REGISTER OF DEBATES IN CONGRESS.

TWENTY-FIFTH CONGRESS...FIRST SESSION.

FROM SEPTEMBER 4 TO OCTOBER 16, 1837.

DEBATES IN THE SENATE.

In pursuance of the authority given by the constitution, the President of the United States, on the 15th day of May, caused to be issued the proclamation which follows:

BY THE PRESIDENT OF THE UNITED STATES OF AMERICA.
A PROCLAMATION.

Whereas great and weighty matters, claiming the consideration of the Congress of the United States, form an extraordinary occasion for convening them, I do, by these presents, appoint the first Monday of September next for their meeting at the city of Washington; hereby requiring the respective Senators and Representatives then and there to assemble in Congress, in order to receive such communications as may then be made to them, and to consult and determine on such measures as in their wisdom may be deemed meet for the welfare of the United States.

In testimony whereof, I have caused the seal of the United States [L. S.] to be hereunto affixed, and signed the same with my hand.

Done at the city of Washington, the fifteenth day of May, in the year of our Lord one thousand eight hundred and thirty-seven, and of the independence of the United States the sixty-first.

M. VAN BUREN.

By the President:

JOHN FORSYTH, Secretary of State.

LIST OF THE SENATORS.

MAINE—John Ruggles, Reuel Williams.
NEW HAMPSHIRE—Henry Hubbard, Franklin Pierce.
MASSACHUSETTS—John Davis, Daniel Webster.
RHODE ISLAND—Nehemiah R. Knight, Asher Robbins.
CONNECTICUT—John M. Niles, Perry Smith.
VERMONT—Samuel Prentiss, Benjamin Swift.
NEW YORK—Nathaniel P. Tallmadge, Silas Wright.
NEW JERSEY—Samuel L. Southard, Garret D. Wall.
PENNSYLVANIA—James Buchanan, Samuel McKean.
DELAWARE—Richard H. Bayard, Thomas Clayton.
MARYLAND—Joseph Kent, John S. Spence.
VIRGINIA—William C. Rives, John J. Roane.
NORTH CAROLINA—Belford Brown, Robert Strange.
SOUTH CAROLINA—John C. Calhoun, William C. Preston.
GEORGIA—Alfred Cuthbert, John P. King.
ALABAMA—Clement C. Clay, William R. King.
MISSISSIPPI—John Black, Robert J. Walker.
LOUISIANA—Alexander Mouton, Robert C. Nicholas.
TENNESSEE—Felix Grundy, Hugh L. White.
KENTUCKY—Henry Clay, John J. Crittenden.
ARKANSAS—William S. Fulton, Ambrose H. Sevier.
MISSOURI—Thomas H. Benton, Lewis F. Linn.

VOL. XIV.—1

ILLINOIS—John M. Robinson, Richard M. Young.
INDIANA—Oliver H. Smith, John Tipton.
OHIO—William Allen, Thomas Morris.
MICHIGAN—Lucius Lyon, John Norvell.

MONDAY, SEPTEMBER 4, 1837.

This being the day designated in the proclamation of the President of the United States for a special meeting of both Houses of Congress, the Senate assembled in the Senate Chamber at the Capitol, at the usual hour of 12 o'clock.

Hon. RICHARD M. JOHNSON, Vice President of the United States, called the Senate to order at 12 o'clock, when forty-two Senators appeared in their seats.

Mr. KING, of Alabama, presented the credentials of Messrs. C. C. CLAY and ROBERT STRANGE, Senators as above, who took the usual oath.

Mr. RIVES presented the credentials of Mr. ROANE, Senator as above, who was also qualified.

On motion of Mr. KING, of Alabama, the Secretary of the Senate was instructed to inform the House of Representatives that a quorum of the Senate was now present, and ready to proceed to business.

Mr. WRIGHT moved that a committee be appointed to join a similar committee from the House, in order to wait upon the President of the United States, and inform him that Congress was assembled and ready to receive such communication as he might have to make; and the motion was agreed to.

The CHAIR was, on motion of Mr. KING, of Alabama, authorized to appoint the said committee; and Mr. WRIGHT and Mr. KING, of Alabama, were appointed accordingly.

On motion of Mr. LINN, the usual number of newspapers was ordered for the use of the Senators.

The Senate then, on motion, proceeded to the election of the Sergeant-at-arms and Doorkeeper to the Senate; whereupon, STEPHEN HAIGHT (the late doorkeeper) was unanimously elected, at the first balloting, Sergeant-at-arms to the Senate, in room of the late Sergeant, Mr. SHACKFORD, deceased; and at the third balloting, Mr. EDWARD WYER was elected (out of many candidates) Doorkeeper in room of Mr. HAIGHT.

And then the Senate adjourned.

SENATE.]

President's Message—Standing Committees.

[SEPT 5, 1837.]

TUESDAY, SEPTEMBER 5.

A message was received from the House of Representatives, through Mr. FRANKLIN, their Clerk, announcing to the Senate that a quorum of the House had assembled, had elected a Speaker, had concurred with the resolution of the Senate for appointing a committee to wait on the President of the United States, and had appointed a committee on their part.

Mr. WRIGHT, from the joint committee appointed to inform the President of the United States that a quorum of the two Houses was assembled and ready to proceed to business, reported that the committee had performed the duty assigned them, and that the President had expressed to them his intention to communicate to the two Houses, in writing, this day at 12 o'clock.

A message was accordingly received from the President of the United States, by Mr. VAN BUREN, his private secretary, and was read by the Secretary; the reading occupying about an hour and a half. (*See Appendix.*)

Mr. WRIGHT moved the printing of 5,000 copies of the message, and 1,500 of the accompanying documents.

Mr. CLAY, of Kentucky, said he rose to second the motion of the Senator from New York [Mr. WRIGHT] to print an extra number of copies of the message. He should indeed have no objection to publishing double or triple the number proposed, if it were convenient to distribute them. He had accomplished the sole purpose for which he had risen; but whilst he was up, he could not forbear saying that, after attentively listening to the reading of this message, he felt the deepest regret that the President, entertaining such views, and proposing such a plan for the relief of the country, as he had presented, had deemed it his duty to call an extra session of Congress at this inconvenient period of the year.

Mr. BUCHANAN said he did not rise to express any opinion or to enter into any discussion. "Sufficient for the day," said he, "is the evil thereof." But it was his wish to increase the number of copies to be printed from five thousand to ten. He thought the former number too small for his proportion of it to satisfy the demand of his constituents.

Mr. WRIGHT was ready to accept the proposition as a modification of his original motion, and did so.

The question on printing ten thousand was then put and carried.

On motion of Mr. GRUNDY, the Senate then adjourned.

WEDNESDAY, SEPTEMBER 6.

STANDING COMMITTEES.

Mr. HUBBARD offered a resolution proposing an alteration in the standing rules of the Senate, and asked its consideration at this time.

Mr. CLAY, of Kentucky, objecting, the resolution lies over till to-morrow.

Mr. HUBBARD moved that the Senate proceed to-morrow to the appointment of the standing committees.

Mr. CLAY said he should be very glad to learn from that part of the Senate which was capable of affording the information, whether it was intended to appoint all the standing committees, and for what purpose? It had been intimated in the message that those communications which were annually made, and which formed the basis and action of the standing committees generally, were at this time to be withheld until the usual period of the meeting of Congress. Indeed, we were told—and he thought without a sufficient regard to the rights, and he would add, what was of much importance in the present crisis of the country, the duties which Congress had now to perform—that he (the President) had called them together for a certain purpose; that he meant to limit his communications to that purpose, and dismiss us when we should have done.

Assembled as we are, (continued Mr. C.,) we have a right to look to the interests of the whole country—to the interests of all; and, for one, I must say that, although no man has come here with more reluctance than I have done, and no man here will return to his private pursuits with more pleasure and satisfaction than I shall do, yet when I regard the present general, unhappy, distressed, and embarrassed condition of the country, I should be more reluctant, whatever may have been the purposes of the President, or anybody else, to return home, until I see some broad, comprehensive, effectual plan proposed for the relief of the country.

But, sir, I have risen to inquire what is the design, what is the purpose, of appointing all the standing committees, if we are limited to one single object, and which, according to the language of the message, we are called here to deliberate upon? We know nothing of our foreign affairs; we know nothing concerning the question of the north-eastern boundary; we know nothing in regard to Texas. Then what are the purposes to be answered by appointing the Committee on Foreign Relations? All that I desire is to have light on the subject—to learn, if it be possible, the views and purposes of those into whose hands are confided the intentions of the administration, why all these committees should be appointed.

Mr. HUBBARD remarked that he regretted as deeply as the Senator from Kentucky could the existence of any cause which had made it necessary for the President to assemble Congress at this time; and he was quite sure that he had left his home with as much reluctance to perform his duty here, as that Senator, or as any other Senator. But Congress were now assembled; both Houses had been organized in the usual manner, and communications had been interchanged that the two Houses were now ready to proceed in the transaction of the public business; and, after such a meeting, what was it proper for the Senate to do? By the 33d rule, it was made their duty at the commencement of each session to appoint their standing committees. This was the law, and it had been the invariable practice of the Senate. And was there any less obligation, any less propriety, or any less importance for the Senate to appoint its usual standing committees at an extra session, than there was at an ordinary session of Congress? He did not so consider the matter. The rule itself was imperative. The course of proceeding was to his mind plain, and he had offered the resolution in accordance with his sense of duty. He was well aware, with the Senator from Kentucky, that the President had, in his public message which had been communicated to Congress, alluded mainly to but one subject, and what seemed to him to be necessarily connected therewith; and he was free to admit that that was a subject of deep and abiding importance to the interests of our whole country. But does the Senator know that the President may not, by special message during the present session, communicate to Congress other and different subjects? Certain the fact is, that the people themselves are not precluded by the message from coming here with their memorials. They have a right to present here their petitions; and would it be wise or proper for the Senate to refuse to hear, consider, and dispose of these matters in the usual manner, because this happened to be an extra session of Congress, called by the President for a particular and avowed purpose? He thought not. This session of Congress having commenced, he had offered to the Senate the resolution for the appointment of the usual committees, as the best and most legitimate mode for the disposal of the public and private business which may be presented for its consideration. He could not doubt that the great and absorbing subject referred to in the President's message would engage the unremitting attention, and would command the most faithful service of the Senate; but the all-importance of that subject, and the fact of its being exclu-

SEPT. 7, 1837.]

Standing Committees.

[SENATE.]

sively considered in the message, was to his mind no sufficient reason against the appointment of the standing committees. The consideration of that subject would be, and should be, the main business of the present session. He could not believe that the appointment of the committees would necessarily protract the session. After the completion of the business which had summoned Congress together, Congress would adjourn. He was as anxious as any man could be to bring this session to a speedy close, to finish the work proper to be done; and he felt assured that, by exerting their best efforts, Congress would be able at this session to accomplish some measure which would, in effect, restore confidence, and give relief to the community. He was as desirous as the Senator from Kentucky, or as any other Senator could be, to have this done, and done speedily. He had, therefore, thus early introduced the resolution for the appointment of the committees. He hoped to see this a short but a business session. It seemed to him that every consideration of policy and of duty should induce the Senate at this time to make the appointment of their committees. He hoped, therefore, that his motion would be adopted.

The motion was agreed to.

On motion of Mr. WALKER, the Senate adjourned.

THURSDAY, SEPTEMBER 7.

The resolution offered yesterday by Mr. HUBBARD, proposing to amend the 33d rule of the Senate, by the insertion of the words "Committee on Patents and the Patent Office," was, on his motion, taken up.

Mr. GRUNDY stated that the reasons which had influenced the mover of the amendment were to provide for the appointment of a committee to have especial charge of every thing relating to patents and the Patent Office; for neither branch of Congress had ever appointed a committee solely for that purpose. In the Senate, every thing connected with the subject had heretofore been referred to the Committee on the Judiciary. That committee, however, being almost always engaged with subjects of its own of importance, had frequently found it impossible to pay that attention to others which they deserved; and hence the necessity of creating a committee to take especial charge of all matters in relation to patents and the Patent Office. He hoped that the amendment would be adopted.

The question was then taken on the adoption of the resolution, and it was agreed to.

Mr. BUCHANAN presented a memorial from certain delegates of a meeting held at Erie, praying for an appropriation to construct a McAdamized turnpike road from the Cumberland road to lake Erie.

Mr. B. observed that he did not believe that it was the intention of Congress, at this time, to go into the general transaction of business. Should it be their disposition to do so, (which he trusted might not be the case,) he would ask to have the memorial referred to an appropriate committee. However, as he had received the memorial, it was his duty to present it. He then moved that it be laid on the table and printed; which was agreed to.

On motion of Mr. HUBBARD, the Senate then proceeded to ballot for the chairmen of the several standing committees. After the balloting had been some time proceeded in,

Mr. CLAY, of Kentucky, said that, as the complexion of the Senate was well known, he thought this waste of time might be avoided by leaving it, on the present occasion, as had been the practice at some times formerly, to the VICE PRESIDENT to appoint the committees.

After some conversation, in which Mr. GRUNDY, Mr. KING, of Alabama, and Mr. HUBBARD, participated, Mr. CLAY's proposition was agreed to without dissent; and by general consent the VICE PRESIDENT was authorized to

appoint the several committees, and time for this purpose given till to-morrow.

Mr. WRIGHT moved that three thousand extra copies of the report of the Secretary of the Treasury, transmitted with the message of the President of the United States, be printed in lieu of the number first ordered. Agreed to.

The Senate then, on motion of Mr. KING, of Alabama, went into secret session on executive business; after which, on the doors being opened, the Senate adjourned.

FRIDAY, SEPTEMBER 8.

The CHAIR announced that, in pursuance of the authority vested in him yesterday by the Senate, he had appointed the following members of the various standing committees of the Senate:

On Foreign Relations.—Mr. Buchanan, chairman, Mr. Tallmadge, Mr. King, of Georgia, Mr. Clay, of Kentucky, Mr. Rives.

On Finance.—Mr. Wright, chairman, Mr. Webster, Mr. Nicholas, Mr. Benton, Mr. Hubbard.

On Commerce.—Mr. King, of Alabama, chairman, Mr. Davis, Mr. Brown, Mr. Ruggles, Mr. Norvell.

On Manufactures.—Mr. Niles, chairman, Mr. Buchanan, Mr. Preston, Mr. Strange, Mr. Pierce.

On Agriculture.—Mr. Smith, of Connecticut, chairman, Mr. Spence, Mr. Linn, Mr. McKean, Mr. Black.

On Military Affairs.—Mr. Benton, chairman, Mr. Preston, Mr. Tipton, Mr. Wall, Mr. Allen.

On the Militia.—Mr. Wall, chairman, Mr. Swift, Mr. Clay, of Alabama, Mr. Mouton, Mr. Smith, of Indiana.

On Naval Affairs.—Mr. Rives, chairman, Mr. Southard, Mr. Tallmadge, Mr. Cuthbert, Mr. Williams.

On Public Lands.—Mr. Walker, chairman, Mr. Fulton, Mr. Clay, of Alabama, Mr. Roane, Mr. Prentiss.

On Private Land Claims.—Mr. Linn, chairman, Mr. Sevier, Mr. Bayard, Mr. Mouton, Mr. Lyon.

On Indian Affairs.—Mr. White, chairman, Mr. Sevier, Mr. Tipton, Mr. Linn, Mr. Swift.

On Claims.—Mr. Hubbard, chairman, Mr. Tipton, Mr. Crittenden, Mr. Strange, Mr. Young.

On Revolutionary Claims.—Mr. Brown, chairman, Mr. White, Mr. Crittenden, Mr. Norvell, Mr. Smith, of Con.

On the Judiciary.—Mr. Grundy, chairman, Mr. Morris, Mr. King, of Georgia, Mr. Wall, Mr. Clayton.

On the Post Office and Post Roads.—Mr. Robinson, chairman, Mr. Grundy, Mr. Knight, Mr. Brown, Mr. Niles.

On Roads and Canals.—Mr. Tipton, chairman, Mr. McKean, Mr. Nicholas, Mr. Young, Mr. Williams.

On Pensions.—Mr. Morris, chairman, Mr. Sevier, Mr. Prentiss, Mr. Pierce, Mr. Roane.

On the District of Columbia.—Mr. Kent, chairman, Mr. King, of Ala., Mr. Nicholas, Mr. Roane, Mr. Allen.

On Patents and the Patent Office.—Mr. Ruggles, chairman, Mr. Strange, Mr. Bayard, Mr. Prentiss, Mr. Robinson.

On the Contingent Expenses of the Senate.—Mr. McKean, chairman, Mr. Fulton, Mr. Black.

On Engrossed Bills.—Mr. Clay, of Ala., Mr. Smith, of Indiana, Mr. Norvell.

On Enrolled Bills.—Mr. Smith, of Con., Mr. Lyon, Mr. Allen.

On motion of Mr. WRIGHT, so much of the message of the President and of the Secretary of the Treasury's report as relates to the subject of finance, was referred to the Committee on Finance.

And, on motion of Mr. GRUNDY, the appropriate parts of the same documents were referred to the Committee on the Judiciary.

On motion of Mr. GRUNDY, it was

Resolved, That when the Senate adjourn, it adjourn to meet on Monday next.

After executive business, the Senate adjourned till Monday.

SENATE.]

Report of Committee on Finance—District Courts.

[SEPT. 11, 1837.]

MONDAY, SEPTEMBER 11.

The CHAIR stated the order of the day to be the election of a Secretary of the Senate; whereupon, the Senate proceeded to ballot for Secretary, and at the first ballot ASBURY DICKINS, Esq. received 39 votes out of 40, and was declared duly elected.

On motion of Mr. GRUNDY, the Senate then proceeded to the election of Chaplain; when, after four ballottings, the number of candidates being twenty-one, the Rev. Mr. SLICER, of the Methodist Church, Georgetown, received a majority of the votes, and was declared duly elected.

REPORT FROM THE COMMITTEE ON FINANCE.

Mr. WRIGHT, chairman of the Committee on Finance, to which was referred that part of the message of the President of the United States relating to the distribution of the surplus revenue, and other matters, reported a bill for the postponement of the fourth instalment of the deposit to the States till further provision therefor by law. The following is the bill:

A bill to postpone the fourth instalment of deposit to the States.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the transfer of the fourth instalment of deposits directed to be made with the States under the thirteenth section of the act of June 23d, 1836, be, and the same is hereby, postponed until further provision by law.

Mr. WRIGHT said that, as the time the committee had was but short, he should now merely report the above bill, which he would move to be read a first time, and ordered to a second reading, with a view to take it up to-morrow; when he expected the committee would be able to report further.

Mr. CALHOUN said he hoped this bill would not be pressed so rapidly. It was due to the Senate to have the whole subject before them, and he therefore hoped that this bill would be suffered to rest until it should be seen what other measures the committee might propose.

Mr. WEBSTER said he rose to express a wish that, whether the measures proposed were to be considered separately, or whether they were to be considered all together, they might be considered and decided upon with all the promptness and despatch consistent with considerate legislation. It was not his good fortune to concur with the committee, nor did he think the measure suited to the exigencies and condition of the country; but, whatever measure might be introduced here for the purpose of meeting the existing exigency of the Government, and the wide distress of the country, should receive no hindrance, obstruction, or delay from him.

Mr. W. would content himself with a short statement of his views, when the measure came up; and he should leave it in the hands of the majority known to be favorable to the existing administration, both in the Senate and in the House; but he would beseech those majorities to pronounce their judgment in form of law. They have the power, and they have the responsibility also. I (said Mr. W.) shall do nothing to obstruct them in the prompt exercise of their power; nor will I do any thing tending to diminish their responsibility. He was connected with the manufacturing and with the mercantile interest, and thought he saw oppression on the labor and industry of the country, which required relief. He saw things connected with the Government which demanded from Government an efficient as well as a prompt relief. He thought it not necessary that all these measures should be considered together; but the earlier they were considered the better.

Mr. CALHOUN explained that he did not desire any delay; on the contrary, he agreed with the Senator from Massachusetts [Mr. WEBSTER] in the necessity of an early and full decision on the several points recommended.

The bill, as reported by Mr. WRIGHT, was then ordered to a second reading.

Mr. HUBBARD presented three private petitions, and moved their reference to the Committee on Naval Affairs.

Mr. CALHOUN adverted to the importance of despatching the special business now before Congress, and expressed the hope that all ordinary business would be postponed till that purpose should be accomplished.

Mr. HUBBARD explained the nature of the petitions which he had presented, and remarked that they might be referred without interrupting more important business, and might be acted upon either at this, or the ensuing session of Congress.

Mr. BUCHANAN said he entirely concurred with the Senators from Massachusetts and South Carolina in regard to the course which business ought to take at the present session of Congress. He believed it was not expected by the country, and it would be inconvenient to both Houses of Congress, to continue this session up to the regular time for the next. If petitions should be sent to the standing committees, it would be regarded as conclusive evidence of a design to proceed to ordinary business; and if this should be done, Congress would be here till June. Mr. B. would not object to consider any special and important matters at this session, but he was in favor of postponing the ordinary business till the usual time; and in order to try what course the Senate meant to pursue, he moved to lay the petitions on the table; and it was so ordered.

Mr. CLAY, of Alabama, presented the following resolution, which lies over one day:

Resolved, That the Committee on the Judiciary be instructed to inquire into the expediency of restoring to the district court of the United States for the northern district of Alabama its former jurisdiction.

Mr. KING, of Alabama, said he was in favor of considering special matters of moment at this session; and the subject of this resolution he considered both important and demanding to be acted upon as early as possible. It was necessary to the proper administration of justice.

Mr. CLAY also offered the following resolution, which he represented as important, and yet more pressing; and he therefore asked that it might be now considered:

Resolved, That the Committee on the Judiciary be instructed to inquire into the expediency of altering the time for holding the United States courts of the ninth judicial circuit.

This resolution was accordingly adopted.

On motion of Mr. PRESTON, the Senate adjourned.

TUESDAY, SEPTEMBER 12.

DISTRICT COURTS.

The following resolution offered yesterday by Mr. CLAY, of Alabama, was taken up for consideration:

Resolved, That the Committee on the Judiciary be instructed to inquire into the expediency of restoring to the district court of the United States for the northern district of Alabama its former jurisdiction.

Mr. CLAY explained his reasons, in brief, for offering the resolution at the present time. It was a matter, it was true, of mere local consideration; yet he presumed it would not encounter objection from any quarter. The object of the change was to expedite the public business, much inconvenience and delay having resulted from the present time of holding the court.

Mr. GRUNDY asked, if the change were made as proposed by the gentleman from Alabama, whether the desired object would be effected. He recollected that, some fifteen years since, an attempt was made to introduce something like a uniform system in relation to these matters. He would say, if the subject were referred, the committee would endeavor to do what was right.

SEPT. 13, 1837.]

Fourth Instalment—Treasury Notes, &c.

[SENATE.]

Mr. BUCHANAN submitted to the gentleman whether any inconvenience would be sustained if the subject were deferred until the next session.

Mr. CLAY explained that the business would be delayed for that length of time.

Mr. SEVIER begged to offer an amendment, so as to embrace the State of Arkansas, and to insert, after the word Alabama, "and to the district court of the State of Arkansas." Mr. S. explained the necessity of the adoption of this amendment, on the ground of the delay that was occasioned. In that country there were frequent murders of the whites by the Indians, and of the Indians by the whites; and in all cases they had to remain twelve months in prison before trial.

The amendment was adopted, and the resolution as amended agreed to.

FOURTH INSTALMENT.

The bill to postpone the fourth instalment of deposit to the States being taken up—

Mr. WRIGHT said that, before the bill was read a second time, he would ask the indulgence of the Senate to make a short explanation in regard to the Committee on Finance. Yesterday morning, when the bill was reported from that committee, he took the opportunity of stating that, in all probability, they would report further this morning. They, however, found themselves unable to do so, partly in consequence of being unable to prepare the labored details before them, and having found at their meeting this morning two members of the committee unexpectedly absent. The one, as he was informed since he came into the Senate, was called away by business, over which he had no control; and the other was so indisposed as to be unable to attend either the Senate or the committee. He mentioned these facts as an apology for not fulfilling his promise. He felt a confident hope, from the best judgment he could form, that the committee would be able to report in full on Thursday next.

The bill was then taken up, read a second time, and,

On motion of Mr. HUBBARD, the further consideration of it was postponed till to-morrow.

On motion of Mr. BUCHANAN, the Senate spent some time in executive business, and then adjourned.

WEDNESDAY, SEPTEMBER 13.

Mr. WRIGHT, from the Committee on Finance, reported a bill authorizing the issue of Treasury notes. Read a first time, and ordered to a second reading.

[This bill authorizes the issue of Treasury notes to an amount not exceeding — millions of dollars, and of denominations not less than \$100, and provides that the notes be redeemed by the United States, at the Treasury, after one year from their date, to bear interest for the said term; rate of interest to be fixed by the Secretary, not to exceed six per cent. per annum; the faith of the United States to be solemnly pledged for the redemption of said notes. Also, that the notes be signed by the Treasurer of the United States, and countersigned by the Register of the Treasury; separate accounts of the number signed to be kept by each officer as a mutual check. These officers are by this section also authorized to employ such additional clerks as these duties may render necessary; their salary to be fixed by the Secretary of the Treasury.]

Section 4th authorizes the Secretary to issue these notes to all creditors of the United States who choose to receive them at par, and also to borrow money on the credit of such notes.

Section 6th enacts that such notes shall everywhere be received in payment of all duties, taxes, &c., and for public lands.

Section 9th makes it felony to counterfeit said notes, and fixes the penalty on conviction.]

Mr. WRIGHT, from the same committee, reported a bill authorizing the postponement of the payment of duty bonds. Read once, and ordered to a second reading.

[This bill provides that the extension of credit for duties now outstanding shall be six months from the time the original bond became due; and making the condition in each case to depend on the same conditions as to additional security, interest, &c. prescribed by the Treasury Department to the extension of revenue bonds since May; and not to include any bonds where the parties have not given additional security, or made part payment, or are (by the proper officers of the Government) considered insolvent or unsafe security for their bonds.]

Section 2d provides an additional credit of six months granted on all bonds which may be given during the period of one year from and after the 1st of October, 1837. Also, that, where the security in any bond postponed is satisfactory, the principal and sureties shall not be disabled from being the same for other bonds, though the first bond be not yet paid.]

Mr. WRIGHT also reported from the same committee a bill adjusting the remaining claims on the late deposit banks; which was also read, and ordered to a second reading.

[Section 1st provides that the Secretary of the Treasury be authorized to withdraw the public moneys remaining in any of the late deposit banks, in as convenient a manner to them as may be suitable to the interests of Government. No bank having met, or which shall meet, the requisitions of the Department, to pay any further interest than that required by the deposit act of 23d June, 1836.]

Section 2d provides that, in case of neglect or refusal on the part of the banks to comply with the requisitions of the Secretary of the Treasury, then such banks shall be sued at law, unless bond with security be given, providing for payment in three instalments: the first instalment after two months from the passage of this act; the second, after five months, and the remainder after eight months from the same period; interest being paid at the rate of six per cent. per annum from the time of default, and damages to be paid accruing from protests or other causes.]

FOURTH INSTALMENT.

The special order of the day, being the bill to postpone the fourth instalment of the deposit to the States—

Mr. CALHOUN said he hoped that this bill would not now be acted upon. It was his wish that no action should be had on any of these measures proposed by the Committee on Finance until a report had been made. He hoped, therefore, that the chairman of the committee [Mr. WRIGHT] would consent to a postponement until all the contemplated measures should have been reported.

Mr. WRIGHT said he had no strong desire upon the subject, other than to expedite, as far as was possible, the business before the Senate and Congress. He was not aware that any bills yet to be reported by the committee would affect the question on the present bill; he, however, felt no strong desire to press this bill in particular, as he hoped the committee would complete the business before it to-morrow.

On motion of Mr. CALHOUN, the bill was then postponed until to-morrow; and

The Senate adjourned.

THURSDAY, SEPTEMBER 14.

FINANCIAL AFFAIRS.

Mr. WRIGHT, from the Committee on Finance, reported the following bills, which were severally read and ordered to a second reading:

1. A bill to authorize goods and merchandise to be deposited in the public stores.

[This bill authorizes the deposit of goods in the public

SENATE.]

Fourth Instalment.

[SEPT. 14, 1837.]

stores, under the requisite precautions, allowing them to be transported to other districts, or to be exported, on certain conditions; to be sold, if requisite, at the end of three years, so far as to pay the duties, storage, and other necessary expenses.]

2. A bill imposing additional duties, as depositaries, in certain cases, on public officers.

[This bill provides for the receiving and safekeeping of the public revenue, by the various receiving officers, postmasters, &c., until regularly called for by the Department. The bill contains many details, especially of precaution, to secure the faithfulness of officers having the custody of the public money.]

3. A bill to revoke the charters of such banks in the District of Columbia as shall not resume specie payments in a specified time; and for the suppression of small notes in the District.

[This bill requires the payment of specie on all notes of and under ten dollars, in sixty days from the date of the bill; and on all notes of a larger denomination, in six months. It provides for the appointment of three public commissioners, in case of failure; not interrupting, however, the due course of law. It forbids the issuing notes under five dollars; and requires that within thirty days all notes of individuals and private corporations, under five dollars, shall be neither issued nor passed, under the penalty of a fine of not more than fifty dollars for each offence—one-half to the prosecutor. The banks to forfeit their charters for non-compliance with the provisions of this bill.]

Mr. HUBBARD offered the following resolution, which lies over one day:

Resolved, That after this day the daily meeting of the Senate shall be at ten o'clock, instead of twelve, till otherwise ordered.

FOURTH INSTALMENT.

The Senate proceeded to the consideration of the special order, the bill to postpone the payment of the fourth instalment of the deposits to the States.

Mr. RIVES said he understood that this day the Committee on Finance expected to make a full report on the subjects which had been referred to them. But there was one subject most interesting to the country, on which they had not reported at all; they had reported no bill to designate the kinds of funds in which the public dues are to be received. As Mr. R. had understood it to be the general sense of the Senate that no action should be had on any measure till all should be reported, he would now move that the Senate adjourn.

Mr. WRIGHT said the Committee on Finance had taken up the message of the President and the report of the Secretary of the Treasury, had given them a full consideration, and had now reported all the measures which they proposed to report, or which they deemed it their duty to report. They had considered the subject mentioned by the Senator from Virginia, and had concluded to let the law on that subject remain as it is.

Mr. RIVES said, that, not having an opportunity to know the views of the committee, he had taken it for granted that they would report on every subject embraced in the message and Treasury report, both of which, he believed, had suggested that it ought to be determined in what kinds of funds the revenue should be collected. It was now announced by the chairman that no communication from the committee would be made on the subject. Mr. R. would therefore proceed on the assumption that the committee intended to leave the laws on that subject as they now are; and, that being the case, and Mr. R. believing that all the measures proposed and to be proposed would have a mutual bearing and dependence on each other; and believing it to be infinitely more important to the country that what Congress should do should be well

done, rather than done quickly, Mr. R. moved that when the Senate adjourned it should adjourn to meet on Monday next, that all the bills reported on the subject might be examined, compared, and carefully considered by members before the Senate came to act on them. Mr. R. said it was as inconvenient for him to remain here as it would be for any one; but whatever the inconvenience, he preferred that all measures should be duly and amply considered.

Mr. NILES said that he regretted the honorable Senator from Virginia [Mr. RIVES] should have felt it his duty to ask for a further delay of the business before the Senate, by a motion for adjournment until next week. When the first bill was reported by the Committee on Finance, several days since, the Senator from South Carolina [Mr. CALHOUN] suggested that it would be inexpedient to act on that, or any single measure, until we had before us all the bills which were to be expected from that committee, relating to important subjects, presented in the message of the President. The necessity of this course, although he believed doubted by some, was generally acquiesced in. Since then, the committee have reported a number of bills for carrying out all the great measures recommended in the message, which they deem it important to be acted upon during the present session; and the chairman has informed us that they do not intend to report any more bills. If his distinguished friend from Virginia, or any other Senator, thought that the bills reported did not cover the whole ground, they would of course have an opportunity to supply the deficiency.

But (said Mr. N.) the whole subjects are before us; if not in the bills reported, they are submitted in the message. Our whole work is before us; we now see what is to be done, and he thought that it was our duty to enter upon it without further delay. We are now in the last half of the second week, and have done nothing; and it is proposed to adjourn over to the third week before we enter upon the business for which we have been convened. He did not complain of the delay so far, but on the contrary would say (for he thought it due to them) that the committee to whom the grave and important subjects contained in the message had been submitted had been remarkably faithful and industrious in the discharge of their duties. They had performed their service, and it now remained for us to enter upon ours, which he hoped would be done without further delay. Congress had been assembled at an extraordinary conjuncture to perform a special service, and he hoped, now we had the work before us, that we should enter upon it, and continue our labors with diligence and perseverance, so as to despatch the business, and close the session as soon as was consistent with the full deliberation and reasonable discussion due to the important subjects before us.

But we are told by the honorable Senator from Virginia that the several subjects are so connected, that we cannot with propriety act upon one, without an opportunity to examine and compare them, and make up our minds upon the whole. He wishes time for examination, reflection, and consultation. But he (Mr. N.) thought there had already been sufficient time for these purposes, and he did not consider that there was much connexion between the bill for postponing the fourth deposit to the States, which would be acted upon to-day, and the several bills that the honorable chairman of the Committee on Finance had just reported.

Sir, (said Mr. N.) we have been called here at an extraordinary emergency, when the business of the country was deranged, and the public mind in an unsettled and feverish state; the expectations of the people are excited; the eyes of the whole country are upon us. At such a time, and under such circumstances, Congress cannot remain in session without a prodigious influence for good or for evil;

SEPT. 14, 1837.]

Fourth Instalment.

[SENATE.]

and he greatly feared it would be the latter. A protracted session, he was persuaded, would tend to agitate and disturb the public mind, already sufficiently unsettled, that could hardly fail of increasing existing difficulties, which depend much, if not mainly, on a general want of confidence. Would gentlemen prolong the present, so as to run it into the regular annual session? He hoped no one was disposed to do this; nothing, in his opinion, could have a more injurious effect. He was sensible of the great and momentous importance of the subjects before Congress, and was as desirous as any one could be that time should be allowed for their full consideration and reasonable discussion; but he believed it due to the country that we enter upon this at once, and continue our labors with diligence, so as to bring the session to a close as soon as possible. He therefore hoped that the Senate would now take up the bill for the postponement of the fourth instalment to the States, which was the order of the day.

Mr. WRIGHT said it was but justice to himself and the committee to say that it was not their purpose to press any measure unkindly, unnecessarily, or prematurely upon the Senate. And even if such had been their disposition, it was not in their power. But Mr. W. had been requested by the members of the committee to say that the committee had already reported all that they expected to report on the subject. The committee had had free and full consultations with the Secretary of the Treasury on the subjects referred to in the message and the report, and had now submitted to the Senate all the measures which it appeared to them proper to propose. The facts before them showed a high necessity of speedy action, on the two first bills at least, with which the latter bills had no intimate connexion. Mr. W. would, therefore, ask that the first (the postponement of the deposit) bill might be considered this morning, and to this effect several Senators had expressed to him their wishes. Under these evidences of such a disposition in the body, no one could suppose that he (Mr. W.) had any desire unkindly to press the action of the Senate upon any subject.

Mr. RIVES said he did not attribute any unkindness to the Senator. He knew too well his accustomed parliamentary courtesy to suspect him of such a disposition. But that honorable member, as well as the honorable member from Connecticut, must perceive that there were other members whose situation was materially different from theirs. They from the first had free access to all the documents on the subject, and the advantage of free communication with the head of the Treasury Department. But such was not the case with all the members, and it was not so with himself. He and others had not been aware of the character of the President's message till it was communicated; and they had not prepared themselves to act on an assumption of what it might be. Mr. R. therefore now asked the privilege of time to consider the subject for himself; and not for the purpose, as had been intimated by the Senator from Connecticut, of private consultation. Mr. R. was determined to act on his own responsibility, without private consultation; and if there had been, or was to be, any such consultation, it was not by him. The expectations of the constituents of the Senator from Connecticut were different from those of Mr. R.'s constituents—that they should merely set the machine of Government in operation, and then go home. Mr. R. was not sent here for the relief of the Government merely, but for the relief of the people first. And especially Mr. R. did not wish to cast the slightest reproach on the Committee on Finance; but they would permit him to say that he did not perceive, in the measures which the committee had proposed, any thing to relieve the sufferings of the community. They were merely convenient for the Government, and were so far important. But Mr. R. felt bound to his constituents to provide some remedy, if any

could be found, for their distresses, and those of the community at large; and there was one which Mr. R. thought very obvious. Restore but confidence through the country, and it would again at once be erect and prosperous. But where was any thing from the committee that could have any such tendency?

Such a measure Mr. R. was desirous to see; and if it should appear from no other quarter, he would take it upon himself, humble as he was, to offer some measure having a tendency to produce that result, and relieve the distresses of his bleeding country. Gentlemen had compared the economy of a short session with the great interests of the country. But Mr. R. thought, if economy alone were to be considered, it would be more economical, and save the mileage of a double session, to hold but one session instead of two, and to go at once upon the general business of the nation. Mr. R. had no disposition to remain here; his private interests demanded that he should be at home. But he would sacrifice every such interest, and every personal convenience, on the altar of his country. Now, if ever, was the time to restore confidence; and now, while the elements of national relief and prosperity were lying dormant before them, and only requiring the breath of Congress to put them in action, he called upon gentlemen not merely to think of providing facility for the operations of Government, but to look to the great interests of the people.

Mr. R. believed something might be done for the good of the community. If the Government could do harm, it could also do good. He meant no reproaches—all Governments were capable of doing harm, as well as good; and it was peculiarly incumbent on ours, at the present crisis, to do what it could for the good of the country, and to the full extent of its power. But they ought not to act on trust. However others might act, Mr. R. could not act to his satisfaction without examination by himself. He repeated, that he deemed it infinitely more important for them to act well than hastily. He might not be so happy as to comprehend these subjects as readily as others; but he deeply felt their importance, both to the present welfare, and to all the future destinies of the country.

Whether the session should be long or short—whether continued to the next or not—depended on the wisdom and responsibility of Congress. But if these great and important subjects could not be well and deliberately disposed of before the first of December, Mr. R. would, by all means, remain; and he felt now ready to take the oath of the members of the French convention, not to disperse till the country should be relieved. As yet, Mr. R. had not seen one measure proposed for this purpose.

Mr. CALHOUN was deeply impressed with the magnitude and danger of the present emergency. It, however, had not taken him by surprise, nor was it unlooked for by him. In his humble opinion, of the many difficulties through which the country had passed within the last five-and-twenty years, this was by far the most distressing and overwhelming. Seeing and believing this, he had come here with a full and fixed determination to do his duty, despite of all personal considerations and party feeling; for, when his country was in danger, he knew but one impulse, and that was to perform his duty. He had been looking forward with the most intense anxiety for the remedy which would be proposed. Fixing two great points in his mind, he had observed the most strict reserve until he saw the plan of the administration. Having now seen it, he felt that the only feature in the message, and in the report of the Secretary of the Treasury, which gave character to the present bill, was to be abandoned. For himself, while he was ready to act on this understanding, he must say that, with regard to the other measures, he regarded them as nothing—as perfectly immaterial. And he would tell gentlemen that this was not a crisis for weak

SENATE.]

Fourth Instalment.

[SEPT. 14, 1837.]

action. They had a difficult scene to go through, and, if they did not meet it with promptness and boldness, they would find it no easy matter to overcome. He professed himself prepared to act immediately on the bill before the Senate.

Mr. WEBSTER said he felt himself bound, in pursuance of his pledge, to give as early an opportunity of considering the measures proposed by the Committee on Finance as was consistent with considerate legislative deliberation. That which governed him in this case, to a great degree, was the apprehension which he felt (perhaps it might be erroneous and unfounded) that no measures were likely to be offered to Congress, under the recommendation of the message, or Treasury report, which would meet with his approbation.

In the mean time, Mr. W. was as ready as the Senator from Virginia [Mr. RIVES] to stay here till May next, if necessary; but whatever procrastination was indulged in here, was a protraction of the evil oppressing the country. He hoped, therefore, the Senator from Virginia would agree to consent that the measure first proposed by the committee be now brought before the Senate, and be now examined, because there are other measures dependent upon it. The first step, as it seemed to him (Mr. W.) the most proper to be decided upon, was, whether the payment of the fourth instalment should be postponed; because the period was now near at hand when that instalment was to have been paid. This question ought to be settled one way or the other. They were bound, in consideration of the great suffering and distress now oppressing the country, to make trial of some measures.

Mr. RIVES said that, as it appeared to him there was a disposition in the Senate to take up this bill, and as he understood the Senator from Massachusetts [Mr. WEBSTER] felt a personal interest in its immediate consideration—intending to deliver his sentiments on it to-day—he (Mr. R.) would withdraw his motion. It was, however, his decided opinion that the action demanded of them on all these measures was not simply and merely to put the Government in motion again, but to provide effectual and immediate relief for the people, in preference to affording aid in the first place to Government. This object he (Mr. R.) thought not very likely to be promoted by taking up this bill; but, in compliance with the general opinion of the Senate, he should withdraw his motion.

Mr. WEBSTER then rose, and said that the importance of the present crisis and the urgency of this occasion was such as to lead him earnestly to desire that some measures of adequate relief might come from the quarter which alone had the power to effect any thing, by the majority it commanded. Much as I differ from them, (said Mr. W.) I would be glad to accept any measure of substantial relief which they might bring forward. I think, sir, I see such a necessity for relief as never before, within my recollection, has existed in this country, and I regret to be obliged to say that the measures proposed by the President, in his message to Congress, and reiterated by the Secretary of the Treasury, in his report to the same body, only regard one object, and are, in their tendency, only directed to one branch of partial relief. The evils, however, under which the community now suffers, (said Mr. W.) though related, and of the same family, are yet capable of distinct consideration. In the first place, there are the wants of the Treasury, arising from the stoppage of payments and the falling off of the revenue. This is an exigency requiring the consideration of Congress; it is an evil threatening to suspend the functions of at least one department of the Government, unless it be remedied. Another and a greater evil is, the prostration of credit—the interruption brought upon all business transactions, arising from the suspension of all the local banks throughout the country, with some few and trifling exceptions. Hence has proceeded a prostration of

the local currency, and a serious obstruction and difficulty thrown in the way of buying and selling. A third want is, the want of an accredited paper medium, equal to specie, having equal credit over all parts of the country, capable of serving for the payment of debts and carrying on the internal business of the country throughout and between the different and distant sections of this great Union. These three evils, though they are co-existent and cognate in their being, cannot be met by the same measures of relief. If relief is given to the one, it does not follow that you will relieve the others; if you replenish the Treasury, and thus bring a remedy to that evil, this brings no relief to the disordered currency. And again: if the local currency is relieved, it does not supply the other want, namely, that of a universally accredited medium.

It has, no doubt, struck the country generally that the most important objection to the message is, that it says nothing about relief to the country, directly and mainly; the whole amount of the proposition it contains relates to the Government itself; the interest of the community is treated as collateral, incidental, and contingent. So in the communication made by the Secretary of the Treasury, the state of the currency—the condition in which the commerce and trade of the country now are—is not looked at as a prominent and material object. The Secretary's report, as well as the message itself, exclusively regards the interest of the Government, forgetting or passing by the people. The outpourings of the Secretary, which are very considerable in quantity, are under seven heads—the exact number of the seven vials of which we read. But the contents of none of these are concocted or prepared in reference to the benefit of the community; all the medicine is intended for the Government Treasury, and there is none for the sickness and disease of society, except collaterally, remotely, and by-the-by. It is, however, to the credit of the President that he has given, in an unequivocal and intelligible manner, his reasons for not recommending a plan for the relief of the country; and they are, that, according to his view, it is not within the constitutional province of Government. I confess (said Mr. W.) this declaration is to me quite astounding, and I cannot but think that, when it comes to be considered, it will produce a shock upon the whole country. This avowed disregard of the public distress, upon the ground of alleged want of power; this exclusive concern for the interest of Government and revenue; this broad line of distinction, now, for the first time, drawn between the interests of the Government and the interests of the people, must certainly present a new era in our politics. For one, (said Mr. W.) I consider Government as but a mere agency; it acts not for itself, but for the country; the whole end and design of its being is to promote the general interests of the community. Peculiar interests, selfish interests, exclusive regard for itself, are wholly incompatible with the objects of its institution, and convert it from its true character, as an agency for the people, into a separate dominant power, with purposes and objects exclusively its own.

Holding, Mr. President, opinions on this subject, and being prepared to stand by and maintain them, I am certainly rejoiced at the clear shape which the question has at last assumed. Now, he that runs may read; there are none but can see what the question is: is there any duty incumbent on this Government to superintend the actual currency of the country? has it any thing to do beyond the regulation of the gold and silver coin? In that state of mixed currency which existed when the constitution was formed, and which has existed ever since, is it or is it not a part of the duty of the Government to exercise a supervisory care and concern over that which constitutes by far the greater part of that currency?

In other words, may this Government abandon to the States and to the local banks, without control or supervi-

Fourth Instalment.

[SENATE.]

sion, the unrestrained issue of paper for circulation, without any attempt on its own part to establish a paper medium which shall be equivalent to specie, and universally accredited all over the country? Or, Mr. President, to put the question in still other words: since this Government has the regulation of trade, not only between the United States and foreign states, but between the several States themselves, has it nevertheless no power over that which is the most important and essential agent or instrument of trade—the actual circulating medium? Now, Mr. President, on these questions, as already said, I entertain sentiments wholly different from those which the message expresses.

It is, (said Mr. W.) in my view, an imperative duty imposed upon this Government by the constitution, to exercise a supervisory care and control over all that is in the country assuming the nature of a currency, whether it be metal, or whether it be paper. All the coinage of the country is placed in the power of the Federal Government; no State, by its stamp, can give value to a brass farthing. The power to regulate trade and commerce between the United States and foreign or Indian nations, and also between the respective States themselves, is expressly conferred by the constitution upon the General Government. Now, it is clear that the power to regulate commerce between the States carries with it—not impliedly, but necessarily and directly—a full power of regulating the essential element of commerce, viz. the currency of the country—the money, which constitutes the life and soul of commerce. We live in an age when paper money is an essential element in all trade between the States; its use is inseparably connected with all commercial transactions. That it is so, is now evident, since by the suspension of those institutions from which this kind of money emanates, all business is comparatively at a stand. Now, sir, (said Mr. W.) what I maintain is simply this: that it surely is the duty of somebody to take care of the currency of the country; it is a duty imposed upon some power in this country, as is done in every other civilized nation in the world.

I repeat, sir, that it is the duty of some Government or other to supervise the currency. Surely, if we have a paper medium in the country, it ought only to exist under the sanction and supervision of the Government of the country. Now, sir, if the General Government does not exercise this supervision, who else, I should like to know, is to do it? Who supposes that it belongs to any of the State Governments, for example, to provide for or regulate the currency between New Orleans and New York?

The idea has been thrown out that it is not the duty of the Government to make provision for domestic exchanges, and the practice of other Governments has been referred to; but, I think, in this particular a great mistake has been committed. It is certainly far otherwise in England: she provides for them most admirably, though by means not, perhaps, altogether in our power. She and other nations, however, provide for them; and it is plain and obvious that, if we are to have a paper medium of general credit in this country, it must be under the sanction and supervision of the Government. Such a currency is itself a proper provision for exchanges. If there be a paper medium always equivalent to coin, and of equal credit in every part of the country, this itself becomes a most important instrument of exchange. Currency and exchange thus become united; in providing for one, Government provides for the other. If the Government will do its duty on the great subject of the currency, the mercantile and industrious classes will feel the benefit through all the operations of exchange. No doubt some modes of establishing such a currency may be more favorable to exchange than others; but by whatever mode established, such a currency must be useful to a great extent. The question, therefore, comes to this: whether we are to have such a medium. I understand there are

gentlemen who are opposed to all paper money, who would have no medium whatever in circulation but gold and silver. Now this, at all events, is an intelligible proposition; but as to those who say that there may be a paper medium, and yet that there shall be no such medium universally receivable, and of general credit, however honest the purposes of such gentlemen may be, I cannot perceive the sanity of such views; I cannot comprehend the utility of their intentions; I can have no faith, sir, in any such systems. Now I would ask this plain question: whether any one imagines that all the duty of Government, in respect to the currency, is comprised in merely taking care that the gold and silver coin be not debased? If this be all its duty, that duty is performed, for there is no debasement of them; they are good and sound. If this is all the duty of Government, it has done its duty. But if Government is bound to regulate commerce and trade, and, consequently, to exercise oversight and care over that which is the essential element of all the transactions of commerce, then Government has done nothing.

I shall not, however, (said Mr. W.) enter into this question to-day, nor perhaps on any early occasion; my opinions upon it are all well known; and I leave it with great confidence to the judgment of the country, only expressing my strong conviction that, until the people do make up their minds, and cause the result of their conclusions to be carried into effect by their representatives, there will be nothing but agitation and uncertainty, confusion and distress, in the commerce and trade of the country.

I shall now (continued Mr. W.) confine myself to a few remarks on the bill before us, and not detain the Senate longer than will be strictly necessary to give a plain statement of my opinion.

This measure is proposed in order to provide for the wants of the Government. I agree that this is a necessary object; but the question is, whether this bill is the proper mode of making such a provision. I do not think it is, though others may think differently. If this is indeed the best mode, I should wish to see it carried into execution, for relief is wanted both by the Treasury and by the country, but first and chiefly by the country.

I do not say that by the law providing for this deposit the States have any fixed right to it; I prefer to put the matter entirely on the footing of convenience and expediency; and when it is considered what expectations have been raised—that this money has even been already disposed of in advance by the several States for different purposes, such as internal improvements, education, and other great objects—it becomes a question of expediency whether it would not be better to supply the wants of the Treasury by other means.

Another consideration of great importance in my view is this: There are already many disturbing causes in operation, agitating the transactions of society in all the various ramifications of business and commerce. Now, I would ask, sir, is it advisable, is it wise, is it even politic, to introduce, at such a time as this, another great disturbing cause, producing a reversed action, altering the destiny of this money, overthrowing contracts now entered into, disappointing expectations raised, disturbing, unsettling, and deranging still more the already deranged business transactions of the whole country? I would ask, is it worth while to do this? I think not.

We are to consider that this money, according to the provisions of the existing law, is to go equally among all the States, and among all the people; and the wants of the Treasury must be supplied, if supplies be necessary, equally by all the people. It is not a question, therefore, whether some shall have money and others shall make good the deficiency. All partake in the distribution, and all will contribute to the supply. So that it is a mere question of convenience, and, in my opinion, it is decided—

SENATE.]

Fourth Instalment.

[SEPT. 14, 1837.]

ly most convenient, on all accounts, that this instalment should follow its present destination, and the necessities of the Treasury be provided for by other means.

Again, if you pass this bill, what is it? It is a mere *brutum fulmen*; of itself, it will not produce any good if you do pass it. All admit there is no money; therefore the bill will give no relief to the Treasury. This bill, Mr. President, will not produce to the Secretary one dollar: he acknowledges himself that at all events it will not produce him many, for he says he wants other aid, and he has applied to Congress for an issue of some millions in Treasury notes. He gets the money, therefore, just as well without this bill as with it; the bill itself, then, is unnecessary, depriving the States of a sum which the Secretary cannot avail himself of, and which sum, notwithstanding this bill, he proposes to supply by an issue of Government notes. He calls this collateral aid to the measure of postponement. But this evidently reverses the order of things, for the Treasury notes are his main reliance; to them, only he looks for immediate relief, and this instalment now to be withheld is (as a productive source of revenue) only subsequent and collateral to the issue of the notes.

But now, sir, what sort of notes does the Secretary propose to issue? He proposes, sir, to issue Treasury notes of small denominations, down even as low as twenty dollars, not bearing interest, and redeemable at no fixed period; they are to be received in debts due to Government, but are not otherwise to be paid until at some indefinite time there shall be a certain surplus in the Treasury beyond what the Secretary may think its wants require. Now, sir, this is plain, authentic, statutable paper money; it is exactly a new emission of old continental. If the Genius of the old Confederation were now to rise up in the midst of us, he could not furnish us, from the abundant stores of his recollection, with a more perfect model of paper money. It carries no interest; it has no fixed time of payment; it is to circulate as currency, and it is to circulate on the credit of Government alone, with no fixed period of redemption! If this be not paper money, pray, sir, what is it? And, sir, who expected this? Who expected that in the fifth year of the *experiment for reforming the currency*, and bringing it to an absolute gold and silver circulation, the Treasury Department would be found recommending to us a regular emission of paper money? This, sir, is quite new in the history of this Government; it belongs to that of the Confederation which has passed away.

Since 1789, although we have issued Treasury notes on sundry occasions, we have issued none like these; that is to say, we have issued none not bearing interest, intended for circulation, and with no fixed mode of redemption. I am glad, however, Mr. President, that the committee have not adopted the Secretary's recommendation, and that they have recommended the issue of Treasury notes of a description more conformable to the practice of the Government.

I think (said Mr. W.) there are ways by which the deposits with the States might be paid by the funds in the banks. There are large sums on deposit in some of the States, and an arrangement might be made for the States to receive the notes of their own banks in payment of this instalment, while the Treasury is at the same time relieved by its own measure; and all the inconvenience, disappointment, and disturbance, which this bill will necessarily create, would be avoided. At any rate, the payment of this deposit could do no more than in some measure to increase the amount of Treasury notes necessary to be issued; it is a question of quantity merely. Much of the instalment, I believe, might be paid, by judicious arrangements, out of those funds now in the banks, which the Secretary cannot use for other purposes; so that the whole might be provided for, by no great augmentation of the

proposed amount of Treasury notes. I am, therefore, of opinion that this instalment should not be withheld: 1st. Because the withholding of it will produce great inconvenience to the States and to the people. 2d. Because provision may be made for paying it, without any large addition to the sum which it is proposed to raise, and which, at all events, must be raised for the uses of the Treasury.

In relation to the general subjects of the message, there is one thing which I intended to have said, but have omitted; it is this: We have seen the declaration of the President, in which he says that he refrains from suggesting any specific plan for the regulation of the exchanges of the country, and for relieving mercantile embarrassments, or for interfering with the ordinary operation of foreign or domestic commerce; and that he does this from a conviction that such measures are not within the constitutional province of the General Government; and yet he has made a recommendation to Congress which appears to me to be very remarkable, and it is of a measure which he thinks may prove a salutary remedy against a depreciated paper currency. This measure is neither more nor less than a bankrupt law against corporations and other bankers.

Now, Mr. President, it is certainly true that the constitution authorizes Congress to establish uniform rules on the subject of bankruptcies; but it is equally true, and abundantly manifest, that this power was not granted with any reference to currency questions. It is a general power—a power to make uniform rules on the subject. How is it possible that such a power can be fairly exercised by seizing on corporations and bankers, but excluding all the other usual subjects of bankrupt laws? Besides, do such laws ordinarily extend to corporations at all? But suppose they might be so extended, by a bankrupt law enacted for the usual purposes contemplated by such laws; how can a law be defended, which embraces them and bankers alone? I should like to hear what the learned gentleman at the head of the Judiciary Committee, to whom the subject is referred, has to say upon it.

How does the President's suggestion conform to his notions of the constitution? The object of bankrupt laws, sir, has no relation to currency. It is simply to distribute the effects of insolvent debtors among their creditors; and I must say, it strikes me that it would be a great perversion of the power conferred on Congress to exercise it upon corporations and bankers, with the leading and primary object of remedying a depreciated paper currency.

And this appears the more extraordinary, inasmuch as the President is of opinion that the general subject of the currency is not within our province. Bankruptcy, in its common and just meaning, is within our province. Currency, says the message, is not. But we have a bankruptcy power in the constitution, and we will use this power, not for bankruptcy, indeed, but for currency. This, I confess, sir, appears to me to be the short statement of the matter. I would not do the message, or its author, any intentional injustice, nor create any apparent where there was not a real inconsistency; but I declare, in all sincerity, that I cannot reconcile the proposed use of the bankrupt power with those opinions of the message which respect the authority of Congress over the currency of the country.

Mr. WRIGHT said it might become him to say a few words in relation to the bill before the Senate. His position in reference to this and other bills, perhaps, required him to do so. He would, however, confine himself strictly to the present subject, and to the most brief justification of his own course, and that of a majority of the Committee on Finance, who had concurred with him in reporting the bill.

Immediately upon the appointment of the committee, and the reference to it of the important subjects treated of in the message of the President, and the report of the Secretary of

SEPT. 14, 1837.]

Fourth Instalment.

[SENATE.]

the Treasury, the committee found that the Treasury of the United States was, very soon, to be in want of means to meet the current demands upon it, without regard to any further transfer to the States. They also found that this fourth instalment of the deposits with the States was to become payable on the 1st day of October, and amounted to about nine and one-third millions of dollars.

The state of the Treasury, as developed by the report of the Secretary of the Treasury, was, as he now recollected, (and he thought he could not be materially mistaken,) that, at the time when the statement appended to that report was made up, about the first day of the present month, (he believed the exact date was the 28th of August,) there was in the Treasury, subject to draft, available and unavailable, but eight million one hundred and some odd thousand dollars. The report was printed, and upon the table of every Senator, and would verify his correctness in this particular. This amount was exclusive of the sums already deposited with the States, being some twenty-eight millions.

To arrive at what would be the condition of the Treasury on the 1st of October, the expenses of the present month, which, from drafts already made and anticipated, were estimated at about two and a half millions, must be deducted from the eight million one hundred and odd thousand; thus leaving in the Treasury, subject to draft on the 1st day of October, less than six millions, without the transfer of a dollar to the States towards the October instalment. This, too, included all the funds in the Treasury, subject to draft for payments, or transfers to the States, whether available or not, upon the drafts of the Treasurer; the funds on deposit with the States not being taken into the computation.

If, then, the October instalment was to be transferred to the States, all the means in the Treasury, of all descriptions, on the day when that instalment was, by the deposit law, made transferable, would not be equal to two-thirds of the amount; and money must be borrowed upon the credit of the United States, to supply the deficiency.

Another and stronger view, however, was presented to the committee by the head of the Treasury Department. The largest portion of the funds in the Treasury at present, and which would remain there on the 1st of October, were wholly unavailable upon the drafts of the Treasurer. They were in the Western and Southwestern banks; and experience had already shown that the drafts of the Treasurer upon these banks would not be received in payment by the public creditors. It was equally proved that the States, other than those in which the banks were located, would not take those drafts, and give their obligations for a repayment of the amount in money, in pursuance of the provisions of the deposit law. The transfer to the States, therefore, could not be made, even to the amount of the funds in the Treasury subject to draft, by reason of the character of the funds to be drawn upon; and, if to be made a loan, to a much greater amount than the deficiency of those funds upon paper, would be regarded indispensable, from the unavailable condition of these funds.

Still it would be seen by the Senate, that this disposition of the funds in the Treasury, and of the public credit, would leave the Treasury without a dollar to answer the current demands upon it. The appropriations for the year were large, almost beyond example; and the current calls upon the public Treasury must be measured by them. Hence it had been an object of primary interest with the Secretary to devise the means for carrying on the Government, and fulfilling its obligations to the public creditors; and, in reaching that object, he had, as he (Mr. W.) considered, wisely and properly suspended his efforts to make this last transfer to the States. In pursuance of this necessity, he had told Congress, in his printed report, that he should make no movements towards the accomplishment of that object, until the action of Congress should signify its will that that

transfer should still be made, and should provide the means for making it. These facts and conclusions were fully before the committee.

It then became necessary for them to see what would be the state of the public Treasury, upon the supposition that the October instalment of the deposit with the States should be withheld. In prosecuting that inquiry, they found that the funds in the Treasury subject to draft were to so great an extent unavailable, that it would be indispensably necessary to resort to the use of the credit of the Government, in some form, to anticipate the practical use of the unavailable portions of those funds for the purpose of current payments.

At this stage of the inquiry, two other important interests, both public and private in their character, pressed themselves upon the attention of the committee. In any settlement with the late deposit banks, which should have proper regard to the present deranged and depressed state of the business of the country, and to the security of the public moneys yet remaining in their possession, the committee were forced to the conclusion that indulgence to these institutions, beyond their legal liabilities, was indispensable. The conclusions of the committee upon this point had been embodied in the shape of a bill, and was now before the Senate in a printed form. The other great interest to which he referred was a similar indulgence upon the revenue bonds. There, also, the committee had reported a bill, which was before the body. In both cases, the least indulgence had been proposed, which the committee believed to be consistent with the great private interests of the community, or the security of the public property involved. They had been induced to believe that the time granted to the banks was the least which would enable them to meet the payments in the manner required by law, and that any dependence upon a more speedy collection of the merchants' bonds would result in disappointment to the public Treasury, and a consequent failure to pay the public creditors.

It being assumed that Congress would agree with the committee in these conclusions, and that these bills would meet with approbation, what then would be the state of the Treasury with reference to a transfer of the October instalment to the States?

Mr. W. said he understood the estimates of the department to be, that, without these indulgences to the banks and the merchants, and with the postponement of the October instalment of the transfer to the States, the whole means in the Treasury might be adequate to its wants; in case Congress should be willing to grant the use of the public credit temporarily, that that portion of the funds which were at present unavailable might be brought into practical use, until time should render them available for the redemption of that credit. If those indulgences should be granted, then the use of the public credit would be required beyond the current year, because material portions of the existing means, and of the otherwise accruing revenue, would be placed without the reach or control of the Treasury for more than that period.

Upon these calculations and hypotheses the bills of the committee had been framed; and it was now his duty to give these facts and conclusions practical application to the measure under discussion.

This was a bill to postpone the October instalment of the transfer to the States. If he had been correct in his statements, and had made himself intelligible to the Senate, it would be seen that nothing existed in the Treasury out of which this transfer could be made, and that nothing within its power could enable it to make it without the aid of Congress. It would also be seen that the whole means of the Treasury were inadequate to meet the current calls upon it without the temporary aid of the credit of the nation; and that, if a reasonable indulgence were granted to public

SENATE.]

Fourth Instalment.

[SEPT. 14, 1837.]

debtors, (such as the condition of the country and the security of eventual collections seemed to demand,) the use of that credit must extend beyond the current year, and could, at best, be only eventually met and redeemed by the means of the Treasury, existing or in prospect, without a further transfer to the States.

In view of these facts, Mr. W. said his own mind had been brought to this simple and plain conclusion: that the United States had no longer any moneys to be safely kept by the States; that if the October instalment of the transfer provided for by the deposite law of 1836 were made, the means to make it must be borrowed upon the credit of the United States; and that Congress must place itself in the singular position of using the public credit to borrow money, merely that it might be safely kept by the States when it was obtained. He understood these provisions of the deposite law, upon their face, to be mere provisions for the safe-keeping of the public money. He understood this to be the object of those who advocated and supported that law at the time of its passage. In that sense he was disposed to regard it now; and he did not, therefore, view it as creating any claim in favor of the States, or as imposing any debt upon the United States. If, therefore, we were called upon to borrow money to fulfil the provisions of that law, he could only view it in the light of a call upon us to borrow money, merely that it might be safely kept when so borrowed. He had not felt, and could not feel, himself authorized to recommend a loan upon the credit of the nation for such a purpose. He believed he spoke the sentiments of those of his colleagues upon the committee, when he said that these were the views which had actuated him and them in consenting to report this bill.

Mr. W. said he owed it to himself to say that he had felt most sensibly the remarks of the honorable Senator from Massachusetts [Mr. WEBSTER] as to the inconveniences and disappointments which must grow out of withholding the transfer of this instalment to the States. With a much less knowledge of the varied business and pecuniary affairs of our extended country than that distinguished Senator, he had not been insensible to these considerations. The course pursued by his own State, in the disposition of this money, had compelled him to be awake to them. The law of his State for the investment of its portion of this money had placed the matter even beyond its control, and had compelled its chief fiscal officer, long since, to announce to its citizens that this instalment would be paid from the treasury of the State, whatever might be the action of Congress upon the subject. This would, beyond doubt, be done; and those who sent him here, and whom it was his duty and desire faithfully to represent, should this bill pass, would be compelled to indemnify, from their own public funds, the individuals interested as borrowers of these moneys against disappointment, damage, or loss, from the action of Congress. Yet, under these delicate and difficult circumstances, he had not been able to convince himself that he could properly do otherwise than to support the bill. He owed a high duty to those constituents, but he owed, in his estimation, a higher to the nation and to the constitution of his country. He could not think that the power granted to Congress to borrow money upon the credit of the United States could be properly exercised for the mere purpose of raising money to be safely kept; and this he must consider the simple question presented. He might be mistaken in this view of the matter, but such was the deliberate conclusion of his mind, upon the most mature reflection; and that conclusion must govern his action upon the bill, as it had done his action as a member of the committee which reported it.

Having said thus much, Mr. W. said, he would only correct two or three errors of fact into which the honorable Senator who had just resumed his seat [Mr. WEBSTER] seemed to him to have fallen, and he would detain the Senate no longer.

The honorable Senator seemed to suppose that the means to make this transfer to the States were in the Treasury; and that the only difficulty, separate from the other demands upon it, grew out of the present unavailable character of those means. The statements he had already made had shown the error of this hypothesis. He had already shown that the whole means in the Treasury, even when the Secretary of the Treasury made his report, at the commencement of our present session, of whatever character, whether available or not, were less, by more than a million of dollars, than the instalment required to be transferred to the States under the deposite law. He had further shown that those means, such as they were, were, before the 1st of October, when that transfer was required to be made, to be still further diminished by the whole expenses of the Government for the present month, ascertained and estimated to amount to two and a half millions of dollars. Hence it would follow, that the whole means in the Treasury on the 1st day of October next must be from three and a half to four millions less than the transfer required. It was in vain, therefore, Mr. W. said, to escape from the conclusion, that, if Congress should insist upon this transfer, it must authorize a loan of money upon the public credit, to enable the Treasury to make it: in other words, that it must authorize a loan of money upon the credit of the United States, in order that that money, when loaned, may be deposited with the States for safekeeping.

Another error of the honorable Senator [Mr. WEBSTER] which he felt bound to correct was in his strictures upon the recommendations of the Secretary of the Treasury, as to the manner of issuing Treasury notes. The honorable Senator had criticised this part of the report of the Secretary of the Treasury with some severity, and had held him up to the Senate and the country as striking out a new path for the supply of the Treasury; as recommending the issue of paper money, of a description of paper similar to that which we know by the denomination of "continental money;" and of doing this for the first time since the organization of the Government under the constitution. The fault complained of consisted in a recommendation, merely discretionary and alternative, to issue Treasury notes bearing no interest, and payable to the bearer, in case the public creditors should be found willing to receive such notes in payment of their demands against the Government, at par; otherwise, to give the notes such an interest as would bring them to par.

Mr. W. said, as the committee, in the bill they had reported, had not followed this recommendation of the Secretary, it would be seen that no question was depending before the Senate, either in the bill now under discussion, or in any other, which rendered this point material; but he was sure his object would be fully understood and appreciated in making this correction. It was simply to defend this public officer against a mistaken accusation. It was not necessary for him to defend, at this time, the soundness of the recommendation, but to protect the Secretary against the charge of being the author of a principle now supposed to be so new and so dangerous. To do this, it was only necessary for him to read the third section of the act of the 24th of February, 1815, authorizing an emission of Treasury notes, in which all these dangers would be found to be embraced, adopted, and made imperative, as a part of the laws of the land.

[Mr. W. here read the section of the act, as follows:

"Sec. 3. And be it further enacted, That the said Treasury notes shall be prepared of such denominations as the Secretary of the Treasury, with the approbation of the President of the United States, shall, from time to time, direct; and such of the said notes as shall be of a denomination less than one hundred dollars shall be payable to bearer, and be transferable by delivery alone, and shall bear no interest; and such of the said notes as shall be of the de-

SEPT. 14, 1837.]

[SENATE.]

nomination of one hundred dollars, or upwards, may be made payable to order, and transferable by delivery and assignment, endorsed on the same, and bearing an interest from the day on which they shall be issued, at the rate of five and two-fifths per centum per annum; or they may be made payable to bearer, and transferable by delivery alone, and bearing no interest, as the Secretary of the Treasury, with the approbation of the President of the United States, shall direct."]

What, now, Mr. W. asked, was the condition and the fault of the Secretary? He had found the public treasury in want of means to pay the public creditors. The exigency had grown out of a reverse in trade and business, sudden and universal; and the use of the credit of the Government, in some form, seemed to him indispensable. It became his duty to suggest to Congress the means and the mode of supplying the Treasury. He examined the legislative history of the Government in former cases of embarrassment at the Treasury, and found, among other expedients, that emissions of Treasury notes paying no interest, payable to bearer, transferable by delivery alone, and without any restriction as to the denomination of the notes to be so issued, had been authorized. Among a variety of plans to meet the present wants, he suggested this, recommending that no note should be issued for a less amount than \$20. Had he attempted to introduce any new principle? Certainly not. Was his conduct, in making this suggestion, in conformity with the previous practice of Congress itself, deserving of the high censure which had been bestowed upon it? He (Mr. W.) thought not.

A single other reply to the honorable Senator. That gentleman had supposed the President most inconsistent and contradictory with himself, in remarking, generally, in his message, that he did not recommend to Congress measures for the regulation of the general currency of the country, or of the foreign and domestic exchanges, because he could not find in the constitution any power conferred upon Congress to regulate these matters; and then, in the same message, recommending a bankrupt law, as applicable to banks and bankers. Where was the inconsistency or contradiction? The President had said he omitted to make further recommendations upon these subjects than those found in the message, because he could not find, and did not believe, that Congress possessed further power over them; but he did recommend a bankrupt law, because the power to pass bankrupt laws is conferred upon Congress by the constitution, in express terms. He did, therefore, recommend a bankrupt law, which the constitution authorizes; and he did not recommend any thing else, upon these points, because the constitution authorizes Congress to do nothing else. Is this inconsistent?

Mr. WEBSTER said, in reply, if the act of 1815 authorized the issuing of Treasury notes, no circulation was ever made of such notes as the Secretary now recommends. All Treasury notes went on the ground of a temporary loan to the Government, to be paid or funded as soon as the Treasury would allow.

The member from New York [Mr. WRIGHT] had said that the question before the Senate was a simple proposition, whether they should borrow money to be safely kept with the States! By him, and by others, it had also been represented as a question whether they should borrow money to give away! Nobody, Mr. W. thought, would borrow money merely to give away, or deposite for safe-keeping. But he would put it to the honorable member, if any Government had made a contract, or excited an expectation that a deposite would be made, and the other party had acted on the faith of this assurance, and had nearly completed their arrangements, whether it ought not to supply the means, even if it did not, at the time, possess them? And suppose it was the promise of a gift, instead of a deposite; might it not be found more just to borrow,

than to defeat the expectation on which the other party had acted? What was the object of this bill? It was not to repeal, but to postpone what was hereafter to be fulfilled. Such being the case, it was doubtful whether it could ever be transferred to the States with more convenience than it could now from the banks.

During the late war there was great want of money, and a great disposition to use Treasury notes, and pass them as a medium of payment to the public creditors. But, in the difficulties and embarrassments of a foreign war, things were done, which, in a day of peace and abundance, we should be slow to do. And one thing which we should be slow to do was, to propose by law that we should pay the public creditors any thing less in value than gold and silver, on the condition that the creditors would voluntarily take it. The Secretary had said that the protested checks now in circulation were only a little depreciated below the value of specie, and argues that these notes will be as good at least as the protested checks. But suppose these notes should be depreciated only a little below the value of silver; was it proposed that they should be offered to the public creditors if they would receive them? What was meant when it was said that the officers of the Government may pay its creditors in Treasury notes, if they will voluntarily receive them? What was the alternative? Were the gold and silver held in one hand, and the Treasury notes in the other? On the contrary, it was a sort of forced payment, not as good as was required by law. All knew there was no choice. The men who labored in the streets of this city, on the public works, or who furnished the bricks and stones, would come for their pay; and they would be offered Treasury notes, and asked if they were willing to take them. But would there be gold and silver in the other hand? No; nothing but the Treasury notes; and they would be asked if they were willing to take them; and then, if they should take them, that is called voluntary reception.

Now it is evident that, in such a case, the only choice is between Treasury notes, on the one hand, and something worse, or nothing at all, on the other. No man can be supposed to receive voluntarily any thing of less value than that which he is legally entitled to. The reception of such inferior medium is always the result of force or necessity, either greater or smaller. Neither the justice nor the dignity of the Government could ever allow of such a course. If Treasury notes were offered to the public creditor, there ought to be an actual choice afforded between them and the specie. And, especially, with what an aspect could this Government offer such payment, at the very moment when, with a stern countenance and iron hand, it was demanding of its creditors metallic money for every dollar of its dues? Was it not now the law that no officer of the Government should offer the public creditor any thing less in value than specie? Mr. W. thought, therefore, that the notes proposed by the committee were better than those recommended by the Secretary. He was in favor of that system which would put the public creditor in no such selection as between paper and nothing.

Mr. BUCHANAN said he had often admired the dexterity with which the Senator from Massachusetts could extricate himself from a difficulty, in which, however, he was seldom involved. On such occasions, he always made a skilful retreat. Feeling the respect which he (Mr. B.) did for his legal knowledge, he had received, as a matter of faith, his declaration that Treasury notes not bearing interest had never been issued under the present constitution; and when he called up the ghost of the ancient Confederation to act as godfather of these Treasury notes, Mr. B. remained satisfied that he had made himself fully acquainted with the laws in relation to that subject. But scarcely had he taken his seat, when the act of 1815 laid the ghost which he had conjured up; and by that it ap-

SENATE.]

Fourth Instalment.

[SEPT. 14, 1837.]

peared that Congress had done the very thing which he had declared had not been done since the days of the Confederation. Thus much was due to the Secretary of the Treasury. Mr. B., however, rejoiced that the Committee on Finance had proposed the issue of no notes not bearing interest.

In regard to this bill, a plain statement of facts would be the most conclusive argument which could be urged in its favor. He had voted for the deposit of June, 1836; and, upon a retrospect of all which had occurred since its passage, he had found no cause to repent of this vote. It was a choice of evils; and between the alternatives presented, he thought he had made the best choice. On the one side, after reserving five millions, nearly forty millions of dollars had accumulated in the deposit banks. This vast amount of money was used by them to increase the dividends of their stockholders, to expand extravagantly the paper circulation of the country, and to excite speculation to the greatest excess. On the other hand, strong objections existed against making the Federal Government an instrument for the purpose of collecting money that it might be deposited with the States. The precedent might in many respects be dangerous. But the money was on hand. It had been collected under existing laws. Placed in this situation, he thought it was more just, more politic, more safe, to place it in deposit with the States, that it might be used for the benefit of the people, than to suffer it to remain with the banks for the benefit of their stockholders, and to the injury of the country.

But does the deposit law, from first to last, contain one sentence—nay, does it contain one word—which resembles a gift or a loan to the States? Is it not, in terms, a bare transfer of the deposits from the banks to the States? Under its provisions, the faith of all the States is pledged for the safekeeping and repayment of their respective proportions of this money, whenever they shall be required by the Secretary of the Treasury, for the purpose of defraying the wants of the Treasury. The mode and manner in which he shall call for it are expressly prescribed. Nay, more; the case has actually occurred. If the Secretary had pursued the line of strict duty under the law, he would, ere this, have called on the States for a portion of the three instalments which have already been paid. He has acted wisely in not making this demand until the pleasure of Congress could be known. The States are not now in a condition to return immediately any portion of what they have already received.

Under these circumstances, the question is, whether we are bound, upon any principle, to deposit with them the fourth instalment, when the Secretary of the Treasury, the very next day, might demand a return not only of it, but of the three other instalments, in the manner prescribed by the law.

The Senator from Massachusetts had not contended that we were bound by any contract to deposit this fourth instalment with the States. He had said, however, that if an individual, by his conduct, had induced a reasonable expectation that he would loan money to another, or give money to another, it might become his duty to borrow it, and pay interest for it, for either of those purposes. Mr. B. denied that the conduct of Congress was such as to afford any pretext for such an expectation. On the face of the act there was nothing but *deposit* written. Neither a loan nor a gift appeared upon it. It was a mere deposit, without interest, to be restored when demanded in the manner prescribed; and not a loan for a given period, much less an absolute gift. If the States, therefore, had entertained any such expectation, it was from other circumstances, and not from the solemn contract into which they had entered with the United States under this law.

Mr. B. knew that several of the States had made appropriations of this money, which would render it extreme-

ly inconvenient for them to return, at the present time, any portion of the money which they had already received. He did not believe that it ought to be demanded from them by the Secretary of the Treasury, without the special direction of Congress. Still, this opinion was not founded upon any doubts which he entertained of their obligation to refund it.

Congress would not have been involved in its present difficulties in regard to this subject, but for the unfortunate amendment which had been made to the deposit bill by the House of Representatives, which was acquiesced in by the Senate. Had it not been for this amendment, we might now proceed and suffer the fourth instalment to be deposited with the States. The Secretary of the Treasury would then have received from them transferable certificates of deposit, in such convenient sums as he might have directed, bearing no interest until it became necessary for him to use them, but afterwards bearing an interest of five per cent., and redeemable at the pleasure of the States. At this very moment such certificates would command a premium in the market, and would be equal to gold and silver. The Treasury might have been replenished by their sale; and we might suffer the deposit law to take its course.

Mr. B. said, however much ingenuity might attempt to disguise this question, the result was, that we must now determine whether we will borrow the amount of the fourth instalment, either in the form of Treasury notes, or by a direct loan, and pay interest upon it, in order that we may deposit it with the States for safekeeping, and without interest. This was the plain and simple proposition. It was the result of all the argument. What man, in his senses, ever contracted a debt in order that he might deposit the amount of it with his neighbor for safekeeping? And is the Federal Government to be guilty of this absurdity? Are we, as the trustees of the people of the United States, to manage their concerns so unwisely as to involve them in a debt, and collect taxes from them to pay it, for any such purpose? However much the States might desire to receive this fourth instalment, and whatever attempts might be made to excite popular feeling upon this subject, he had full confidence that his constituents would approve his vote upon this bill.

Mr. B. said that he knew very well that this was a subject well calculated to enlist the feelings of Senators. The instalment might be deposited with the States against his vote. In that event, he should bow most cheerfully to the will of the majority. Indeed, there was one consideration which had induced him to endeavor to bring himself to this conclusion; and nothing but a conviction of imperious duty had stood in the way. He knew that the greater amount of Treasury notes which we issued, the greater would be the relief to the community. Whatever amount might be issued, would be equal, in this respect, to the creation of so much gold and silver. They would assist in regulating the exchanges, both foreign and domestic. They would go to Europe in payment of our debt, and thus prevent the transportation of the precious metals. If this bill should not pass, their amount would be increased several millions; and thus additional relief would be afforded to the public. But however much he might desire, and however much he did desire this result, he could not consent to borrow money on the faith of the United States, not to carry into effect the legitimate purposes of the Government, but to place it on deposit with the several States.

In answer to Mr. BUCHANAN,

Mr. WEBSTER, having obtained and examined the act of 1815, said: The honorable member from Pennsylvania has been kind enough to say that I do not often get into difficulties in debate, and that when I do, I generally extricate myself better than I have done on the present occasion. He partakes in the supposed triumph of his friend from New York, [Mr. WRIGHT,] in having proved me incorrect when

SEPT. 14, 1837.]

Fourth Instalment.

[SENATE.]

I said that this Government had never issued such paper money as the Secretary has now recommended. Now, sir, although I am pleased to see the happiness which the gentleman enjoys, yet I believe I must dash it a little. Most assuredly, sir, it authorizes no such paper as is now proposed. I was persuaded it could not, as I have a pretty good recollection of the proceedings of Congress on such subjects at that time.

The law of 1815 authorized the issue of two classes of Treasury notes: 1st. Such as bore no interest, but which, the very hour they were issued, might be funded in a 7 per cent. stock, to be redeemed like other stocks of the Government. 2d. Treasury notes bearing an interest of five and two-fifths per cent., capable of being funded in like manner, in a 6 per cent. stock. These stocks were to be issued on application by any commissioner of the revenue in any State. Now, what comparison is there between either of these classes of Treasury notes and those recommended by the Secretary, which bear no interest, and for which no fixed redemption is provided?

I affirm again, therefore, sir, all that I have said, namely, that the notes recommended by the Secretary are regular paper issues, like the old emissions of Congress and the States before the adoption of the present constitution; and that no precedent has been found for them, and I am sure none can be found, in the practice of this Government.

Mr. BUCHANAN said he did not think the Senator, with all his ingenuity, had got out of the difficulty. Under the section of the law of 1815, which he had just read, Treasury notes were to be issued without interest; they were to circulate as a currency without interest; they might continue to circulate for years without interest. It did not alter the case that the holder of them above a certain amount had the privilege of funding them, and converting them into a stock bearing interest. This interest did not commence from the date of their issue, but from the time they were funded. All the time they remained in circulation, they were Treasury notes without interest. They were what the Senator from Massachusetts had supposed never was issued under the present constitution. Mr. B. however, agreed with the Senator that at this time no Treasury notes ought to be issued which did not bear interest.

Mr. CALHOUN said that he was decidedly of the impression that, under the circumstances of the case, this postponement ought to be made. The object of the deposit law was to draw the revenue out of the grasp of the Government, and to restore it to those to whom it ought to be restored. And now, when there was no surplus, it was not contrary to the purpose of that law to withhold it. But the responsibility of doing so would rest on gentlemen of the administration and those of the opposition who made last year the extravagant appropriations of thirty-two millions, exceeding the estimate of the Secretary of the Treasury. They were then told of the folly of raising the revenue, and of raising the disbursements. The result now was, that the Government was bankrupt. Were they never to look ahead, and see the difficulties that threatened them?

Another era had now arisen. They had got through with the surplus, and Mr. C. trusted they were through with extravagant appropriations. If they did not economize and retrench, he saw a new age commencing—perhaps that of Treasury notes—when the compromise act would be annulled, and the high tariff revived. But Mr. C. would agree that the fourth deposit should be withheld, since that law had fulfilled its main purpose, and since a new series of extravagances was now to arise unless they kept a good lookout.

Mr. WALKER moved an adjournment; when, a division being called for, the Senate refused to adjourn.

Mr. BUCHANAN then rose to offer an amendment, if in order; the object of which was to take off from the Secretary the responsibility of calling upon the States, and to

repose this responsibility where he (Mr. B.) thought it should be—namely, in Congress. For this purpose he proposed to insert “provided the three first instalments already paid do remain on deposit until further directed by Congress.”

Mr. NILES said he must ask for the yeas and nays on the amendment, and was sorry it had been offered. If it was to be fully considered, it would renew the debate on the deposit act, as it went to change the essential principles and terms of that act. A majority of those who voted for that act, about which there had been so much said and so much misrepresentation, had professed to regard it—and he could not doubt that at the time they did so regard it—as simply a deposit law; as merely changing the place of deposit from the banks to the States, so far as related to the surplus. The money was still to be in the Treasury, and liable to be drawn out, with certain limitations and restrictions, by the ordinary appropriation laws, without the direct action of Congress. The amendment, if adopted, will change the principles of the deposit act, and the condition of the money deposited with the States under it. It will no longer be a deposit; it will not be in the Treasury, even in point of legal effect or form: the deposit will be changed to a loan, or, perhaps more properly, a grant to the States. The rights of the United States will be changed to a mere claim, like that against the late Bank of the United States; and a claim without any means to enforce it. We were charged, at the time, of making a distribution of the public revenue to the States, in the disguise and form of a deposit; and this amendment, it appeared to him, would be a very bold step towards confirming the truth of that charge. He deemed the amendment an important one, and highly objectionable; but he saw that the Senate were prepared to adopt it, and he would not pursue the discussion, but content himself with repeating his request for the yeas and noes on the question.

Mr. BUCHANAN said he had not imagined this amendment would meet with opposition. He wished to know if it was right and proper that the Secretary should be made responsible for not calling upon the States for this money, as the law required him to do? The condition of the States was such that the Secretary cannot make such call upon them. He (Mr. B.) was therefore desirous to relieve him from this embarrassment. The substituting Congress instead of the Secretary would not, Mr. B. thought, make any change in the nature of the fund.

Mr. CALHOUN said he fully concurred in the proposed amendment. It was due to the States in their sovereign capacity not to subject themselves to be called upon for the money by any other authority than Congress.

The question was then taken on the amendment offered by Mr. BUCHANAN; and the yeas and nays being called for, were as follows:

YEAS—Messrs. Allen, Bayard, Black, Brown, Buchanan, Calhoun, Clayton, Crittenden, Fulton, Grundy, Kent, King of Alabama, King of Georgia, Knight, Linn, Lyon, Morris, Nicholas, Norvell, Preston, Robbins, Robinson, Sevier, Smith of Indiana, Southard, Strange, Swift, Tallmadge, Wall, Webster, White, Williams, Young—33.

NAYS—Messrs. Benton, Clay of Alabama, Hubbard, Niles, Pierce, Rives, Roane, Ruggles, Smith of Connecticut, Tipton, Walker, Wright—12.

Mr. TALLMADGE then moved, as an amendment, to strike out all the bill after the enacting clause, and insert the following as a substitute therefor:

“That the money deposited, and to be deposited, with the States, under the 13th section of the act of June 23, 1836, shall remain on deposit with the States until otherwise directed by Congress.”

Mr. T. made a few brief remarks in support of this amendment, which he said embraced the substance of the amendment offered by the Senator from Pennsylvania, [Mr. BUCHANAN.]

SENATE.]

Fourth Instalment.

[SEPT. 15, 1837.]

The yeas and nays being ordered, the question was taken on Mr. TALLMADGE's amendment, and decided in the negative, as follows:

YEAS—Messrs. Bayard, Clayton, Crittenden, Fulton, Kent, Knight, Lyon, Nicholas, Norvell, Preston, Robbins, Smith of Indiana, Southard, Swift, Tallmadge, Tipton, Webster, White—18.

NAYS—Messrs. Allen, Benton, Black, Brown, Buchanan, Calhoun, Clay of Alabama, Grundy, Hubbard, King of Alabama, King of Georgia, Linn, Morris, Niles, Pierce, Rives, Roane, Robinson, Ruggles, Sevier, Smith of Connecticut, Strange, Walker, Wall, Williams, Wright, Young—27.

The question on engrossing the bill as amended, and ordering it to a third reading, was then taken, and decided in the affirmative, as follows:

YEAS—Messrs. Allen, Benton, Black, Brown, Buchanan, Calhoun, Clay of Alabama, Fulton, Grundy, Hubbard, King of Alabama, King of Georgia, Linn, Morris, Niles, Pierce, Rives, Roane, Robinson, Ruggles, Sevier, Smith of Connecticut, Strange, Walker, Wall, Williams, Wright—27.

NAYS—Messrs. Bayard, Clayton, Crittenden, Kent, Knight, Lyon, Nicholas, Norvell, Preston, Robbins, Smith of Indiana, Southard, Swift, Tallmadge, Tipton, Webster, White, Young—18.

The Senate then, on motion of Mr. NICHOLAS, adjourned.

FRIDAY, SEPTEMBER 15.

Mr. HUBBARD called up the resolution offered by him yesterday, by which it was proposed that the Senate should meet in future at 10 o'clock.

Mr. H. modified his resolution to read, "that after this week, the Senate meet at 11 o'clock, A. M.;" and this was agreed to.

FOURTH INSTALMENT.

The bill to postpone indefinitely the payment of the fourth instalment of the deposit bill, was read a third time; and the question being upon its passage,

Mr. PRESTON, of South Carolina, said he should not now undertake to make a formal opposition to this bill, as he understood its fate to have been decided on the second reading, and it might be considered as having already passed. He thought, however, it ought to have met with more discussion than had taken place upon it, and he would therefore beg the indulgence of the Senate while he briefly expressed his opinion upon its merits.

The first inquiry he should make was, whether a case had been made out justifying the withholding of this instalment of the deposit with the States; and, secondly, he would inquire if, supposing the case had arrived, this was the proper and the most advisable course to be adopted to assist in replenishing the Treasury.

My opinion (said Mr. P.) decidedly is, that the *casus federis* has not arrived for Congress to encroach upon the fund set aside for deposit with the States; and I further am of opinion that, even if it had now arrived, yet this is not the course by which we shall best consult the interests of the country, in attempting to bring relief to the Treasury.

Let us briefly consider the history of the deposit act. That act was passed contemporaneously with other acts of most prodigal expenditure. We had a surplus which we knew not how to dispose of. To expend—to get rid of our overflowing funds—was then the order of the day. We were in the full tide of an inauspicious prosperity, and the departments were stimulated and goaded on to find out how much they could spend, while the majority in Congress seemed to be employed in finding out how much they could give. The departments asked for twenty millions; and Congress, eager to get rid of the surplus, outstripped

even their extravagant demands, and gave them thirty millions. Then it was, sir, that this deposit bill was originated. It went hand in hand with bills of the most extravagant and prodigal expenditure.

Now, sir, under these circumstances, when we give so prodigally to the departments, at a time of high prices, it is well worth our while to inquire whether the time has not arrived to lop off and curtail from our expenditure, rather than to withhold this instalment from the States. I am of opinion we might save the nine millions of this instalment by curtailing the extravagant expenditures of the departments, and so pay the instalment—not by distressing the States in withholding it, but by introducing a wholesome measure of retrenchment in the expenditure of Government.

This, sir, is the ground I take; namely, that it would be far better to curtail our expenditure than to stop the payment of this instalment.

Again, I would ask, does the proposition contained in this bill go to relieve in any manner the pressure upon the people? Not in the least, sir. Neither will the Government place itself in funds by the operation of this law. The banks have laid violent hands on the deposits; they will pay them no longer in the medium they were expected to pay them in. Of what use, then, will this bill be to Government? The money is locked up in the banks; and the wildest enthusiast in favor of this measure would not go so far as to say that by the mere fiat of this body a bill such as this is going to fill the country with gold and silver. We have not got the magician's wand, by one touch of which we can make the gold come forth from its hiding places. We may call, indeed, by our enactments, the spirits from the vasty deep; but will they come when we do call them? Will money be obtained for the Government when you pass this law? No, sir; we all know that this bill will bring no money into the Treasury.

It would be better, therefore, under such circumstances, to let the law go on, and let the States receive the whole of the deposit. The States, sir, are willing to take the instalment in the only medium in which the State institutions are able to pay it. They are not going, at this crisis, to clamor for a hard-money currency. They will be satisfied with receiving the State currency—their own domestic currency. But the President says "no;" and by passing this bill, according to his recommendation, you will not let them receive a currency which they are willing to receive. The amount of the instalment now in the banks would be useful, in that currency, to them, for they would gladly receive it; but it will be of no use whatever to the Government, for the Government will not receive it. Then, sir, if I may use a homely similitude, by such an enactment as this you act the part of the dog in the manger—you will not take the money of the States yourselves, and you will not let them have it, though they wish to receive it. Is this a noble, or even a politic proceeding? Is this your reforming the currency? Is this aiding and relieving the embarrassments of the people, to stamp a bad name upon their currency, to refuse to receive it yourselves, to pass laws fixing a stigma upon it, and then to forbid others to receive it?

Again, sir: there is another view which I think ought to be taken of this subject; and, had it received its due consideration, such a measure as this could surely never have been proposed. In fifteen days from now, this instalment will be due to the States. They have already made their disposition of the money. It has been disposed of in various contracts, and been directed to various great and useful purposes; and now, suddenly, at this short notice, the expected sum—the sum which the law had pledged to them—is, by another law, to be withheld. But, by the terms of the deposit law, a specific time was fixed upon and accorded to the States, in which the States were to have notice of any demand to be made upon them for the

SEPT. 15, 1837.]

Fourth Instalment.

[SENATE.]

sum deposited. By the law, therefore, they are entitled to a notice before this fourth instalment can be withdrawn from them—for they have already expended it; and this bill to withhold it is equivalent in its action to taking back the money from them, without the notice which the law provided for.

Mr. P. then proceeded to show that there were other and better methods of raising money for the Treasury, without resorting to this expedient, which, while it would be onerous and oppressive to the States, would be, at the same time, virtually useless and unproductive to the Government. One mode which he should point out was, that of an issue of certificates of deposit, which would immediately provide available funds for the Government, without this measure of withholding an expected and promised instalment. Mr. P. remarked that such a provision had been originally inserted in the deposit bill; but he greatly regretted that, in order to overcome the prejudices of an illustrious person, and to make the bill acceptable to him, (the late President of the United States,) that provision had been stricken out of the bill, in order to secure its passage and save it from his veto. He also remarked that he should not permit himself now to dwell upon that painful recollection, but should content himself with merely expressing his deep regret that so wise and salutary a provision had been stricken out of the bill from considerations so individual, personal, and little.

If (continued Mr. P.) that wise and salutary measure had been carried out in the original deposit bill, we should not now be here. The Senate would not now be fatigued with its present labors, and all the trouble we are now undergoing would have been avoided. The Treasurer would then have only had to throw the certificates into the market, to raise what sum he required for the use of the Government. Such a course, sir, (observed Mr. P.) would have been enough and ample to pry up the Government out of the Slough of Despond in which now it is sunk. Not only would it have given funds to the Government, but also it would have given relief to the people. It would have thrown money into circulation; it would have benefited all parties. It would have been twice blessed, giving double relief both to the States which gave the certificates, and to the General Government, which received them.

By this proposition to suspend or postpone the payment of the instalment, Mr. P. said, no one will be benefited. He would venture to suggest how both parties might be benefited, and the issue of Treasury notes might be avoided. Let the clause excised from the original deposit bill be re-enacted; let the States issue their certificates, which will be as good as specie to the Government. Let the States receive this instalment, and let the Treasury receive the certificates, and sell them. In this manner, instead of adding to the general distress of the times, both parties would be eminently benefited. Surely (said Mr. P.) those gentlemen who hold our destinies in their hands, who carry all the measures they please to imagine, good or bad—and he (Mr. P.) was sorry to say he could not look back and call all their measures good, nor could he look at this measure and deem it either wise, or good, or politic—surely, he would repeat, those gentlemen ought to be willing to adopt such measures as would be the least distressing, the least painful, onerous, and disturbing, at a time of general distress, such as the present, when we are called together to relieve, not to aggravate; to benefit, and not to injure; to heal, and not to take vengeance.

I entreat those gentlemen, therefore, (said Mr. P.,) to take these things into consideration. I entreat them to give more time to the States—not to stop the payment of this instalment; I entreat them to let the money go where it might almost be considered a vested right it should go. Mr. P. concluded by saying he was sorry to have detained the Senate at this stage of the bill; he had not expected

that he could have weight enough to change the course of the gentlemen of the majority, or to prevent the passage of this disastrous bill. All he had desired was, to give brief expression to his views of it. He had now done so, and, in doing so, he felt that he had done his duty.

Mr. CALHOUN said he thought it would be better for his colleague [Mr. PAXTON] to make a motion at once for the repeal of unexpended appropriations to the amount of nine millions of dollars, the amount of the instalment. There would then be a surplus to that extent, which might go for the payment of the fourth instalment. If Mr. P. felt unwilling at this stage of the bill to make such a motion, he (Mr. C.) would agree to the laying of the bill on the table in order to give time. He confessed that the idea had occurred to him which his colleague had just stated; but he did not see any probability of such a proposition being attended with success. He had done his utmost to stop the extravagant course pursued at former sessions in granting the appropriations. His efforts had been unsuccessful, and now he thought there was still less chance of getting back that which it had not been possible to prevent from being legislated away. He agreed with his colleague that it was entirely useless to lock up this money. It would do no good to the Government; when, if let go, it would do good to the States.

Mr. CRITTENDEN, of Kentucky, said he fully concurred in the views just expressed by the gentleman from South Carolina, [Mr. PAXTON.] In the State which he came from, he said, the general opinion was that retrenchment was wanting, and ought to be exercised in the several departments of the Government. The profusion to which they were becoming habituated it was time should be checked, and he (Mr. C.) agreed with the honorable Senator from South Carolina, [Mr. PAXTON,] that now was the time, if ever, to put in force such a necessary retrenchment. He (Mr. C.) could not well understand the reason why any other course should be resorted to; for it clearly appeared to him that, by proper retrenchment in the expenditures of Government, enough, and more than enough, might be curtailed from its superfluous disbursements to make up the amount which the payment of this instalment would require.

But he (Mr. C.) was at a loss to understand what object the Government could have in view by the measure here proposed. Such was its tenacity for a metallic currency, so great was its abhorrence of any other media, that it refused to take, or acknowledge as available funds, the money of the country and of the people. It could, therefore, get no available funds by this bill. The banks could not pay its demands now in gold or silver, nor were they likely to be able to do so for some time to come. Why, then, did the Government seek by this bill to deprive the States of funds which were available to them, but which were altogether unavailable to the Government? He could not comprehend the reasons and motives of such a measure. If this bill would benefit the Government by making the sum it withholds from the States available to the General Government, there might be, indeed, some reason in it. But why, he asked, take from the States that which would benefit them, in order to hand it over to the General Government, to whom it will confessedly be of no benefit whatever? The State of Kentucky, and other States also, had made provisions for the expenditure of this money—had already applied it to various great and useful objects, relying on the solemn faith of a law of Congress, passed after the fullest deliberation by that body. On such a law, not deeming that it would be lightly broken or rescinded upon the first pretext, Kentucky had built her expectation of this money, and had acted upon that expectation, and had disposed of it by anticipation. Therefore, not only on the ground that this money would not be available to the General Government was this bill objectionable, but also

SENATE.]

Fourth Instalment.

[SEPT. 15, 1837.]

on the ground that its present withdrawal from the States would be highly injurious and inconvenient to them. On this ground the bill, in his view, was eminently objectionable.

Was the faith pledged by an act of Congress to be so lightly broken? Was an expectation, based upon such ground, to be with such indifference and facility disappointed? Was it worth no effort—no exertion—no trouble, to keep a promise? to stand by a law? to fulfil an engagement? The States were invited to accept this deposit; it was no boon of their soliciting; and now, after it has been offered—after it has been promised—after it has been accepted—after it has been spent—after numberless schemes and plans for its employment, all beneficial to the States, have been devised and settled, and are waiting the payment of this fourth instalment for their completion—is it now the time to recede from our engagement? Is it now the time to break a promise? Is it now the time to violate a pledge, and say that you have not got the money? Might it not be replied, You have got the money, but you will not let the States have it! Such, in fact, would be the effect of the passage of this bill! Yes, sir, the money is there; the money is in the banks; the States are willing to receive it; but Congress interposes, and, by this bill, says “No, you shall not receive it.”

We are told by the supporters and advocates of this bill that it must be passed, because it would be highly impolitic to borrow money in order to deposit it with the States. This, sir, is not the correct view of the case; this is not a fair statement of the question; this, sir, is not the question at all. The question is this: The States have been led to expect this fund, on the faith of a law; they have made improvements, entered into contracts, incurred expenses on the expectation of receiving this money, pledged to them by the law; and now, sir, the question is, “is there no right on the part of the States—is there no obligation on the part of the General Government to fulfil the law?” Shall the law be set aside on the mere plea of inconvenience? That, sir, is the question—the great question! Whether a solemn law shall be fulfilled—whether a pledge shall be redeemed—whether a promise shall be performed—whether there exists any obligation to fulfil promises given, and not to disappoint expectations gratuitously raised! Shall we be told, sir, that there exists no such obligation? It is, in my view, the highest obligation which attaches to any Government. Now, in answer to this, we are met by the plea of convenience. We are told it would be very inconvenient to fulfil this contract with the States; that money will have to be borrowed for the purpose; and, therefore, since it would not be quite convenient to fulfil the obligation, the obligation ought to be broken, and the faith of the law violated!

But there is also another plea for this measure. I understand gentlemen to say that there is not money enough in the Treasury to pay this fourth instalment. But, sir, laying aside the question how far such an argument ought to prevail to induce the violation of a solemn engagement, let us ask, as to the fact, whether there are indeed no funds for the purpose of meeting this engagement? On looking over the report of the Secretary of the Treasury, (said Mr. C.,) I only find a probability spoken of. He says there *may probably* be a deficit, and not that there *is*. The argument, therefore, is divested of its main strength—and that is, of the absolute fact necessary to sustain it. But, sir, if there are no funds adapted to the wants of the General Government, there are funds which the States would willingly receive. They have confidence in the banks; they would receive their paper. They are not engaged in warfare against them; they do not wish to destroy them, and to destroy the credit of the country and of the people; while, on the other hand, there are no funds for the use of the General Government, only because it will not

recognise our money, our funds, our credit, and will only receive gold and silver. It is not willing to go hand in hand with the people in aiding and assisting to support and sustain that credit which is the life and soul of the business, trade, and commerce of the nation.

Again, sir, let me expose another monstrous idea which seems to possess the gentlemen who have brought forward and those who advocate this bill—an erroneous idea indeed, of which it were well that they were dispossessed; and it is this, sir: they seem to imagine that this money belongs to the Government. Not so, sir, (said Mr. C. ;) far from it: it belongs to the States—it belongs to the people, from whom the Government has gathered and collected it; but which gathering and collecting did not make it its own. Therefore, sir, in addition to the many strong reasons why this money should not be withheld from us, the reason above all is, that it is our own money.

The President of the United States, in his message, had read a lecture on economy to Congress and to the people of this country, and had told them that the distress and exigency of the times which have brought us here are to be attributed to the extravagance of the people. Now, sir, it is very strange that it never occurred to the President that economy was, of all things, that in which the Government itself was most deficient; that economy was especially needed to be put in practice by it; that the tide of prodigality and high expenditure of millions upon millions, in which it had of late years indulged, it was now high time should be stopped. Strange, sir, is it that the President, before he made this charge upon the people, did not look to the crying necessity for reform and economy in the Government itself.

In a time of distress like this, when the Government gives to the people such lessons of economy, what conduct do we behold in the Government? Any approach, sir, to economy? No, sir, none whatever; on the contrary, all the recommendations of the message, and all the measures of the administration, are, notwithstanding the people's distress, and notwithstanding the lessons of economy read to them by the President, directed and aimed at the one single and only object of filling the Treasury with money—of keeping the Government going—of providing means for a profuse and wild extravagance of expenditure. Before we vote for the issue of Treasury notes, I feel it my duty, sir, to inquire to what extent retrenchment may not be carried into the expenditures of the departments. All eyes are turned upon you; the people look to you for relief; and what do we behold? Why, sir, all the inquiry made, all the measures proposed, are merely how to fill the Treasury with money! *Sauve qui peut!* is the cry of the Government. All its efforts are directed to help itself, to save itself; to cut loose from the general wreck, and leave the country to help itself as it best may be able. Is this the duty of a Government!—when we come here for the express purpose of giving relief, then only to bring forward a bill like this, to withhold money from the States; and other bills, as bad in their principle, to raise more money from them, in order to sustain, and help, and fill the Treasury, while nothing is done or thought of for the people!

Mr. BROWN said he had not intended, at that stage of the bill, to delay its early passage by any remarks of his; but in consequence of the observations which had fallen from the two gentlemen who in the course of that morning had addressed the Senate, he would take the occasion to make a few remarks in reply, and in justification of the vote which it was his purpose to give on the measure then before them.

In addition to the arguments which had already been urged, and which to his mind were conclusive, in favor of withholding the fourth instalment payable to the several States on the 1st of October, under the deposit act, another argument, entitled to still more weighty considera-

SEPT. 15, 1837.]

Fourth Instalment.

[SENATE.]

tion, had decided his mind in favor of that course. If we refuse to pass the bill having that object in view, the obligation will unavoidably devolve on Congress to provide the means to meet the payment of the instalment which will otherwise become due to the States, the available means of the Treasury being inadequate for that purpose. Now he (Mr. B.) could not see in any part of the constitution the power to raise money, and, of necessity, the power to tax our constituents to pay the money thus raised, for the mere purpose of depositing it in the treasuries of the several States. The power to raise money was limited to the objects and duties with which the General Government was charged by the constitution; and in no part of that instrument was the power to be found, either by express grant or implication, to raise it for any such purpose. It could not be pretended that to raise money for such purpose was to carry into effect any power belonging to the General Government. To his mind, therefore, it was a palpable violation of the constitution to exercise such power, which they unquestionably would have to do, in providing the means to meet the remaining instalment, if its payment should not be postponed. He drew a distinction between the power of Congress to authorize the deposit of a surplus in the State treasuries which already existed, and the power to raise money for the sole purpose of thus depositing it. It was in that point of view that he deemed the deposit act of last year justifiable; that act had, in the course of its execution, exhausted the surplus, which was the true object Congress had in view in passing it; and, having fulfilled its great end, he was of opinion its further operation should now cease. He thought the gentleman from South Carolina [Mr. PRISTON] would have much difficulty in reconciling the vote which he had announced his intention to give on this question, with the doctrines of a strict construction of the constitution, of which he had heretofore professed himself a zealous advocate. He called on that gentleman to show what constitutional authority Congress had to pass a law raising money, not in execution of any of its conceded powers, but for the avowed purpose of being deposited with the States. It had been argued by the same gentleman that strong expectations had been created among the States that the instalment which it is now proposed to withhold would be paid over to them, and that an equitable obligation was imposed on Congress not to disappoint those expectations. He contended that the idea of an equitable obligation on Congress to pay over the money was utterly destroyed by the power given to the Secretary of the Treasury in the deposit act to call on the States, under certain restrictions, for the repayment of the sums deposited with them. The power thus given to that officer by the act in question was, in effect, a notice to the States that the Government of the United States might want the money deposited with them; and, in that event, would require its repayment. He considered the same notice as substantially applicable as regarded the instalment yet unpaid, and was, in itself, a very significant indication that Congress would withhold any part of the money unpaid, should a contingency arise making it necessary to do so. That contingency had arisen, making it proper, in his opinion, to withhold that which remained unpaid; but he trusted that none would arise making it necessary to call on the States for that portion of the surplus revenue already deposited with them.

Besides the constitutional objection to raising money for the purpose of depositing it with the States, the unavoidable consequence of providing for the payment of the remaining instalment to them would be to lay the foundation of a new national debt; than which nothing, in his opinion, would be more preposterous, when resorted to for the unauthorized purpose of dividing money among the States. He would in no event vote for any measure leading to the creation of a national debt, unless it could be made to appear

indispensable to aid the Government in the performance of its legitimate functions.

It had not been without some surprise that he had heard the charge of harsh and unjust treatment towards the States, in reference to the proposed measure especially, brought against the General Government. Was it nothing that it had in the space of a few months past divided among the States near thirty millions of dollars? Was the distribution of this immense amount among the States (for he regarded it, practically and in point of fact, as a distribution) to be considered nothing? Or was it in this act that gentlemen found reason to complain of oppression, on the part of the General Government, against the States? He really thought, if gentlemen would take a dispassionate review of the conduct of the General Government towards the States, in its pecuniary transactions with them, if they did not find all their most extravagant expectations realized, they would at least find enough, in the magnitude of the distribution which had been made, to exempt the General Government from the harsh censure which they had cast on it.

The gentleman from Kentucky [Mr. CRITTENDEN] has taken strong exceptions to what he has been pleased to term the paternal advice given us by the President, in his message, against the increasing luxury and extravagance in the mode of living, which are rapidly diffusing themselves throughout our country; and thinks that it would have been more becoming in him to have set an example of economy and retrenchment, by the introduction of those principles into his administration, before he ventured his advice on such subjects. It was true (said Mr. B.) that the President had—not in the way of advice, as had been suggested by the gentleman, but in tracing the causes which had led to the present embarrassed condition of the country—enumerated that, among many others, in connexion with the inflated paper system existing in this country and in England, which, acting and re-acting on each other, have, in conjunction with the cause first mentioned, mainly contributed to produce the existing evils—evils which all experience, in both countries, proves belong to the paper system, and periodically recur under it, no matter in what form it exists, whether in the shape of a national bank or of State institutions. He would, however, before finishing his reply to the censure which had been cast on the President for this remark, take the occasion to say to the gentleman from Kentucky, if he would unite in carrying out the recommendation of the President to withhold the fourth instalment to the States, that it would be taking a step of no little importance towards bringing the Government back to economy and retrenchment. The state of the case between the views of the President and the gentleman from Kentucky, in relation to the measure alluded to by him, was simply this: the President recommends the passage of a law postponing the payment of the fourth instalment to the States, amounting to some nine or ten millions, and which the Government, not having the means to satisfy, owing to the default of the deposit banks, will necessarily, if paid, have to provide the means by going in debt for that sum; while the gentleman from Kentucky insists on the payment of the instalment to the States, the effect of which would be to compel the Government to raise the necessary means, either by an issue of Treasury notes or in some other manner. Now, he would submit it to the impartial decision of any one to determine who was for economy and retrenchment, and who was for extravagant expenditure—the President of the United States, or the honorable Senator himself?

We have been told, with much emphasis, (said Mr. B.) that although Congress had been specially convoked by the President, yet no measure of relief had been recommended for the people; that it was all for the Government. While he would say that this declaration was unsustained

SENATE.]

Fourth Instalment.

[SEPT. 15, 1837.]

by the character of the measures recommended in the message of the Chief Magistrate, he could not permit the occasion to pass without the expression of his sincere regret that language of that character had fallen from any Senator on that floor. The Government of the United States had been spoken of as something alien to the people who were its constituents. Gentlemen surely forgot the principles and theory of our Government, and imagined themselves engaged in combating against a Government of irresponsible powers, and claiming no origin from, or sympathy with, the public will. What, he would ask, was the nature and character of that Government, which it was in this way attempted to rouse public prejudice against, and to induce the belief that its interests were distinct from the great body of the people? Was it not an emanation of that popular will, which it was now sought to turn against it, imbued with the same feelings, and interwoven with the best interests and dearest rights of the great body of the people? Was it to be regarded as a crime, that means should be taken by those sent here to legislate, and by the Executive, whose province it was to see that the laws are executed, to continue the Government in its regular and constitutional action? Heretofore, we had been taught that the preservation of our system of government in its constitutional action, while it was by far an object of higher interest and more universal concernment than any other to every citizen, was at the same time the first and highest duty of patriotism. Language of the kind to which he had alluded had unfortunately been too common among a certain political party in this country; the effect of it was, to produce dissatisfaction in the public mind, and prepare the way for the overthrow of our system of government, by inducing the impression that there is no identity of interests between the people and their own Government. It was not the part of an American statesman, in his humble judgment, to use language calculated to bring the Government into disrepute at home, and to degrade it in the estimation of foreigners abroad.

As to the idea of legislative relief to the country, of which so much had been said in the course of this debate, he must confess that he had but little faith in it. It was true that Congress might, and probably would, grant indulgence to such of the merchants as were debtors to the Government, and required it; and might adopt some other measures affording some incidental benefit to the country; but as to the idea of a legislative remedy to relieve it from its embarrassments, it was, in his opinion, not only impracticable, but at variance with the principles of our Government. What, he would ask, did gentlemen mean by the relief which they had so often spoken of in the course of the debate? Was it that men should be legislated out of debt, who had most improvidently plunged into gambling speculations? Was it that banking corporations should in some way be favored, by our legislation, at the expense of public rights? They had not spoken out as to the measures of relief, on the virtue of which they seemed so much to rely. He ventured to predict, however, whenever these measures of relief were proposed, although they might be brought forward professing to be in the name and for the benefit of the people, they would turn out to be a plan to relieve certain classes at the expense of the great mass of the people. The true doctrine under our system, if he had rightly comprehended it, was for Government to extend its powers no further than to protect individuals in their personal rights and lawful acquisitions of property against fraud and violence, leaving each in the enjoyment of the rewards of his own industry, and to pursue his own happiness in his own way. When Government undertakes to do more, and to interfere in the private pursuits of men, it must of necessity, in endeavoring to relieve one class, violate the rights of another, by doing it at their expense. Such was the doctrine that had been

taught by the highest and most revered names on the list of our statesmen. He, therefore, repudiated the doctrine of legislative nostrums to relieve classes who were embarrassed, and believed that such things must mainly work out their own cure; that being the only sure and effectual way of remedying the evil.

While gentlemen in the opposition were so unsparing in their censure against the measures proposed by the administration, they had not condescended, in the plenitude of their skill in curing diseases of state, to propose the panacea which they were ever and anon obscurely hinting at. Without intending to dictate a course of public conduct to them, he must be allowed to say, that when gentlemen condemn so freely the policy and plans of others, they thereby assume an obligation, as faithful representatives of their constituents, to furnish a better, and not to confine themselves simply to a line of condemnation.

He (Mr. B.) did not see in the condition of the country the alarming symptoms and dangerous crisis which had been described in such dark and gloomy colors, and which, however well intended the motives doubtless were that prompted them, were but little calculated, in the present tremulous and sensitive state of public confidence, to allay the evils arising from pecuniary embarrassment. He did not believe that the nation had fallen into the "Slough of Despond," as the gentleman from South Carolina [Mr. PIERCE] had said. It was true that embarrassment had been severely felt in the commercial community, and among other classes who had overtraded and engaged in ruinous speculations; but the great mass of substantial citizens, agriculturists and others, he believed were unaffected, except by the banks having suspended specie payments, which they had done with, he believed, a larger aggregate proportion of specie than they had at any time before possessed. Looking to the condition of our country in contrast with others, he saw no reason to despair, but much to congratulate ourselves on. With no national debt weighing on our resources; with a population possessed, to an unexampled degree, of the means of human subsistence and happiness; with a country of unlimited capacity for the production of every thing essential to supply its wants and comforts; and, above all, remembering that our free and noble institutions yet survive, who does not feel that we stand in proud and gratifying contrast with any other nation? Checked in its prosperity, it might be, for a short time, by the causes which had operated, on both sides of the Atlantic, to produce an imprudent extension of the credit system; but he denied that the substantial resources of the country were even touched by the events which had happened in the last six months. Many individuals, in commercial and other pursuits, had fallen beneath the pressure of the times; others, perhaps, would share the same fate. Property had, and would, he did not doubt, in very many more instances, change proprietors; but it would still remain in the country, leaving us in possession of all the substantial elements of individual happiness and national greatness. He saw nothing in the present crisis to produce despondency, but much to animate our hopes, in looking through the perspective of the future. No country on earth, he believed, possessed, in a higher degree, the faculties of self-recovery. Its onward course might be retarded for a very short period, but could not be arrested by the causes now operating.

He could not admit that the country was so absolutely dependent on banks for its prosperity, as was supposed by some. As a citizen of this republic, he should feel humiliated to make such an admission. The true sources of its prosperity are to be found in the enterprise and industry of our citizens; in the inexhaustible natural resources in which it abounds; and in our free Government, which, by protecting each citizen in the enjoyment of the fruits of his labor, quickens enterprise and invigorates exertion. Not-

SEPT. 15, 1837.]

Fourth Instalment.

[SENATE.]

withstanding these views, he was, however, far from either expecting or wishing the abolition of the paper system; the most that could be effected was, to subject it to salutary restrictions, by lessening its capacity to do mischief, and to infuse into it a greater proportion of metallic currency. These correctives could be applied only by the joint agency of the States and the General Government, which were demanded as well by the public voice, as the best interests of the country. He repeated, therefore, that he saw nothing in the condition of the country to inspire alarm—nothing that the public virtue and intelligence were not fully able to meet, and in a short time to overcome. For this we had the best guaranty in the abundant capacity which the nation had shown to rise above all difficulties, in seasons infinitely more trying than any to be found in its present condition.

Mr. WALKER said, without discussing at this time the great question debated by the Senator from Massachusetts, [Mr. WEBSTER,] in regard to the paper currency of the country, and the supreme control which he claims on this subject, and all that relates to it, for the Government of the United States, he would proceed at once to the inquiry now before us—whether it would be proper to postpone paying over to the States the last instalment under the deposit act. This instalment amounted to a sum exceeding nine millions of dollars. The report of the Secretary of the Treasury informs us that the money is not in the Treasury to pay the instalment. Even in the event of the postponement of this deposit with the States, there is still a deficiency in the revenue, which the Secretary asks to be supplied by the emission of Treasury notes. It is, then, obvious, that if this instalment is to be paid to the States on the 1st of October next, it can only be effected by an emission of an additional amount of Treasury notes bearing interest; or, in other words, by the creation of a new national debt, arising from a new loan, in order to deposit the amount for safekeeping with the States of this Union. Disguise it then as we may, the refusal to pass this bill is a determination on our part to borrow more than nine millions of dollars on the credit of the United States, to be deposited for safekeeping with the States of this Union. The constitution authorizes us to borrow money on the credit of the United States—but for what object? Clearly for no other than to carry into effect the powers delegated by the constitution. But that this Government could borrow millions, without limitation as to the amount, for the purpose of depositing it with, or distributing it among, the States, was to clothe this Government with the most alarming and despotic powers. If this Government can make such a loan for such a purpose, the taxing power is unlimited; for by taxes only can it raise the money to refund what it has borrowed. Mr. W. said he was one of a small minority of six in the Senate who had voted against this deposit bill. He had then predicted the disastrous consequences that he thought would follow from the passage of this bill; and his worst fears would be realized, if now, when there was a deficit in the Treasury, when many of the public creditors had to be paid in protested drafts on broken banks, a surplus was created by loans, for the purpose of distributing among the States of the Union.

Mr. W. said he well knew the voracious character of the surplus spirit; that it was ready to keep up the tariff, to keep up the price of the public lands, and to refuse all relief to the settlers of the West, for the purpose of creating a surplus for distribution; but he could scarcely have believed that now, when we must in any event replenish, by loans, an exhausted Treasury, new loans would be asked for to the amount of nine millions for distribution—loans to be refunded, if not from the lands of the West, from the tariff; by which Mississippi, now nearly the greatest exporting State of this Union, will receive but about one-fourth as much as she will be compelled to refund by the operation

of the tariff—reducing the price of her great staple, to enrich the incorporated monopolists of other sections of the Union. Mr. W. said he must be blind indeed, who did not perceive that to raise, by loans, nine millions for deposit with the States, is, to the extent of nine millions, to render it necessary to augment the tariff. It is true, we talk of getting back this money from the States; whilst a majority of the Senate—as he (Mr. W.) thought most unwisely—have just taken from the Secretary of the Treasury the authority which he possessed, under the deposit act, to call upon the States to refund any portion of the money already deposited. And now he (Mr. W.) predicted that Congress never would make any requisition upon the States for this money, but that, when it was wanted, the South would be compelled to raise it through the operation of the tariff. Could any man doubt this result, when so bold an effort was now made to induce the Government to borrow money to pay the last instalment to the States?

But the Senator from South Carolina [Mr. PRESTON] tells us that we can obtain this money for deposit among the States by repealing some of the appropriation bills. Sir, the Senator from South Carolina [Mr. CALHOUN] has most clearly shown the impossibility of obtaining a repeal of laws partly executed, passed by large majorities in both Houses of Congress. But if the appropriation bills were repealed to-morrow, to the extent proposed, it would not put one dollar in the Treasury, now exhausted; nor enable the Government on the 1st of October next, now at hand, to deposit these nine millions with the States of the Union; for, in the calculation of the Secretary of the Treasury, the expenditure of fifteen millions of these appropriations is postponed till next year. But we have been told by the Senator from Massachusetts, [Mr. WEBSTER,] that this amount may be paid to the States by the money in the deposit banks, whose paper would be gladly received by the States in which they are located. It has been already shown by the Senator from New York, [Mr. WRIGHT,] that the entire money now in the deposit banks, subject to new drafts, is not enough, by more than a million, to meet the required amount of the last deposit instalment; but if it were enough, let us examine the effect of this proposition. It is to pay the States in the paper of the deposit banks, by new issues of paper by those banks to an amount exceeding nine millions of dollars; to pay out, in other words, more than nine millions of depreciated bank paper, issued by banks that have suspended specie payments. And is this the relief the Senator from Massachusetts would extend to the community? Sir, (said Mr. W.) nearly all the embarrassments of the community have been occasioned by the vast over-issues of paper by the banks—paper which they cannot now redeem in specie, and which has depreciated from ten to thirty per cent. in various sections of the Union. Is it not clearly perceived that this would greatly increase the embarrassments of the community? that it would add greatly to the present enormous mass of depreciated paper? that it would still further depreciate all the paper of all the banks making the new emissions; postpone for a long time, if not indefinitely, the resumption of specie payments by the banks, by augmenting nearly one-third the amount of their depreciated paper; and thus, also, disable them from extending the least indulgence to their debtors by this vast increase of their circulation; imposing the correspondent obligation of calling in their debts as rapidly as possible to the same amount? If (said Mr. W.) this proposition of the Senator from Massachusetts be a part and portion of the plan of the opposition for relieving the embarrassments of the country, he had no curiosity to hear the remainder of their proposition.

Mr. PRESTON rose in reply to the two last named. He said he would restate some of his objections to the bill before the Senate, because he had been misapprehended by Senators. He had not said—nor did he intend to permit

SENATE.]

Fourth Instalment.

[SEPT. 15, 1837.]

himself to be represented as having said—that he thought it better to create a national debt than to recall the money deposited with the States. He had presented no such proposition. But he did say that he would execute the deposit law in good faith; and if the Treasury should be empty, he would then draw on the State deposits, *in the time and manner prescribed by the law*. He had, therefore, taken the ground that the Treasury was not empty, except nominally; because not only was the money deposited with the States virtually in the Treasury, but the extravagant unexpended appropriations of last session constituted a fund on which Congress ought now to draw; and Mr. P. proposed that Congress should do this. Six millions more than was called for by the department had been appropriated, and Congress had thus become the principal actor in this prodigality. But further: there was other money in the Treasury which should be taken, rather than to withhold this from the States, or to create a national debt. But if this were not so, the bill now presented is not the proper alternative. If it be necessary now to draw upon the deposit fund, do so according to the provisions of that act, which enables the Secretary, whenever the Government stands in need of money, to call upon the States for it, giving due notice of the demand. Without the stipulation to draw only upon notice, the States might not have consented to receive the deposits; for it would be obviously burdensome to be prepared at all times to pay millions on a draft at sight. It is not keeping good faith with the States, therefore, to stop this fourth instalment, which they have used in anticipation of its receipt, upon so short a notice—indeed, without notice at all.

[Mr. MORRIS was here understood to say that there was no such understanding with the States.]

It was strange (Mr. P. said) if there was no such understanding. He had taken it for granted that the States would get it; and the States certainly had so taken it for granted. If it were not so, why had Virginia, New York, Kentucky, and other States, already used this instalment? The law was explicit that the money should be deposited with the States; and all its other provisions related to the manner of investing and withdrawing it, without any intimation of its being withheld in any event. Under the faith of this law, the States had a right to make the arrangements which they did; and Congress ought, in equity and good faith, to conform to the provisions of that law accordingly. On the supposition that there were no other funds in the Treasury for the use of the Government, Mr. P. would suggest that this bill ought not to pass, but that the prior instalments should be called for. Take openly the responsibility of recalling the deposits; and appropriate them, not to pay a debt, but to pay for harbors, fortifications, and other matters on which money had been squandered for the sake of being squandered. Let the States, the people, the masters of Congress, know clearly what Congress were about.

And if this money was to be withheld from the States for such purposes, how was it to be obtained? By crushing the banks? Mr. P. was gratified to hear that the Senator from North Carolina [Mr. BROWN] and his constituents were not dependent on the banks. But Mr. P. said that in his judgment a very large amount of property, and, indeed, the general prosperity of the country, would be endangered by the ruthless war which, for political purposes, was now to be waged against State institutions. They are denounced by the administration—threatened with a bankrupt law applicable to them alone; and now it is proposed to put them all at the mercy of this administration—within the reach of its menaces—by transferring nine millions of debt due by them, from the States, who are their guardians and protectors, and participate in their prosperity or adversity, and would therefore relieve them as far as practicable, to this rash and hostile Government.

Go (said Mr. P.) to these States for this money—recall the first instalment—take the responsibility—come out boldly, and demand it back; but do not smuggle it from them—give them the notice required by the law, and recall it in such sums, and at such times, as the law specifies. My word for it, they will repay it according to the law; and they will see that other States pay it back, too, if the Treasury requires it.

I concur with the Senator from North Carolina that it is unconstitutional to borrow money or lay taxes for the purpose of distribution or safekeeping. I was not guilty of any such absurdity. Neither, sir, am I disposed to do so for any further financial experiments. The gentleman exclaims, No more nostrums for him! He is not disposed to take up with any of these nostrums. Sir, we have had nostrum after nostrum. The body politic has been in hot water, bled, dieted, depleted; and is now reduced to a state of great debility. The gentleman now repudiates nostrums; but does he do it truly? O, yes! We have had, and yet have, the best of currencies—a noble experiment, by which the body politic was to be cured of all its diseases! And so it has been, the gentleman always said, up to the present session of Congress. The body politic has been cured, invigorated, expanded, by the glorious pet-bank nostrum.

And now the honorable gentleman is for tonics—the *aqua regia*—the gold currency—to the exclusion of paper money. Sir, I am tired of all this. Changing the experiments will not do. I wish to change the experimenters, who have broken and blown up their whole laboratory, to the destruction and ruin of the country, and who now propose to build up a new system of experiments on the fragments and ruins of the past.

I wish, sir, I could concur with the Senator when he says the condition of the country is not so bad, after all, as it has been represented. I wish he may be right. But is it prosperous? It is not long since the people of this country raised an exclamation of joy, from all quarters, at the apparent prosperity of the country, which, like a majestic ship, was sailing gloriously onward on the smooth, glassy, peaceful surface of an unbounded ocean; but, while they look, it is foundered, sunk, gone, overwhelmed in a moment by the very element on which it appeared so lately riding triumphant.

But the gentleman says he regrets to hear us speak of the Government as something foreign, alien, hostile to the people. Sir, I was not aware that I spoke in that manner, though I had good cause to feel that its action was severe, at least on my portion of the country. But I am not at all in favor of its being alien or foreign to the States.

I am in favor of a Government and an administration that will identify the interests of the country with its own, and share the destiny of the people. But let those themselves beware, who are so earnest to procure from the people support for Government, lest the Government, not touching favorably the States and people in return, should force them from that position of identity of interests and mutual dependence; and the Government, like a huge engine turned from its proper and legitimate course, should run over and crush beneath it the States and the people. We who are the advocates of State rights are not liable to censure in that quarter.

Mr. P. concluded by remarking that it did not belong to him to make any distinct proposition, or to bring forward any specific plan of action. He did not appear here as a builder up, or as an architect in any political measures. He belonged to a small minority, which had it not in their power to carry into effect any object, however valuable or beneficial to the country. All he could do was to point out errors in the building which the majority were carrying up. He might tell them where any defect might lie; he might show where their plan was

SEPT. 15, 1837.]

Treasury Notes.

[SENATE.]

defective, or their foundation unsteady, or the capital out of proportion to the shaft, or where the corners wanted polishing and rounding off. This was all he could do; and even this he well knew would be done in vain, for he did not expect that those gentlemen (who, being in the majority, carried every thing their own way) would be inclined to listen to the advice, or to profit by the admonitions of himself and other members of a small minority. But he would entreat that majority not to be rash or precipitate in their course; not to sacrifice the public good while they triumphed in the exercise of their power; not to lay heavy burdens upon the States, when the absolute necessity of doing so was not very apparent. He entreated them to adopt the best plans to effect the objects they had in view. For the object now in view, he concluded by saying this bill did not appear to him to mark out the best plan.

The question was then put on the passage of the bill, and decided as follows:

YEAS—Messrs. Allen, Benton, Black, Brown, Buchanan, Calhoun, Clay of Alabama, Fulton, Grundy, Hubbar, King of Alabama, King of Georgia, Linn, McKean, Morris, Niles, Pierce, Rives, Roane, Robinson, Ruggles, Sevier, Smith of Connecticut, Strange, Walker, Wall, Williams, Wright—28.

NAYS—Messrs. Bayard, Clay of Kentucky, Clayton, Crittenden, Kent, Knight, Nicholas, Norvell, Preston, Robbins, Smith of Indiana, Southard, Swift, Tallmadge, Webster, White, Young—17.

So the bill was passed, and sent to the House of Representatives for concurrence.

TREASURY NOTES.

The bill authorizing the issue of Treasury notes was next taken up as in Committee of the Whole.

Mr. WRIGHT moved to fill up the first blank in the bill with the word "ten," thereby making the amount of notes to be issued ten millions of dollars.

Mr. W. said that it had not been possible for the committee to know the amount of the notes necessary until action had been had on the bill to postpone the fourth instalment to the States; which bill having now passed the Senate, he was able to fill up the blank. He had had an interview on the subject with the Secretary of the Treasury, and he had learned from that officer that, on the supposition that no more extension would be granted than was proposed by the bill for extending the duty bonds, he had thought the sum of eight millions would be sufficient. This was, however, on the supposition that the Bank of the United States would pay in October the instalment then due to the Government by that institution. But it was understood by the Secretary and the committee that this would not be done, that bank having bought up Treasury drafts issued in July for the payment of the third instalment to the States, and intending to give in those drafts in payment of the instalment then due from the bank. This being the case, the Secretary would require that the blank be filled up with nine million five hundred thousand dollars; and therefore, on this calculation, the committee had instructed him (Mr. W.) to move for ten millions.

Mr. CLAY, of Kentucky, was very desirous of obtaining more full information relating to one point; and that was, that as a bill had now passed the Senate for arresting the payment of the fourth instalment to the States, and since the fund intended for the use of the States was now to be applied to the use of Government, if it was intended to employ the funds in the banks before being reduced in some way or other to a specie basis, whether Government intended by laws passed, or to be passed—such, for example, as a bankrupt law—to force the conversion of the funds now in the banks into metal, and then throw the sum thus obtained from the banks into the Treasury, there

to lie without being used? His inquiry was not, he thought, useless, since it must be evident that the amount of the blank must depend upon the availability of the funds in the banks.

Mr. WRIGHT said it had been ascertained, and was so stated in the Secretary's report, that all the money in the banks subject to draft on the 28th of August last amounted only to eight million one hundred and sixty-six thousand dollars. Out of that sum the expenses for the month of September were to be taken, which would leave the sum reduced to about two millions and a half by the 1st of October. But, if the outstanding drafts should come in on the Treasury, (many of them being protested,) in that case the available amount would still be diminished, and the Treasury would be in want of means. There were, therefore, no ready means without the assistance of Congress. In all the Atlantic coast, the money in the banks had for the most part been withdrawn, (only a small sum subject to drafts being with them—say less than a million,) and creditors were not willing to receive drafts upon the South-western banks, where now almost all the funds in deposit with banks were placed.

Such being the case, and such the amount of unavailable money, the object of issuing Treasury notes was to anticipate the funds in deposit with the banks until Congress should say how those funds were to be made available. The Committee on Finance had reported a bill giving to those banks intervals of two, five, and eight months in which to pay the sums due; dividing the balance in their hands into three instalments. Again: the extension granted already, and proposed still to be granted, on bonds, would diminish the means of the Treasury; from all which considerations, the issue of these notes was rendered necessary to meet the current expenses.

Mr. CLAY, of Kentucky, professed himself greatly obliged by the valuable information communicated by the honorable Senator, [Mr. WRIGHT:] but he still felt that the inquiry which he had wished to make was not yet answered. He meant to inquire if the money in the banks was to be used as bank-notes, or if the banks were to be compelled to pay them in specie; and then, if these funds were to be left idle?

Mr. WRIGHT, in reply, said they would not be used as bank-notes unless the law should authorize them so to be used.

Mr. CLAY: Then it comes to this: we have passed a bill to take funds out of the hands of those who would have been glad to use them, to put them into the hands of others who refuse to acknowledge and make use of them. The States would have been glad to receive this money in the shape of bank-notes, and we have taken it from them. Again: Government refuses to call them funds in that shape; and to Government we have now made them over by the bill just passed! And as Government, though it receives those funds, and prevents their being paid to the States, will not acknowledge them as funds, there is a deficiency existing; and this deficiency is to be supplied by issuing Treasury notes, in order that Government may be able to get along. That is to say, Government will not receive the paper of the country, and is about to create a paper of its own, which the country is expected to receive! And thus, all the promises which have been made to us of the flowing of gold and silver all over the country—these promises of a better currency result in the issue of ten millions of paper money!

Mr. KING, of Georgia, read to the Senate a statement and estimate of some length, which was inaudible in the reporter's gallery.

Mr. WRIGHT then moved to fill up the second blank in the bill with the words "not exceeding twenty thousand dollars." This sum, Mr. W. explained, was intended to defray the expenses incurred by the execution of

SENATE.]

Treasury Notes.

[SEPT. 16, 1837.]

the act, and was made upon an estimate of the bill of 1812. Agreed to.

Mr. CLAY, of Alabama, moved to insert a provision that Government should not be permitted to make any purchase of these notes in the public market below par.

Mr. WRIGHT could see no possible objection to this amendment.

Mr. CLAY, of Kentucky, saw a great objection to such an amendment. He thought the country should have the benefit of the market as well as individuals; when, from an excess in the market, the number was too great, and the price had fallen below par, then was the very time for the Secretary to go into the market and purchase. The commissioners of the sinking fund had acted in this way, and the country had reaped the benefit of it.

Mr. CLAY, of Alabama, grounded his amendment on the principle, that, as it would be disreputable for individuals to buy up their own notes at a depreciated value, so also it would be disgraceful for Government to do the same thing.

The amendment offered by Mr. CLAY, of Alabama, was then agreed to.

Mr. CRITTENDEN was understood to call upon the chairman of the Committee on Finance for some explanation relative to the payment of clerks to be employed; which payment, by the provisions of the bill, is left discretionary, as to the amount of salary, with the Secretary.

Mr. WRIGHT explained the necessity of leaving this matter at the discretion of the Secretary, since it was impossible to say for what length of time the services of the clerks might be required—whether for a year, or less than a year.

At this stage of the bill, Mr. CALHOUN expressed a wish that a postponement of the bill until to-morrow might be allowed, for an examination into some points.

Mr. WRIGHT made a few observations, expressing his assent to Mr. CALHOUN's proposal.

Mr. WEBSTER said he earnestly hoped that, whatever other delay occurred, no delay whatever would be permitted to be had on the bill for the extension of merchants' bonds; but, to give the time requested by Mr. CALHOUN, he moved an adjournment; and

The Senate adjourned.

SATURDAY, SEPTEMBER 16.

TREASURY NOTES.

The Senate resumed the consideration of the bill authorizing the issue of Treasury notes.

Mr. CALHOUN said he had turned his attention to the bill, but had found great difficulty in bringing his mind to a satisfactory conclusion respecting it. The very point which the Senator from Massachusetts so much approved (allowing interest) was one which constituted an objection to the bill, in the view of Mr. C. Neither was he satisfied to give up his opinion to any one scheme, till he understood what was to be done on the great point involved in the subject of this bill, namely, the separation of Government from all banks. All ought to verge to this point, even if considered as a measure of relief. As the law now was, the Secretary of the Treasury was compelled to receive the notes of all specie-paying banks. Of course, when specie payments should be resumed, all would be received. If this should occur, and if Congress should adjourn without altering the law, the result would be, that the Government would, under the sub-treasury system, have the custody of the money, but would collect it in bank-notes. If it was intended to restore the connexion between the Government and the banks, this bill ought to be different; and if it was not so intended, it still ought to be different. Mr. C. could support it as it was, in neither alternative.

But he designed to move an amendment to this bill,

which would serve as a testing question, whether it was the object or not to make a separation between the banks and the Treasury. If it was intended to make such separation, now was the acceptable time. And if it was not done now, it would perhaps never be done. The question was one of great magnitude; and Mr. C. therefore hoped that the subject would be postponed till Monday, by which time he hoped to be prepared to offer the amendment which he had indicated.

On this great point Mr. C.'s opinion had been long made up; and he believed, firmly, that the only alternative was a separation from all banks, or a Bank of the United States. He had so declared it in the debate of 1834, and he had never seen any reason to change his opinion. On the contrary, the catastrophe at the present time had greatly confirmed that opinion. In his view, it was one of the greatest questions that had been, or that could be, presented to this body. And, further, it was due to the country, to themselves, and to posterity, that gentlemen on all sides should meet this question openly, boldly, and decidedly. He entreated them to show their hands, as Mr. C. would show his, and go on with the question. He moved to postpone the bill till Monday.

Mr. WRIGHT said he was not disposed to deny to the Senator from South Carolina any opportunity to consider the subject, which could properly be allowed. Neither was he unwilling to act on the proposition which the Senator considered so very important, when the proper time should come for so doing. But his own opinion was, that the proposition of the Senator ought not to be connected with this bill. Whatever Congress might do on that subject, the Treasury must have the means to go on; and it was well known that on the question referred to by the Senator there was a great difference of opinion in both Houses of Congress. The object was in itself entirely distinct from that of this bill, and one could not interfere with the other. The committee had been careful so to frame the bills as to make them independent of each other. It was most plainly necessary that this bill should pass without delay. The Treasury could not satisfy the public creditors any way acceptably for more than twenty, and perhaps not fifteen, days longer, without aid from Congress. Mr. W. therefore hoped, without any disposition to press the Senator, but because the two propositions were independent, that the Senate would not postpone this bill.

Mr. CALHOUN said it was impossible for him to say what ought to be done on this bill till he could know how the Executive would shape its course. Mr. C. was willing to grant the relief, (to the Treasury,) but he would not do it in the dark. The great point was the one to which he had alluded, and to that all kindred measures ought to have a reference. If time should not be given him, Mr. C. would vote against this bill, and would forever disconnect himself from all responsibility as to the result. He knew that all ought to feel a proper sensibility for the embarrassments of the Government, but he felt still more for those of the country; and he thought it infinitely more important that all should be well, rather than speedily, done; and, as far as his voice had any power, it should be done well. On this question, as the chairman of the committee was opposed to a postponement, Mr. C. called for the yeas and nays; which were ordered.

Mr. BENTON said that, as one connected as he had been with the deposit bill, he could not agree to vote for any postponement of the bill which might have the effect of connecting any other proposition with it.

Mr. WALKER said he could not know fully the importance of the amendment proposed by the Senator from South Carolina till he should hear his views on the subject, which he, (Mr. W.,) and he believed the whole country, were anxious to know. He hoped, therefore, that the delay asked for would be granted.

SEPT. 18, 1837.]

Treasury Notes.

[SENATE.]

Mr. KING, of Alabama, said no Senator was more desirous than he to give the opportunity requested. But he thought the subject so disconnected as to render a postponement of this bill unnecessary. When the subject of the bank and Treasury connexion should come up, a great deal of time would be necessarily consumed upon it. The committee of the Senate had looked into the subject, and had differed upon it. He hoped the Senate would see the necessity of acting on this bill at once; and if any other and better form could be given to it, he hoped it might be done without discussing the great question of bank and Treasury connexion.

Mr. CALHOUN said that this unexpected opposition required that he should go a little into detail. If it was the intention of the Senate, or rather of the administration, to restore gradually the connexion between the Government and the banks, in that event, instead of issuing Treasury notes, they ought at once to resort to a provisional loan, made in notes of the State banks, and then pay off the loan as the means should come in; or, otherwise, they should issue Treasury notes so as to constitute a currency. No Senator could properly know how to act, unless he knew the course to be pursued on the principal point. There never had been a better time to separate the Treasury and the banks; and, if to be done at all, it ought to be done at once. Mr. C. wished to be put in a position that he might vote understandingly on measures for the relief of the country. The demands of the Treasury he considered as trifling, compared with the settlement of this great question.

Mr. NILES remarked, that as the gentleman from South Carolina wished to bring before the Senate his proposition, and as it must come before us and before the country sooner or later, the sooner it came the better; and he would vote in accordance with the wishes of the gentleman.

Mr. WRIGHT said his great objection was to the connexion of these two subjects, which must result unavoidably in injury to the public interest by the delay of this bill. He, therefore, desired that they might be kept separate. He had personally no design gradually to restore the connexion of the Treasury and the banks. As to the design of the administration on this point, he knew no more than the Senator from South Carolina.

The question was then taken on postponing the bill till Monday, and decided in the affirmative by the following vote:

YEAS—Messrs. Bayard, Black, Brown, Calhoun, Clay of Kentucky, Clayton, Crittenden, Grundy, Kent, King of Georgia, Knight, Linn, McKean, Nicholas, Niles, Preston, Roane, Robbins, Robinson, Ruggles, Sevier, Smith of Connecticut, Southard, Strange, Walker, Wall, White, Young—28.

NAYS—Messrs. Allen, Benton, Buchanan, Clay of Alabama, Fulton, Hubbard, King of Alabama, Lyon, Morris, Norvell, Pierce, Smith of Indiana, Swift, Tallmadge, Tipton, Webster, Williams, Wright—18.

On motion of Mr. CALHOUN, the Senate then adjourned.

MONDAY, SEPTEMBER 18.

Mr. RIVES gave notice that he should to-morrow ask leave to bring in a bill designating the funds to be received by Government in payment of public dues.

Mr. R. observed, that he had, on a former day, intimated his intention of proposing a bill of this description himself, in the event that no similar bill should be reported by the Committee on Finance. He viewed the neglect of this highly important subject likely to be of such serious consequence to the community at large, that he felt himself bound to act on the occasion by bringing in a bill calculated to do justice to the people in this particular.

Mr. WRIGHT presented a petition from the merchants,

importers, and other citizens of the city of New York, relating to the extension on revenue bonds.

Mr. W. remarked, that as the Committee on Finance had already instructed him to report a bill on this subject, he should move that the petition be laid upon the table and printed for the use of the Senate.

Agreed to.

Mr. WRIGHT also presented a memorial from several merchants and other citizens of the city of New York, sufferers from the great conflagration of 1835, praying for the remission of duties upon goods burnt in that fire.

Mr. W. observed, that though the Senate had expressed a determination to attend to no business in this session, other than that marked out by the message, yet, as this was a subject so intimately connected with the interest and welfare of the mercantile community, he should, if there were no objection, depart from that determination in the present instance, and move that this memorial be referred to the Committee on Finance.

Agreed to unanimously.

The following joint resolution from the House of Representatives was then taken up and adopted unanimously, viz:

Resolved, That the following be added to the standing rules, to wit: No spirituous liquors shall be offered for sale or exhibited in the Capitol, or on the grounds adjacent.

TREASURY NOTES.

The bill for the issue of Treasury notes having been postponed to this day, in order to give Mr. CALHOUN an opportunity of preparing an amendment, and of offering his sentiments generally upon the subject, was now resumed by the Senate.

Mr. CALHOUN rose and addressed the Chair as follows:

Mr. President: An extraordinary course of events, with which all are too familiar to need recital, has separated, in fact, the Government and the banks. What relation shall they bear hereafter? Shall the banks again be used as fiscal agents of the Government—be the depositories of the public money—and, above all, shall their notes be considered and treated as money, in the receipts and expenditures of the Government? This is the great and leading question; one of the first magnitude, and full of consequences. I have given it my most anxious and deliberate attention; and have come to the conclusion that we have reached the period when the interest both of the Government and the banks forbids a reunion. I now propose to offer my reasons for this conclusion. I shall do it with that perfect frankness due to the subject, to the country, and to the position I occupy. All I ask is, that I may be heard with a candor and fairness corresponding to the sincerity with which I shall deliver my sentiments.

Those who support a reunion of the banks and the Government have to overcome a preliminary difficulty. They are now separated by operation of law, and cannot be reunited while the present state of things continues, without repealing the law which has disjoined them. I ask, who is willing to propose its repeal? Is there any one who, during the suspension of specie payments, would advocate their employment as the fiscal agents of the Government, who would make them the depositories of the public revenue, or who would receive and pay away their notes in the public dues? If there be none, then it results that the separation must continue for the present, and that the reunion must be the work of time, depending on the contingency of the resumption of specie payments.

But suppose this difficulty to be removed, and that the banks were regularly redeeming their notes: from what party in this body can the proposition come, or by which can it be supported, for a reunion between them and the Government? Who, after what has happened, can advo-

SENATE.]

Treasury Notes.

[SEPT. 18, 1837.]

cate the reunion of the Government with the league of State banks? Can the opposition, who for years have been denouncing it as the most dangerous instrument of power, and efficient means of corrupting and controlling the Government and country? Can they, after the exact fulfilment of all their predictions of disastrous consequences from the connexion, now turn round and support that which they have so long and loudly condemned? We have heard much from the opposite side of untried experiments on the currency. I concur in the justice of the censure. Nothing can be more delicate than the currency. Nothing can require to be more delicately handled. It ought never to be tampered with, nor touched, until it becomes absolutely necessary. But if untried experiments justly deserve censure, what condemnation would a repetition of an experiment that has failed deserve!—an experiment that has so signally failed, both in the opinion of supporters and opponents, as to call down the bitter denunciation of those who tried it. If to make the experiment was folly, the repetition would be madness.

But if the opposition cannot support the measure, how can it be expected to receive support from the friends of the administration, in whose hands the experiment has so signally failed as to call down from them execrations deep and loud?

If, Mr. President, there be any one point fully established by experience and reason, I hold it to be the utter incompetency of the State banks to furnish, of themselves, a sound and stable currency. They may succeed in prosperous times, but the first adverse current necessarily throws them into utter confusion. Nor has any device yet been found to give them the requisite strength and stability, but a great central and controlling bank, instituted under the authority of this Government. I go farther. If we must continue our connexion with the banks—if we must receive and pay away their notes as money, we not only have the right to regulate and give uniformity and stability to their value, but we are bound to do so, and to use the most effective means for that purpose. The constitution makes it our duty to lay and collect the taxes and duties uniformly throughout the Union; to fulfil which, we are bound to give the highest possible equality of value, throughout every part of the country, to whatever medium it may be collected in; and, if that be bank-notes, to adopt the most effective means of accomplishing it, which experience has shown to be a Bank of the United States. This has been long my opinion. I entertained it in 1816, and repeated it in my place here on the deposit question in 1834. The only alternative then is, disguise it as you may, between a disconnection and a Bank of the United States. This is the real issue to which all must come, and ought now to be openly and fairly met.

But there are difficulties in the way of a national bank, no less formidable than a reconnection with the State banks. It is utterly impracticable, at present, to establish one. There is reason to believe that a majority of the people of the United States are deliberately and unalterably opposed to it. At all events, there is a numerous, respectable, and powerful party—I refer to the old State-rights party—who are, and ever have been, from the beginning of the Government, opposed to the bank; and whose opinions, thus long and firmly entertained, ought at least to be so much respected as to forbid the creation of one, without an amendment of the constitution. To this must be added the insuperable difficulty, that the Executive branch of the Government is openly opposed to it, and pledged to interpose his veto, on constitutional grounds, should a bill pass to incorporate one. For four years, at least, then, it will be impracticable to charter a bank. What must be done in the mean time? Shall the Treasury be reorganized to perform the functions which have been recently discharged by the banks; or shall the State institutions be again em-

ployed until a bank can be created? In the one case, we shall have the so much vilified and denounced sub-treasury, as it is called; and, in the other, difficulties insurmountable would grow up against the establishment of a bank. Let the State institutions be once reinstated, and reunited to the Government as their fiscal agents, and they will be found the first and most strenuous opponents of a national bank, by which they would be overshadowed and curtailed in their profits. I hold it certain, that, in prosperous times, when the State banks are in full operation, it is impossible to establish a national bank. Its creation, then, should the reunion with the State banks take place, will be postponed until some disaster, similar to the present, shall again befall the country. But it requires little of the spirit of prophecy to see that such another disaster would be the death of the whole system. Already it has had two paralytic strokes—the third would prove fatal.

But suppose these difficulties were overcome, I would still be opposed to the incorporation of a bank. So far from affording the relief which many anticipate, it would be the most disastrous measure that could be adopted. As great as is the calamity under which the country is suffering, it is nothing to what would follow the creation of such an institution under existing circumstances. In order to compel the State institutions to pay specie, the bank must have a capital as great, or nearly as great, in proportion to the existing institutions, as the late bank had, when established, to those of that day. This would give it an immense capital—not much less than one hundred millions of dollars; of which a large proportion (say twenty millions) must be specie. From what source is it to be derived? From the State banks? It would empty their vaults, and leave them in the most helpless condition. From abroad, and England in particular? It would reproduce that revulsive current which has lately covered the country with desolation. The tide is still running to Europe, and, if forced back by any artificial cause before the foreign debt is paid, cannot but be followed by the most disastrous consequences.

But suppose this difficulty overcome, and the bank re-established; I ask, what would be the effects under such circumstances? Where would it find room for business, commensurate with its extended capital, without crushing the State institutions, enfeebled by the withdrawal of their means in order to create the instrument of their oppression? A few of the more vigorous might survive; but the far greater portion, with their debtors, creditors, and stockholders, would be involved in common ruin. The bank would, indeed, give a specie currency, not by enabling the existing institutions to resume, but by destroying them and taking their place.

Those who take a different view, and so fondly anticipate relief from a national bank, are deceived by a supposed analogy between the present situation of the country and that of 1816, when the late bank was chartered, after the war with Great Britain. I was an actor in that scene, and may be permitted to speak in relation to it with some little authority. Between the two periods there is little or no analogy. They stand almost in contrast. In 1816, the Government was a debtor to the banks—now, it is a creditor; a difference of the greatest importance, as far as the present question is concerned. The banks had overissued, it is true, but their over-issues were to the Government—a solvent and able debtor, whose credit, held by the banks in the shape of stock, was at par. It was their excessive issues to the Government on its stock which mainly caused the suspension; in proof of which, it is a remarkable fact, that the depreciation of bank paper under gold and silver was about equal to the proportion which the Government stock held by the banks bore to their issues. It was this excess that hung on the market and depressed the value of their notes. The solution is easy. The banks took the Government stock, payable in twelve years, and issued

SEPT. 18, 1837.]

Treasury Notes.

[SENATE.]

their notes for the same, payable on demand, in violation of the plainest principles of banking. It followed, of course, that when their notes were presented for payment, they had nothing but Government stock to meet them. But its stock was at par, and all the banks had to do was to go into market with the stock they held, and take up their notes; and thus the excess which hung upon the market, and depressed their value, would have been withdrawn from circulation, and the residue would have risen to par, or nearly par, with gold and silver; when specie payments might be easily resumed.

This they were unwilling to do. They were profiting every way—by drawing interest on the stock, by discounting on it as capital, and by its continued rise in the market. It became necessary to compel them to surrender these advantages. Two methods presented themselves: one a bankrupt law, and the other a national bank. I was opposed to the former then, as I am now. I regarded it as a harsh and unconstitutional measure, opposed to the rights of the States. If they have not surrendered the right to incorporate banks, as is conceded, its exercise cannot be controlled by the action of this Government, which has no power but what is expressly granted, and no authority to control the States in the exercise of their reserved powers. It remained to resort to a national bank as the means of compulsion. It proved effectual. Specie payments were restored; but even with these striking advantages, it was followed by great pressure in 1818, '19 and '20, as all who are old enough to remember that period must recollect. Such, in fact, must ever be the consequence of resumption, when forced, under the most favorable circumstances; and such, accordingly, it proved even in England, with all her resources, and with all the caution she used in restoring a specie circulation, after the long suspension of 1797. What, then, would be its effects in the present condition of the country, when the Government is a creditor instead of a debtor—when there are so many newly-created banks without established credit—when the over-issues are so great, and when so large a portion of the debtors are not in a condition to be coerced? As great as is the tide of disaster which is passing over the land, it would be as nothing to what would follow were a national bank to be established as the means of coercing specie payments.

I am bound to speak without reserve on this important point. My opinion then is, that, if it should be determined to compel the restoration of specie payments by the agency of banks, there is but one way; but to that I have insuperable objections—I mean the adoption of the Pennsylvania Bank of the United States as the fiscal agent of the Government. It is already in operation, and sustained by great resources and powerful connexions, both at home and abroad. Through its agency specie payments might undoubtedly be restored, and that with far less disaster than through a newly created bank; but not without severe pressure. I cannot, however, vote for such a measure. I cannot agree to give a preference and such advantages to a bank of one of the members of this confederacy over those of others—a bank dependent upon the will of a State, and subject to its influence and control. I cannot consent to confer such favors on the stockholders, many of whom, if rumor is to be trusted, are foreign capitalists, and without claim on the bounty of the Government. But, if all these and many other objections were overcome, there is still one which I cannot surmount.

There has been, as we all know, a conflict between one of the departments of the Government and that institution, in which, in my opinion, the department was the assailant; but I cannot consent, after what has occurred, to give to the bank a triumph over the Government—for such its adoption as the fiscal agent of the Government would necessarily be considered. It would degrade the Government in the eyes of our citizens and of the world, and go far to make that bank the Government itself.

But if all these difficulties were overcome, there are others, to me, wholly insurmountable. I belong to the State-rights party, which, at all times, from the beginning of the Government to this day, has been opposed to such an institution as unconstitutional, inexpedient, and dangerous. They have ever dreaded the union of the political and the moneyed power, and the central action of the Government to which it so strongly tends; and at all times have strenuously resisted their junction. Time and experience have confirmed the truth of their principles; and this, above all other periods, is the one at which it would be most dangerous to depart from them. Acting on them, I have never given my countenance or support to a national bank, but under a compulsion which I felt to be imperious, and never without an open declaration of my opinion as unfavorable to a bank.

In supporting the bank of 1816, I openly declared that, as a question *de novo*, I would be decidedly against the bank, and would be the last to give it my support. I also stated that, in supporting the bank then, I yielded to the necessity of the case, growing out of the then existing and long-established connexion between the Government and the banking system. I took the ground, even at that early period, that so long as the connexion existed, so long as the Government received and paid away bank-notes as money, they were bound to regulate their value, and had no alternative but the establishment of a national bank.

I found the connexion in existence and established before my time, and over which I could have no control. I yielded to the necessity, in order to correct the disordered state of the currency, which had fallen exclusively under the control of the States. I yielded to what I could not reverse, just as any member of the Senate now would, who might believe that Louisiana was unconstitutionally admitted into the Union, but who would, nevertheless, feel compelled to vote to extend the laws to that State, as one of its members, on the ground that its admission was an act, whether constitutional or unconstitutional, which he could not reverse.

In 1834 I acted in conformity to the same principle, in proposing the renewal of the bank charter for a short period. My object, as expressly avowed, was to use the bank to break the connexion between the Government and the banking system gradually, in order to avert the catastrophe which has now befallen us, and which I then clearly perceived. But the connexion, which I believed to be irreversible in 1816, has now been broken by operation of law. It is now an open question. I feel myself free, for the first time, to choose my course on this important subject; and, in opposing a bank, I act in conformity to principles which I have entertained ever since I have fully investigated the subject.

But my opposition to a reunion with the banks is not confined to objections limited to a national or State bank. It goes beyond, and comprehends others of a more general nature, relating to the currency, which to me are decisive. I am of the impression that the connexion has a most pernicious influence over bank currency; that it tends to disturb that stability and uniformity of value which is essential to a sound currency; and is among the leading causes of that tendency to expansion and contraction, which experience has shown is incident to bank-notes as a currency. They are, in my opinion, at best, without the requisite qualities to constitute a currency, even when unconnected with the Government; and are doubly disqualified by reason of that connexion, which subjects them to sudden expansions and contractions, and exposes them to fatal catastrophes, such as the present.

I will explain my views. A bank-note circulates not merely on account of the credit of the institution by which it is issued, but because Government receives it like gold and silver in all its dues, and thus adds its own credit to

SENATE.]

Treasury Notes.

[SEPT. 18, 1837.]

that of the bank. It, in fact, virtually endorses on the note of every specie-paying bank, "receivable by the Government in its dues." To understand how greatly this adds to the circulation of bank-notes, we must remember that Government is the great money-dealer of the country, and the holder of immense public domains; and that it has the power of creating a demand against every citizen, as high as it pleases, in the shape of a tax, or duty, which can be discharged, as the law now is, only by bank-notes or gold and silver. This, of course, cannot but add greatly to the credit of bank-notes, and contribute much to their circulation, though it may be difficult to determine, with any precision, to what extent. It certainly is very great. For why is it that an individual of the first credit, whose responsibility is so indisputable that his friend of equal credit endorses his note for nothing, should put his name with his friend's, being their joint credit, into a bank, and take out the notes of the bank, which is, in fact, but the credit of the bank itself, and pay six per cent. discount between the credit of himself and his friend and that of the bank? The known and established credit of the bank may be one reason, but there is another and powerful one: the Government treats the credit of the bank as gold and silver in all its transactions, and does not treat the credit of individuals in the same manner. To test the truth: let us reverse the case, and suppose the Government to treat the joint credit of the individuals as money, and not the credit of the bank; and is it not obvious that, instead of borrowing from the bank, and paying six per cent. discount, the bank would be glad to borrow from them on the same terms? From this we may perceive the powerful influence which bank circulation derives from the connexion with the credit of the Government.

It follows, as a necessary consequence, that to the extent of this influence the issues of the banks expand and contract with the expansion and contraction of the fiscal action of the Government; with the increase of its duties, taxes, income, and expenditure; with the deposits in its vaults, acting as additional capital, and the amount of bank-notes withdrawn, in consequence, from circulation; all of which must directly affect the amount of their business and issues, and bank currency, and must, of course, partake of all those vibrations to which the fiscal action of the Government is necessarily exposed; and, when great and sudden, must expose the system to catastrophes such as we now witness. In fact, a more suitable instance cannot be selected to illustrate the truth of what I assert than the present, as I shall proceed to show.

To understand the causes which have led to the present state of things, we must go back to the year 1824, when the tariff system triumphed in Congress—a system which imposed duties not for the purpose of revenue, but to encourage the industry of one portion of the Union at the expense of the other. This was followed up by the act of 1828, which consummated the system. It raised the duties so extravagantly, that out of an annual importation of sixty-four millions, thirty-two passed into the Treasury; that is, Government took one-half for the liberty of introducing the other. Countless millions were thus poured into the Treasury beyond the wants of the Government, which became in time the source of the most extravagant expenditures. This vast increase of receipts and expenditures was followed by a corresponding expansion of the business of the banks. They had to discount and issue freely, to enable the merchants to pay their duty bonds, as well as to meet the vastly-increased expenditures of the Government. Another effect followed the act of 1828, which gave a still further expansion to the action of the banks, and which is worthy of notice. It turned the exchange with England in favor of this country. That portion of the proceeds of our exports, which, in consequence of the high duties, could no longer return with

profit in the usual articles which we had been in the habit of receiving principally from that country in exchange for our exports, returned in gold and silver, in order to purchase similar articles at the North. This was the first cause that gave that western direction to the precious metals; the revulsive return of which has been followed by so many disasters. With the exchange in our favor, and consequently no demand for gold and silver abroad, and the vast demand for money attendant on an increase of the revenue, almost every restraint was removed on the discounts and issues of the banks, especially in the northern section of the Union, where these causes principally operated. With their increase, wages and prices of every description rose in proportion, followed, of course, by an increasing demand on the banks for further issues. This is the true cause of that expansion of the currency, which began about the commencement of the late administration, but which was erroneously charged by it to the Bank of the United States. It arose out of the action of the Government.

The bank, in increasing its business, acted in obedience to the condition of things at the time, and in conformity with the banks generally in the same section. It was at this juncture that the late administration came into power; a juncture remarkable in many respects, but more especially in relation to the question of the currency. Most of the causes which have since terminated in the complete prostration of the banks and the commercial prosperity of the country were in full activity.

Another cause, about that time, (I do not remember the precise date,) began to produce powerful effects. I refer to the last renewal of the charter of the Bank of England. It was renewed for ten years, and, among other provisions, contained one making the notes of that bank a legal tender in all cases except between the bank and its creditors. The effect was to dispense still further with the use of the precious metals in that great commercial country, which, of course, caused them to flow out in every direction through the various channels of its commerce. A large portion took their direction hitherward, and served still further to increase the current which, from causes already enumerated, was flowing in this direction; and which still further increased the force of the returning current, on the turn of the tide.

The administration did not comprehend the difficulties and dangers which surrounded it. Instead of perceiving the true reason of the expansion of the currency, and adopting the measures necessary to arrest it, they attributed it to the Bank of the United States, and made it the cause or pretext of waging war on that institution. Among the first acts of hostility, the deposits were removed, and transferred to selected State banks; the effect of which, instead of resisting the tendency to expansion, was to throw off the only restraint that held the banking institutions of the country in check; and, of course, gave to the swelling tide, which was destined to desolate the country, a powerful impulse. Banks sprung up in every direction; discounts and issues increased almost without limitation; and an immense surplus revenue accumulated in the deposit banks, which, after the payment of the public debt, the most extravagant appropriations could not exhaust, and which acted as additional banking capital. The value of money daily depreciated; prices rose; and then commenced those unbounded speculations, particularly in public lands, which were transferred, by millions of acres, from the public to the speculators for worthless bank-notes, till at length the swelling flood was checked, and the revulsive current burst its barriers, and overspread and desolated the land.

The first check came from the Bank of England, which, alarmed at the loss of its precious metals, refused to discount American bills, in order to prevent a further decrease

SEPT. 18, 1837.]

Treasury Notes.

[SENATE.]

of its cash means, and cause a return of those which it had lost. Then followed the execution of the deposit act, which, instead of a remedial measure, as it might have been made if properly executed, was made the instrument of weakening the banks at the point of pressure, especially in the great commercial metropolis of the Union, where so large a portion of the surplus revenue was accumulated. And, finally, the Treasury order, which still further weakened those banks, by withdrawing their cash means to be invested in public lands in the West.

It is often easier to prevent what cannot be remedied, which the present instance strongly illustrates. If the administration had formed a true conception of the danger in time, what has since happened might have then been easily averted. The near approach of the expiration of the charter of the United States Bank would have afforded ample means of staying the desolation, if it had been timely and properly used. I saw it then, and purposed to renew the charter, for a limited period, with such modifications as would have effectually resisted the increasing expansion of the currency, and, at the same time, gradually and finally wear out the connexion between the bank and the Government. To use the expression I then used, "to unbank the banks;" to let down the system easily, and so to effect the separation between the bank and the Government as to avoid the possibility of that shock which I then saw was inevitable without some such remedy. The moment was eminently propitious. The precious metals were flowing in on us from every quarter, and the vigorous measures I purposed to adopt in the renewal of the charter would have effectually arrested the increase of banks, and checked the excess of their discounts and issues; so that the accumulating mass of gold and silver, instead of being converted into bank capital, and swelling the tide of paper circulation, would have been substituted in the place of bank-notes, as a permanent and wholesome addition to the currency of the country.

But neither the administration nor the opposition sustained me, and the precious opportunity passed unsized. I then clearly saw the coming calamity was inevitable; and it has neither arrived sooner, nor is it greater, than I anticipated.

Such are the leading causes which have produced the present disordered state of the currency. There are others of a minor character, connected with the general condition of the commercial world, and the operations of the Executive branch of the Government, but which, of themselves, would have produced but little effect. To repeat the causes in a few words: the vast increase which the tariffs of 1824 and 1828 gave to the fiscal action of the Government, combined with the causes I have enumerated, gave the first impulse to the expansion of the currency. These, in turn, gave that extraordinary impulse to overtrading and speculation (they are effects, and not causes) which has finally terminated in the present calamity. It may thus be ultimately traced to the connexion between the banks and the Government; and it is not a little remarkable that the suspension of specie payments in 1816 in this country, and that of 1797 in Great Britain, were produced by like causes.

There is another reason against the union of the Government and the banks, intimately connected with that under consideration, which I shall next proceed to state. It gives a preference to one portion of citizens over another, that is neither fair, equal, nor consistent with the spirit of our institutions.

That the connexion between the banks and the Government, the receiving and paying away their notes as cash, and the use of the public money from the time of the collection to the disbursement, is the source of immense profit to the banks, cannot be questioned. It is impossible, as I said, to ascertain with any precision to what extent their

issues and circulation depend upon it, but it certainly constitutes a large proportion. A single illustration may throw light upon this point. Suppose the Government were to take up the veriest beggar in the street, and enter into a contract with him that nothing should be received in payment of its dues or for the sale of its public lands in future except gold and silver and his promissory notes, and that he should have the use of the public funds from the time of their collection until their disbursement: can any one estimate the wealth which such a contract would confer? His notes would circulate far and wide over the whole extent of the Union; would be the medium through which the exchanges of the country would be performed; and his ample and extended credit would give him a control over all the banking institutions and moneyed transactions of the community. The possession of a hundred millions would not give a control more effectual. I ask, would it be fair, would it be equal, would it be consistent with the spirit of our institutions, to confer such advantages on any individual? And if not on one, would it be if conferred on any number? And if not, why should it be conferred on any corporate body of individuals? How can they possibly be entitled to benefits so vast, which all must acknowledge could not be justly conferred on any number of unincorporated individuals?

I state not these views with any intention of bringing down odium on banking institutions. I have no unkind feeling towards them whatever. I do not hold them responsible for the present state of things. It has grown up gradually, without either the banks or the community perceiving the consequences which have followed the connexion between them. My object is to state facts as they exist, that the truth may be seen in time by all. This is an age of investigation. The public mind is broadly awake upon this all-important subject. It affects the interests and condition of the whole community, and will be investigated to the bottom. Nothing will be left unexplored, and it is for the interest both of the banks and of the community that the evils incident to the connexion should be fully understood in time, and the connexion be gradually terminated, before such convulsions shall follow as to sweep away the whole system, with its advantages as well as its disadvantages.

But it is not only between citizen and citizen that the connexion is unfair and unequal. It is as much so between one portion of the country and another. The connexion of the Government with the banks, whether it be with a combination of State banks or with a national institution, will necessarily centralize the action of the system at the principal point of collection and disbursement, and at which the mother bank, or the head of the league of State banks, must be located. From that point the whole system, through the connexion with the Government, will be enabled to control the exchanges both at home and abroad; and with it, the commerce, foreign and domestic, including exports and imports.

After what has been said, these points will require but little illustration. A single one will be sufficient; and I will take, as in the former instance, that of an individual.

Suppose, then, the Government, at the commencement of its operation, had selected an individual merchant, at any one point in the Union, (say New York,) and had connected itself with him, as it has with the banks, by giving him the use of the public funds from the time of their collection until their disbursement, and of receiving and paying away, in all its transactions, nothing but his promissory notes, except gold and silver: is it not manifest that a decisive control would be given to the port where he resided over all the others? that his promissory notes would circulate everywhere, through all the ramifications of commerce? that they would regulate exchanges? that they would be the medium of paying duty bonds? and that they would attract

[SENATE.]

Treasury Notes.

[SEPT. 18, 1837.]

the imports and exports of the country to the port where such extraordinary facilities were afforded? If such would clearly be the effects in the case supposed, it is equally clear that the concentration of the currency at the same point, through the connexion of the Government with the banks, would have equal, if not greater, effects; and that, whether one general bank should be used as an agent, or a league of banks, which should have their centre there. To other parts of the country, the trifling advantages which a branch or deposit bank would give, in the safekeeping of the public revenue, would be as nothing, compared to the losses caused to their commerce by centralizing the moneyed action of the country at a remote point. Other gentlemen can speak for their own sections; I can speak, with confidence, of that which I have the honor in part to represent. The entire staple States, I feel a deep conviction, banks and all, would, in the end, be great gainers by the disseverance, whatever might be the temporary inconvenience. If there be any other section in which the effects will be different, it would be but to confirm the views which I have presented.

As connected with this, there is a point well deserving consideration. The union between banks and Government is not only a main source of that dangerous expansion and contraction in the banking system which I have already illustrated, but is also one of the principal causes of that powerful and almost irresistible tendency to the increase of banks, which even its friends see and deplore. I dwell on this point on a former occasion, (on Mr. WEBSTER's motion to renew the bank charter in 1833,) and will not repeat what I then said. But, in addition to the causes then enumerated, there are many others very powerful, and among others the one under consideration. They all may be summed up in one general cause. We have made banking too profitable—far, very far, too profitable; and I may add, too influential. One of the most ample sources of this profit and influence may be traced, as I have shown, to the connexion with the Government; and is, of course, among the prominent causes of the strong and incessant tendency of the system to increase, which even its friends see must finally overwhelm either the banks or the institutions of the country. With a view to check its growth, they have proposed to limit the number of banks and the amount of banking capital by an amendment of the constitution; but it is obvious that the effects of such an amendment, if it were practicable, would but increase the profits and influence of bank capital; and that, finally, it would justly produce such indignation on the part of the rest of the community against such unequal advantages, that in the end, after a long and violent struggle, the overthrow of the entire system would follow. To obviate this difficulty, it has been proposed to add a limitation upon the amount of their business; the effects of which would be, the accommodation of favorites, to the exclusion of the rest of the community, which would be no less fatal to the system. There can be, in fact, but one safe and consistent remedy—the rendering banking as a business less profitable and influential; and the first and decisive step toward this is a disseverance between the banks and the Government. To this may be added some effectual limitation on the denomination of the notes to be issued, which would operate in a similar manner.

I pass over other and important objections to the connexion—the corrupting influence and the spirit of speculation which it spreads far and wide over the land. Who has not seen and deplored the vast and corrupting influence brought to bear upon the Legislatures to obtain charters and means necessary to participate in the profits of the institutions? This gives a control to the Government which grants such favors, of a most extensive and pernicious character; all of which must continue to spread and increase, if the connexion should continue, until the whole

community must become one contaminated and corrupted mass.

There is another and a final reason which I shall assign against the reunion with the banks. We have reached a new era with regard to these institutions. He who would judge of the future by the past, in reference to them, will be wholly mistaken. The year 1833 marks the commencement of this era. That extraordinary man, who had the power of imprinting his own feelings on the community, then commenced his hostile attacks, which have left such effects behind, that the war then commenced against the banks, I clearly see, will not terminate, unless there be a separation between them and the Government, until one or the other triumphs—till the Government becomes the bank, or the bank the Government. In resisting their union, I act as the friend of both. I have, as I have said, no unkind feeling toward the banks. I am neither a bank man, nor an anti-bank man. I have had little connexion with them. Many of my best friends, for whom I have the highest esteem, have a deep interest in their prosperity, and, as far as friendship or personal attachment extends, my inclination would be strongly in their favor. But I stand up here as the representative of no particular interest. I look to the whole, and to the future, as well as the present; and I shall steadily pursue that course which, under the most enlarged view, I believe to be my duty. In 1834 I saw the present crisis. In vain raised a warning voice, and endeavored to avert it. I now see, with equal certainty, one far more portentous. If this struggle is to go on—if the banks will insist upon a reunion with the Government against the sense of a large and influential portion of the community—and, above all, if they should succeed in effecting it—a reflux flood will inevitably sweep away the whole system. A deep popular excitement is never without some reason, and ought ever to be treated with respect; and it is the part of wisdom to look timely into the cause, and correct it before the excitement shall become so great as to demolish the object, with all its good and evil, against which it is directed.

The only safe course for both Government and banks is to remain, as they are, separated—each in the use of their own credit, and in the management of their own affairs. The less the control and the influence of the one over the other, the better. Confined to their legitimate sphere—that of affording temporary credit to commercial and business men—bank-notes would furnish a safe and convenient circulation in the range of the circle of commerce and business within which the banks may be respectively situated, exempt almost entirely from those fluctuations and convulsions to which they are now so exposed; or, if they should occasionally be subject to them, the evil would be local and temporary, leaving undisturbed the action of the Government and the general currency of the country, on the stability of which the prosperity and safety of the community so much depend.

I have now stated my objections to the reunion of the Government and the banks. If they are well founded; if the State banks are of themselves incompetent agents; if a Bank of the United States be impracticable, or, if practicable, would, at this time, be the destruction of a large portion of the existing banks, and of renewed and severe pecuniary distress; if it would be against the settled conviction of an old and powerful party, whose opposition time cannot abate; if the union of Government and banks add to the unfitness of their notes for circulation, and be unjust and unequal between citizen and citizen, and one portion of the Union and another; and, finally, if it would excite an implacable and obstinate war, which could only terminate in the overthrow of the banking system or the institutions of the country, it then remains that the only alternative would be permanently to separate the two, and to reorganize the Treasury so as to enable it to perform those

SEPT. 18, 1837.]

Treasury Notes.

[SENATE.]

duties which have heretofore been performed by the banks as its fiscal agents. This proposed reorganization has been called a sub-treasury—an unfortunate word, calculated to mislead and conjure up difficulties and dangers that do not really exist. So far from an experiment, or some new device, it is only returning to the old mode of collecting and disbursing public money, which, for thousands of years, has been the practice of all enlightened people till within the last century.

In what manner it is intended to reorganize the Treasury, by the bill reported, I do not know. I have been too much engaged to read it; and I can only say that, for one, I shall assent to no arrangement which provides for a Treasury bank, or that can be perverted into one. If there can be any scheme more fatal than a reunion with the banks at this time, it would be such a project. Nor will I give my assent to any arrangement which shall add the least unnecessary patronage. I am the sworn foe to patronage, and have done as much and suffered as much in resisting it as any one. Too many years have passed over me to change, at this late day, my course or principles. But I will say, that it is impossible so to organize the Treasury for the performance of its own functions as to give to the Executive a tenth part of the patronage it will lose by the proposed separation, which, when the bill for the reorganization comes up, I may have an opportunity to show. I have ventured this assertion after much reflection, and with entire confidence in its correctness.

But something more must be done besides the reorganization of the Treasury. Under the resolution of 1816, bank-notes would again be received in the dues of the Government, if the banks should resume specie payments. The legal as well as the actual connexion must be severed. But I am opposed to all harsh or precipitate measures. No great process can be effected without a shock, but through the agency of time. I accordingly propose to allow time for the final separation; and, with this view, I have drawn up an amendment to this bill, which I shall offer at the proper time, to modify the resolution of 1816, by providing that after the 1st of January next, three-fourths of all sums due to the Government may be received in the notes of specie-paying banks; and after the 1st of January next following, one-half; and after the 1st of January next subsequent, one-fourth; and after the 1st of January thereafter, nothing but the legal currency of the United States, or bills, notes, or paper issued under their authority, and which may by law be authorized to be received in their dues. If the time is not thought to be ample, I am perfectly disposed to extend it. The period is of little importance in my eyes, so that the object be effected.

In addition to this, it seems to me that some measure, of a remedial character, connected with the currency, ought to be adopted, to ease off the pressure while the process is going through. It is desirable that the Government should make as few and small demands on the specie market as possible during the time, so as to throw no impediment in the way of the resumption of specie payments. With this view, I am of the impression that the sum necessary for the present wants of the Treasury should be raised by a paper, which should at the same time have the requisite qualities to enable it to perform the functions of a paper circulation. Under this impression, I object to the interest to be allowed on the Treasury notes which this bill authorizes to be issued, on the very opposite grounds that the Senator from Massachusetts bestows his opposition. He approves of interest, because it would throw them out of circulation into the hands of capitalists, as a convenient and safe investment; and I disapprove, because it will have that effect. I am disposed to ease off the process; he, I would suppose, is very little solicitous on that point.

But I go farther. I am of the impression, to make this great measure successful, and secure it against reaction, that

some stable and safe medium of circulation, to take the place of bank-notes in the fiscal operations of the Government, ought to be issued. I intend to propose nothing. It would be impossible, with so great a weight of opposition, to pass any measure without the entire support of the administration; and, if it were possible, it ought not to be attempted where so much must depend on the mode of execution. The best measure that could be devised might fail, and impose a heavy responsibility on its author, unless it met with the hearty approbation of those who are to execute it. I, then, intend merely to throw out suggestions, in order to excite the reflection of others on a subject so delicate, and of so much importance: acting on the principle that it is the duty of all, in so great a juncture, to present their views without reserve.

It is, then, my impression, that, in the present condition of the world, a paper currency, in some form, if not necessary, is almost indispensable in financial and commercial operations of civilized and extensive communities. In many respects it has a vast superiority over a metallic currency, especially in great and extended transactions, by its greater cheapness, lightness, and the facility of determining the amount. The great desideratum is, to ascertain what description of paper has the requisite qualities of being free from fluctuation in value, and liability to abuse, in the greatest perfection. I have shown, I trust, that the bank-notes do not possess these requisites in a degree sufficiently high for this purpose. I go farther. It appears to me, after bestowing the best reflection I can give the subject, that no convertible paper—that is, no paper whose credit rests upon a promise to pay—is suitable for currency. It is the form of credit proper in private transactions between man and man, but not for a standard of value, to perform exchanges generally, which constitute the appropriate functions of money or currency. The measures of safety in the two cases are wholly different. A promissory note, or convertible paper, is considered safe so long as the drawer has ample means to meet his engagements; and, in passing from hand to hand, regard is had only to his ability and willingness to pay. Very different is the case in currency.

The aggregate value of the currency of a country necessarily bears a small proportion to the aggregate value of its property. This proportion is not well ascertained, and is probably subject to considerable variation in different countries, and at different periods in the same country. It may be assumed, conjecturally, in order to illustrate what I say, at one-to-thirty. Assuming this proportion to be correct, (which probably is not far from the truth,) it follows that, in a sound condition of the country, where the currency is metallic, the aggregate value of the coin is not more than one in thirty of the aggregate value of the property. It also follows, that an increase in the amount of the currency, by the addition of a paper circulation of no intrinsic value, but increases the nominal value of the aggregate property of the country in the same proportion that the increase bears to the whole amount of currency; so that, if the currency be doubled, the nominal value of the property will also be doubled. Hence it is, that, when the paper currency of a country is in the shape of promissory notes, there is a constant tendency to excess. We look for their safety to the ability of the drawer; and so long as his means are ample to meet his engagements, there is no distrust; without reflecting that, considered as currency, it cannot safely exceed one in thirty in value, compared to property. And the delusion is farther increased by the constant increase in value of property, with the increase of the notes in circulation, so as to maintain the same relative proportion. It follows that a Government may safely contract a debt many times the amount of its aggregate circulation; but, if it were to attempt to put its promissory notes in circulation in amount equal to its debts, an explosion in the currency would be inevitable. And hence, with other causes,

SENATE.]

Treasury Notes.

[SEPT. 18, 1837.]

the constant tendency to an excessive issue of bank-notes in prosperous times, when so large a portion of the community are anxious to obtain accommodation, and who are disappointed when negotiable paper is refused by the banks; not reflecting that it would not be safe to discount beyond the limits I have assigned for a safe circulation, however good the paper offered.

On what, then, ought a paper currency to rest? I would say on demand and supply simply, which regulates the value of every thing else—the constant demand which the Government has on the community for its necessary supplies. A medium resting on this demand, which simply obligates the Government to receive it in all of its dues, to the exclusion of every thing else except gold and silver, and which shall be optional with those who have demands on Government to receive or not, would, it seems to me, be as stable in its value as those metals themselves, and be as little liable to abuse as the power of coining. It would contain within itself a self-regulating power. It could only be issued to those who had claims on the Government, and to those only with their consent, and, of course, only at or above par with gold and silver, which would be its habitual state; for, as far as the Government was concerned, it would be equal in every respect to gold and silver, and superior in many, particularly in regulating the distant exchanges of the country. Should, however, a demand for gold and silver from abroad, or other accidental causes, depress it temporarily, as compared with the precious metals, it would then return to the Treasury; and, as it could not be paid out during such depression, its gradual diminution in the market would soon restore it to an equality, when it would again flow out into the general circulation. Thus there would be a constant alternate flux and reflux into and from the Treasury, between it and the precious metals; but, if at any time a permanent depression in its value be possible from any cause, the only effect would be to operate as a reduction of taxes on the community, and the only sufferer would be the Government itself. Against this its own interest would be a sufficient guaranty.

Nothing but experience can determine what amount and of what denominations might be safely issued; but it may be safely assumed that the country would absorb an amount greatly exceeding its annual income. Much of its exchanges, which amount to a vast sum, as well as its banking business, would revolve about it, and many millions would thus be kept in circulation beyond the demands of the Government. It may throw some light on the subject to state that North Carolina, just after the Revolution, issued a large amount of paper, which was made receivable in dues to her. It was also made a legal tender, but which, of course, was not obligatory after the adoption of the federal constitution. A large amount—say between four and five hundred thousand dollars—remained in circulation after that period, and continued to circulate for more than twenty years, at par with gold and silver during the whole time, with no other advantage than being received in the revenue of the State, which was much less than \$100,000 per annum. I speak on the information of citizens of that State, on whom I can rely.

But, whatever may be the amount that can be circulated, I hold it clear that, to that amount, it would be as stable in value as gold and silver itself, provided the Government be bound to receive it exclusively with those metals in all its dues, and that it be left perfectly optional with those who have claims on the Government to receive it or not. It will also be a necessary condition that notes of too small a denomination should not be issued, so that the Treasury shall have ample means to meet all demands, either in gold or silver, or the bills of the Government, at the option of those who have claims on it. With these conditions, no further variation could take place between it and gold and silver than that which would be caused by the action of

commerce. An unusual demand from abroad for the metals would, of course, raise them a little in their relative value, and depress relatively the Government bills in the same proportion, which would cause them to flow into the Treasury, and gold and silver to flow out; while, on the contrary, an increased demand for the bills in the domestic exchange would have the reverse effect, causing, as I have stated, an alternate flux and reflux into the Treasury, between the two, which would at all times keep their relative values either at or near par.

No one can doubt that the fact of the Government receiving and paying away bank-notes in all its fiscal transactions is one of the principal sources of their great circulation; and it was mainly on that account that the notes of the late Bank of the United States so freely circulated all over the Union. I would ask, then, why should the Government mingle its credit with that of private corporations? No one can doubt but that the Government credit is better than that of any bank—more stable and more safe. Why, then, should it mix it up with the less perfect credit of those institutions? Why not use its own credit to the amount of its own transactions? Why should it not be safe in its own hands, while it shall be considered safe in the hands of 800 private institutions scattered all over the country, and which have no other object but their own private profits, to increase which they almost constantly extend their business to the most dangerous extremes? And why should the community be compelled to give six per cent. discount for the Government credit blended with that of the banks, when the superior credit of the Government could be furnished separately, without discount, to the mutual advantage of the Government and the community? Why, let me ask, should the Government be exposed to such difficulties as the present, by mingling its credit with the banks, when it could be exempt from all such, by using by itself its own safer credit? It is time the community, which has so deep an interest in a sound and cheap currency, and the equality of the laws between one portion of the citizens of the country and another, should reflect seriously on these things—not for the purpose of oppressing any interest, but to correct gradual disorders of a dangerous character, which have insensibly, in the long course of years, without being perceived by any one, crept into the state.

The question is, not between credit and no credit, as some would have us believe; but in what form credit can best perform the functions of a sound and safe currency. On this important point I have freely thrown out my ideas, leaving it to this body and the public to determine what they are worth. Believing that there might be a sound and safe paper currency founded on the credit of Government exclusively, I was desirous that those who are responsible and have the power should have availed themselves of the opportunity of a temporary deficit of the Treasury, and the postponement of the fourth instalment intended to be deposited with the States, to use them as the means of affording a circulation for the present relief of the country and the banks, during the process of separating them from the Government; and, if experience should justify it, of furnishing a permanent and safe circulation, which would greatly facilitate the operations of the Treasury, and afford, incidentally, much facility to the commercial operations of the country. But a different direction was given; and when the alternative was presented, of a loan, or the withholding the fourth instalment from the States, I did not hesitate to give a decided vote for withholding it. My aversion to a public debt is deep and durable. It is, in my opinion, pernicious, and is little short of a fraud on the public. I saw too much of it during the late war not to understand something of the nature and character of public loans. Never was a country more egregiously imposed on.

Having now presented my views of the course and the

SEPT. 18, 1837.]

Treasury Notes.

[SENATE.]

measures which the permanent policy of the country, looking to its liberty and lasting prosperity, requires, I come finally to the question of relief. I have placed this last—not that I am devoid of sympathy for the country in the pecuniary distress which now pervades it. No one struggled earlier or longer to prevent it than myself; nor can any one more sensibly feel the widespread blight which has suddenly blasted the hopes of so many, and precipitated thousands from affluence to poverty. The desolation has fallen mainly on the mercantile class—a class which I have ever held in the highest estimation. No country ever had a superior body of merchants—of higher honor, of more daring enterprise, or of greater skill and energy. The ruin of such a class is a heavy calamity, and I am solicitous, among other things, to give such stability to our currency as to prevent the recurrence of a similar calamity hereafter. But it was first necessary, in the order of things, that we should determine what sound policy, looking to the future, demands to be done at the present juncture, before we consider the question of relief, which, as urgent as it may be, is subordinate, and must yield to the former. The patient lies under a dangerous disease, with a burning thirst and other symptoms, which distress him more than the vital organs which are attacked. The skilful physician first makes himself master of the nature of the disease, and then determines on the treatment necessary for the restoration of health. This done, he next alleviates the distressing symptoms as far as is consistent with the restoration of health, and no further. Such shall be my course. As far as I possibly can, consistently with the views I entertain, and what I believe to be necessary to restore the body politic to health, I will do every thing in my power to mitigate the present distress. Further I cannot go.

After the best reflection, I am of the impression that the Government can do but little in the way of relief, and that it is a case which must be mainly left to the constitution of the patient, who, thank God, is young, vigorous, and robust, with a constitution sufficient to sustain and overcome the severest attack. I dread the doctor and his drugs much more than the disease itself. The distress of the country consists in its indebtedness, and can only be relieved by the payment of its debts. To effect this, industry, frugality, economy, and time, are necessary. I rely more on the growing crop—on the cotton, rice, and tobacco, of the South—than on all the projects or devices of politicians. I am utterly opposed to all coercion by this Government. But Government may do something to relieve the distress. It is out of debt, and is one of the principal creditors both of the banks and of the merchants, and should set an example of liberal indulgence. This I am willing to give freely. I am also prepared to vote freely the use of Government credit in some safe form, to supply any deficit in the circulation during the process of recovery, as far as its financial wants will permit. I see not what more can be safely done. But my vision may be obtuse upon this subject. Those who differ from me, and who profess so much sympathy for the public, seem to think that much relief may be afforded. I hope they will present their views. I am anxious to hear their prescriptions; and I assure them that whatever they may propose, if it shall promise relief, and be not inconsistent with the course which I deem absolutely necessary for the restoration of the country to perfect health, shall cheerfully receive my support. They may be more keen-sighted than I am as to the best means of relief, but cannot have a stronger disposition to afford it.

We have, Mr. President, arrived at a remarkable era in our political history. The days of legislative and executive encroachments, of tariffs and surpluses, of bank and public debt, and extravagant expenditure, are past for the present. The Government stands in a position disentangled from the past, and freer to choose its future course

than it ever has been since its commencement. We are about to take a fresh start. I move off under the State-rights banner, and go in the direction in which I have been so long moving. I seize the opportunity thoroughly to reform the Government; to bring it back to its original principles; to retrench and economize, and rigidly to enforce accountability. I shall oppose strenuously all attempts to originate a new debt; to create a national bank; to reunite the political and money power—more dangerous than that of church and state—in any form or shape; to prevent the disturbances of the compromise, which is gradually removing the last vestige of the tariff system; and, mainly, I shall use my best efforts to give an ascendancy to the great conservative principle of State sovereignty, over the dangerous and despotic doctrine of consolidation. I rejoice to think that the Executive department of the Government is now so reduced in power and means, that it can no longer rely on its influence and patronage to secure a majority. Henceforward it can have no hope of supporting itself but on wisdom, moderation, patriotism, and devoted attachment to the constitution, which I trust will make it, in its own defence, an ally in effecting the reform which I deem indispensable to the salvation of the country and its institutions.

I look, sir, with pride to the wise and noble bearing of the little State-rights party, of which it is my pride to be a member, throughout the eventful period through which the country has passed since 1824. Experience already bears testimony to their patriotism, firmness, and sagacity; and history will do it justice. In that year, as I have stated, the tariff system triumphed in the councils of the nation. We saw its disastrous political bearings; foresaw its surpluses and the extravagances to which it would lead. We rallied on the election of the late President to arrest it, through the influence of the Executive department of the Government. In this we failed. We then fell back upon the rights and sovereignty of the States, and by the action of a small but gallant State, and through the potency of its interposition, we brought the system to the ground, sustained as it was by the opposition and the administration, and by the whole power and patronage of the Government. The pernicious overflow of the Treasury, of which it was the parent, could not be arrested at once. The surplus was seized on by the Executive, and, by its control over the banks, became the fruitful source of Executive influence and encroachment. Without hesitation, we joined our old opponents on the tariff question, but under our own flag, and without merging in their ranks, and made a gallant and successful war against the encroachments of the Executive. That terminated, we part with our late allies in peace; and move forward, lag, or onward who may, to secure the fruits of our long but successful struggle, under the old republican flag of 1798, which, though tattered and torn, has never yet been lowered, and, with the blessing of God, never shall be with my consent.

On concluding his speech, Mr. C. submitted his amendment, which provided that from and after the 1st of January next, three-fourths of the money due to the Government may be paid in notes of specie-paying banks; that from and after the 1st of January 1839, one-half might be paid in such notes; one-quarter after the 1st of January, 1840; and that, from and after the 1st of January 1841, all sums due the Government for customs, lands, &c. shall be paid only in the legal currency of the United States, or in such notes, bills, &c., as should by law be ordered.

Mr. WEBSTER rose, and inquired of Mr. C. to what bill it was proposed to make this an amendment.

Mr. CALHOUN replied, to one called the divorce bill between the Government and the banks, which he said was just ahead.

Mr. BENTON, after expressing his entire concurrence in the amendment of Mr. CALHOUN, sent to the Chair two

SENATE.]

Treasury Notes.

[SEPT. 18, 1837.]

amendments of his own, which he said comprised the substance of the bill introduced by him two years ago, "to re-establish the constitutional currency of the country." His first amendment provides that, after a day to be specified, all the public dues should be paid in gold and silver only, and in Treasury notes and land scrip, as might by law be authorized; and the second provides that, after the resumption of specie payments by the banks, the Treasury should begin with specie payments.

[These amendments, together with Mr. CALHOUN's, were ordered to be printed.]

Mr. B. said he should not have risen in this debate, had it not been for the misapprehensions which seemed to pervade the minds of some Senators as to the character of the bill. It is called by some a paper-money bill, and by others a bill to germinate a new national debt. These are serious imputations, and require to be answered, not by declamation and recrimination, but by facts and reasons, addressed to the candor and to the intelligence of an enlightened and patriotic community.

I dissent from the imputations on the character of the bill. I maintain that it is neither a paper-money bill, nor a bill to lay the foundation for a new national debt; and will briefly give my reasons for believing as I do on both points.

There are certainly two classes of Treasury notes—one for investment, and one for circulation; and both classes are known to our laws, and possess distinctive features, which define their respective characters, and confine them to their respective uses.

The notes for investment bear an interest sufficient to induce capitalists to exchange gold and silver for them, and to lay them by as a productive fund. This is their distinctive feature, but not the only one; they possess other subsidiary qualities, such as transferability only by endorsement—payable at a fixed time—not re-issuable—nor of small denomination—and to be cancelled when paid. Notes of this class are, in fact, loan notes—notes to raise loans on, by selling them for hard money—either immediately by the Secretary of the Treasury, or, secondarily, by the creditor of the Government to whom they have been paid. In a word, they possess all the qualities which invite investment, and forbid and impede circulation. The act of 1812 authorized an issue of notes of this description. They bore five and two-fifths per cent. interest, with an express clause that the Secretary of the Treasury might raise money upon them by loan. I presume there are Senators present who were members of the House of Representatives in 1812, who gave the sanction of their approbation to the Treasury note law of that year, and who would be very unwilling to hear the epithets applied to that law which are lavished upon this bill, which is copied from it.

The Treasury notes for currency are distinguished by features and qualities the reverse of those which have been mentioned. They bear little or no interest. They are payable to bearer—transferable by delivery—re-issuable—of low denominations—and frequently reimbursable at the pleasure of the Government. They are, in fact, paper money, and possess all the qualities which forbid investment, and invite to circulation. The Treasury notes of 1815, were of that character, except for the optional clause to enable the holder to fund them at the interest which commanded loans—at seven per cent.

These are the distinctive features of the two classes of notes. Now try the committee's bill by the test of these qualities. It will be found that the notes which it authorizes belong to the first named class; that they are to bear an interest, which may be six per cent.; that they are transferable only by endorsement; that they are not re-issuable; that they are to be paid at a day certain, to wit, within one year; that they are not to be issued of less denomi-

nation than one hundred dollars; are to be cancelled when taken up; and that the Secretary of the Treasury is expressly authorized to raise money upon them by loaning them.

These are the features and qualities of the notes to be issued, and they define and fix their character as notes to raise loans, and to be laid by as investments, and not as notes for currency, to be pushed into circulation by the power of the Government, and to add to the curse of the day by increasing the quantity of unconvertible paper money.

The execution of the act, and especially the cardinal feature of the quantum of interest, is left to the President and the Secretary of the Treasury. I presume it will be executed as a law to borrow money; and in that point of view the interest was left open, under a maximum limit, as is proper to be done in all propositions for loans. Bids may be invited by advertisement; the competition of lenders may fix the interest; capitalists may fix it by competition, though nominally left to the discretion of the President and Secretary; and at whatever rate it is thus fixed—at whatever rate a loan of gold and silver is commanded—at that rate the whole issue, made at any one time, ought to go. There should not be two rates of interest—a high one for the independent and opulent capitalist, and a low one for the helpless and necessitous public creditor.

This is my opinion of the character of these Treasury notes, and of the mode of using them. I cannot doubt but that lenders will present themselves, and that the whole ten millions may be borrowed in gold and silver just as fast as the Government needs it. That opinion is formed upon data—upon the great amount of specie now in the country, its unproductiveness to its present holders, and the facility with which large amounts of specie were borrowed immediately after the bank suspensions and the commercial revulsions of 1819. The specie in the United States cannot now be less than it was six months ago, to wit, eighty millions of dollars; for it is shown by the custom-house reports, and other data, that, notwithstanding the efforts to ship it to Europe, the imports and exports are about even during that time; and that, taking the whole fiscal year together, the imports now exceed the exports by nearly four millions of dollars; and that near \$900,000 in gold have been coined in the first three quarters of the present calendar year. The specie in the country cannot, therefore, be less than \$80,000,000, and, upon the calculation of last year, is more. The whole of this vast amount is lying idle, barren, and unproductive to its owners—not that they are all unwilling to lend it, and to receive interest, but for want of borrowers in whom they have confidence. The United States will present that borrower, and will bring forth the hoarded treasures which the lack of general confidence now consigns to sterility in private chests and in special bank deposits. Thus it was in 1819–'20. The commercial and bank catastrophe of that period took place in 1819; in less than a year afterwards, from the collapse of business and the stagnation of commerce, money in the Atlantic cities was abundant, idle, and seeking investment at four or five per cent. So says Mr. Cheves—so we can all remember. But to refresh memories, and establish this important fact, I will read a paragraph from Mr. Cheves's late letter to Dr. Cooper:

"Before the close of the first year of my administration, adequate capital had been assigned to the offices in which it had been deficient, and the bank and its offices generally, then or very soon after, were in a condition to do extensive business, had the situation of the country permitted it. But the commerce of the country became perfectly stagnant. Money was a drug. The bank, to keep up its business as far as possible, discounted long paper—say at four and six months, and perhaps longer. It was even proposed, with the same object, to lower the rate of interest

SEPT. 18, 1837.]

Treasury Notes.

[SENATE.]

to five per cent. I believe local banks at Boston did, in some instances, discount at that rate. In Philadelphia, I think, the local banks discounted paper having nine months to run, and perhaps more. The commerce of the country was reduced from a state of great excitement, such as we have just witnessed, to a state of collapse, such as I fear we may soon suffer. Under these circumstances, the discounts fell off. The bank was too safe. It had, at times, I believe, as much specie—perhaps more—in its vaults than it had notes in circulation. Under this want of demand for money, I was so fortunate as to obtain the public loans, to the amount of \$6,000,000, which the bank was able to pay for, and retain an abundance of specie in its vaults.”

Such is the testimony of Mr. Cheves; and thus easily and rapidly did the recuperative energies of this young, vigorous, athletic country recover from the depression and desolation of that day. The effect cannot be different now; on the contrary, the recovery must be more rapid and easy; for the distress now is not the tithe of what it was then. The real money in the country—the gold and silver—was not the fourth part then of what it is now; the distress then was all real, and no part of it assumed, pretended, artificial, forced, and fictitious, contrived with malice aforethought to govern elections and politics, and to coerce the revivification of a national bank.

I remember the times of which Mr. Cheves speaks. I came to the Senate in 1829; and I know that his picture of the abundance of money, the facility of getting loans, and the low rate of interest, is entirely just. Our own legislation proves it; for a loan of \$3,000,000 was authorized in the session of 1819–’20, and another at the ensuing session for \$5,000,000, both expressly to defray the current expenses of the Government; and both loans were eagerly bid for by capitalists, and at rates considerably below six per cent. It was six millions out of these eight that Mr. Cheves congratulates himself for having been fortunate enough to obtain for the Bank of the United States. The picture drawn by Mr. Cheves is correct, as applicable to the Atlantic board, for which he intended it; it is not correct as applicable to the West, and was not so intended by him. That great region did not recover for several years after 1819. It had been eviscerated of its gold and silver, to sustain the Bank of the United States! It had been sacrificed to save that bank! At the time that Mr. Cheves refers to, it was, so far as the precious metals were concerned, the empty skin of an immolated victim, sacrificed upon the altar of salvation to a foreign institution. Not so now. Thanks to the ever-glorious Treasury order! That order has saved the West from the fate which overwhelmed her for so many years after the revulsion of 1819. She is not now, in respect to money or any thing else, the empty skin of a sacrificed victim. She has her fair proportion of all the blessings of good government, as well as her fair proportion of all the blessings of Heaven. She is able and willing to pay her share of the public revenue in solid money. The sales of the public lands, since the suspension of specie payments, are fully equal to what they were in the best years before the two years of bank expansions and mad speculations. These sales have gone on in June, July, and August, at a rate to yield near four millions per annum, which is equal to the best years before 1835 and 1836. Mr. Cheves was right in his picture of the moneyed plethora on the Atlantic board. It was a drug there in less than one year after the great catastrophe of 1819; it will be a drug there again, and from the same causes—stagnation of trade and collapse of business—within a few months. It is on the Atlantic board that these Treasury notes will be borrowed. Money will be loaned upon them. They will be taken as investments, to be laid by; not as currency, to be shoved into circulation.

The bill has been denounced as the germe of a new national debt. It certainly proposes the creation of a debt.

But for what purpose, and under what circumstances? To comply with the maxim, that a public debt is a public blessing? By no means! But to relieve the States from being called upon for a reimbursement of any part of the twenty-seven millions of dollars which have been deposited with them; to relieve the merchants from an immediate payment of four millions; and to relieve the late deposit banks from an immediate press for six millions. This is the object. The loan of ten millions on the Treasury notes comes in place of the four and six millions due from merchants and the banks. It is because we cannot collect the one, that we create the other. If we had the ten millions from the merchants and the banks, we should not want the Treasury notes; not being able to collect those ten millions, we give time to our debtors, and borrow an equivalent sum.

The outstanding debt due to the United States is equal to the debt created; it will be a fund to pay it, interest and all; (for the merchants and banks are to pay interest;) and then the Treasury note debt becomes a mere nominal transaction, so far as debt is concerned, being no burden to the United States, and a relief to her debtors.

This is the object of this nominal debt; and under what circumstances is it created? Under the same which occasioned eight millions to be borrowed by direct loan in the two succeeding sessions after the catastrophe of 1819. We have run the career of that period over again, and the parallel is exact in every particular. Then, as now, we had our dream of inexhaustible surpluses, and were waked up to the reality of an empty Treasury. Then, as now, we had our forty-seven millions of revenue—our nine millions of annual surplus—our bank expansions—our mad speculations—our bloated and delusive prosperity; and then, as now, we were called together to borrow eight millions for the support of the Government, to hear the cries of distress and the calls for relief. The eight millions borrowed then, and borrowed with the approving voice of some who now stigmatize a similar loan, under similar circumstances, and for the same object, was not considered as the germe of a new national debt; neither will our loan be so considered by the country.

I trust I have vindicated the bill from the stigma of being a paper currency bill, and from the imputation of being the first step towards the creation of a new national debt. I hope it is fully cleared from the odium of both these imputations. I will now say a few words on the policy of issuing Treasury notes in time of peace, or even in time of war, until the ordinary resources of loans and taxes had been tried and exhausted. I am no friend to the issue of Treasury notes of any kind. As loans, they are a disguised mode of borrowing, and easy to slide into a currency; as a currency, it is the most seductive, the most dangerous, and the most liable to abuse of all the descriptions of paper money. “The stamping of paper (by Government) is an operation so much easier than the laying of taxes, or of borrowing money, that a Government in the habit of paper emissions would rarely fail, in any emergency, to indulge itself too far in the employment of that resource, to avoid as much as possible one less auspicious to present popularity.” So said General Hamilton; and Jefferson, Madison, Macon, Randolph, and all the fathers of the republican church, concurred with him. These sagacious statesmen were shy of this facile and seductive resource, “so liable to abuse, and so certain of being abused.” They held it inadmissible to recur to it in time of peace, and that it could only be thought of amidst the exigencies and perils of war, and that after exhausting the direct and responsible alternative of loans and taxes. Bred in the school of these great men, I came here at this session to oppose, at all risks, an issue of Treasury notes. I preferred a direct loan, and that for many and cogent reasons. There is clear authority to borrow in the constitution; but, to find authority to issue these notes, we must enter the field of constructive powers. To borrow, is to do a responsible act; it is to in-

SENATE.]

Treasury Notes.

[SEPT. 18, 1837.]

cur certain accountability to the constituent, and heavy censure if it cannot be justified; to issue these notes, is to do an act which few consider of, which takes but little hold of the public mind, which few condemn and some encourage, because it increases the quantum of what is vainly called money. Loans are limited by the capacity, at least, of one side to borrow, and of the other to lend; the issue of these notes has no limit but the will of the makers and the supply of lampblack and rags. The continental bills of the Revolution, and the assignats of France, should furnish some instructive lessons on this head. Direct loans are always voluntary on the part of the lender; Treasury note loans may be a forced borrowing from the Government creditor—as much so as if the bayonet were put to his breast; for necessity has no law, and the necessitous claimant must take what is tendered, whether with or without interest—whether ten or fifty per cent. below par. I distrust, dislike, and would fain eschew, this Treasury note resource. I prefer the direct loans of 1820-'21. I could only bring myself to acquiesce in this measure when it was urged that there was not time to carry a loan through its forms; nor even then could I consent to it, until every feature of a currency operation had been eradicated from the face of the bill.

I have spoken to the points which induced me to rise, and might here terminate my remarks; but the committee of which I am a member has been assailed, and, being on my feet, I will say a word in its defence. Senators have said that the committee have reported nothing for the relief of the country—nothing, in fact, of any value or consequence. With deference to their judgments, I presume to think otherwise, and, with the indulgence of the Senate, will undertake to convince them of their mistake. First, there is the merchant's bond bill; it relieves a class of debtors to the amount of four millions of dollars, and, through them, it relieves many others. This bill also grants additional credits on bonds to become due for a year hence, and in that grants further relief to the same class and to their numerous dealers. Then there is the deposit bank relief bill. This gives time to another class of debtors to refund six millions, and, through them, it relieves all their debtors, and, besides, enables them to give temporary assistance to the country generally. Then comes the Treasury note bill—a measure of relief to the States to the amount of ten millions, and, through them, a relief to all their citizens, by supplying the Treasury from our own resources, and thus staving off the contingency on which they became subject to reimburse ten out of the twenty-seven million deposit, whilst still in the very act of receiving it. The Senate, on the motion of the Senator from Pennsylvania who sits over the way, [Mr. BUCHANAN,] has since abrogated this contingency, and substituted the will of Congress; but this change, while it admonishes us to say “farewell—a long farewell” to the twenty-seven millions, and even to fear the approaching departure of the nine millions, cannot diminish the merit of the committee, which had first deferred the contingency before the Senator's motion abrogated it forever.

These are instances of direct relief—large as well as direct—and extending into all the ramifications of society. It is four millions to the merchants, six millions to the banks, and ten millions to the States—in all, twenty millions; and, though nominally to the merchants, to the banks, and to the States, it is in reality to the whole body of the community—to all the citizens to whom merchants, banks, and States resort to collect the money which is to be paid over to the Federal Treasury. To these three bills of immediate, direct, large, and positive relief, the committee have added two others, less general in their scope, and more indirect in their action, but still well entitled to be classed among relief measures—one, to abolish credits at the custom-houses after a given time; and the other, to relieve this city, and these ten miles square, in which Congress has exclusive jurisdiction, from the evils of an irre-

deemable paper currency, and the pestilence of paper ticket change.

The divorce bill—the bill to dissolve the connexion between bank and state, and to enable the Government to keep in its own hands its own means of existence—will certainly be a relief to one of the parties, if not to both. These bills have been reported by the Finance Committee, and will enable the country to judge how far they are obnoxious to the charge of reporting nothing for relief, and nothing of any value. They are six in number—of great value and efficacy, in my estimation; and they comprise all the subjects on which that committee were expected to produce any thing for the action of the Senate.

There is another bill which may come from another committee, (the Judiciary,) and which I shall rejoice to see come from it—a bill of most potential and universal relief to the whole country! to relieve us from a most crying imposition, which now afflicts and oppresses every thing in our America, from the Federal and State Governments, and their elevated functionaries, down to the tub of the washerwoman and the cart of the drayman. It is the bill to apply the penalties of bankruptcy to their ancient, original, appropriate, and primitive subject, and the one from which the law itself takes its name. Broken bank—*bancus* and *ruptus*—is the Roman designation of the law. Broken banks, and not broken merchants, broken tailors, broken lawyers, and broken farmers, were the Roman, the Grecian, the Asiatic, and the Egyptian subjects of this law. The English, and other moderns, have diverted it to humbler game; and President Van Buren is the first in the list of executive magistrates to propose to restore it to its original and most appropriate subjects. I shall rejoice to see that bill come in. It will be tidings of forthcoming relief to an afflicted and prostrate empire. It will fix the day for the general resumption of specie payments, and will furnish a rule, and provide an engine for separating the solvent from the insolvent “promisers to pay.”

That bill has been denounced in advance upon this floor, and war to the knife has been declared against it. The assault has even assumed the character of a combined movement against the nervous system of the friends of the measure. It seems as if they would terrify us. I have not communed with others to learn how they stand the shock of this precocious assault; but, for one, my nerves remain unaffected, and my feet do not feel as if they meditated flight, and intended to bear off my body from the perils of the coming conflict.

That bill has been denounced in an unusual, unexpected, and precipitate manner. I do not return the denunciation, nor do I now undertake its defence, by obliquing into an argument foreign to the question before the Senate; but I am free to declare myself friendly to the measure, and ready to support it as soon as it is brought forward. I am not deterred by the imposing apparition of sovereign States, engaged in the trade, or associated in the business, of banking. My own State, even Missouri, has embarked in the perils and mysteries of this trade. She has chartered a moneyed corporation, and gone into partnership with it; and if ever that concern shall dishonor its “promises to pay,” I, for one, shall be ready to apply the penalties of bankruptcy to the whole establishment, and shall make no discrimination between the effects of individual stockholders and the effects of the State embarked in the partnership.

I say this, not in defiance, but in candor, in sincerity, and in openness of heart. I am for the measure, and avow it in my place here; and if the consequences of this avowal should be what some seem to think—an extinction of political existence, and a perpetual exclusion from the purlieus of this ten miles square—I stand here now ready to do the deed, and to pay the forfeit—to vote for the bill without faltering and to march from this Capitol without looking back.

Mr. CALHOUN rose to move that the bill be so amended—

SEPT. 18, 1837.]

Treasury Notes.

[SENATE.]

ed as to prevent the allowance of interest on the notes to be issued by the Treasury; but yielded the floor to

Mr. WALKER, who said he had all along intended to offer a similar amendment, and would now (by leave of Mr. C.) do so. Mr. W. said he was opposed to allowing any interest whatever on the notes to be issued, and for the following reasons: First, because it appeared to him quite unnecessary to allow interest on them. This Government, possessed of a public domain of such vast extent and value, amounting to at least seven hundred millions of acres, and being out of debt, (the only Government of which such a proud circumstance could be related,) was not under the necessity of alluring credit to its notes by the offer of a trifling interest. Notes issued by such a Government would command full credit equal to gold and silver, and would freely pass as such without interest. This was his first reason against these notes bearing any interest.

His second reason was the following: If these notes are made to bear interest, they would, almost immediately on their issue, take their flight to Europe; they would be transmitted there, instead of specie; and, coming from a Government of such undoubted credit, they would be freely received there in payment of our debts, even without bearing any interest. Much more, therefore, would they be made welcome in Europe when they bore interest. This was his second reason for wishing to allow no interest upon them, because it would lead to their more rapid abstraction from circulation here.

A third reason Mr. W. would now state, which, indeed, was a branch of his second reason, but to which he earnestly solicited the attention of Senators. He thought that, in consequence of the issue of these bills, bearing interest, an immediate effect would be produced upon the price of cotton, highly injurious to the interests of planters in the South. There is now (said Mr. W.) a demand for cotton, and consequently, a rise in its price. The cause of this he was disposed to attribute to the fact that cotton was a better remittance to Europe in payment of our debts than specie; and, therefore, merchants who had to remit to Europe, instead of buying specie, bought cotton, and remitted it in the place of specie. Hence a demand for cotton in the market. He (Mr. W.) understood that the Bank of the United States itself had gone into market and bought up cotton to send to Europe, instead of specie, setting the example of a remittance so highly conducive to the interests of the cotton-grower—having purchased (he believed) as much as three millions of dollars worth of cotton.

Now the effects of this issue, with interest, would be, that the whole ten millions issued would be sent to Europe, instead of the produce of the country; and, consequently, ten millions less of cotton, or other produce, would be sold. This he (Mr. W.) considered absolutely the same thing as directly taking so much money out of the pockets of the Southern producers, because, but for this measure, so much money would be expended with them in the purchase of their produce. If the merchants who now remitted cotton instead of specie could find any thing more convenient for them to remit—more easily to be procured and transmitted—they would naturally avail themselves of it. Now these notes bearing interest were precisely this convenient remittance which the merchants wanted; and, therefore, instead of buying up any more cotton, they will possess themselves of these notes, and remit them. And, on the other hand, they in Europe would prefer these notes to our cotton, as coming from a Government such as he (Mr. W.) had described, and bearing interest besides, which the cotton did not. Thus the effect would be to throw the cotton of the South out of the market, and thereby cause a fall in its price ruinous to the already ruined producers. Such a measure he, as coming from the great cotton-growing State, felt himself called upon most strenuously to oppose.

Another reason he would state why he wished this issue of notes bearing an interest should not take place; it was this: these notes being remitted to Europe, (as undoubtedly they would be,) would create a debt abroad against us. Our Government would thus be made a debtor to foreign Governments and people—a thing in his view by no means desirable. Mr. W. concluded by moving that so much of the bill as relates to allowing interest upon the notes be stricken out.

Mr. WRIGHT expressed himself taken by surprise with the amendment offered by the Senator from Mississippi. From the discussion which had already taken place on this bill, it was evident that there was much difference of opinion among Senators on this subject; some differed from views of policy, others on principle. He confessed it was his hope that the amendment just offered would not be agreed to. The object which he was anxious to attain was, to make these notes, as far as practicable, equal to gold and silver, and as acceptable to the public creditor. Now, it did not appear to him that this object could be attained unless the discretion allowed by this bill to the Secretary was retained in the bill. Mr. W. did not think that the country, at this peculiar juncture, was in a condition to bear the emission of notes without interest. The effect of such an issue would be to cause the notes to sink in value in the market; but if they bore interest, no risk of this kind he thought would be run. It was to be borne in mind that the interest was not fixed; it was only limited not to exceed 6 per cent.; in every other respect, the question was left entirely to the discretion of the Secretary.

Mr. W. hoped, therefore, that the Senate would let the bill pass as it now stood, without embarrassing it with this amendment. In a very short time after the close of this session Congress would meet again; and then, if it should appear that he and the committee had erred in their suggestion of this measure, the error might be rectified. For his part, he must confess he had been greatly struck with the force of the remarks made by the Senator from South Carolina, [Mr. CALHOUN,] in the course of his speech this morning. He could not say he differed from him: he thought such notes as that honorable Senator had described might, and perhaps ought to be issued; but he found that many of his friends entertained objections—he meant to say political friends. Some of the most distinguished also of his opponents strongly objected to it; their objections went against the principle of the thing; and, as it was his desire to make the bill as far as possible unobjectionable in all respects, he was anxious that it should pass in its present shape.

Mr. KING, of Georgia, must profess the high respect he entertained for the sentiments and opinions of the Senator from South Carolina, [Mr. CALHOUN,] and of the Senator from Mississippi, [Mr. WALKER,] It was, therefore, somewhat painful to his feelings to be obliged, on the present occasion, to differ from those honorable gentlemen. There was one principle of finance which appeared to him incontrovertible: namely, that whenever there existed two sorts of currency in circulation, of which the one, from any cause, possessed any advantages above the other, by answering any one purpose more than the other, then that would always command a small premium over the other. This truth was fully evidenced at the present moment, when drafts which had even been protested, yet coming from the Government, commanded a premium little inferior to that of gold and silver. In order to place these Treasury notes in the most favorable position, and to prevent their depreciation, Mr. K. thought that the discretion allowed by the bill ought to be left with the Secretary, to be used according to the emergency of circumstances. The Secretary might then attach to the notes what interest might be necessary to make them acceptable to the creditors of the Government. He did not entertain the apprehension

SENATE.]

Merchants' Bonds—Claims on Deposit Banks, &c.

[SEPT. 18, 1837.]

hensions of his honorable friend from Mississippi [Mr. WALKER] that these notes would find their way to Europe. We had had kites enough, (and, indeed, too many,) which had been made to fly across the Atlantic; and now he thought no more of our paper would find its way to Europe—at least until our debt was paid off there.

Mr. K. proceeded further to combat the opinion of Mr. WALKER, urging that at the present state of the exchanges between the two countries, a better state of things could not perhaps be expected.

Mr. WALKER briefly replied, repeating his views that the price of this year's crop would be considerably diminished by the issue of Treasury notes bearing interest, serving as a remittance to Europe, which would be taken as a substitute for cotton, to the great loss of the South.

Mr. W. said, however, that as he found all his friends opposed to the issue of notes without interest, he would modify his amendment so as to reduce the discretion of the Secretary from 6 to 3 per cent.

Mr. WEBSTER said he would briefly remark, that it was of little consequence as to the results apprehended by the Senator from Mississippi, [Mr. WALKER,] whether the notes bore interest or not; for if they bore interest, \$100 would go for \$106; and if they bore no interest, there would be the discount, and \$100 would at that rate only go for \$94. The thing was simple enough, and of very little consequence, as a foreign remittance.

Mr. WALKER briefly explained.

Mr. CALHOUN, in reply to Mr. KING, of Georgia, said he thought it not a desirable thing that these notes should be equal to gold or silver.

Mr. KING, of Georgia, expressed his apprehension that it would not be possible for Government to induce the public creditors to take these notes at all, unless they bore interest.

Mr. CALHOUN. If the banks resume, these notes will be equal to gold and silver.

Mr. BENTON asked for the yeas and nays on Mr. WALKER's motion; which were ordered, and the amendment was rejected: Yeas 6, Noes 40, as follows:

YEAS—Messrs. Black, Calhoun, McKean, Strange, Walker, Young—6.

NAYS—Messrs. Allen, Bayard, Benton, Brown, Buchanan, Clay of Alabama, Clay of Ky., Clayton, Fulton, Grundy, Hubbard, Kent, King of Ala., King of Georgia, Knight, Lyon, Morris, Nicholas, Niles, Norvell, Pierce, Preston, Rives, Roane, Robbins, Robinson, Ruggles, Sevier, Smith of Conn., Smith of Ind., Southard, Spence, Swift, Tallmadge, Tipton, Wall, Webster, White, Williams, Wright—40.

The bill was then ordered to be engrossed and read a third time by the following vote:

YEAS—Messrs. Allen, Bayard, Benton, Black, Brown, Buchanan, Calhoun, Clay of Alabama, Clayton, Fulton, Grundy, Hubbard, Kent, King of Ala., King of Georgia, Knight, Lyon, McKean, Morris, Nicholas, Niles, Norvell, Pierce, Rives, Roane, Robbins, Robinson, Ruggles, Sevier, Smith of Connecticut, Smith of Indiana, Strange, Swift, Tallmadge, Tipton, Walker, Wall, Webster, White, Williams, Wright, Young—42.

NAYS—Messrs. Clay of Kentucky, Crittenden, Preston, Southard, Spence—5.

MERCHANTS' BONDS.

The bill extending the time for the payment of merchants' revenue bonds, was next taken up.

Mr. WEBSTER rose for the purpose of proposing an amendment to the bill, in which, after reflection, he hoped the chairman of the committee [Mr. WRIGHT] would concur. The bill proposed a delay of six months; but, unless a longer period should be granted, it would be utterly impossible to compel payment. By this provision, large

sums would fall due in October, in November, in December, and in January. It was to be considered that the obligors on these bonds could not pay them unless they had time to receive their own dues; and the exchanges and business of the country were so much obstructed, and so fallen off from their usual amount, that they could not pay the Government even, on that account, with their usual promptitude. If the Government pressed them, they would be compelled to press their customers in the interior; and they, in turn, to press the people generally. It was a question, therefore, whether these debts had not thus become a matter of public interest and importance.

All, Mr. W. doubted not, might be paid promptly. But a reasonable time must be given. It had been suggested that the bonds, if necessary, might be renewed. But there were objections to that expedient; it was, at best, a troublesome and expensive process. On the whole, with a desire that there should be no absolute pressure in relation to these bonds, and at the same time that nothing like extraordinary indulgence should be granted, Mr. W. would assume the medium of the two periods which had been suggested, and propose an extension of nine months instead of six, as now in the bill. In the mean time, if that should be deemed insufficient, it would at least give ample time and opportunity for bringing the subject again before Congress at the ensuing session. Mr. W. would be extremely gratified if the chairman of the committee would assent to this amendment.

Mr. WRIGHT said he had received a memorial from merchants of New York, strongly urging an extension of twelve months; and they had stated a single fact, which must have a great influence on Congress in this matter: which was, that the principal importations took place semi-annually; and at such times, that the six months in the bill would bring the Government demands upon them when they were most pressed for money; whereas, nine months would bring them to the period when they had the least call for money. Mr. W. believed the Treasury would not be essentially incommoded by this arrangement, and he was therefore in favor of a change of the time to nine months.

Mr. SEVIER called for the yeas and nays on the question, which were ordered, and it was carried in the affirmative: Yeas 44, Noes 1; Mr. SEVIER only voting in the negative.

So the bill was ordered to be engrossed for a third reading.

CLAIMS ON DEPOSITE BANKS.

The bill for adjusting the claims on the deposit banks having been read a second time,

Mr. WALKER moved to insert in the room of "two, five, and eight," the words "*four, six, and nine*" months; which was adopted, and the bill ordered to be engrossed for a third reading.

MERCHANDISE IN PUBLIC STORES.

The Senate then proceeded to consider, as in Committee of the Whole, the bill to authorize merchandise to be deposited in the public stores, and for other purposes.

Mr. BUCHANAN said he relied so much on the benefit of this bill to the country, that he wished to record his vote in its favor. He therefore called for the yeas and nays on its engrossment; which were ordered.

Mr. CLAY, of Kentucky, said he was entirely in favor of the object of the bill, and thought it would be beneficial ultimately to the commerce of the country, and immediately to the manufacturing and other interests. He would, therefore, vote for it with pleasure. He suggested, however, that it was proper to strike out the exception in relation to fruits.

Mr. CALHOUN said it appeared to him that the bill required more consideration, and that it ought to be post-

SEPT. 19, 1837.]

Kinds of Money for Revenue.

[SENATE.]

poned to the regular session. He moved, therefore, to postpone it to the first Monday in December.

Mr. WRIGHT said this was not one of the bills peculiarly connected with the supply of the Treasury. He was, however, ready to act on it now, but was willing to acquiesce in the will of the Senate respecting it.

Mr. BUCHANAN said he should vote against its postponement. The question had long been agitated whether it was not better that every interest should conform to the laws and usages of every other commercial country, so that goods might be deposited in the warehouses. Mr. B. was always prepared to vote for the proposition; and one reason for delaying the bonds was, that, hereafter, no such question could arise. He would indulge the merchants to the greatest extent, on condition that this was the last call from them. A similar favor had been shown to the purchasers of the public lands, and Mr. B. thought it equally due to the merchants. So far as he understood, there was not one merchant now in this city who was opposed to its passage.

Mr. CALHOUN said the situation of himself and the Senator differed. He [Mr. BUCHANAN] had studied the subject, and had satisfied himself that the bill would be beneficial; and for him there might be sufficient reason for such a conclusion. But Mr. C. hoped that he would not, therefore, call upon others to vote without understanding the subject. He thought the request to postpone perfectly reasonable, that others might be as well informed on the subject as the Senator from Pennsylvania.

Mr. BUCHANAN said he had such perfect reliance on the information and intelligence of the Senator, that he believed his mind would be opposed to the bill on the first of December as much as now. He despaired of a change in its favor by that time. He called for the yeas and nays on the question of postponement; which were ordered.

Mr. KING, of Alabama, said he thought the bill would be advantageous, and he was not prepared to go against it. He would move, however, to postpone it till Monday next.

Mr. CALHOUN accepted this modification, though he still thought it ought not to be acted on till the next session; and the bill (Mr. BUCHANAN assenting) was postponed till Monday next.

On motion of Mr. WRIGHT, the Senate adjourned.

TUESDAY, SEPTEMBER 19.

The following bills were read a third time and passed:

The bill authorizing the issue of Treasury notes;

The bill to extend the time of payment on merchants' revenue bonds; and

The bill for adjusting the remaining claims on the late deposit banks.

KINDS OF MONEY FOR REVENUE.

Mr. RIVES, pursuant to notice, rose to ask leave to introduce a bill to designate the funds receivable in payment of the revenues of the Government.

Mr. R., on introducing the bill, addressed the Chair as follows:

Mr. President: I rise, in pursuance of the notice I gave yesterday, to ask leave to bring in "A bill to designate the funds receivable in payment of the revenue of the United States." It will be borne in mind by the Senate that among the most prominent, and certainly not the least important objects presented both by the President's message and the report of the Secretary of the Treasury, for the "immediate attention" of Congress at their present session, is the expediency of some legislative provision defining the character of the funds to be received, in future, in discharge of the public dues. From the intimate connexion between the collection of the public revenue and the general currency of the country, this question has, in my estimation, far more essential bearings on the great interests of the community than any which the President has

submitted for our deliberations. The Committee on Finance, however, to whom the message was referred, have not thought it proper to make any report on that portion of it, and we have been informed by the honorable chairman that it is not their intention to make any report upon it at the present session. It is this omission on the part of the committee that it is the object of my motion now to supply.

The President recommends that henceforward the whole revenues of the United States shall be collected exclusively in gold and silver. A proposition of so marked a character, emanating from a source of such high authority, could not fail to excite deep anxiety in the public mind; and it seemed to me that all uncertainty in regard to the policy of the Government on so vital a subject, should be promptly settled one way or the other, by the action of the legislative department. It is my misfortune to differ with the President in his views of the expediency of this proposition. I am fully convinced that, in the actual condition of our circulating medium, and in what is likely for years to come to be its condition, the operation of such a measure would be distressing to the community, injurious to every branch of industry and enterprise, and, above all, would postpone indefinitely that return to specie payments by the banks, which is the great object of the public solicitude, and ought to be the end and aim of our deliberations here. Viewing the question in this light, I desired it should be met with promptitude, considered with candor, and decided with wisdom.

Since I gave notice yesterday of my motion, two gentlemen, the Senator from South Carolina, [Mr. CALHOUN,] and the Senator from Missouri, [Mr. BENTON,] have submitted propositions intended to carry out the President's recommendation, differing somewhat in detail, but both founded on the principle of rejecting bank paper altogether in the operations of the Government, even though immediately convertible into specie, and issued by banks of unquestionable solidity. Both contemplate, as does the recommendation of the President, a thorough revolution in the policy and practice of the Government. From the origin of the Government it has been the practice of the Treasury Department to treat the notes of specie-paying banks as equivalent to specie; and the joint resolution of 1816 expressly placed bank notes convertible into specie on the same footing with specie, in the fiscal transactions of the Government. It is true that, under the construction given to that act by the law officer of the Government, the late President of the United States caused an order to be issued requiring payments for public lands to be made in gold and silver alone, still leaving the other branch of the revenue (the customs) to be collected as heretofore, in the notes of, or checks on, specie-paying banks. That order was understood at the time to be issued for objects purely of a temporary nature, and as such it may have been a salutary measure. But its continuance as a part of the permanent policy of the Government was almost unanimously repudiated by the voice of the representatives of the people and of the States.

You well remember, Mr. President, that the discussions to which this subject gave rise, during the last session of Congress, terminated in the passage of a bill, by overwhelming majorities of both Houses, distinctly reaffirming the principle of the joint resolution of 1816, in relation to the receivability of the notes of specie-paying banks, and containing also the significant provision that, in future, no discrimination should be made between the different branches of the revenue, as to the medium in which they were to be paid. This bill received the votes of nine-tenths of the members of this House, and near three-fourths of the other. Still it did not become a law. The circumstances under which it was arrested in the ordinary and regular course, and which alone prevented it from being now the law of the land, are fresh in the recollection of

SENATE.]

Kinds of Money for Revenue.

[SEPT. 19, 1837.]

the country. I will not speak of them, for it is my sincere wish to keep out of the present discussion every thing which may awaken unpleasant feelings. But this I will say, that no act of legislation was ever the subject of a more watchful scrutiny, in the various stages of its progress; few, if any, have ever met a fuller discussion, or a more deliberate consideration; none, within my experience, has ever received a more unanimous and emphatic assent of the bodies by which it was passed. The country, too, so far as I have been able to learn, (and I have not been an inattentive observer of the evidences of public sentiment on the subject,) has responded with a general voice of approbation to the decision of Congress, and warmly and cordially sustained it. It is that measure, thus doubly sanctioned, with some modifications suited to the change of circumstances, that I beg leave to re-present as a compliance with the call of the President on Congress for further legislation, believing it to be adapted to the exigencies of the occasion, as well as useful and salutary in its general operation on the currency.

The principles of that bill were these: It declared that the public dues should be collected in specie, or in the notes of specie-paying banks, under certain restrictions in regard to small notes, which were intended to operate the suppression (ultimately, but gradually) of all notes under twenty dollars; and it further provided, as I have already stated, that, in future, no discrimination should be made between the different branches of the revenue, as to the funds in which they were receivable. These principles are incorporated in the bill I now ask leave to present, and in the very language in which they stood in the bill of last session. The modifications of that bill which I have made with reference to existing circumstances are these: In contemplation of the contingency (now highly probable) of an issue of Treasury notes, I have introduced an alternative clause, declaring that, in addition to specie and the notes of specie-paying banks, the public dues may be collected "in any other medium specially authorized by law." The other modification has relation to the great desideratum of an early resumption of specie payments by the banks, and consists in a proviso that "the notes of no bank which now fails, or may hereafter fail, to redeem its notes in specie, shall, at any time, be received in discharge of the public dues, unless such bank shall, on or before a given day, have *bona fide* resumed payment in specie." The object of this proviso is to designate a fixed period for the resumption of specie payments by the banks, which may serve as a rallying point to them all, and produce that concert and harmony of movement, without which this most desirable end cannot be accomplished. There will be no difficulty, I think, from the data already in our possession, or easily attainable, in fixing that period understandingly and judiciously. The mere designation of a day by Congress will, itself, be powerfully operative in effecting the result we aim at. You doubtless recollect, Mr. President, what was the effect produced by a similar proceeding in 1816-17. By the joint resolution of April, 1816, the 20th of February following was fixed as the day for the resumption of specie payments by the banks. The banks themselves determined, in a formal convention held for the purpose, not to resume until the 1st of July, 1817; but the firm adherence of Congress to their original resolution forced the banks to yield, and they finally and simultaneously resumed specie payments on the 20th February, 1817, the day indicated by the act of Congress.

The inducements to an early resumption of specie payments held out to the banks by this bill are two fold. It addresses itself both to their hopes and their fears. It says to them, in effect, that, whenever you resume specie payments, (provided it be before a certain day,) your notes, under the restrictions of the bill, shall be receivable in payment of every branch of the public revenue, whether for

lands or customs; but if you do not resume by that day, your notes shall not be received in payment of public dues, even though you may thereafter resume. The banks will thus be doubly stimulated to a resumption of specie payments—by the promise of a benefit on the one hand; by the exhibition of a penalty on the other.

With these provisions I do not doubt the early re-establishment of a sound and healthy state of things. What is the present condition of the country; and what the treatment it demands? If we look around us, we find all the great sources of national prosperity still unimpaired—the land, the labor, the capital of the country, in their accustomed fertility and abundance. And yet industry is paralyzed; commerce at a stand; the currency degraded and deranged; the precious metals fled from circulation; the land overrun with spurious or precarious substitutes for money, exposing every interest of society to insecurity and hazard—an insecurity and hazard involving alike the wages of labor, the value of property, the fulfilment of contracts, all the acquisitions of the past, and all the hopes of the future. Now, what is the remedy for this extraordinary state of the body politic? It is comprehended in a single word—the restoration of confidence.

It will be admitted on all hands that the first thing to be brought about, with a view to the amelioration of the present condition of things, is the return to specie payments by the banks. But that return cannot be effected without a restoration of confidence; and confidence is to be restored mainly by the policy and example of the Government. With its aid in the re-establishment of confidence, nothing is clearer than the ability of the banks, at an early day, to resume and maintain specie payments. Let us for a moment look at the condition of the country and of the banks in regard to those particulars which form the leading elements of this question. And, first, as to the stock of precious metals in the country. This supply in the country is most abundant; for, although a good deal has gone out recently, to pay off our foreign debt, an equal, or nearly equal, quantity has come in. It is shown by official returns that the importations and exportations of specie, during the year, very nearly balanced each other. The quantity in the country at this moment, according to the estimates and statements we have received from the Treasury Department, is nearly three times as great as it was four years ago. The means to enable the banks to resume and sustain specie payments are, therefore, ample and unquestionable, as soon as confidence shall be restored. Then, as to the balance of our foreign debt, which forms another important element of this question, it has been in a course of constant and progressive reduction for the last six months, and with the aid of the new crop which is now coming in, and the great diminution of foreign imports, we shall soon see it entirely extinguished. At the same time, the great mass of the banks throughout the country have been diligently preparing themselves for a return to specie payments, by a steady and judicious reduction of their circulation.

Nothing, then, is wanting to a speedy accomplishment of that great object, but the restoration of confidence; and it depends mainly on the action and policy of the Government to supply that requisite. The currency of the country is, at this moment, in the condition of a human body in a state of suspended animation—the heart still beats, the principle of vitality is unextinguished, but the active functions of life are suspended. Let the Government but breathe the breath of confidence into it, and it will be at once resuscitated. It is the more necessary that the Government should give its aid in this work of restoring confidence, because, whether justly or unjustly, it is from the Government that the greatest danger of hostility is apprehended. Let this apprehension, then, be quieted by some pledge of security, by some token of encouragement and confidence.

SEPT. 19, 1837.]

Kinds of Money for Revenue.

[SENATE.]

The Senator from South Carolina [Mr. CALHOUN] asserted yesterday that the disease of the country is debt, the only remedy is time, and that he relied much more on the cotton and tobacco crops for relief than upon any action of the Government. Sir, the debt of the country, as I have already remarked, has nearly reached its extinguishment, either by actual payments or the bankruptcy of unfortunate debtors. But, if this were not so, the cotton and tobacco crops, though essential ingredients of relief, do not supersede the necessity of other and auxiliary remedies. Examples are not wanting in the financial history of this and other countries, to show the magical effects of confidence in periods of great public distress, and how that confidence depends on the conduct and policy of the Government. The year 1793 was a period of the severest commercial distress in England. More than a hundred country banks became bankrupt, and the whole country seemed destined to a similar catastrophe; when a single act of the Government, encouraging confidence, produced immediate and general relief. I allude to the offer made by the British Government, in that crisis of suffering and alarm, to lend to solvent dealers five millions of pounds in Exchequer bills. A considerable part of the sum was not taken or even applied for; but the simple offer of the credit of the Government, in restoring confidence between man and man, elicited the dormant resources of the country, and relieved at once the general distress.

We have had a similar and striking example in our own country. You well recollect, Mr. President, the memorable panic of 1834, which ensued on the removal of the deposits from the Bank of the United States. The storm which was raised on that occasion was directed chiefly on the great commercial emporium of New York. The Legislature of that patriotic and powerful State, with a paternal sensibility to the interests and sufferings of her citizens, came forward and authorized the creation of a stock of six millions of dollars to be lent to the banks, for the purpose of sustaining them under the extraordinary pressure to which they were exposed. What was the effect? Not a solitary dollar was taken by the banks; but the offer itself operated like a charm. It restored confidence and relieved the pressure. These examples may serve to show gentlemen that there is some practical virtue in confidence, and in the moral power of the Government to promote and encourage it. What does the country ask at the hands of the Government at the present moment? Is it a loan of six millions? No, sir. The only boon that is asked, the only aid that is wanted, is, that the Government should not discredit, by its act, the great circulating medium of the country, in which ninety-nine hundredths of the transactions of society are negotiated and settled, when that medium shall be restored to soundness, and brought back to the standard of convertibility into specie.

In connexion with this subject, I beg leave to call the attention of the Senate to one remarkable consideration. It is this: the President, in tracing the causes of the present calamity, states that the same embarrassments and distresses have existed in England as in this country, arising from the same general causes, with this only difference in the result—that here the banks have suspended specie payments, while in England no such catastrophe has occurred. This difference to my mind comprehends every thing. It is rendered the more remarkable by the fact that, during the progress of these difficulties, England was constantly losing her supply of the precious metals, the stock of bullion in the bank having been reduced from about eight million to four million pounds sterling, (one half of her ordinary quantity,) while in this country, during the same period, the precious metals have been steadily flowing in upon us, and accumulating in an unprecedented manner; so that, at the time of the suspension of specie payments we had three times the amount of specie we ever possessed before. Ac-

cording to these circumstances, the results in the two countries ought to have been precisely reversed. We should have continued to sustain specie payments here, while a suspension of them in England would seem to have been inevitable. Why has it been otherwise? How has it happened that England, with her supply of the precious metals reduced to one half her usual stock, has continued specie payments, while we, with three times the amount we ever had before, have been compelled to suspend specie payments? The solution must be found mainly in the fact, that in England, in periods of commercial distress, confidence is always encouraged by Government, while here nothing was done by the Government to animate and sustain confidence. I do not mention this as matter of reproach to the Government. It may be that the Government here believed it had no constitutional faculty to interpose in any manner for the support of confidence. But, unfortunately, direct and open attacks on the commercial credit and institutions of the country, well calculated to destroy confidence, were made in a quarter which, from the relation it bore to the Government, gave rise to lively apprehensions of hostility from the Government itself. These apprehensions are now again revived by the recommendation of the President—a recommendation which, if attempted to be carried into execution, would, in my humble judgment, render the recovery of the country from its prostrate condition hopeless and impossible.

It is a matter susceptible of demonstration, that if the policy of demanding specie exclusively in payment of the public dues shall now be adopted, it will be utterly impossible for the banks to resume specie payments. It is an invariable law of currency, well stated by my honorable friend from Georgia [Mr. KING] yesterday, that if there be two currencies in a country, one answering all the purposes of the other, and a valuable purpose besides, the currency answering the additional purpose will always command a premium. This is the condition of the country at the present moment. Bank paper constitutes the great mass of the circulation, while gold and silver are only to be had at a premium. If the Government shall now adopt the policy of requiring payment of its dues in specie alone, this state of things must be perpetuated. Applicable to all the purposes for which bank notes can be used, and, over and above that, answering the important purpose of paying the public revenue, from which bank notes will be excluded, specie, under these circumstances, must continue to command a premium. Can the banks resume specie payments in the face of a premium borne by gold and silver? The very moment they opened their vaults, the holders of notes, in order to secure the premium to be obtained for specie, would make a general run upon them for cash; and if they opened their vaults, it would only be to close them immediately.

But again, sir, would not the example of the Government, in the indiscriminate rejection of all bank paper, have a powerful moral influence in exciting the jealousies and suspicions of the whole community? If the Government, by its acts, shall declare bank paper to be worthless or unsafe, will not the people also take the alarm? Will not a general distrust be created of all banking institutions, and will not every person holding their paper become impatient to convert it into specie? In this pervading want of confidence, their vaults would be drained of every dollar they possessed. It is demonstrable, therefore, that, under the policy of collecting the dues of the Government in hard money alone, we never can accomplish that great object in which the whole country has so vital an interest—the resumption of specie payments by the banks.

How does the proposition of the honorable Senator from Missouri [Mr. BENTON] bear upon this question? Its practical effect, if I understand it correctly, will be to enforce a penalty upon the banks for resuming specie payments. In the amendment offered by him there is a blank left for the

SENATE.]

Kinds of Money for Revenue.

[SEPT. 19, 1837.]

day after which the revenues are proposed to be collected in gold and silver only; and I understood the gentleman to say it is his intention to fill that blank with the day on which the banks would probably resume specie payments. I believe, sir, said, Mr. R., (turning to Mr. BENTON,) I am not mistaken. [Mr. BENTON. Right, right.] Then, Mr. President, here is a positive penalty denounced against the banks when they shall return to specie payments. As the law now stands, the notes of specie paying banks are receivable in payment of the public revenue. The Senator is willing that this should continue to be the law while the banks do not pay specie for their notes; but when they do pay specie, the honorable gentleman says to them, we will revoke this privilege, thenceforward reject your notes, though immediately convertible into specie, and declare that, from and after the day of your resumption, nothing but gold and silver shall be received in discharge of the public dues. Is not this, in effect, a direct penalty visited upon the banks for returning to specie payments? Under such a policy, this great object of public interest and anxiety never can be accomplished; and I recur with confidence to my original position, that the only means by which it can be effected is a just, safe, and paternal policy on the part of the Government, announcing to the banks that, on such conditions as may be necessary to guard against the recurrence of the catastrophe we are now suffering from, we will receive your notes, convertible into specie, in payment of the public dues, as they have been received, by the practice of the Treasury Department or by express enactment of law, from the origin of the Government down to the present time.

I have thus far, Mr. President, spoken of this matter in reference to the particular circumstances of the crisis, and what appears to me to be the pressing and paramount object to which the attention of every patriotic legislator ought to be directed at the present moment—an early resumption of specie payments by the banks. But, looking at it in a broader and more general point of view, I ask, sir, upon what principle of republican government is it that the Government can be justified in drawing a line between itself and the people—in saying there shall be one currency for the Government and its officers, and another for the great body of the community—that the better currency shall be for the governors, and the baser currency for the governed? Such I have shown must be the effect of demanding the public dues in gold and silver exclusively, while the great mass of the circulation shall consist of bank paper. Sir, I have always been taught to believe—my honorable colleague and myself learned it from the bill of rights of our own State as soon as we were capable of reading—that a common interest between the governors and the governed is a fundamental principle of free institutions, and that the best means of “restraining the former from oppression is to make them feel and participate the burdens of the latter.” Let the Government share the same fate with the citizen, and you give it the strongest of all motives to watch over the general interests. On the other hand, place it in a position different from that of the great body of the community, especially in so vital a matter as that of its revenue and pecuniary support, and you make it at once callous and indifferent to the sufferings of the people, and even give it an interest to perpetuate those sufferings. You destroy all sympathy on the part of the Government with the people, and you alienate the confidence and affections of the people from the Government.

What, sir, is at this moment the ungracious attitude in which the Government is placed towards the people? Its officers and contractors are paid in gold and silver, or in Treasury drafts made receivable in discharge of public dues, and therefore nearly equivalent to gold and silver, while the community at large are left to conduct their business as they may, in an irredeemable paper currency. Does not

this operate as a virtual increase of the salaries of public officers, in the midst of general distress affecting all the rest of the community? The gold and silver which they receive is at a premium of ten or twelve per cent., and the Treasury drafts at seven or eight per cent., above the actual and common currency of the country. This premium is, I repeat, an addition of so much to the amount of their salaries; for, in a practical sense, there has as yet been no depreciation in the value of current bank notes. They pass for as much in the ordinary business of life—in the payment of debts, in the purchase of necessaries and conveniences, of whatever is worn, drank, or eaten—as they ever did. The premium, then, which the public officers and contractors obtain on their gold and silver, and Treasury drafts, is so much clear gain to them. And at whose expense is it acquired? Is it not at that of the great body of the people, the ultimate tax-payers and supporters of the Government? Does any one suppose that the importing merchant, who has to give ten or twelve per cent. for the gold and silver, and seven or eight per cent. for the Treasury drafts, with which he pays his duties to the Government, does not add an equal amount, with the usual profit upon it, to the price of his goods? It is, then, the consumer, at last, or, in other words, the great body of the people, who are subject to increased taxation for the benefit of the office-holder and the contractor.

Sir, this is a state of things which I do not wish to see perpetuated. It is contrary to the genius and fundamental principles of our republican system. Of all schemes of policy I can conceive, that which proposes a permanent distinction between the Government and the people in their pecuniary interests—one currency, and that the better one, for the Government, and another, and inferior currency, for the people—such a system of discrimination is, to my mind, of all others, the most injurious and revolting in principle, the most heartless in character, and the most despotic in its tendencies. It is like quartering the Government, as a foreign enemy, on the heart of the country. You entrench it behind a frowning fortification, surround it with battlements, and lay the country, far and near, under contribution for the support of this garrison of office-holders. Desolation and oppression are without, while the tenants of the citadel are revelling in luxury and profusion within. I am not willing, for one, to see the Government of my country placed in this antisocial, if not belligerent, attitude towards the people. I am not willing that this favored land, to which the nations of the earth are looking for a successful example of the practical enjoyment of free institutions, should exhibit such a spectacle of inequality and oppression in the eyes of the world.

Much reliance, Mr. President, has been placed on the popular catch-word of divorcing the Government from all connexion with banks. Nothing is more delusive and treacherous than catch-words. How often has the revered name of liberty been invoked, in every quarter of the globe, and every age of the world, to disguise and sanctify the most heartless despotisms. Let us beware that, in attempting to divorce the Government from all connexion with banks, we do not end with divorcing the Government from the people. As long as the people shall be satisfied in their transactions with each other, with a sound convertible paper medium, with a due proportion of the precious metals forming the basis of that medium, and mingled in the current of circulation, why should the Government reject altogether this currency of the people, in the operations of the public Treasury? If this currency be good enough for the masters, I thought to be so for the servants. If the Government sternly reject, for its uses, the general medium of exchange adopted by the community, is it not thereby isolated from the general wants and business of the country, in relation to this great concern of the currency? Do you not give it a separate, if not hostile, in-

SEPT. 19, 1837.]

Kinds of Money for Revenue.

[SENATE.]

terest, and thus, in effect, produce a divorce between Government and people!—a result, of all others, to be most deprecated in a republican system.

We have been told, Mr. President, of the embarrassments and inconveniences to which the Government is exposed, by receiving its revenues in any thing but gold and silver, in such an event as has now overtaken the country and involved it in general distress. For one, sir, I cannot respond to this appeal. I do not desire to see the Government placed in a position that would exempt it from embarrassment when the people are embarrassed. Would it give any satisfaction to a patriotic mind, in the present calamitous condition of the country, to see treasures of gold and silver pouring into the coffers of the Government, while the people are suffering all the evils of an irredeemable and depreciating paper currency? For myself, I am free to say, that neither as a citizen nor as a representative, having it in my power, if I would, to participate, in some degree, in these peculiar advantages of the Government, could such a state of things minister the slightest gratification to me. No, sir, my heart disowns the thought. So far from it, the contrast would be but a new feature added to the mortifying and distressed condition of the country, and casting reproach upon our institutions, which admitted such an unnatural and anti-republican inequality. If any thing could make your Government a callous and indifferent spectator of the sufferings of the people, refusing a helping hand to their relief, and “mocking when their fear cometh on,” it would be to place it in a position like this. No, sir; whenever the people suffer embarrassment, embarrassment should be felt by the Government, that it may be stimulated, through experience of the common suffering, to do all it can to prevent or relieve that suffering. I am for holding the Government in all things to a common fate with the people, so that whatever touches the one shall be immediately felt by the other. Let the condition of the Government answer to the condition of the people, so that the conduct and policy of the one may, with equal fidelity, reflect the interests and sentiments of the other.

This, sir, is the principle which has always guided my views in regard to the great question of the currency. No one desires a sound reform of the currency more than I do; but I wish to improve it for the benefit of the people as well as of the Government. I desire to see a large infusion of the precious metals into the general circulation and business of the country, and not a monopoly of them by the Government. This great object can be effected only by the suppression of bank notes of the lower denominations, and not by demanding gold and silver alone in payment of dues to the Government. Let all notes under twenty dollars be gradually suppressed, and you will have an abundance of gold and silver in common circulation, passing from hand to hand in the common business of society. That will be a salutary and beneficent reform, ensuring to the advantage of the great body of the people as well as of the Government; and when it shall have been accomplished, when gold and silver shall thus have become the common currency of the country, you may, without hardship or injustice, demand payment of the public dues in the precious metals. But this most desirable result—the general circulation of gold and silver in the common business of life—never can be effected, (as I think I have fully shown on another occasion,) without a previous suppression of bank notes of the lower denominations. In every scheme of reforming the currency, which looks to the benefit of the people as well as of the Government, this is the great point to be aimed at. It was the leading object of the measure I brought forward during the last session of Congress, and which then received the almost unanimous sanction of this House, and the assent of a large majority of the other, though, from causes to which I have already

alluded, it failed to become a law. The same measure, in all its essential principles, I now again submit for the consideration of the Senate.

The President, sir, in his message, tells us that the requisition of gold and silver in payment of the public dues would have “a direct tendency to produce a wider circulation of the precious metals, to increase the safety of bank paper, and to improve the general currency. I desire to treat the opinions of the President with all possible respect—a respect felt alike for the individual and the magistrate; but unless I have wholly misconceived the elementary principles which belong to this subject, as well as their obvious practical operation, it is impossible to sustain any one of these positions. How, sir, can the collection of the revenue in gold and silver tend “to widen the circulation of the precious metals?” It is a well-known and invariable law of currency, that bank notes and coins of the same denomination cannot circulate together. It is in vain, then, to attempt to widen the circulation of gold and silver by any other means than by the suppression of bank notes of the lower denominations. But, not now to dwell on this view of the subject, (which I have fully developed and enforced elsewhere,) I maintain that the collection of the public revenue in gold and silver, while the common currency of the country consists of bank paper, instead of widening the circulation of those metals, would have the effect of taking them out of general circulation altogether. In the remarks I have already made, I think it has been satisfactorily shown that the necessary effect of this policy would be to cause gold and silver to bear a premium. Bearing a premium, they would not circulate as currency at all, but would be at once converted into an article of merchandise. The public debtor would buy them of the broker to pay his dues to the Government; and when paid out to the public creditor, he would go and sell them again to the broker. Instead of entering into circulation, all of them that were seen would be restricted to this narrow round of traffic, while the great mass of them would be withdrawn from public view as well as use.

Then, sir, as to the tendency of this policy to “increase the safety of bank paper”—would you increase the safety of bank paper by abstracting the fund for its redemption? Yet, such would be the plain operation of this policy. The Secretary of the Treasury has referred to the condition of the Treasury in 1834, as affording a general average to illustrate the operation of the new financial system he proposes. In looking at the Treasury statements for that year, I find that the average amount of public moneys on deposit in the city of New York, during that year, was about five millions, while the whole amount of specie in the banks of the city was about two millions. Taking this as a fair average for that city, what would be the influence of this new policy of collecting the public dues in gold and silver, on the safety of bank paper there? Where would you get the five millions of specie to meet this demand for the public revenue? It is evident the banks would be drained by it of their stock of the precious metals, and the community would thus be deprived of the security on which they relied for the soundness of the bank paper held by them. The “improvement of the general currency,” then, which the President anticipates as the result of the policy he proposes, would, unless the principles heretofore received as incontestable truths on the subject of the currency be utter fallacies, amount to this, that the precious metals would no longer form a part of the general circulation; that they would cease to be currency, and become mere articles of merchandise, to be obtained only at a premium, and that the specie basis, on which the soundness and safety of bank paper so mainly depend, would henceforward, to a great extent, be withdrawn and monopolized by the Government.

But it has been said, and I regret to perceive that the

SENATE.]

Kinds of Money for Revenue.

[SEPT. 19, 1837.]

idea is countenanced by the high authority of the President, that the general currency of the country is a matter with which this Government has nothing to do; that its duties are confined to the exercise of the coinage power and the collection of its own revenues in gold and silver; and that the general circulating medium of the country must be entirely abandoned to the separate and often conflicting control of the individual States. Now, sir, as my opinion differs alike from this view of the subject, and from that urged a few days ago by the Senator from Massachusetts, [Mr. WEBSTER,] I beg leave to state briefly what they are. The whole history of the formation of the constitution, as well as the internal evidence of its provisions, prove, beyond question, that the framers of that instrument intended that there should be a common currency for the Union, and not "as many different currencies as there are States." They, doubtless, believe that that currency would consist, almost entirely, of gold and silver. There were but two banks then in existence, whose issues formed an exceedingly small part of the general circulation. They no more foresaw that immense multiplication of banks, which has made bank paper the actual currency of the country, than they foresaw the two great discoveries of the age—steamboats and railroads—which have had so extraordinary an influence on the wealth and resources of the country. Believing that gold and silver would continue to constitute the currency of the country, they placed the "regulation" of that currency expressly under the control of Congress, and took it away, in terms equally express, from the States. But while they did this, they left with the States (for the omission to take it away amounted to the same thing) the power of incorporating banking institutions. In the general and extensive exercise of that power by the States, the issues of the banks have come to take the place of gold and silver, and to form the actual currency of the country. In the practical working of our system, then, a state of things has grown up entirely unforeseen by the founders of the constitution. This Government has no authority, by force of law, to put an end to that state of things, nor is it desirable, considering the many and indisputable conveniences of a sound paper currency, in the present advanced stage of commerce and civilization, to destroy it altogether. But as the original design and intention of the constitution certainly was that there should be a common currency for the Union, it is incumbent upon Congress, in the exercise of the powers delegated to it, to do all it can to fulfil that design, and to render the actual currency of the country as sound, as equal, and as nearly equivalent to gold and silver as possible.

This duty is essential to the harmony and friendly intercourse of the States, and is, indeed, intimately connected with all the objects of a common Government which led to the establishment of the constitution. But this duty is to be measured by the extent of the powers which have been delegated to Congress; for it must always be borne in mind that this Government can exercise no other powers than such as have been specifically delegated to it. Now what are those powers in regard to the question of the currency? The Senator from Massachusetts [Mr. WEBSTER] argued, the other day, as if the constitution had given to Congress a substantive and plenary power to "regulate the currency," *eo nomine*, and inferred from thence the power to establish a national bank to regulate the issues of the State banks, which form the actual currency of the country. But, in the first place, the constitution has not delegated to Congress any general or substantive power to "regulate the currency," nor has it, any where, either by express grant, or necessary implication, given to Congress the power to create a banking corporation. What, then, are the powers it has vested in Congress on the subject of the currency? In the first place, it gives to Congress "the power to coin money and regulate the value thereof." But

since the precious metals form so small a part of the actual circulation of the country, this power, however important in itself, can exert no controlling influence on the general currency. We then find that the constitution gives to Congress the power "to lay and collect taxes, duties, &c., to pay the debts, &c. of the United States." From the large amount of the receipts and disbursements of the Government, this power is susceptible of an extensive and important bearing on the general currency of the country. In the exercise of it, it is incumbent on Congress to make it instrumental to secure to the whole country, as far as possible, the benefits of a sound and equal currency, equivalent every where to specie. It may be so managed, by receiving the paper and employing the agency of the State banks, in the fiscal operations of the Government, under certain salutary restrictions and conditions, as to impart to the issues of those banks, forming the actual currency of the country, some of the most essential qualities of a sound, stable, and equal circulating medium. But if, on the other hand, this incidental control, through the revenue power of the Government over the actual currency of the country, is to be abandoned, and that currency be regulated exclusively, as is now proposed, by the separate and conflicting legislation of the individual States, our whole monetary system, affecting so widely and deeply the interests of society, must run into wild disorder and confusion, and one of the highest objects of the constitution be nullified and defeated.

This, sir, was the doctrine steadily maintained by the late administration. From the removal of the deposits from the Bank of the United States down to the close of that administration, it was constantly put forth, in bold relief, in the messages of the President, and the reports of the Secretary of the Treasury, as well as in the speeches of its leading friends in this and the other branch of Congress. The obligation of the General Government to watch over the general currency, and to secure to the whole country, as far as possible, the benefit of a circulating medium that should be sound and of equal value, was distinctly recognised and admitted; and it was contended that this object could be as effectually accomplished through the State banks, as by the agency of any national incorporation. The management of the revenue, through those institutions, was to be the instrument by which the end was to be accomplished, and the particular means relied on was to make a suppression of the small notes, and some other reforms in the currency, the conditions of a deposit of the public funds in the banks, and of the receivability of their notes in payment of the public dues. By the employment of these means, the late President, in his last annual message but one to Congress, said, "we should soon gain, in the place of the Bank of the United States, a practical reform in the whole paper system of the country," and looking forward to the ultimate suppression of all bank notes below twenty dollars as the result of this policy, he hailed it with enthusiastic patriotism, as "forming an era in the history of our country, which would be dwelt upon with delight by every true friend of its liberty and independence." The present Chief Magistrate, in his celebrated letter to a member of the other House, speaking of this same policy, said: "nothing but a faithful prosecution of it by the General Government and the States is necessary to place us on a footing of equality with other nations," enjoying, in the highest degree, the advantages of a stable and uniform currency. To all this, I was a sincere convert, and am still. I still believe that it is the duty of this Government—a duty from which it cannot free itself without betraying one of the highest objects of the Union—to exercise a superintendence, in all constitutional modes, over the general currency, so as to secure to the whole country a sound, stable, and, as nearly as may be, uniform medium of exchange; and, to use the lan-

SEPT. 19, 1837.]

Kinds of Money for Revenue.

[SENATE.]

guage of the late President of the United States, that "the management of the public revenues, through the State institutions, may, and ought to be, made auxiliary" to the accomplishment of this great end.

The measure which I now offer to the consideration of the Senate, and which received the almost unanimous sanction of both Houses of Congress at the last session, is the result of these views. Permit me, for a few moments, to inquire what would be its practical effects on the general condition of the currency, if the policy it holds out should be carried into full effect by the co-operation of the States and the General Government, as I think it would be if sustained here. It contemplates the gradual suppression, after given periods, of all bank notes under ten and twenty dollars respectively. Supposing this last limit attained, how would the currency of the country then stand under its operation? According to a calculation I submitted last winter, founded on authentic data, it would in that case be constituted nearly as the currency of England is, that is, nearly one half of the precious metals, and the residue of convertible paper. Would not such a constitution of the currency as this accommodate all the wants of the community? What are the real wants of the country in regard to currency? To have a sound, stable, and convenient medium of circulation, for ordinary and local purposes; and for occasional and more extended use, a medium which, in addition to these fundamental properties, shall be substantially of uniform value throughout the whole country. Now, for the first description of uses there could be no better currency than the policy of this bill would give us. There would be an abundance of gold and silver in circulation for the great mass of daily and ordinary transactions, while, for large payments and remittances, we should enjoy the conveniences of a sound, convertible paper medium. In regard to those distant uses which call for a medium of general and uniform credit, the occasions of them are either travelling or remittances. But for travelling, there could be no medium of more uniform and general credit than the gold coins, which, in the case supposed, could always be had without difficulty, while they would at the same time be perfectly portable and convenient. As to distant remittances, they are hardly ever made in money of any sort, but are effected through drafts and bills of exchange; and when the local currencies within their respective spheres shall be raised to par with specie, the rates of exchange, with the advantages of so portable a currency as gold to adjust balances between the States, would be next to nothing—certainly as cheap as it has ever been under the regime of a national bank.

Among the most important advantages of such a constitution of the currency as is contemplated by this bill, are the substantial securities it would afford against the peculiar dangers and evils of the banking system. Those evils are, a tendency to over-issues of paper, fluctuations in the quantity of currency and in the value of property as affected by them, and the liability to a suspension of specie payments. The suppression of the small notes would operate, in two ways, to check over-issues. In bringing a larger quantity of gold and silver into circulation, it would, of course, diminish in the same proportion the issues of paper to form a part of the circulation. The number of issuers, too, would be diminished; for, the small note circulation being a considerable source of profit, its suppression would take away one efficient motive to the multiplication of banks. Then as to fluctuations in the amount of the currency, and the often ruinous fluctuations that ensue in the value of property, this evil is greatly increased by the fact that, in the existing state of the currency in this country, whenever an unfavorable balance of trade creates a drain on the banks for specie, having no means of recruiting their supply but from abroad, for every dollar of specie that is drawn from them they are forced to draw in their

own circulation to three or four times the amount. But when the domestic channels are filled with gold and silver, as they would be if the small notes were suppressed, the banks, being always able to replace whatever specie is drawn from them by a foreign drain, with an equal quantity obtained in the country, their circulation remains comparatively steady. The same circumstance, enabling the banks to meet any sudden run upon them by a prompt reinforcement of their resources, obviates the danger of a suspension of specie payments, and renders such a contingency next to impossible. If all bank notes under twenty dollars had been suppressed, who, for example, could suppose that, filled as the channels of circulation would in that case have been with gold and silver, and the quantity of bank paper comparatively small, the banks of this country would, in the late pressure, have been compelled to suspend specie payments?

The system of policy, then, proposed by this bill, if carried into full execution, would secure to the country a sound, stable, convenient, and substantially uniform currency—consisting nearly one-half of coin for the daily and ordinary transactions of life, and the residue of sound convertible paper, for large operations and commercial purposes. Without depriving the community of any of the advantages of the banking system, it would obviate the danger and cure the evils incident to that system. But the Senator from South Carolina, [Mr. CALHOUN,] while acknowledging the high importance of the reform contemplated by the bill, objects that the means proposed for its accomplishment are inefficient. If that gentleman be right in supposing that the credit of bank paper is owing to its receivability in payment of the public dues, which, he says, operates as a general endorsement of it by the Government, then surely the means proposed by the bill are not inefficient. What more powerful inducements could be addressed to the banks to conform their issues to the provisions of the bill than the announcement that, if they did not do so, the Government would withhold from them that which, according to the opinion of the Senator from South Carolina, alone gives credit to their paper? But, without agreeing with the Senator from South Carolina in the extent to which he carries his views of the credit of bank paper being solely derived from its receivability by the Government, I still believe that the sanctions of this bill, though I have never supposed them sufficient of themselves to fully accomplish the object, would exert a very considerable influence on the conduct of the banks. It must not be forgotten that the means proposed by this bill are the very means employed by the joint resolution of 1816, to bring the banks back to specie payments on that occasion, and which, notwithstanding the previously declared determination of the banks to the contrary, did bring them back to specie payments on the day fixed by that resolution. The same means, too, were employed with success by the Secretary of the Treasury, in 1815, to induce the banks to receive Treasury notes (which had sustained a considerable depreciation) at par, though they had before refused to receive them either in payment or on deposit.

But my reliance is not so much on the direct operation of this measure on the banks themselves, as on the moral influence it is calculated to exert upon the policy of the States, which have full and complete power to carry its object into effect. The public mind is now universally awakened to this great common interest of the currency, and is anxiously looking to Congress for the adoption of some common system, to be acted upon and carried out by the States, so far as their action may be necessary to supply the defect of Federal power. The States have heretofore shown no backwardness in seconding the policy of Congress on the subject of the currency; but, on the contrary, have promptly and zealously co-operated in the reforms which have originated here, under the auspices of

SENATE.]

Kinds of Money for Revenue.

[SEPT. 19, 1837.]

the national representation. The promptitude with which a majority of them have already prohibited the issue of bank notes under the denomination of five dollars, as soon as this Government adopted, in its fiscal policy, the principle of discontinuing those small issues, is an encouraging proof of the patriotic co-operation of the States. I may add to this proof the recent example of my own State, whose Legislature, being in session at the time of the passage of the currency bill by both Houses of Congress, during the last winter, immediately responded to the policy announced by that bill, by the enactment of a law prohibiting, after an early period, all bank notes under the denomination of twenty dollars. There is no fear that the States will abandon the General Government in this wise policy of reforming the actual currency of the country, if the General Government do not abandon them. Let Congress persevere in the policy so earnestly inculcated by the late administration, and so warmly embraced by itself at the last session, and that policy cannot fail to be carried on, by the co-operation of the States, to a triumphant and beneficent consummation. Public opinion, in our republican system especially, is the mistress of human affairs, of government and legislation as well as every thing else. Let us, by the example of our measures here, awaken that opinion to the importance of the reforms which are needed in the currency of the country, and if it approve them, as we have every reason to believe it will, it will not be slow in finding, in some branch or other of our system, efficient as well as appropriate organs to work out its decision.

Besides the reform contemplated by this bill, there are others of high importance, in regard to the soundness and uniformity of the general currency, which an adherence to the policy of the late administration, with regard to the employment of State banks in the fiscal operations of the Government, would afford the means of accomplishing. In what did the boasted power of the Bank of the United States to preserve the soundness of the currency consist? Was it not in checking the issues of the State banks, when tending to excess, by periodical and frequent settlements with them, so as to keep them, to use the language of the president of that institution, "in the habitual presence of accountability?" The same practice has long prevailed in Scotland, and constitutes, by general acknowledgment, the distinguishing excellence and chief security of the eminently successful system of banking in that country. All the banks have agents in Edinburgh, who regularly exchange their notes twice a week, and the balances are paid by bills at ten days' date on London. By this means over-issues are effectually prevented, and the currency of that country, though consisting almost entirely of paper, has been preserved in a condition of constant soundness. Nothing would be easier than to incorporate this same regulating principle into a system of deposit banks. It might be made the duty of each of them, as a condition of their employment, to have frequent and regular settlements with all the banks with which they maintained relations of business, and to call, if necessary, for an adjustment of the balances in specie. This would be an efficient check upon over-issues; and, administered by some twenty or thirty deposit banks, in different parts of the Union, would exert a far more powerful and extensive influence over the general currency of the country than the same check in the hands of the Bank of the United States could have done; inasmuch as the aggregate capital and business of these deposit banks would, in all probability, much exceed that of the Bank of the United States. Here, then, is an object of the highest importance, in regard to the preservation of a sound currency for the whole country, which might be easily and certainly accomplished by a perseverance in the policy of the late administration. If to that were added, as there is reason to believe might easily be done, an arrangement among the deposit banks to receive and credit

each other's notes as cash, whenever offered in payment of public dues, you would secure to the country the advantages of a convenient circulating medium of equal and diffusive credit throughout the nation, and possessing every attribute of the paper of the late national bank, without its unconstitutionality. By thus accommodating the practical wants of the country in regard to currency, you would put an end forever to the bitter and recurring struggles for a national moneyed institution, and would give that stability and repose to the social and business relations of the community which are so much needed for its prosperity.

But all these high considerations, it seems, are now to be disregarded, and a policy, announced with the most confident promises of success, and prosecuted, for more than three years, with a signal fulfilment of those promises, is to be all at once abandoned for new and untried expedients. And why this sudden change of policy? Because the suspension of specie payments by the banks has occasioned some momentary embarrassments in the operation of the system. It is, therefore, pronounced that the system has been tried and failed; and I heard yesterday, with amazement, the Senator from South Carolina [Mr. CALHOUN] appealing to the friends of the late administration, in the confidence that, of all parties, they would be the most certain to join him in opposition to this system; that they who had been the sponsors, the advocates, the champions of it, who were identified with it in every possible mode of honorable commitment, would be the first to turn round and abandon and disown it! Why, sir, if they are against it, who are for it? That Senator said, if it be folly to adopt an "untried expedient," it is madness to employ one that has been tried and failed. But, sir, that is the question at issue. Has this system of State bank depositories failed? I say it has not, unless the explosion of a steamboat would justify you in pronouncing the great discovery of the age—the application of steam to navigation—an imposture, or the sweeping away of a mill by a freshet would prove that most useful invention for the subsistence of man to be an abortion. The recent suspension of specie payments by the banks is an accidental and extraordinary occurrence, the result, as I shall show, of circumstances peculiar in their character and unprecedented in their combination, and affords no criterion by which the general utility or success of a system is to be judged. If we wish to form a correct judgment of the system of State bank depositories, we must review the whole history of its operations. And here I might appeal to the Senator from Missouri, [Mr. BENTON,] who was the zealous champion of this system at a period when its capacities were put to the severest test, if it did not then give the amplest proofs of its usefulness and efficiency. I refer to the memorable struggle of 1834, when the Bank of the United States, enraged by the loss of the public deposits, and stimulated by the desire of regaining them, waged open and violent war on these State institutions; when some of the State banks themselves, coerced or subsidized by the Bank of the United States, joined in the unnatural and fratricidal conflict; when the eloquence of this body was thundering upon the system, and the artillery of the press at the same time pouring in its unrelenting and destructive fire. Did not these abused institutions then give triumphant evidence alike of their strength and their fidelity, and bear the country and themselves harmless through the conflict? There can be but one answer to the question.

In reference to the stirring and important events of that day, I will say, that no one more heartily approved the conduct of the late Executive, in removing the public deposits from the Bank of the United States, than I did. I believed that the bank had not only failed in the prompt and faithful discharge of its fiscal duties to the Government, but, in one instance particularly, that it had balked and counteracted the execution of a great measure of public policy. It had, moreover, manifested a dangerous spirit of ambition,

SEPT. 19, 1837.]

Kinds of Money for Revenue.

[SENATE.]

by an active interference in the politics of the country. I held, therefore, the conduct of the late President, in the removal of the public deposits from the Bank of the United States, perfectly justifiable; and I viewed it with the more satisfaction, because, believing the institution itself to be unconstitutional, I saw in the measure of the President the most certain means of preventing its recharter. But, while I considered the removal of the public deposits, under the circumstances of the case, lawful, justifiable, and proper, it was evidently a bold measure, and not without hazard of disturbing, for a time, the business and pecuniary interests of the country. It was the firm, judicious, and patriotic conduct of the selected State banks, sustained as they then were by the prudent confidence of the Government, that mitigated, and, in a great degree, obviated the threatened pressure, and ultimately reconciled the public mind to this bold and decisive measure of State policy. I little supposed, while the Government was thus leaning on these State institutions for co-operation and support, that they, too, in their turn, were destined for the sacrifice, and that the only favor they were to expect was the Cyclops' boon to Ulysses—that of “being last devoured.”

But, sir, not to dwell, in particular, on the success and services of the deposit banks in that period of trial and danger, let us inquire what have been their *general* conduct and efficiency. Have we not seen the satisfactory manner in which they have discharged their duties as fiscal agents of the Government, year after year made the subject of the warmest eulogies in the annual messages of the President, and the reports of the Secretary of the Treasury, and put in striking and advantageous contrast with the operations of the Bank of the United States? In the very last message of the late President, (in December last,) in bearing his testimony to the promptitude and regularity with which the transfers of the public moneys had been made by the deposit banks, he showed that the amount of these transfers during the preceding year (about forty millions of dollars) was more than double the largest sum which had ever been transferred, during an equal period, by the Bank of the United States; and all this had been effected without the smallest expense or cost to the Government. At the same time he states that an amount of domestic exchanges had been negotiated by the deposit banks for the public, exceeding more than three times the operations of the Bank of the United States, in the same way, during an equal period of time, and generally at rates below those charged by that institution. What more could be expected or desired? And what does the Secretary of the Treasury *now* tell us as to these deposit banks? That their condition, in regard to the great elements of soundness, was never better than at present; that, in a comparative view of their means and liabilities, both immediate and ultimate, the proportion of the former to the latter is considerably increased, and is now much greater than has been customary with the banks of this country, or even with the Bank of England; that, since the suspension of specie payments, they have paid the drafts and accounts of the Treasury upon them, to the amount of between fifteen and twenty millions, in a manner acceptable to the holders; that there remains now but a comparatively small sum due from them to the Government; and that of that sum there is no reason to apprehend the loss of a single dollar.

In the presence of these facts, with what propriety can it be said that the State bank deposit system has failed? If a temporary suspension of specie payments, under most extraordinary circumstances, constitutes a failure of a system, then the national bank system and the hard money system have equally failed. I say the national bank system, because the Pennsylvania Bank of the United States, (which we all know suspended specie payments at the same time with the deposit and other State banks,) we have the authority of its president for saying, possessed all

the strength and real advantages under its charter from the State of Pennsylvania, that it did under its charter from the United States. If it had been a national instead of a State institution, it would equally have suspended specie payments, under the extraordinary circumstances of the crisis. And has not the hard money system, if we apply the same test, also failed? Where now is all that boasted abundance of gold and silver, which we were told was to overspread and rejoice the land? Do you see a dollar of it in circulation, performing its true office of effecting payments in the business of the country? No, sir; all, all has disappeared.

If, then, the State bank deposit system has failed, the other systems, proposed by one party or another to be substituted for it, are equally demonstrated to have failed. But, sir, this system has not failed. The banks have been embarrassed and momentarily obstructed in some of their functions, by circumstances which have embarrassed and deranged the whole commercial world. If they have bent for a time beneath a tornado which has swept over the globe, it is only that they may rise again, and resume their erectness and vigor, when the fury of the storm is spent.

But, superadded to these general causes of embarrassment, there have been peculiar and extraordinary causes operating here, (most of them originating in the errors of our public policy,) which have mainly contributed to the recent disaster, and which, being such as will not occur, or may be guarded against in future, prove nothing against the system itself. Some of these anomalous and disturbing causes I will briefly advert to; and, first, to that enormous surplus revenue which we permitted to grow up under our own improvident legislation. Forty millions of public money were thus thrown into the banks, upon which they were not merely authorized, but invited, to found new discounts and accommodations to the public. It was a virtual addition of so much to the capitals of the banks, by act of the Government itself; which naturally led to an increase and dangerous expansion of their business. But, sir, another disturbing cause, not less mischievous in its operation, has been the factitious importation of gold and silver into the country during the last three or four years. It is estimated that the quantity of the precious metals in the country has been increased in that time, under the various provocatives administered in one way or another, nearly another sum of forty millions. This enormous augmentation of the precious metals has been the subject of much inconsiderate exultation; but in truth, sir, it has been one of the most efficient causes of the present derangement in our currency. What became of all this gold and silver as it was brought into the country? It could not enter into circulation, because the channels of circulation were already occupied by the smaller bank notes, which, we have seen, will invariably exclude coins of the same denominations. It went, then, to enlarge the specie basis of the banks; and for every hard dollar they thus acquired they put out, in the usual ratio of their circulation to their specie, three or four paper dollars.

Gentlemen who have patronised this artificial importation of gold and silver, with a view to enlarge the metallic circulation and restore the “constitutional currency,” have committed a great mistake. They began *at the wrong end*. They should have first provided for the suppression of small notes, and then the gold and silver, as they came into the country, would at once have entered into circulation. But brought into the country as they were in large quantities, before any opening was made for their circulation by the previous suppression of the small notes, they accumulated in banks, where they furnished the basis of new issues and discounts, and thus formed one of the chief causes of that undue distension of the paper system, which terminated in the recent catastrophe.

I have already alluded, Mr. President, to a measure, the

SENATE.]

Kinds of Money for Revenue.

[SEPT. 19, 1837.]

protracted continuance of which had, in my opinion, no small agency in producing the suspension of specie payments by the banks. I mean the specie circular. It has been common to assume the amount of specie paid into the land offices as the true measure of the operation of that order. But this is a very fallacious and inadequate view of the subject. What is called *land-office* money, or money receivable in payment for the public lands, is the universal standard of the currency in the West. In all private payments and transactions, it is the sort of money that is required. When, therefore, by the specie circular, convertible bank notes, however sound, were no longer receivable in payment for public lands, and gold and silver were made the only *land-office* money, every body wanted gold and silver. This necessarily gave rise to extensive demands upon the banks in that portion of the Union for specie, which they provided for by drawing large supplies from the East. But this was not all. All persons emigrating to the West, whether they intended to buy public lands or not, felt it necessary to provide themselves with *land-office* money—the general and standard currency of the country to which they were going. The ordinary preparation for removal was first to convert all the bank notes held by them into gold and silver. This, I know, has been extensively the case in Virginia, for many of my friends and neighbors have recently migrated to the West, and in every case they have gone to the banks, whose paper they held, to exchange it for specie. The same thing has, doubtless, occurred in every portion of the Union whence emigrations have taken place to the West. I have been informed, particularly, that it was so in the Northern and Eastern States—that great hive which has poured forth so many swarms of useful and enterprising citizens to people and subdue the western forest. Gentlemen, who represent those States here, can correct me, if my information has been erroneous. These multiplied and extensive calls for specie, resulting from the direct and indirect operation of the Treasury order, must have produced a very serious pressure upon the banks throughout the country, but especially in the Atlantic States. It was a sudden and unnatural displacement of the precious metals, which could not fail to give a violent shock to the whole system of bank credit founded upon them. But when the Government announced its final determination to continue this specie circular as the permanent policy of the country, the blow was decisive and fatal. In the permanent and indiscriminate refusal of the notes of all banks in the largest branch of the public revenue, an official discredit was stamped by the Government upon bank paper, which, in the critical state to which it had already been brought by the circular, it could not survive. Public confidence was shaken, distrust and panic were produced, systematic runs upon the banks commenced, under which, whatever their ultimate ability, they were forced to succumb for the time.

I know, sir, that this catastrophe has been sometimes, in particular quarters, attributed to the transfers of public money under the deposit act. But if the specie circular had not been issued, and that act had been executed in the true spirit of the policy which shaped its provisions, no sensible embarrassment could have resulted from it to the banks. The act itself was a measure of wise and necessary policy. It grew out of a state of things which presented these three alternatives: An immense surplus of near forty millions of public revenue was to be continued in the deposit banks, and used by them in ministering to a reckless spirit of speculation, at the hazard of the ultimate loss of the whole fund to the Government, as well as of great injury to the community; or, secondly, it was to be wasted in projects of Government expenditure, which were not merely useless, but highly dangerous and pernicious; or, lastly, it was to be laid by, in ratable proportions with the several States, as temporary and unques-

tionably safe depositories, with the privilege of using it, till called for by the wants of the nation, in such manner as they should think best for the benefit of their respective communities. I think, sir, there are but few candid and patriotic minds which, looking back to the state of things which then existed, will not at once decide that the last alternative—that which was embraced by the bill—was the one most proper to be adopted. At the same time, its provisions were of the most liberal and considerate character, in regard to the banks from which these moneys were to be drawn. The whole payment was divided into four equal instalments: the first, not to be paid over by the banks till after six months' notice given by the act itself, and the three remaining instalments to be paid at successive periods of three, six, and nine months thereafter. Ample time was thus afforded to the banks to meet these payments; and there is reason to believe that, upon a judicious plan of execution, the greater part, if not the whole, of the necessary transfers might have been made through the trade and commercial exchanges of the country, not only without inconvenience, but with real accommodation to the business of the community. A fundamental principle of the act was the six months' notice given to the banks before the commencement of its execution. But, instead of this, anticipated transfers to the amount of ten or fifteen millions (unless I am erroneously informed) were made, and without any known necessity for them, very soon after the passage of the act. In the execution of the law, also, it is said that large amounts of specie were drawn and transported to and fro, to the great disturbance of commerce, when the same movement of funds might have been effected with ease, through the customary channels of trade, without displacing a dollar. I have heard, for example, of a case in which a bill of exchange had been declined, and a considerable sum drawn and transported, in specie, when, almost as soon as the specie arrived at its destination, the bill of exchange overtook it, and brought it or its equivalent back again to its original point of departure. It is not my purpose, sir, to enter into any detailed examination of the mode in which the deposit act has been executed; but I refer to these circumstances to show that, if inconvenience and embarrassment, to any serious extent, have really attended its operation, there is ground, at least, for the inquiry, whether the fault has been "in the law, or in the administration of the law." I am far from imputing any thing wilfully wrong to the Secretary of the Treasury; but I am well satisfied that the inconveniences which have been felt might have been avoided by a different execution of the law.

If I am not mistaken, Mr. President, in this review of the circumstances which have mainly contributed to the recent suspension of specie payments by the banks here, I have shown that suspension to be the result of causes which are not likely to occur, or may be guarded against in future. Our late experience will, I think, effectually admonish us against another surplus revenue, which has been the chief source of the derangement in our monetary concerns; and, in this respect, I am happy to perceive that the President gives us the assurance of a cordial concurrence of views on his part. Neither shall we, I trust, again do violence to the natural laws of trade by forcing large quantities of gold and silver into the country, in the vain hope of extending their circulation, before any opening is made for them by a suppression of the smaller bank notes, but with the real effect of stimulating and expanding the paper system; and, if we may judge of the opinions of future Congresses by the almost unanimous sense of the last, we shall not again be exposed to the disturbing operations of a specie circular. The suspension of specie payments, taking place under circumstances so peculiar and anomalous, and so unlikely to occur, or so easy to be guarded against in future, proves nothing in my estimation,

SEPT. 19, 1837.]

Kinds of Money for Revenue.

[SENATE.]

against the general expediency of using the State banks as fiscal agents of the Government. But, if it were otherwise, is this the time, I would ask, to withdraw the countenance and support of the Government from them? I would appeal to those political friends with whom I have acted in steady and harmonious opposition to the Bank of the United States, and ask them if they have not seen the attitude assumed by that institution? Do they not recognise her controlling influence in the late meeting of the banks of Philadelphia, in which it was resolved not to join in the measures proposed by the New York banks with a view to an early resumption of specie payments? It is evident she does not desire a return to specie payments; and there is reason to believe, from the large extent of the commercial operations in which she has been engaged, that, however much her strength may be vaunted, she is, least of all the respectable banks in the country, prepared at this time to meet her liabilities. All her power and influence, then, in conjunction with those of the allies she has enlisted, will be exerted to delay the resumption of specie payments by the other banks. How important is it that a design so contrary to the best interests in the country, should be counteracted; and what mode of counteraction is there so effectual as to reinforce the other banks, with the confidence and support of the Government? I appeal, then, again to my political friends, who deprecate as I do the dangerous dominion of this ambitious institution, if this is the time to weaken other institutions, who must be mainly relied on to balance her power and defeat her schemes.

If ever a party, Mr. President, was honorably committed to the prosecution of a great public policy, it seems to me that the friends of the late Administration are so committed to the policy of employing the agency of State institutions, in the fiscal concerns of the Government, as the true practical substitute for a dangerous national institution. A system of financial administration, founded on that principle, was organized and put in motion by the late Executive; it was attended with eminent success for three years and a half, till momentarily thrown out of gear by the extraordinary convulsions of the times; its satisfactory results were made the theme of repeated and earnest representation to Congress, by both the President and the Secretary of the Treasury; it was the policy under which the whole republican party rallied; it formed, indeed, the defensive rampart from which they fought, as they believed, the battles of constitutional liberty against a powerful and aspiring moneyed monopoly. But we are now called upon, all at once, to abandon that policy; we are appealed to by the Senator from South Carolina, [Mr. CALHOUN,] in the name of State rights, to make war upon State institutions, and summoned, in the name of republicanism, to surrender a republican stronghold! Sir, for every republican authority that can be vouched in favor of the sub-Treasury scheme, a hundred might be adduced in favor of State institutions as the depositories of the public revenue. The Senator from Missouri, [Mr. BEXTON,] with a triumphant sense of the weight of that authority, produced to the Senate a few years ago an extract from the opinion of Mr. Jefferson, on the constitutionality of the first national bank, in which that great statesman pointed to the State banks as the practical and efficient substitute for a national institution. We all know that, too, was the ground occupied by Mr. Madison and his republican associates in the debates of Congress on the same occasion. When the question of the recharter of the bank came up in 1810-'11, the same ground was again taken and adhered to by the organs of the republican party in Congress.

But let us see what has been said on this subject by distinguished statesmen of the republican party, to whose opinions actual and large experience in the administration of the public finances gives a peculiar and impressive weight. In a letter addressed to a committee of this body

in 1811, by Mr. Gallatin, then Secretary of the Treasury, and who had presided over that Department for a term of ten years, that able financier, after speaking of the many conveniences afforded by the banking system for the collection, safe-keeping, transmission, and disbursement of the public moneys, employs this emphatic language: "State banks may be used, and *must* be used, in case of a non-renewal of the charter [of the Bank of the United States,] by the Treasury." What renders this testimony of Mr. Gallatin the more important is, that Mr. Jefferson, in 1803, (then President of the United States,) addressed a letter to him as Secretary of the Treasury, suggesting for his consideration the question, whether it would not be practicable to organize a distinct machinery, for holding and administering the public funds, through the officers charged with their collection and disbursement. With his attention thus specially called to the subject of an independent fiscal agency, such as is now proposed, and with the advantage of all the lights which could be obtained from a free consultation with Mr. Jefferson, Mr. Gallatin reports to the Senate of the United States, as the mature result of his experience and reflection, that "State banks *may* and *must* be used by the Treasury, in case of a non-renewal of the charter of the Bank of the United States."

Let us now consult another great oracle of American finance on this subject; and, however I differed with him on one of the leading questions of his time, I cannot mention the name of Mr. Dallas on this floor without bearing the humble tribute of my admiration to the superior ability, the fertile resource, the elevated moral courage and fearless patriotism with which he conducted the finances of the nation, at a period of the greatest difficulty and embarrassment they have ever seen. It is well known that Mr. Dallas came into the Treasury Department shortly after the suspension of specie payments by the banks in 1814, and continued, through the whole period of his administration, to struggle with all the formidable impediments occasioned by that state of things. His embarrassments were much increased by the wide diversity that had arisen in the value of the various local currencies, and the consequent refusal of the banks which had been employed as public depositories to receive and credit the notes of each other as cash. In this state of things he was driven to the necessity of considering the very question which is now presented, of discontinuing the banks as depositories, and henceforward committing the custody and safe-keeping of the public moneys to the hands of officers of the Government. The result of his deliberations is given in a very interesting report submitted by him to the President in 1816, at the moment of his retirement from office, in which he rendered a full account of his arduous and responsible stewardship. In that paper, after referring to the embarrassments I have mentioned, he says: "In this state of things, the Treasury was driven to a choice of expedients; that is, either to take the hazard of accumulations of revenue in the hands of individual collectors and receivers, or, to recognise as places of deposit the banks (being, however, banks of unquestionable solidity) established in the districts most affected by the course of exchanges. Many powerful considerations led to an adoption of the latter measure." Thus we see that Mr. Dallas, after full deliberation, "for many powerful considerations," gave a decided preference to State banks as public depositories, even while they had suspended specie payments, over the individual agency that is now proposed, and actually employed as many as ninety-four of those banks in that capacity, cumbersome and inconvenient as so large a number necessarily was.

These, Mr. President, are authorities entitled to no light consideration. It seems, however, we are growing far wiser than the great minds that have gone before us. I am one of those, sir, who believe in the progress of light

Kinds of Money for Revenue.

[SEPT. 19, 1837.]

and knowledge. But still I cannot but reverence the lessons of wisdom bequeathed to us by our ancestors; and when I see especially the same question presented again and again for consideration, and men of the highest experience, sagacity, and patriotism, giving, under every change of circumstances, their concurrent testimony in favor of the utility and advantages of a particular system of administration, I confess my mind bows, with unreluctant deference, to such a weight of authority.

And now, sir, permit me to say something in regard to the machinery that is proposed to be substituted for the State banks. Does it afford any adequate guaranty for the safety of the public moneys? Can you rely upon it? I say you cannot; all experience proves you cannot. Look at the records of your Treasury Department, and see in how many instances your receivers of public money fail to pay over, as they are required to do, the moneys collected by them. Look at a brief but most pregnant report made on the 23d of February, 1820, to this body, by Mr. Crawford, then Secretary of the Treasury. He states the amount lost to the Government by the infidelity of officers employed in the collection of the public revenue, from 1789 to 1819, at one million and a half of dollars; and the losses sustained by the misapplication of the public money by the officers of Government employed in disbursing it, he adds, "there can be no doubt, *greatly exceed* those which have been incurred in the collection." Here, then, we have an aggregate loss to the Government, from the infidelity of its officers employed in the collection or disbursement of the revenue, during the first thirty years of its existence, greatly exceeding three millions of dollars! This period, it must be remarked, too, was one characterized, during the greater portion of it, by extreme simplicity in the organization of the Government, as well as by a very moderate amount both of revenue and expenditure. It must be borne in mind, also, that the losses sustained were by the infidelity of officers employed merely in the collection or disbursement of the public money, who held possession of it momentarily and *in transitu* only, till they could hand it over to the banks in which it was to be deposited, or pay it to the public creditors whose claims were to be discharged with it. But under the system now proposed, the officers are to be themselves the depositaries of the public money, and to retain continuous possession of it till called for by the actual expenditures of the Government. How infinitely would the hazards of infidelity and misapplication be increased by such a state of things.

With great deference, then, to the honorable Senator from New York, [Mr. WRIGHT,] this system has not even the merit of being an "untried expedient." It has been tried, though to a limited extent, in the operation of this Government itself, and the bitter fruits of that partial experiment are found in the facts I have just stated. But, sir, it has been *fully* tried in my own state. The treasury of Virginia was formerly organized on that principle of personal custody and control of the public moneys, which is now proposed to be made the basis of a new system of fiscal administration here. Without entering into any painful details, I will only say, that the experiment signally and mournfully failed; and from that period the public moneys have been kept in and disbursed by the banks, under efficient checks against abuse and misapplication by the public officers authorized to draw on the public funds; upon which plan the finances of the State have ever since been conducted with perfect success. When I consider the infirmities of human nature, I am utterly opposed to a system which would subject it to such cruel trials as that now proposed must inevitably do. I hope, sir, my standard of virtue and integrity is not much lower than that of other men; and yet I can conceive, that even an honorable man, having a large sum of public money lying idle in his hands, for which there was no call in the public service, appealed

to by a friend in distress, whose destinies, and those of wife and children, might depend upon pecuniary relief at a critical moment, confiding in the solemn assurances of that friend that whatever money was advanced to him should be restored before there could be any occasion for its application to the public use—I say, sir, I can conceive that even an honorable man, thus situated and thus appealed to, might be prevailed upon, by the feelings and sympathies of his heart, to yield from an idle public hoard the means of salvation and relief to a numerous and interesting family, and, his calculations upon the return of the money (thus momentarily diverted) disappointed in the end, find himself at last a defaulter to his public trust. But, sir, the temptations of another character, arising out of the necessities or speculations of the officer himself, having a large amount of idle funds at his disposal, would be constant, habitual, and powerful. To these would be superadded the danger of misapplication to political purposes. It often happens that public officers are zealous and active partisans. Suppose that such a one had in his hands a large amount of idle public money at the moment of a critical election, on which the continuance of his employers in power depended, would he not be strongly tempted to use the funds in his hands to sway the result, and would there not be the more danger of his yielding to the temptation, as he would naturally rely on the indulgence of those for whose benefits he had violated the trust? We are now, Mr. President, to found a system that is to *last*, and which may influence, for good or for evil, the destinies of the country in all future time; and consequences and dangers, however remote or improbable they may appear to some at the present moment, ought to be looked to and weighed. In this view, I cannot but fear that the system proposed will be found both demoralizing and unsafe.

The President, in his message, says that the objection to the proposed system as being unsafe, must proceed on the assumption that "a vault in a bank is stronger than a vault in the Treasury." This observation does not seem to me to be well considered. It overlooks the important distinction, that if the vaults of a bank be despoiled, and the public money be taken therefrom, the loss is not that of the Government, but of the bank; whereas, when the vaults of the Treasury are violated, the loss falls wholly and exclusively on the Government. In the one case, the stockholders of the bank are interposed between the Government and the violated vault, (their whole capital being bound to make good the loss,) whereas, in the other, no shield is interposed, but the Government is left naked to the spoiler.

Another most important objection to this system is the dangerous increase of Executive patronage it would bring with it. If I seem to give way too much to old republican jealousies, I hope gentlemen will pardon me. I imbibed them early from the fathers of the political church, and I cannot now get rid of them. I have always been taught to believe that the great danger to liberty is in the growth of Executive patronage. Every day's observation of the operation of our Government confirms me in the conviction that here is the *peccant* part of our system, and that it cannot be too closely watched by the vigilance of the people and their representatives. The bill upon your table, sir, for organizing a new fiscal agency, is the latent germe of a vast growth of Executive patronage, which will spread and spread till it overshadow the land. If the immense moneyed concerns of this Government, which have heretofore been managed through banking institutions, (extending in number to sometimes near a hundred,) are to be henceforward committed to individual agencies exclusively, an enormous multiplication of those agencies will be inevitable. The bill now offered merely introduces the principle. Let the principle once receive the sanction of law, and it must go on. It will generate a force in itself that will be competent to carry it forward to a fearful development. I was informed, during

SEPT. 19, 1837.]

Kinds of Money for Revenue.

[SENATE.]

my residence in France, that this sub-Treasury system, which prevails in that country, embraced there not less than one hundred thousand officers. Our population is already near one-half that of France; and whether we are not, in time, to have here a swarm of official locusts that will bear a corresponding proportion to those that now darken and devour that fair land, may depend upon the issue of our present deliberations. I repeat, sir, that the bill upon your table is but the grain of mustard seed, the least of all seeds, but when it is grown it will be a large tree, overspreading the land with its boughs, so that the fowls of the air, yea, sir, birds of prey, will come and lodge in the branches thereof.

But, it has been alleged by some that there is as much, if not more, danger of an increase of Executive influence from the employment of banks in the fiscal operations of the Government, as from the new official agencies that are proposed to be organized under the absolute control of the Executive. What, sir, are the banks? Are they not institutions of the States, created by the States, supervised by the States, and dependent on the States? A breath of the States has made, and a breath of the States can unmake them. They are subjected to the constant surveillance of the State Governments; and if any thing improper should occur in their administration, or exist in their connexions, it would be promptly detected, and as promptly and vigorously corrected, by the authority of those Governments—the natural and jealous guardians of the public liberty against Federal influence or encroachment. How powerless a share of the public deposits would be to sway these institutions, is strikingly shown by what occurred in my own State in the very origin of the State bank deposit system. An arrangement had been made between the Treasury and one of the banks to become the depository for Virginia, on certain conditions agreed upon by the parties. When the arrangement was submitted to a general meeting of the stockholders, they refused, by a large majority of voices, to accept the deposits on the conditions proposed, and furnished by their decision a conclusive and practical demonstration of the fallacy of the argument I am now noticing. Gentlemen seem to me to give a free scope, indeed, to their imaginations, when they gravely compare the influence to be exercised over institutions like these, made independent, too, by the very terms of the law, (which does not permit them to be discontinued, when once selected as depositories, except for special reasons to be laid before Congress,) with that which would exist over an army of fiscal officers, subject to the unrestrained orders, and removable at the absolute will, of the President.

One of the most alarming and portentous aspects of this sub-Treasury scheme still remains to be considered. To my view it has a squinting, an "awful squinting," towards a Treasury bank—a bank under the sovereign and exclusive control of Executive agents. It appears from the report of the Secretary of the Treasury that the contemplated fiscal agencies are to furnish "a paper medium" for the community, by "issuing certificates and drafts payable in specie to bearer or order, and made receivable for all public dues." After descanting on the advantages of "this kind of paper," he says: "If the demand for such paper increased, public and private convenience might be promoted, and an equal quantity of specie, at the same time, preserved in the country, by reserving for this purpose, from any accumulation in the Treasury, a sufficient sum, and placing it at a few important and convenient points, to render a greater number of certificates redeemable there with the very coin whose representative they are intended and honestly ought to be." These views of the Secretary are referred to, and impliedly sanctioned, by the President in his message. Now, sir, is not this apparatus, to all intents and purposes, a Government bank? The fundamental idea of a bank is an institution which "issues and circu-

lates a paper credit, founded on a deposit of coin or other property, which paper credit is to answer the purposes of money!" This project fulfils every feature of the definition. The officers of the Government are to issue a paper credit in the form of certificates and drafts, founded on a deposit of specie in the Treasury and sub-Treasuries, which paper credit is to answer the purposes of money, or a general "circulating medium." It is a remarkable coincidence that this scheme is the precise embodying of the outline given by General Hamilton in 1791, of what he describes and avows to be a bank—a Government bank. Such, I believe, is the tendency and virtual operation of the sub-Treasury scheme.

I ask gentlemen, then, if they are willing to organize a great moneyed machine like this, and put it, for all future time, in the hands of the Executive; if they are willing, in the form of a fiscal agency, to create a Treasury bank, with its ramifications penetrating every part of the Union, to be managed, directed, and controlled exclusively by Executive agents? To my mind it presents a fearful conjunction—realizing that union between the moneyed and political power of the country, which reflecting men have hitherto considered the most fatal of all devices to the liberties of the people. I have revolved the subject deeply and anxiously, and I can see but two possible issues to the scheme proposed. It will either terminate in a great Treasury bank, such as I have described, affording a fatal accommodation to the moneyed concerns of the country at the expense of its liberties, or otherwise failing in any degree to relieve the actual derangement of the currency—on the contrary, abandoning that currency to wild disorder and confusion; the people, finding the inconveniences of such a state of things no longer tolerable, will, with a voice extorted by their sufferings, call for a national regulator in the shape of an incorporated national bank! Either alternative is, to my mind, fearful and alarming; but believing one or the other to be the destined result of the scheme proposed, I entreat gentlemen to pause and consider well the consequences of their decision.

I recur now, Mr. President, to the question more particularly involved in the bill I ask leave to introduce. I think I have shown, sir, that the exaction of the public dues in gold and silver, while the great mass of the circulation shall consist of bank paper, would be oppressive in practice; that it is anti-republican in principle, as drawing an invidious line of demarcation between the Government and people; and, especially, that, in the present circumstances of the country, it would indefinitely retard, if not render impossible, that resumption of specie payments by the banks which is the great and urgent object of the public solicitude. In considering the propositions which the occasion has brought forth, I have been strongly reminded of the words of a great man—of one born to serve and instruct mankind. Speaking of the province and duties of a practical statesman, that great oracle of political wisdom says: "A statesman differs from a professor in a university. The latter has only the general view of society; the former (the statesman) has a number of circumstances to combine with those general ideas, and to take into consideration. Circumstances are infinite, and infinitely combined, variable, and transient; and he who does not take them into consideration is not erroneous, but mad, metaphysically mad. A statesman, never losing sight of principles, is to be guided by circumstances; and, judging contrary to the exigencies of the moment, may ruin his country forever." I ask, sir, is this the moment, when the country is weak and suffering, to subject it to the action of so violent a remedy (if remedy it can be called) as that involved in the proposition to collect the revenues in gold and silver? Does it show a wise regard to circumstances, at such a moment, when that credit system, under which the country has grown up to power and greatness, and with which, for the present, at least, its most vital interests are identified—at a moment when that

SENATE.]

Great Fire in New York.

[SEPT. 20, 1837.]

credit system, thus incorporated with the country, has already sustained one of the severest shocks to which it has ever been exposed—is it wise and prudent, I say, to introduce an innovation in the fiscal policy of the Government, which aims a fatal blow at that system, and all the wide-spread and diversified interests connected with it? The effect of this innovation, at the present moment, must be, as I have already shown, to fix upon the country, for an indefinite period of time, the curse of an irredeemable and depreciating paper currency, or otherwise to force, violently and prematurely, an exclusive metallic circulation, by compelling the banks at once to wind up their concerns. But what would be the consequence of thus compelling the banks precipitately to wind up their affairs? They have vastly more debts due to them than they owe. Compel them, then, to wind up, and you turn them loose, or rather drive them, in necessary self-defence, upon the community. According to the most recent and authentic statements upon the subject, the aggregate amount of debts due to the banks is between four and five hundred millions of dollars. Force them by your policy to collect this vast sum from the community, and what a wide-spread scene of desolation, embracing every class of the community must ensue! The banks will press upon the importing merchant, the importing merchant upon the retail dealer, and the latter upon his customers—the laborer, the mechanic, and the farmer. If the result of this desolating process should not be, in the language of Burke, “the ruin of the country forever,” it would be, at least, to inflict upon it, causelessly and heedlessly, a blow, from which recovery could be effected only through long years of suffering and distress.

I stand here, Mr. President, as no advocate of the banking system. I have been the constant enemy of its abuses, the correction of which, by salutary and progressive reforms, I have steadily pursued, without aiming, however, at the destruction of the system itself, which the country has chosen to adopt, and under which it has hitherto attained a prosperity unparalleled in any age or quarter of the world. The measure I now offer to the consideration of the Senate, is, in my humble judgment, one of the most effective reform. I have no interest whatever in banks: I do not own, never have owned, and never expect to own a single share of stock in any bank, nor do I owe a debt, even of the smallest amount, to a bank. I mention these things, not because I could suppose that other gentlemen, who might happen to be differently situated, could, in the slightest degree, be influenced by considerations of this sort. I deem too highly of the patriotism of my fellow-citizens not to believe them above all personal considerations, as I am sure all with whom I have the honor to be associated on this floor are, in pronouncing on great public questions, involving the interests of the country. I know, however, that there are ungenerous minds, which impute other principles of action to public men; and, following the example of the Senator from South Carolina, who spoke yesterday, [Mr. CALHOUN,] I have thought it not improper to state what, from the nature of my pursuits, happens to be my situation in this respect. Those pursuits identify me by interest, as my feelings and tastes do by sympathy, with the great agricultural body of the country. I am under no bias to regard the interest of other pursuits or other classes of the community, except as I believe that, under our happy institutions, all pursuits and all classes are blended in one common interest, and must prosper or decline together. It is in this spirit, looking to the whole country and all its interests, that we shall, I trust, discharge our duties here. The occasion rises far above the narrow and fleeting interests of party, and demands the best exertions of all for the country. The measure which I have ventured to offer is one on which I have supposed all parties might unite, as all parties have heretofore united. Its effect, I persuade myself, will be both to

revive confidence and to furnish security; and, with the language of encouragement and the pledges of a wise and stable policy, proceeding from the national councils here, we shall soon see our youthful and vigorous country rising from her momentary prostration, and, Antæus-like, gathering strength from her fall.

When Mr. RIVES concluded, he introduced his bill; which was read, and ordered to a second reading.

On motion, the Senate went into the consideration of Executive business; and after some time spent thereon, the doors were re opened, and

The Senate adjourned.

WEDNESDAY, SEPTEMBER 20.

THE GREAT FIRE IN NEW YORK.

Mr. WRIGHT, from the Committee on Finance, reported a bill for the relief of the sufferers by the great conflagration of 1835 in the city of New York; which received its first reading, and was ordered to a second reading to-morrow.

[This bill provides for allowing a remission of all duties already paid or remaining due, on all unbroken and entire packages of goods and merchandise consumed in the fire of New York; and it provides for a proportionate remission on packages which had been opened before the fire. Commissioners are to be appointed, consisting of the collectors and other officers in New York city, whose duty it will be to ascertain the amount of duties paid on packages destroyed by the fire, the names and residences of the sufferers, the amount of goods destroyed, &c. They are to meet in New York, and take testimony on oath respecting these particulars. No claim to be entertained which shall not be presented to the commissioners within four months of the opening of their commissions. The commissioners, on the completion of their investigation, shall make out their statement and send it to the Secretary of the Treasury, whose duty it shall be from time to time to receive and examine the statements of claims presented and admitted by the commissioners, and which shall be subjected to his approval or disapproval. When the Secretary of the Treasury shall have made known his determination upon the claims presented, then the commissioners shall make out certificates of remission according to the amount remitted to the several merchants and claimants, and these certificates, signed by the commissioners, shall be received by the collectors and others as money in payment of duties, &c. to the full amount of the sums remitted. It is provided, however, that every individual receiving such certificates to pass in payment of bonds and dues, &c., shall give security in bond and penalty to pay double the amount of money remitted, with interest, if it should ever appear that the goods on which the remission is made were not in truth destroyed by fire. The commissioners are authorized to employ a clerk, whose salary, not exceeding \$2,000, shall be determined by the Secretary of the Treasury.]

The resolution offered by Mr. WALKER, for the establishment of a port of entry at Vicksburg, Mississippi, being taken up for consideration—

Mr. HUBBARD moved that the resolution be laid on the table.

Mr. WALKER expressed a wish that it might be acted upon immediately, for the following reasons: The president of the Vicksburg Railroad Company had chartered a vessel to bring on iron for a railroad in the interior of the country to Vicksburg; the ship was chartered under the impression that Vicksburg would be made a port of entry; and if this were not done, and the vessel suffered to land its cargo at Vicksburg, a great increase of expense would be thrown upon the railroad, and the promotion of an important work of internal improvement be so far impeded.

Mr. HUBBARD confessed he did not feel satisfied by

SEPT. 20, 1837.]

Sub-Treasury Bill.

[SENATE.]

the reasons given. It was certain the other House would adhere to its rule, not to enter upon business beyond the subjects of the message, and, therefore, all action by the Senate on such matters would be a loss of time.

The resolution was then laid on the table.

SUB-TREASURY BILL.

The bill imposing additional duties on public officers, as depositaries for receiving the public money, was then taken up in Committee of the Whole.

Mr. CALHOUN rose, and moved the amendment of which he had given notice on Monday he should offer to this bill; which having been stated to the Senate, it was, at the instance of Mr. WRIGHT, with the consent of Mr. CALHOUN, modified to read as follows, the passages enclosed in [] being those added by Mr. W.

"Sec. — *And be it further enacted,* That from and after the first day of January, eighteen hundred and thirty-eight, three-fourths of the amount due to the Government for duties, taxes, sales of public lands, or other debts, may be received in the notes of specie-paying banks; and that from and after the first day of January, eighteen hundred and thirty-nine, one-half may be so received; and from and after the first day of January, eighteen hundred and forty, one-fourth; and from and after the first day of January, eighteen hundred and forty-one, all sums due for duties, sales of public lands, or other debts to the Government, [and all payments to the General Post Office Department, shall be paid in gold and silver coin only,] or in such notes, bills, or papers issued under the authority of the United States, as may be directed to be received by law; [and from and after the first day of January, eighteen hundred and forty-one, all officers or agents engaged in the making disbursements for the United States or General Post Office Department, shall make all their payments in gold and silver only, or in such notes or papers as shall be authorized by law; and any revenue or disbursing officer neglecting so to do, shall be dismissed from his office, and forfeit all compensation which shall then be due.]"

Mr. NILES then rose and said: That he thought the question should not then be taken on the amendment of the honorable Senator from South Carolina, [Mr. CALHOUN,] as it contained an important feature in the system of finance which it is the object of the bill to establish, and the whole subject could be more conveniently debated together. He believed there were several gentlemen who intended to address the Senate, and as he proposed to submit his views on the subject, if no other gentleman was prepared, he would go on at that time.

He considered the subject, viewed in all its bearings, in a constitutional, financial, and political aspect, as one of great importance, not inferior, perhaps, to any which, for many years at least, has occupied the attention of Congress. It was one to which he had given some attention, and on which he had reflected much; yet he should not probably have troubled the Senate with any remarks, had it not been for the observation of his distinguished friend from Virginia [Mr. RIVES] in his speech yesterday. That Senator, in support of the bill which he had introduced for designating the public funds, which was similar in its provisions to the bill that passed both Houses of Congress last session, and which he (Mr. N.) and other friends of the administration then supported, made an eloquent appeal to himself and others to come out at this time in support of his present bill, or show good reasons why they could not do so.

Mr. N. said he would respond to the call; he could not support the gentleman's bill, but he would endeavor to give his reasons why he could not. He last session gave his hearty support to the bill referred to, which passed with great unanimity. He did so because he considered that bill as containing no new principle, and only carrying out what was then the established policy of the Government; it left

the funds receivable for the revenue as they were placed by the joint resolution of 1816, but contained some provisions intended to operate as inducements upon the State banks to discontinue the issue of notes of the lower denominations. It was true the bill superseded the Treasury circular; and he (Mr. N.) was then disposed to do that, for the same reasons stated by the gentleman from Virginia; he also regarded that as a temporary measure, intended for a particular emergency, to arrest a special mischief. But he could not agree with the Senator in the opinion that the failure of that act, and the continuance of the Treasury order, was one of the causes which had contributed to the pecuniary distress of the country. He had, at the last session, supposed that the exigency which had called forth the order had passed off, but had since become satisfied that he was mistaken. Such had been the condition of the finances of the Government, and the monetary affairs of the country, that he was fully persuaded the order had exerted a most salutary influence, alike favorable to the Government and to the country.

It has secured the revenue received from the public lands, and reinforced the Western banks with specie, which has enabled them to sustain themselves, until the general storm came upon them, as it swept over the whole country. But had it not been for the operation of the order, the Western banks would not merely have suspended payment, but would have exploded months before they, in common with others, suspended payments. Another good effect of the continuance of the order was, that it had drawn specie from the banks all over the country, and thrown it into circulation among the people in the Western States, where he understood more specie was to be found in circulation than in any other section of the Union. And the specie which had been received for the public lands had been an important resource to the Government in its present emergency.

Mr. N. said he gave his support to the currency bill because he did not then think the time had come to change the policy of the Government in respect to the funds in which the revenue was collected. Among the reasons why he could not then go with his distinguished friend from Missouri, [Mr. BENTON,] who so strenuously opposed the currency bill, was the important fact, that the entire financial concerns of the Government were then conducted through the agency of about ninety banks. It was, in his opinion, in vain to think to change our currency as long as we employed the agency of banks; as all public moneys deposited in them were immediately changed to bank credits. He then believed that, as a preliminary step to the collection of the revenue in specie, we must dispense with the agency of banks.

Sir, the late administration adopted a certain policy in regard to the finances of the Government, and he (Mr. N.) saw no occasion to change that policy at the last session of Congress; and the question on which he and the Senator from Virginia differ, is, whether the great changes which have since taken place, in the prostration not only of the deposit banks, but of the entire banking system of the country, the serious embarrassments to the finances, and the general derangement of the monetary affairs of the nation, require a change in that policy? Has the deposit bank scheme failed? The Senator from Virginia thinks not; he regards the present derangement as the result of temporary causes, some of which originated in the measures of the Government; he thinks that, notwithstanding a gust of wind may have capsized the deposit banks, they can be righted, refitted, and again put in service. But he (Mr. N.) thought the banks had failed in their duties both to the Government and to the public. They had proved themselves to be either weak or faithless agents, and perhaps both. They had suspended payment; they had been guilty of a voluntary act of bankruptcy, in a time of pro-

SENATE.]

Sub-Treasury Bill.

[SEPT. 20, 1837.]

found peace, and immediately following a period of unusual prosperity, (or what was so regarded,) and when they had in their vaults nearly thirty millions of the public funds. This suspension was entirely different from that of 1814, when the Government itself had been the principal cause of the vast and dangerous issues of the banks, by which they were broken down.

Whether the general and simultaneous failure of the banks was voluntary and fraudulent, as supposed by some, or a measure of necessity, arising from the over-action and imprudent management of those institutions, was not very material; in either case they must be regarded as unsafe depositories of the public revenues. They might answer in ordinary times, when we had a clear sky and smooth sea; when the commerce and finances of the country were stable and regular; but they could not be depended upon in times of difficulty. And in the present instance they had failed and violated their engagements to the Government and to the public without any apparent cause, other than their own mismanagement. He would not charge the banks of having voluntarily been faithless agents; but he would say that they had violated their high and solemn obligations to the Government and to the public, without any reasonable efforts—he might almost say without any effort at all—to save their own credit and that of the commercial community. When the crisis came, mainly brought on by their own imprudent action, how did they meet it? Did they breast the storm with the hearts and nerves which the occasion called for? Did they make any reasonable efforts to weather it and save the country from the calamities which have overwhelmed it? Far, very far from this. If we look to the point where the extended line of banks first gave way—the city of New York—we shall discover the strongest evidence of cowardice or treachery. What stand did the banks make? How long did they sustain themselves against a run? The bank of England, in 1825, sustained itself against a run for an entire year, and when a general panic prevailed. Why, sir, a frail concern having first given way, and been *docked*, some of the people, as was natural, became alarmed; but there was no general panic; a crowd gathered round the banks; they were not depositors, or persons who had means to acquire any considerable demands against banks; most of them probably were “boot-blacks,” “chimney-sweeps,” and “wash-women,” with a single bill each of the lower denomination; or perhaps they were of that class of citizens who are becoming very notorious of late—the *loco focos*; the officers of the banks look out at their windows and see this formidable array of persons, all armed with their “promises to pay,” about to make an assault upon the banks. What is to be done? Can we make a stand? Can we defend ourselves against this formidable enemy? They did not, however, hesitate long, but, concluding that “discretion was the better part of valor,” they determined to shut their doors, and keep their creditors out. This was certainly a convenient mode of paying debts. At other places the shutting up of the banks was equally sudden; and, what is not a little remarkable, and calculated to excite a suspicion that something was wrong, is the fact that the suspension at New Orleans, Mobile, and other places occurred a few days after that at New York, but before there could have been any communication. These facts are at least calculated to excite a suspicion that there was a previous understanding among the principal banks in the different cities that they were to suspend payment about the time the explosion took place.

But, however this may be, he would ask whether any one can believe that the banks made any reasonable efforts to sustain their own credit and that of the country? Can the deposit banks, some of which possessed millions of the public money, which closed their doors and stopped payment under such circumstances, be regarded as faithful fis-

cal agents? Was it not the duty of these corporations to have attempted to sustain their credit, and to have paid out one-quarter or one-half of their specie before they shut their doors in the face of their creditors? If they had met the shock resolutely, and with a willingness to incur a sacrifice, who can say that they might not have gone safely through the crisis?

Mr. N. said he had lately seen a report of the governor of the Bank of France, for the year past. The money pressure has visited that country; not in the same severity that it has prevailed in England and the United States. There the bank prepared itself to meet the shock; instead of contracting, it enlarged its discounts, extended the time of its credits, and, in addition to its own notes, put into circulation more than one hundred millions of francs in specie. To enable it to do this, and arrest a money crisis, it purchased, at a heavy sacrifice, nearly twenty millions of francs of coin and bullion. But what sacrifices did the banks, make here to sustain their own credit, or that of the commercial community, and of the Government? In the face of these notorious facts, how can it be denied that the deposit banks have proved faithless and unsafe depositories of the public funds? They have stopped payment in a time of peace, and without an effort to sustain themselves. Can we trust them again under such circumstances? This failure of the deposit banks, and palpable breach of trust, has occasioned serious embarrassments to the Government as well as to the country, and it is the sole cause why we are now assembled here.

Sir, connected with the employment of the State banks as agents of the Treasury, was a purpose of controlling their operations to some extent, and thus improving the paper currency. He believed that this formed no part of the original object of the late President; but it was afterwards engrafted in the system, and regarded by many as an essential part of it. This feature in the deposit bank scheme is what seems so highly to recommend it to the Senator from Virginia. The bill he has now introduced contains provisions intended as inducements to the State banks not to issue notes of the lower denominations. So far as the regulation of the State banks, and a restriction upon their issues, formed a part of the system, what success had attended it? He was sorry to say none, or very little. The hopes which were once entertained in this respect, were now blown to the winds. The Senator from Virginia still thinks that it is the duty of this Government to attempt to control and improve the paper currency of the country by means of its revenues, and that this can be accomplished by employing the State banks as fiscal agents. The gentleman certainly has strong faith—the faith of the grain of mustard-seed, to which he so happily alluded in his speech.

Sir, the evils of our banking and paper money system are too deeply rooted and too broadly extended to be corrected or mitigated by any such palliatives. If the inducements, or considerations of interest, held out to the deposit banks, will induce them to give up their small notes, and conduct their business with some little regard to the public interest, how are those banks to influence or control other State banks? Talk about reforming the State banks through the agency of your financial measures! Why, since this attempt commenced, the increase of banking capital and paper issues has greatly exceeded any former period. The tide of paper money has been rising and swelling until its bitter waters have spread over the whole land, leaving behind everywhere the evidences of their corrupting and deleterious influences.

In many of the States the banking capital had been increased one hundred per cent. since 1830, and in others three or four hundred per cent.; and their issues had increased in proportion. It is true that the issue of small bills has been prohibited in several of the States, not in con-

SEPT. 20, 1837.]

Sub-Treasury Bill.

[SENATE.]

sequence of our fiscal measures, but as the result of the impetus which may here have been given to public sentiment.

But (Mr. N. said) the more he reflected on this feature in the deposit-bank scheme the more he was dissatisfied with it. What is it but an attempt on the part of this Government, indirectly, and through the form of contracts, to supervise and control the local institutions of the States? The object he admitted to be good, although he thought it impracticable. But he spoke of the principle, which he believed to be unsound and dangerous. The banking corporations are a part of the local institutions of the States as much as colleges and courts of justice. Can the Federal Government rightfully interfere to impose restrictions and regulate the action of State institutions? That Congress, or the Executive, can do this directly, no one will contend; and can we effect by indirect means, what we have confessedly no power to accomplish by direct legislation? Can we use the funds of this Government to buy up State institutions, for the purpose of moulding them according to our will? As a friend of the rights of the States, he must say he felt alarmed at such doctrines. The deposit-bank system was resorted to in 1833, in a great emergency, when the United States Bank was attempting to crush the State institutions, and, at that time, was a wise, if not an indispensable measure; but the object of superintending and reforming the State banks was then no part of the system. It is now abandoned, and he rejoiced at it, considering it impracticable, and resting on very questionable principles.

Whether, therefore, we look to the direct object of the deposit-bank system, the safe-keeping and disbursement of the revenue, or the incidental advantage of improving the currency, it was (Mr. N. thought) not to be disputed that the measure had failed. The connexion between the Treasury and the State banks is at an end; it has been dissolved by the banks themselves; and the only question now is whether it shall be renewed. He, for one, thought not.

The deposit-bank scheme being, as he considered, out of the question, there were but two plans remaining for the management of the finances. The first of these is a national bank. He did not know that this exciting question would be agitated at this time; there were some memorials, but no distinct proposition before us in relation to it; and, although a national bank seemed to fall within the scope of the present debate, he was not disposed to go into any general discussion of that question. Of the constitutional and political considerations which belonged to it, he would say nothing; but he would make a few suggestions on one or two financial points. The re-establishment of a national bank is now asked for on new and distinct grounds. It is not as a fiscal agent of the Government; it is not so much for its capacity in facilitating commercial transactions, that Congress is now appealed to to establish another bank of the United States; but it is asked for as a general regulator of the currency of the country—to regulate, superintend, and control the operations of the State banks. It is on this ground mainly, if not exclusively, that the mercantile community desire the re-establishment of a national bank.

The Board of Trade of the city of New York, in the circular which they have sent all over the country, to set the friends of a United States Bank in motion, say: "Here are several hundred banks, with an indefinite power to issue paper money, and twenty-seven Legislatures, possessing indefinite power to create banks at their own will. The banks cannot control each other, nor can the State Legislatures control them: so that there is no efficient check on the exercise of this immense power, upon which every man's property depends for its value, and every man's labor for its reward. That their instrumentality has been useful, if not indispensably necessary, is willingly admitted; but, to their safe administration, it was early deemed essential that the Government, charged with the care of the circulating me-

dium, should, by means of its revenue, superintend, and, to a certain degree, control their movements."

The Board of Trade of our great commercial emporium may be regarded as speaking the sentiments of the commercial class generally in the country; and we see in the public papers, and everywhere, the almost universal sentiment among the advocates of a national bank, that it is the only regulator of the currency of the country; and it is to the failure to renew the charter of the late Bank of the United States that they attribute the rapid increase of banking institutions in the States the last few years. It would be difficult to use language more condemnatory to the whole banking system than that contained in the circular of the Board of Trade. What are we to think of a system which contains within itself no sustaining or regulating principle? Such an institution must have within itself the seeds of destruction. What are we to think of banks which cannot control themselves, which cannot control one another, and which cannot be controlled by the very power that created them?

But this unmanageable machinery of State banks, which possesses within itself the very principles of disorder, is to be controlled and regulated by a national bank, so as to render it highly useful. That a large and very respectable portion of the community honestly entertained this opinion can hardly be disputed. But it appeared to him without any foundation in theory, and not only unsupported, but directly opposed to all experience, both in this country and England. How are one set of banks, (for a national bank with numerous branches is, for most purposes, only so many independent institutions,) constructed on the same principles, and moved by the same impulses and motives, to control and regulate another set of banks every way similar? If we examine the position and the reasons *a priori*, it appears to have no support; and if we view it in the lights of experience, it seemed to him strange that such an opinion should ever have prevailed to the extent it has.

The strong reason now urged for a national bank, was, in his opinion, one of the greatest objections to such an institution. That a national bank has exerted, and necessarily must exert, great power over many of the smaller institutions of the States, was a point not to be controverted. But the question is, whether this influence tends to give stability to the paper currency, or increase its fluctuations? What are the evils of our paper currency, and indeed of all paper currencies? Its tendency to excess, and its ruinous fluctuations, or periodical and almost constant expansions and contractions. Is it not apparent that the concentrated power of a great institution, operating upon this floating mass, must agitate and keep it in constant commotion? And do we not know, in point of fact, that all the great and distressing revulsions in this country since 1816, were preceded by large expansions by the United States Bank? Was not this the case in 1817, and the first half of 1818? From July, 1817, to February, 1818, the discounts of the bank were increased about twenty millions of dollars, or nearly one hundred per cent. This preceded, and in no small degree contributed, to the severe embarrassments and distress which followed, and which lasted nearly three years. The pressure for money in 1826 was preceded by the increased discounts of the bank during the year 1825, which favored the speculations in cotton, and led to an excess of imports over the preceding years of twenty-five or thirty per cent. The bank, having increased its discounts in 1831, curtailed and brought on a pressure in 1832, and occasioned an excess of importations in 1831 of more than forty per cent. over the ten preceding years, with the exception of 1825. The contraction of about twenty millions, after the removal of the deposits in 1833, it is well known, brought on the severe pressure and panic of 1834.

Yet, with these facts staring us in the face, it is seriously contended that a national bank is the only regulator of

SENATE.]

Sub-Treasury Bill.

[SEPT. 20, 1837.]

the currency, and the only thing calculated to restrain and check the action of the local institutions. He considered a national bank dangerous and pernicious under any circumstances; but he should feel much less objection to it if its notes formed the only paper currency. In that case, we should only be exposed to its own contractions and expansions; but with our present system of State banks, there is superadded to its own fluctuations the ebb and flood tides of that immense floating mass of paper supplied by the local institutions.

There was one other point of view in which he would consider a bank of the United States. The re-establishment of such an institution is regarded by many as the most effectual mode of immediate relief to the country, by compelling the State banks to resume specie payments. He concurred with the gentleman from South Carolina, [Mr. CALHOUN,] that no measure could operate more injuriously and harshly on present difficulties than this. In 1816, in a state of things somewhat similar, the honorable Senator from Massachusetts, [Mr. WEBSTER,] then in the other branch of Congress, declared that a bank was not the proper remedy. He said, "in my opinion, any remedy to be applied to this evil must be applied to the depreciated mass of paper itself. It must be some measure which would give life to this mortified mass of the body politic. This evil was not to be remedied by introducing a new paper circulation. The establishment of a national bank was not, in his opinion, the proper remedy." He said "the whole strength of the Government ought to be put forth to compel the payment of the duties and taxes in the lawful currency of the country. Gold and silver was the law of the land at home, and the law of the world abroad. The only legitimate power of Congress was to interdict the paper of such banks as do not pay specie from being received at the custom-house."

Mr. N. said those sentiments were sound, and he fully concurred in them; if true and applicable to the crisis in 1816, they were equally so now. And how did the remedy adopted (a national bank) restore to life the "mortified mass" of paper money? Why, in the same manner that a surgeon saves the life of a patient by extensive amputations; an arm, a leg, leaving nothing but the dismembered trunk. If, in that case, the patient survived, his sufferings were great, and for nearly three years he languished in a low and feeble state. The contraction of currency was the most rapid and extensive, and attended by consequences the most afflicting and calamitous of which there are, perhaps, any examples in modern times.

Of the one hundred and ten millions of paper money which was in circulation in 1816, all was annihilated but forty-five millions, according to the authority of Mr. Crawford. But even this destruction of more than sixty per cent. of the depreciated mass of paper did not give soundness to what remained, until the lapse of nearly four years. In a report made in 1820, Mr. Crawford says "that in many of the States, the great mass of the currency is not even ostensibly convertible," and that, in a "great part of the Union, the convertibility of paper was rather nominal than real." Of the deep and extensive distress which this process of restoring the currency occasioned, he says, "all intelligent writers upon currency agree, that when it is decreasing in amount, poverty and misery must prevail. The correctness of the opinion is too manifest to require proof. The united voice of the nation attests its accuracy. As there is no recorded example in the history of nations, of a reduction of the currency so rapid and so extensive, so but few examples have occurred of distress so general and so severe as that which had been exhibited in the United States. To the evils of a decreasing currency are superadded those of a deficient currency. But notwithstanding it is deficient, it is still depreciated. As the currency, at least in some parts of the Union, is depreciated, it must, in

those parts, suffer a further reduction before it becomes sound. The nation must continue to suffer until this is effected."

Such was the picture of distress exhibited at the end of four years after the establishment of a United States Bank, which is regarded by some as a universal panacea, or sovereign remedy, for all disorders in commercial and monetary affairs. Like a patient slowly recovering from a fever, the whole country languished for three years; its resources exhausted; its industry paralyzed; and its whole energies inactive and dormant. The ruin to private fortunes, and the destruction of property was immense; almost every description of property fell fifty per cent., and some much more. Every kind of business, except that which is the basis and support of all others, was entirely prostrated; and even agriculture was so depressed, that the prices of the products of the soil fell fifty, and many seventy-five per cent. These were some of the early fruits of a national bank, as a remedy for a disordered currency and a deranged state of the commercial interests of the country. In the history of England we have many similar examples of the kind of balm which a national bank pours into the wounds of a bleeding and suffering people—in 1793, 1797, 1814, and 1825. At the latter period of revulsion, nearly forty millions of dollars of currency of the private banks was annihilated, and a scene of distress and ruin presented truly appalling.

Sir, said Mr. N., I have said all I propose to say in regard to two financial schemes, and it now remains for me to take some notice of the third, which the bill before us is intended to introduce. This last is characterized as a novel and untried experiment, although much older than either of the others. It is the system on which the ancient and most modern nations have conducted their finances; it is, at any rate, as ancient as 1789, as old as the constitution which we have all sworn to support and to regard as the rule and guide of our actions.

This plan consists of the employment of Federal officers to execute that portion of the Executive power which pertains to the keeping and disbursement of the revenue. This seems to be the natural course, and is, at least, recommended by its simplicity and conformity to the true spirit of the constitution. Can any one believe, on perusing that instrument, that its framers contemplated the agency of banks, either State or Federal, in the keeping and disbursement of the revenue? Has not the employment of banks from the first been a manifest departure from the plain and obvious course indicated by the constitution, and may not this departure be justly regarded as the source of all our financial embarrassments and difficulties?

But is the proposed system practicable? This is, perhaps, the most important question connected with the whole subject. Is there any thing in the constitution, or in the nature of the fiscal duties of the Government, that renders the agency of banks appropriate and necessary? If that part of the Executive power which relates to the finances cannot be executed except by bank agency, then a system of banks becomes an essential part of the Government itself, and enters into its very elements. It becomes a bank Government, and cannot exist independent of banks in some form. And if it is not maintained that banks are absolutely necessary as fiscal agents, to insist that their agency is the most suitable and appropriate means of executing a portion of the Executive power, would seem to lead to the same conclusion, the same connexion between the Government and banks. But those who profess to be opposed to a Bank of the United States, will do well to pause before they come to either of the above conclusions; for if the operations of the Government cannot be carried on without the agency of banks, or if banks are the most suitable and appropriate means for executing the powers relating to the revenue, does it not follow that we must

SEPT. 20, 1837.]

Sub-Treasury Bill.

[SENATE.]

have a Federal bank? Is it not apparent that to admit that bank agency is necessary in the management of the finances, is the strongest possible argument in support of a national bank? Sir, the two questions are identical; they are but one; for to say that a bank is necessary as a fiscal agent, is to say that we must have a national bank. This, sir, is a complete independent system of Government; it possesses within itself all the necessary functions of a Government. It is in no particular dependent on the States, so far as its own action is concerned; and least of all can it be in so important a function as that of its finances. If it has not within itself the power to manage its finances, then it is no Government; it is dependent on the States almost to the same extent as the old confederation, which had no power over a revenue but by requisitions upon the States. Has this Government any control over the State banks? Has it any right to command their services? And, in times of party excitement, might not many of the States prohibit their banks from acting as agents of the Government? What security can there be in a reliance on State institutions? Who control the banks and what is their spirit? Do they not present the embodied elements of aristocracy, and have they not usually been opposed to the Government, when administered by agents possessing the confidence of the great body of the people? Sir, there is no avoiding the conclusion, that, if bank agency is necessary, we must have a Federal bank, which we can control ourselves, or, at least, have a legal right to control. But no such agency is necessary. The proposed system is not only practicable, but natural and simple, and, Mr. N. did not hesitate to say, would be found, on trial, to be as convenient as the State bank machinery.

If authority is of any avail, Mr. N. said, he would refer to that of Mr. Gallatin, whose great experience and learning, as a financier, no one would dispute. He says: "It must be acknowledged, that inasmuch as the revenue may be collected, and the public money may be kept in the public chests, and transferred to distant places without the assistance of banks; as all this has once been done in the United States, and continues to be done in several countries without any public bank, it cannot be asserted that those institutions are absolutely necessary for those purposes, if we take the word *necessary* in that strict sense which has been alluded to." He thinks, however, it would be more inconvenient and expensive.

What, then, are the objections to it? Several have been urged, which he would briefly notice. It is said that it will increase the expense, and that the public funds will be unsafe. The question of expense was too unimportant, in his estimation, to be deserving of any serious consideration; if the expense should be double, triple, or quadruple what it has been estimated at, it would be a matter of no moment with him. As to the security of the public funds, he thought they would at least be as safe as in the banks. Can we not put as much confidence in our own officers, appointed by, and accountable to, this Government, subject to the regulations, and pains, and penalties, which may by law be prescribed, as we can in the officers of mere corporations, over whom we have no control, and who are no way accountable to us for their conduct. We have no remedy, either civil or criminal, against any officer of a State bank for embezzling our funds; our only remedy is against the corporation, and that by suit, like any other creditor. But the power of supervision and removal, which will be applicable to the officers of our own, and a frequent examination of the state of their funds and accounts, as provided for in this bill, is a source of great security. But it is said if we entrust our funds in banks, we have the capital of the institution as a reliance to make good any defalcation. But if our moneys were embezzled or wasted by the officers of a bank, the same fraudulent conduct

would waste the capital also. How many banks in the Union have experienced such a catastrophe? There is one circumstance greatly in favor of the proposed scheme, as regards security. The Federal officers are to be the mere keepers of the public money; they are not to use it; whereas, the banks are expressly authorized to use your funds, and do use them, as a part of their capital; and, of course, they are subjected to all the hazards and contingencies attending the banking business. There is another important point of difference: there are general causes which operate upon all banks at the same time, and which may prostrate the whole at once, to the most serious embarrassment of the Government. This is precisely our present condition. But there are no such causes which can operate on Federal officers; an individual may prove faithless or fraudulent, but that cannot seriously affect the public interest.

It is further objected, that the proposed plan will withdraw the public funds from use. This is true. But who have a right to use the public moneys for their own benefit? Their use, heretofore, has been almost exclusively confined to one class—the merchants—who have had a monopoly of the privilege, if it is one; the privilege is also confined to the places where the revenue is collected. Is this just? The only sound principle is, that the public funds, which belong to the whole people, shall not be used by any one, but kept sacred until wanted to pay the public creditors, and the expenses of the Government.

Is it not the fact that the merchants have been doing business on the funds of the Government, that has occasioned most of the clamor and excitement which has existed in the commercial community in regard to almost every financial measure which the condition of the country or its revenue have required? Is it not time this cause of disturbances was removed? But, sir, we are gravely told by the honorable Senator from Virginia, that the bill, with the amendment, which provides prospectively for collecting and disbursing the revenue in specie, will introduce two kinds of currencies—one for the Government, its officers, contractors, and so forth, and one for the people. He was sorry to see such an objection, which he would not say was taken from the newspapers of the day, put forth from such a quarter. Why, the Senator himself seems to be sensible that it will be regarded as an *ad captandum* argument; yet, in the same breath, he informs us that he discovers in it the germs of an aristocracy. The officers of the Government were to have a "better currency," but rags were good enough for the people. But this currency of the privileged order is no "better" than the public officers are entitled to by law; it is no "better" than we have agreed to pay them; no "better" than justice entitles them to. To pay the public creditors in any thing but the lawful currency, or what is equivalent thereto, is to defraud them; and this was the first time he had heard it urged, that democracy consisted in cheating the public creditors. This argument was hardly deserving of a serious refutation; it was better adapted to the newspapers of the day than to the Senate. The simple fact is, there never has been, and never can be, but one currency, so far as this Government is concerned, which is the lawful currency of the United States, or what, for the time, is deemed equivalent thereto. How would the Senator remedy the supposed evil? Would he require the revenues to be collected and paid in the paper issues of broken banks? And of which banks? How will he distinguish between those which have only suspended payment, and those which are really insolvent? But bank notes are not the only paper currency which the people use; there are small notes, bills, and shinplasters, issued by all sorts of corporations, and even by boot-blacks and chimney-sweepers. Would the gentleman have the Government receive and pay out these shinplasters, so as to bring about equality between the people and the Government? This Gov-

SENATE.]

Sub-Treasury Bill.

[SEPT. 20, 1837.]

ernment has no control over these spurious paper issues, whether from corporations or individuals; it did not authorize them, and it cannot suppress them. If the people suffer themselves to be defrauded, is that a reason why the Government should be defrauded also? Or is it a reason why the Government should encourage these frauds upon others, and upon the whole community.

But the Senator further informs us that the proposed plan, which he insists should be called a sub-Treasury scheme, will open the flood-gates to Executive influence; and this seems to be his strong position. If this were true in point of fact, it would be an objection possessing great force. But to sustain it, the gentleman draws largely upon his imagination. He looks beyond the present bill, which, he says, is only the germe of the system, which, when fully developed, will produce fifty thousand officers, like the establishment of the Receivers General in France. As this objection rested mainly on extraordinary flights of imagination, and as he (Mr. N.) had no capacity for such flights, he could not, perhaps, perceive its truth. He was willing to admit that it might hereafter be found necessary to enlarge somewhat on the plan as now proposed, and, at three or four points, to add some few additional officers, to be specially charged with the keeping and disbursement of the public moneys. New York, Philadelphia, Boston, and New Orleans, he thought were the only places where any such additional officers could be required; but as the mint and branch mints are to be places of deposit, it was quite uncertain whether any receivers or new Treasury officers would be required. But as to the army of fifty thousand, they will never have any existence, except in the warm and fertile imagination of the Senator, who has so strong faith in his own foreboding, that, even now, he can see in a grain of mustard seed (the smallest of all seeds) springing into life, a large plant, spreading broad its branches, whilst the birds of prey are seen lighting upon them, ready to devour the substance of the people. But when we descend from these airy flights, and look at this subject as it is, we shall find that this army of fifty thousand officers dwindles down to a few clerks; for, as the bill now stands, it does not provide for the appointment of any other officers. And should it be found necessary to enlarge the system, as he had supposed it possibly might hereafter, the increase of patronage to the Executive can amount to no more than the appointment of some fifteen or twenty additional officers. These officers can have no extraordinary influence from having the keeping of the public funds, as they will not be permitted to use them in any way or manner whatever. He was aware that it was elsewhere, if not here, charged upon this system, that it placed the whole public treasure in the hands, and under the control, of the Executive. But every one knows that this is entirely incorrect; that the President, or the Secretary of the Treasury, can have no more actual control over the funds, on the proposed plan, than they now have. The President can have no direct control in either case, and the Secretary cannot draw a dollar from the Treasury, except in pursuance of appropriations made by law.

But, sir, I wish to call attention to the great point of distinction between the proposed plan and the deposit-bank scheme: it is this, that the former is entirely free from any moneyed influence. That is the only influence which we have to fear; that is the subtle poison which is to corrupt the very fountains of our liberties; that is the secret enemy, which, like the worm that never dies, is gnawing upon the very vitals of our free institutions. In the one plan, the public funds are not to be loaned or used; they, therefore, can neither benefit any one, nor corrupt any one; but, in the other case, the public funds are to be loaned through the agency of banks. But this is not all, nor the worst. The deposit-bank system, as established by the act of 1836, is subject to the most weighty and

alarming objections. Those provisions of the bill were not sufficiently considered; they passed without discussion; the attention of all being engrossed by the sections of the bill relating to a deposit of the surplus with the States.

That act provides that all the public revenues shall be deposited in State banks, to be selected by the Secretary of the Treasury, and that, when the amount exceeds a certain sum, the banks are to pay interest at a certain rate. The banks are also required, as part compensation for the use of the public deposits, to perform the duties of pension agents. What are these principles but a proposition for a compact with the State banks? and when acceded to by any bank, it becomes a compact between the Government and such bank. And what is the nature of this compact? Why, that the United States is to become a sort of "partner in trade" with the deposit banks. It is, in fact, sir, a system of banking on the part of the United States, carried on through the agency of State banks, that agency resting on contract. If any individual was to contract with a bank for the use, for an indefinite time, of a large sum of money, to be employed for banking purposes, for which he was to receive either a stipulated interest or a certain share of the general earnings of the bank, would not such individual be engaged in the banking business? Sir, under this deposit bank system, the United States, during the year 1836, was carrying on a more extensive banking business than any institution in this country, as it had between forty and fifty millions, all employed in banking operations. But not only are the funds of the Government to be used for loans and discounts, but they are blended with those of the deposit banks; and, by this sort of political copartnership in banking, the Secretary of the Treasury may acquire, to some extent, an influence over the general business of the bank, and over its own capital, as well as that furnished by the Government.

The act contemplates that, by this compact, the bank is to submit to his supervision; it is periodically to report to him the state of its affairs, and to submit to such restrictions and regulations as he may prescribe, so far as he is authorized to do this by the act. The act also imposes restrictions as to the issuing of small bills on the deposit banks, which is virtually modifying their charters.

Now, sir, compare the two systems in respect to their bearing on Executive influence: the one makes a small addition to the patronage of the President, the other not only adds to Executive patronage, (for the designation of deposit banks is an item of patronage,) but it brings the Government into direct connexion with the moneyed institutions of the country. In some instances, a single bank has had several millions of the public funds, using them as a capital for discounts. How many persons would be interested in the maintenance of that fund in the bank? All the stockholders, to the amount of several thousands, whose dividends would be greatly increased; in some instances, no doubt, more than one hundred per cent. He had known something of one deposit bank, whose dividends were increased nearly at that rate. The customers of the bank, and all dependent upon it, have also an interest.

The Secretary of the Treasury has not abused the power improperly conferred upon him; but the influence of this system was great and dangerous. It was a moneyed influence, which ought to be, so far as possible, kept out of the Government. The use of the public funds was entirely wrong, and to receive interest was increasing the evil. Instead of swelling the flood-tide of Executive power, the proposed plan would destroy that dangerous moneyed influence which belongs to the present system, the most to be deprecated of all Executive power.

But it is said that, if this bill was to pass, the result would be the establishment of a Treasury bank. Surely there is nothing in this bill which has any connexion with a Treasury bank, nor could he see any tendency it had to

SEPT. 20, 1837.]

Sub-Treasury Bill.

[SENATE.]

such a result. If a Treasury bank should be established, it must be by the subsequent action of Congress, wholly independent of the proposed financial measure. He hardly knew what the Senator from Virginia meant by a Treasury bank; but if it means only the issuing of a limited amount of Treasury notes or drafts, based on the funds of the Government and the faith of the United States, and receivable for the public dues, he should not be much alarmed at such a bank, provided he could be satisfied as to our constitutional power to establish it. He agreed with the Senator from South Carolina [Mr. CALHOUN] in the opinion that a limited amount of paper of that description would be found extremely convenient, not only for the financial concerns of the Government, but for exchange, and other commercial purposes. It would be truly a national currency, possessing equal value in all parts of the Union, and, of course, have advantages over any bank issues, whilst it would be free from those ruinous contractions and expansions which invariably attend a bank-note currency.

Mr. N. said that the proposed financial system, like all others, had three distinct aspects in which it must be viewed: its efficiency in the conducting of the finances, its political tendency and bearing, and its indirect influence on the currency. He had disposed of the first two divisions of this subject, and it now only remained for him to make a few observations on the last. The powers and duties of this Government in relation to the currency are a subject about which very different opinions prevail, both here and elsewhere.

The honorable Senator from Massachusetts [Mr. WEBSTER] maintains, with great strength of argument, that this Government possesses an independent, substantive power over the entire subject of currency, embracing the bills of State banks, and whatever else may circulate as money. He also said that he did not mean to be understood as expressing the opinion that there was but one way in which Congress could exercise this power of supervising and regulating the currency. By the one way he (Mr. N.) supposed was meant the establishment of a national bank; in what other way the gentleman proposes to regulate the currency he has not informed us. He, for one, felt anxious to see the gentleman's other measures.

The Senator from Virginia does not admit that Congress has any distinct, independent power, but considers that its power over the currency is only incidental to the revenue power. This opinion is not consistent with the views of many in regard to the tariff, yet he (Mr. N.) considered it the true doctrine.

In the adoption of measures for the collection, safe-keeping, and disbursement of the revenue, Congress can take into consideration the effect which such measures may have on the general currency of the country. This is all we can do: we cannot directly interfere with the issues of the State banks. This incidental effect which may be produced by our financial measures, would naturally seem to be of secondary, but now appears to be regarded as of primary importance. Indeed, it is the real or supposed bearing of the financial measures of this Government on the general currency of the country that attaches to them so deep and extensive an interest.

It becomes, therefore, important to consider how the proposed measure will affect the currency or the paper issues of the State banks. He thought that its influence would be very salutary, and that, in this respect, it would have a decided preference over either a national bank or the State deposit banks. It may, it is true, in some degree diminish the profits of banking; but the present system of paper money cannot be improved in any degree, however small, without the reduction of the profits of banking enters into the measure of reform.

What is the great evil of our paper system of currency? It is its instability, its irregular action, its constant ten-

dency to the most ruinous expansions and contractions. This is a point about which there is no controversy; all agree in it. Will the proposed measure, then, tend to render the currency more stable and less fluctuating? If so, its influence must be highly salutary. One of its immediate consequences will be to create and keep up a demand for specie to the extent of the revenue and disbursements of the Government. This constant demand for specie will operate as a continued check and restraint upon the banks in the commercial cities; it will compel them to be more cautious in their issues, and to keep themselves more strongly reinforced with specie. The more cautious action of the city banks will tend to restrain the country banks. How considerable this restraining influence upon the banks may be, it was impossible to say; but, so far as it exists, it would be salutary.

It seemed, however, to be feared that the proposed measure would impose too great a restriction upon the banks; that it would diminish their ability and limit their operations too much. But this was not to be feared; the only danger was the overaction and the irregular action of the banks; this is their natural tendency; it results from the principles of the system, and is an evil which cannot be removed without a change of its principles. A bank of the United States, as he had already said, is now asked for, solely on the ground of checking and controlling the State banks; but when it is proposed to do this in any other way, that is regarded as an insuperable objection to the measure. How is this? Can State banks only be regulated by Federal banks, or is it a mere pretext that a national bank is wanted as a regulator of the State institutions?

But this constant demand for specie in the transactions of the Government will promote the general circulation of coin, and improve the whole currency; it will render our currency, in some reasonable degree, a mixed currency, instead of an exclusive paper one, as it now is.

But there will be other consequences affecting the currency, equal, and perhaps more important, than those named. The proposed system, should it be adopted, will occasion a complete and entire separation of the Government from all banks. This is its distinguishing feature, and highest recommendation. This separation is not only important in a political point of view, but, if possible, equally so in its effect on the currency and the interest of the country. What have been the fruits of this connexion? Sir, there is high authority on this point, which goes to show that it has been injurious both to the Government and the banks. Mr. Biddle, the president of the late Bank of the United States, who, in the opinion of some, is the greatest financier that now exists, or ever did, or ever will exist, has expressed this opinion. At the organization of the Pennsylvania Bank of the United States, in 1836, he congratulated the stockholders on the prosperous condition of their interests, the accumulation of a large surplus fund, and the purchase of a new charter, and boasted of the bank being "safer, stronger, and more prosperous than it ever was." He also adds, that "it was an original misfortune in the structure of the bank that it was in any way connected with persons in office. The instincts of all political power make that association dangerous—useful to neither party—injurious to both."

Sir, I repeat the question, what have been the fruits of this connexion of bank and State? Let the experience of the country answer! He need not go back to the last war, when, in the negotiation of loans with banks to the amount of about fifty millions, at least fifteen millions of dollars was sacrificed by the Government. These loans consisted of exchanging the credit of the United States, which was vastly better than that of any bank, for the credit of the banks, at the rate of eighty and eighty-five dollars for a hundred. This occasioned the rapid enlargement of bank issues during the war, and lead to the sus-

Sub-Treasury Bill.

[SEPT. 20, 1837.]

pension of the banks in 1814, and to a long train of calamitous consequences, under which the country languished for five or six years. He had already alluded to these circumstances.

This connexion has greatly increased the irregular action of the banks, and stimulated their contractions and expansions. The first great and sudden expansion of the Bank of the United States, in 1817, was, in part, occasioned by the Government redeeming thirteen millions of its stock, then held by the bank, as part of its capital, which obliged it to loan it suddenly to individuals. The public deposits, as is well known, have always been used by the banks as the basis of discounts; and, as they increase and diminish suddenly, this produces a corresponding enlargement and curtailment of their loans.

In consequence of this unfortunate connexion, as Mr. Biddle calls it, every measure of the Government, of a mere financial character, having no direct bearing on any commercial interest, has for years occasioned a disturbance in the monetary concerns of the country, which, under our credit system, are otherwise sufficiently unstable. Almost from the foundation of the Government, this has been one continued source of clamor and complaint—of agitation, of fierce denunciations, and of curses loud and deep against the Government, from the commercial portions of the community. Cause or no cause for these complaints, for his present purpose, was of little consequence. He believed that, in general, such complaints had been without any just foundation; but he wished to remove the pretext for them, and effectually to remove all grounds of charging, upon the mere financial measures of the Government, the disturbance of the currency, and the derangement of the business concerns of the country.

Was it necessary to refer to particular cases? There were some too recent not to be fresh in the minds of all. No one, he believed, had forgotten the removal of the deposits, in 1833, or the crisis and panic which followed; the deep agitation of the public mind; the violent party excitement; the failures and bankruptcies; and the general cry of ruin, which resounded from one end of the Union to the other. And what was that measure which produced such frightful and alarming consequences? He did not speak of it in a political point of view. Sir, that measure, which brought on one of the greatest crises that this country has ever experienced; which, in the opinion of some, threatened a revolution, and almost shook the Union to its centre, was nothing more than changing the deposite of some three or four millions of the public funds from one set of banks to another set of banks, in the same places. The deposite act, or the manner of its execution, is considered as one of the prominent causes of existing embarrassments. And the Treasury circular has been, and is now, here and elsewhere, regarded as among the causes which have deranged the currency and prostrated the business of the country. The large amount of revenue which had accumulated in the deposite banks, all admitted, was one of the causes of existing difficulties. He was tired of these complaints, and he believed the people were tired of them. If our monetary affairs are of so ticklish a nature, and there was so much susceptibility in the commercial community, it was time that the financial affairs of the Government were placed on a different footing, so that they could not be charged with disturbing these interests.

But there was one more consideration, of great weight in his mind, in favor of this great measure of a separation of the Government from all banking institutions. The banks have become an element of political power, and the basis of a moneyed aristocracy. The whole system is one resting on monopoly and exclusive privileges, in derogation of the equal and common right of the people. Experience has also proved that the system is founded on unsound principles, and its rapid and dangerous extension in

the last few years, and the serious evils attending it, have produced a very general conviction, embracing, probably, a large majority of the people, that the system cannot long be endured as it is; that it must either be reformed or abandoned. From dear-bought experience this had become the general sentiment. But this reform cannot be effected here; we have no jurisdiction over the subject; Congress did not create the State banks, and it cannot unmake them, or reform the system. This belongs to the people and the States; let us leave it there; they have the power, and are competent to the task. The accomplishment of this important measure—one which at this time excites a deeper and more universal interest than has ever before existed in relation to any reform in our civil institutions—will no doubt be resisted, violently, desperately, by the whole combined moneyed influence of the country. The issue is already made up; it is a great issue; one which will be likely to agitate the public mind for twenty years to come. On the one side is the popular will, the great mass of the people; on the other are the banks and the moneyed power. On the one side (if he might use the language of the London banker's circular) is the aristocracy of wealth; on the other, the democracy of numbers. The struggle will be arduous and probably long, but the result cannot be doubtful. At a time like this, and under such circumstances, is it proper for this Government to become a party to this contest? As we cannot do it directly, is it proper, is it right, for us to interfere indirectly? As we cannot assist in carrying out this great reform, all that he asked was, that this Government should stand aside. It cannot rightfully become a party to this contest. It cannot promote the reform; but it may retard it. Shall Congress interpose itself between the people and this great measure? Shall it take sides with the banks against the people? Shall this Government become the endorser and the backer of the State banks? Shall we, by our improper connexion with them, encourage them to look to us to sustain themselves against the popular voice? Shall we unite and league them together, and thus add to their power by combination? Sir, let this Government stand aloof from this contest, and leave the banks in the hands of the States and people from whom they derived their existence, and to whom they are amenable for their acts, and by whose will they must stand or fall.

Mr. N. said he had gone through with the subject, so far as regarded the matters more particularly connected with the bill under consideration, but would briefly notice another topic which had been drawn into this debate.

It is said by gentlemen that no measures are proposed for the relief of the country; that we seem only anxious to take care of the Government, and to do nothing for the people. This is the broad and general objection to the measures reported by the Committee of Finance. Is this charge well founded? He thought it was not. What is meant by taking care of the Government, and doing nothing for the people? Have the people no interest in the Government? Is it not their Government? And is not what is done for the Government, done for the people?

But he supposed gentlemen meant that no measures were proposed to relieve the present embarrassments of the country. But is this correct? Will not most of the bills which have been reported by the committee have a tendency to afford relief? The bill extending the time of payment of the merchants' bonds is certainly a direct and important measure of relief; the bill giving indulgence to the deposite banks which are indebted to the Treasury, is another essential measure of relief; and the bill authorizing the issue of Treasury notes, although intended to aid the Treasury, will operate most beneficially as a measure of relief to the whole country. Its immediate effect will be equivalent to the infusion of a sum into the metallic currency of the country equal to the notes to be issued.

SEPT. 21, 1837.]

Sub-Treasury Bill.

[SENATE.]

So far as the revenues of the Government are concerned, our measures all tend to afford relief. Ought we to go further? Can we go further? What do Senators desire or expect? Do they wish the Government to provide for liquidating the foreign debt of our merchants? or would they have us assist the banks? Why, the Senator from Virginia [Mr. RIVES] says that all that is wanting is confidence! Confidence from whom, and in whom? He seems to suppose that the want of confidence in the State banks is the principal source of difficulty; and that the measures proposed were calculated to destroy, rather than to restore, that confidence. But Mr. N. apprehended that the want of confidence in the banks was not the cause of our difficulties; they had rather proceeded from an excess of confidence in the banks—and he did not think there was any want of confidence in the solvency of the banks; he was rather astonished that there was so much confidence.

What was the present causes of the prostration of business? He did not mean the causes which may have brought the country into this situation. Is the want of confidence the main cause? He thought not. The causes lie much deeper and broader. You might as well suppose that a patient, brought by a violent fever to a low state, could suddenly recover by confidence. Sir, something more than confidence is required. The causes now operating are debt and the derangement of the currency, and mainly the former. The disordered state of the currency is extremely vexatious, and it embarrasses the domestic exchanges. This is about the extent of its influence; for as long as the bills of the banks circulate freely, they answer the general purpose of currency. But debt is the great cause; all overtrading produces exhaustion; the debts abroad and at home must be paid off, or greatly reduced, before business can revive. This requires time, and the avails of the crops of the country. It is the true policy of this Government to connect its legislation as little as possible with the great interests of the country and the business concerns of the people. Protection, freedom, and security in their pursuits, are all the Government can afford, and all a wise people will desire.

But it is claimed that it is the duty of Congress to adopt measures to bring about a resumption of specie payments by the banks. How can Congress do this? What power have we over the State banks? Can we, by coercion, compel them to resume specie payments? This is not claimed; but it is supposed we can effect the object by means of our revenue. But (Mr. N. said) he had no faith in such remedies; we have been trying them for years, and what have they amounted to? We have tried the experiment of a national bank, and that of deposit banks, for regulating the paper currency of the State banks, and he held that both experiments had failed. It had not been regulated or improved, but had gone on from bad to worse during the whole of this period. He thought it unwise and mischievous for Congress to deceive itself and delude the country any longer. Sir, it is high time this delusion was expelled, and the public opinion disabused in relation to the ability of this Government to regulate and control the paper medium supplied by the State banks. Congress never has done this, and never can do; we have not the power; it resides in the States, and they alone can apply a remedy. If there are petitioners here, it is our duty to refer them to the States. The evils of our paper system are too deeply rooted, and its ramifications too extensive, to be reached by any indirect measures of Congress. It is idle, therefore, to keep up this delusion; and now, sir, is the time to dispel it. One branch of the Government—the Executive—has done its duty. At this great crisis in our monetary affairs, he has spoken with the fearlessness and honesty which became the Chief Magistrate of an enlightened people. The President has done his duty, let Congress do its duty; let us boldly and honestly tell those who apply here for the

correction of the evils of the paper currency, that we have no power to apply a remedy; that they have mistaken the tribunal, and appealed to the wrong forum. Let us refer them to the States; let us tell them that the remedy is in their own hands, and that it depends on themselves whether they will continue to suffer all the evils of a depreciated and vicious paper currency, unsettling the value of property, deranging all the pursuits of business, and corrupting the morals of the community, or apply an adequate remedy. Mr. N. said he had no doubt what would be their final decision on this great question; he concurred fully with the distinguished author of the letter to Sherrod Williams, that an intelligent “people, like those composing the States of this confederacy, will not long stand by and see the currency of their respective States corrupted, the value of their property unsettled, and all their interests deranged, by the imprudence or cupidity of the banking corporations, without finding and enforcing an effectual, and, at the same time, a constitutional remedy.” Such remedy they cannot find here.

What, then, do gentlemen expect can be further done for the relief of the country? Those who so earnestly call for measures of relief, he thought, were bound to suggest their plans. He should like to see their relief measures. The favorite measure of relief we all understand; but, as they cannot obtain that, what are their other measures? Would they have Congress attempt to regulate the commerce of the people, as well as the currency of the States? Would they have the Government interfere in the private pursuits of the citizens to help them out of their difficulties? If we had the power, such interference would most assuredly only make matters worse, and, he feared, be soon denounced as another “experiment.”

To the solemn appeals to the majority for some healing measure to relieve the merchants and others from existing embarrassments, and to help them in their private affairs, he would apply the opinions of two great men and profound thinkers: “Projectors,” says Adam Smith, “disturb nature in the course of her operations in human affairs; and it requires no more than to let her alone, and give her fair play in the pursuit of her ends, that she may establish her designs. Little else is requisite to carry a State to the highest degree of opulence, from the lowest barbarism, but peace, easy taxes, and a tolerable administration of justice; all the rest being brought about by the natural course of things.” This brief sentence contains the principles which lie at the foundation of the immortal work of that great man.

The other opinion is from Thomas Jefferson; scarcely inferior as a philosopher, and more experienced as a practical statesman. In his first inaugural address, where we find more profound and just political maxims than in any other publication of the same extent in this or any other age or country, he asks the question, “What farther is wanted to complete the general prosperity?” and answers it as follows: “One thing more, a wise and frugal Government, which shall restrain men from injuring one another, shall leave them otherwise free to regulate their own pursuits of industry and improvement, and shall not take from the mouth of labor the bread it has earned.” Here, in a few words, we have the three great requisites of a wise and good government—protection and security, entire freedom in private pursuits, and light taxes, or an economical administration.

When Mr. NILES had concluded—

The Senate, on motion of Mr. SMITH, of Indiana, adjourned.

THURSDAY, SEPTEMBER 21.

SUB-TREASURY BILL.

The Senate resumed the consideration of the bill providing for the collection and custody of the public revenues,

SENATE.]

Sub-Treasury Bill.

[SEPT. 21, 1837.]

together with the amendment offered thereto by Mr. CALHOUN.

Mr. SMITH, of Indiana, being entitled to the floor, rose and said:

Suffer me, Mr. President, to make to the Senate my acknowledgments for its kindness in adjourning over last evening upon my motion. At that time I was too much indisposed to proceed; and, in return for the indulgence of the Senate, I can only promise you that I will detain it no longer than may become necessary to enable me to submit, in as brief a manner as possible, some thoughts on this important subject.

Sir, in this my first attempt to address this august body, of which I have but recently had the honor to become a member, I am not unapprized of the delicacy of my situation, surrounded by old, able, and experienced Senators, who have grown gray in the service of the country, in this and the other body—men to whom the people have justly looked for the doctrines of constitutional liberty. It would almost seem presumptuous in me to throw myself into this debate; nor could I be persuaded to do so, to their entire exclusion, unless under a paramount sense of my duty to my State. The country, however, will lose nothing from that source, as I understand that the subject now before the Senate is one which will undergo a full and ample discussion on the part of those distinguished Senators to whom the country is looking for information as to the best course to be pursued, not only on the part of the Government, but on the part of the people; and while it is to be hoped that most of them will respond to the call of the Senator from South Carolina, [Mr. CALHOUN,] I am still disposed to ask your indulgence to the expression of my own opinions on a subject on which the views of even such men are so opposite and so various.

Sir, this is a subject of great importance to the interests of the country, and one that has caused great anxiety in the public mind. It is therefore highly important that the whole matter should be laid clearly and fully before the people, that they may have an opportunity of judging for themselves on the merits of the propositions made here, both in favor of and against the views of the Executive. For my own part, it is sufficient for me to say that, if I know my own heart, I came to this body with a sincere desire to co-operate with the Executive Government in any measures which may benefit the people or restore the national prosperity; and towards the individual now in the Executive chair, and the other officers of the Government. I have none other than the kindest feelings. But in relation to measures proposed for the benefit of the people, I hold myself at liberty to examine them fully and freely, without being controlled by those trammels which have been too often used to force men to act contrary to their convictions. When I took my seat in this body, it was with a full determination to examine carefully for myself the various propositions that might be presented, and to decide upon them according to their merits. Sir, we were called on to aid the Government, because it is obstructed in the exercise of its ordinary powers. And when we were told that the Government required our aid, that it was embarrassed for the want of money, and that it was necessary for Congress to grant it supplies to aid in the course of its ordinary operations, I did not hesitate, nor did I even examine very closely the propositions in relation to the means of those supplies; but, knowing that they came from the Committee on Finance, founded on the estimates of the Secretary of the Treasury, without any hesitation I voted for the bill authorizing the issue of Treasury notes. I preferred the bill as it was, without striking out the provision for interest on the notes. I was not willing to resort to a temporary expedient, such as issuing notes without interest, which, as heretofore, could serve only to delude the people, and end in disappointment, without any practical benefit.

The next bill in order was the one to postpone the fourth instalment of the deposits with the States. It may not be strictly in order, but as great latitude has been given to the debate, I beg leave here to give my reasons why I could not vote for that bill; and one of the strongest, in my mind, was this: that the Government of the United States, through the medium of an act of Congress, had raised expectations on the part of the States which it ought not to disappoint. The States had prepared to receive the money; they accepted the proposition of the Government, proceeded to legislate on the subject, and many of the States appropriated the whole fund: some to the important cause of education; some to aid in their works of internal improvement; some in one way, and some in another, beneficial to the people. The States relied with full confidence on the receipt of the money; they had a right so to rely; and, although the facts may not strictly amount to a legal contract between the parties, it is certainly so nearly allied to one, that it would be doing the greatest injustice to the States and people to disappoint their just expectations, by withholding the instalment.

Again: It was admitted by the chairman of the Committee on Finance that, if the instalment was retained, being in paper, it could not be made available in aid of the necessities of the Treasury, as the Government would not use paper, and we would still have to authorize an issue of Treasury notes, and a loan of at least \$10,000,000. Why, then, withhold it from the States, who are willing to receive it in the very funds the Government rejects; and in many instances can accommodate the matter with their own deposit banks, beneficially to the Government, the banks, and the States?

But, viewing it as a question of inconvenience between the Government and the States, how stands the case? It would certainly be much less inconvenient to the Government to add the amount of the instalment to the amount of the loan she is compelled to make, at all events, than it would be to the States to lose the benefit of the money at this time. These, sir, are some of the reasons that induced me to vote against that bill. I thought it but justice to myself to state them, as I gave a silent vote on that occasion.

Sir, I have been surprised to hear this great subject argued here as if it were really a question between the Government on the one side, and the merchants and banks on the other—as if the great body of the people had no stake or interest in the matter. Do gentlemen really suppose that the banks and merchants are not creditors as well as debtors? Do they not know that for every dollar the banks and merchants owe, the people owe them at least as much? Do they not know that you cannot oppress the banks and the merchants, without producing a corresponding pressure on their debtors, the people? Will not the importing merchants call upon their debtors, the retail merchants? The retail merchants are involved; but are they alone? No, sir; they go to their debtors, the people, with their demand augmented by their profits on the goods. The whole, sir, falls on the consumer. In this way the disasters of all classes in the country are necessarily identified. Sir, you cannot oppress the banks or the merchants, unless you, by the same measures, embarrass their customers, the people. If you put your iron hand on them, they resort to the people; and on the people ultimately the evil must fall. It is not the fact, that this is a controversy between the Government, and the banks and importing merchants. It is a question involving the interests and prosperity of the entire country; and, sir, I am glad it is so. I should be extremely sorry to see the time when the great interests of the community shall be so separated that one may fall without the others. They are all embarked in the same national vessel, bound to the same port; and equal regard should be paid to them all.

SEPT. 21, 1837.]

Sub-Treasury Bill.

[SENATE.]

It is admitted on all hands that, throughout the country, from one end to the other, confidence is destroyed. Yet it is said, truly, that we possess all the elements of prosperity, which only require to be put in action. But, sir, look at the state of our exchanges. Gold and silver, at Nashville, commands eighteen per cent. premium; United States Bank notes are bought up by brokers at twelve and a half per cent., to be sold by them at fifteen; Ohio, Indiana, Kentucky paper, from eight to ten per cent. premium. Such is the state of the money market there, as stated in the Nashville Banner; and so it is all over the country—at a premium at one place, and at a discount at another. Sir, it is impossible for the farmer, the mechanic, the merchant, or any other individual to know what to do; such and so great is the destruction of public confidence and the derangement of the currency and exchanges. But we are told from very high authority, that the Government has nothing to do with the exchanges; that the merchants must manage them themselves, or that other means must be provided than those of Government. If, by this doctrine, I am to understand that Government has no power to fix the rate of exchanges, I admit its correctness. But if the Executive means to say that Government has no power to aid in the application of the appropriate remedy for the deranged and obstructed exchanges of the country, I wholly disagree with him. Sir, it is an after-thought, to answer a particular occasion. It is an opinion never advanced before by any statesman. Such, sir, was not the opinion of President Jackson, or his advisers, at any time of his administration.

It will be recollected that, during the time of the bank war, when the power of the Executive government was arrayed against the Bank of the United States, it was declared that one of the important functions of the bank, due to the interests of the people, was, to regulate the exchanges; and therefore it was contended that it ought to be continued as the Government agent. On the opposite side, it was contended that the local banks, the State banks, the Government deposit banks, would regulate the exchanges with as much advantage to the people of the United States as the United States Bank. And yet it never was contended that the power of the Government, in its fiscal operations, could not be constitutionally directed, so as to regulate the exchanges of the country. Allow me to read an extract from President Jackson himself, in which the regulation of the exchanges was considered an important part of the duties of the fiscal agent of the Government of the United States. The President, considering the matter of so much importance, uses the following language, for the purpose of satisfying the American people that the local banks, while they would perform equally well the ordinary duties of the Bank of the United States, would also perform the same office equally well, in regulating the exchanges of the country. He says:

“Experience continues to realize the expectations entertained, as to the capacity of the State banks to perform the duties of fiscal agents for the Government. At the time of the removal of the deposits, it was alleged by the advocates of the Bank of the United States that the State banks, whatever might be the regulations of the Treasury Department, could not make the transfers required by the Government, or negotiate the domestic exchanges of the country. It is now well ascertained that the real domestic exchanges, performed through discounts by the United States Bank and its twenty-five branches, were, at least, one-third less than those of the deposit banks for an equal period of time; and if a comparison be instituted between the amount of service rendered by these institutions, on the broader basis which has been used by the advocates of the United States Bank in estimating what they consider the domestic exchanges transacted by it, the result will be still more favorable to the deposit banks.”—*Message of 1836.*

Does any one suppose that President Jackson and his cabinet would have thought it so important to satisfy the public mind of the ability of the deposit banks, as fiscal agents of the Government, to regulate and assist in procuring a wholesome state of the domestic exchanges, if, in truth and in fact, the Government had no constitutional right to act in the matter?

It appears, sir, from a paper now before me, that such also were the views of Mr. Van Buren, as expressed in his letter to Sherrod Williams. I read this, sir, for the purpose of showing that the idea of denying to the Government, through its fiscal agents, the power to aid in the regulation of the exchanges, is an after-thought, to answer, as I said before, a particular purpose. Mr. Van Buren, in the letter referred to, says:

“The principal grounds relied upon for a bank, to establish its utility and necessity, as I understand them, are,

“1st. That such an institution is necessary for the transmission and safe-keeping of the public moneys;

“2d. To secure a safe, cheap, and convenient system of domestic exchange; and

“3d. To make and preserve a sound currency.

“The official reports of the Secretary of the Treasury show, first, that the average amount of money annually transferred by the Bank of the United States, from 1820 to 1823, was from ten to fifteen millions of dollars; and the amount transferred by deposit banks, from June, 1835, to April, 1836, or about ten months, over seventeen millions of dollars; in both cases the operation has been without loss, failure, or expense. In regard to domestic exchanges, the following facts are also established by the same authentic source, viz: That the amount of domestic exchanges, performed at the last returns by the deposit banks, exceeded thirty-five millions of dollars; and at no return, for many months, has it been less than twenty-five millions; which, at an average of thirty millions at each return, would be, in a year, one hundred and eighty millions, if each bill of exchange run on an average of sixty days.”

Now, sir, do not gentlemen see the vast amount of the currency of the country operating as a circulating medium, which assumes the character of bills of exchange; and do they not see the fatal consequences to the business and prosperity of the country, resulting from the derangement of this part of the medium of circulation, and the vast importance of regulating it by the fiscal agent of the Government, as no other power can do it? Sir, it appears conclusive to my mind that, when Mr. Van Buren was canvassing for the presidency, he did not pretend that the Government had not the power to aid in the regulation of the currency and the exchanges. I think, sir, I have sustained the position, clearly, that such was not the opinion of the late Executive, and that such was not the view of Mr. Van Buren when he was canvassing for the presidency. But now, in order to sustain the divorce bill, which withdraws the aid of Government in regulating the currency and exchanges, it is necessary to repudiate the idea that Government should aid in regulating the currency and the exchanges, and to show that she has no power over this matter.

Again, sir: we hear from different quarters—I know not whence it originates—but we hear the cry of “propose your questions; bring forward your counter-propositions, if you are opposed to those of the administration; this is a contest between the aristocracy of wealth and the democracy of numbers.” Sir, I know not what the aristocracy is like, or of what it is composed. There may be such a thing in some of the older States, but it is unknown in the State from which I come. There, all are on an equality; or, rather, there is but one line of distinction between them; and that is the line which divides vice from virtue, honesty from villany; every man standing on his own merits, without regard to those factitious and invidi-

Sub-Treasury Bill.

[SEPT. 21, 1837.]

ous distinctions. But, even if such a line existed, are we to array one class of citizens against another—to excite envy and enmity on the one part, and contempt and hatred on the other? No, sir; under this Government all are on the same platform of equality, uninfluenced by artificial distinctions not founded on personal merit, and stimulated by the glorious consideration that the door to the highest offices within the gift of the people is alike open to all.

Sir, as to the embarrassments of the country—the great and menacing crisis at which we have arrived—I have but a few words to offer. We must be guided mainly by the light of experience in providing a remedy. Again and again has it been ascribed to the same cause—of overtrading, speculation, expansion of bank paper, *et cetera*. The people, it is said, have become consumers, and not producers. No doubt, these are some of the immediate causes of the evils complained of. But I have my own views on this subject; made up, (not here, for I have been eight years from the Capitol, but at home,) with the people; and I think I know their views; they are founded on plain common sense. It is said there has been great overtrading, too much speculation, too much bank paper. Sir, I admit the fact; but standing here as I do, I feel it due to myself, to my State, and to gentlemen here, that I should not withhold my more particular views on this subject—not for the purpose of criminating others, or of disuniting us; this would do no good; we ought, as far as possible, only to recur to the past to guide us in future, and to unite in attaining the great object of the session. I will not say, therefore, that this, that, or the other measure was wrong, for the purpose of censuring any one; but I do say that the people have a right to know all that they can know from us respecting them; they are looking with intense anxiety to this body, both for information and relief.

Sir, I attribute this crisis of the country to something different from the Senator from South Carolina, [Mr. CALHOUN;] and, in doing so, I judge by the times of different events, and by their effects on the people. I know, sir, the great ability of that gentleman to argue away our common sense, and almost induce us to believe that a thing is not what is apparent on its face. I attribute these embarrassments and disasters to the destruction of the national bank, and the removal of the deposits, in the first instance, as the great moving cause. I cannot be satisfied without speaking the truth. Previous to changing the deposits, these difficulties were unknown; the exchanges were unobstructed, and almost without expense; and bank paper was everywhere redeemed with specie. But the moment you said “break down the Bank of the United States,” and it became evident that you would succeed in its prostration, these evils were excited; and banks sprang up, and banking capital increased all over the country, in a manner without a parallel in the banking history of this or any other nation. Your next step was to remove the deposits of the Government from the United States Bank to the selected local banks. These deposit banks, so soon as they received the public revenue, were encouraged—nay, compelled—by the Government to expand their issues; it was expected and required at their hands, before the Government would give them the use and control of the public revenue. The vacuum created by the withdrawal from circulation of the notes of the Bank of the United States was to be supplied by this better currency, as the people were told. The banks, thus encouraged and stimulated by Government, expanded their issues, until the whole country was flooded with their paper; property of every kind took a sudden rise, except the public lands; produce was high, and paper money as plenty almost as the leaves on the trees of the forest. The temptation was too great; the people were seized with a kind of speculating mania; millions of dollars were drawn from the banks, and invested in public lands and other property; a great de-

mand was created for merchandise, in consequence of the facility with which money was obtained; and the importing merchant, willing to share in the golden harvest, made large importations; the whole country presented a most flourishing aspect, and the friends of the measures pointed with pride and self-gratulation to all these evidences of prosperity, and cried, “Now who can doubt the wisdom of our measures?” In the midst of all this cheering, while the banks were pursuing the very course pointed out to them by Government, they were met by the cruel Treasury circular, the order in council, which required all payments for public lands to be made in gold and silver. Sir, what was the consequence of this order? Why, sir, it at once created a suspicion of bank paper; and that suspicion immediately ran through the public mind like fire through a dry western prairie; it was the tocsin of alarm to the people; public confidence was soon destroyed; and the consequence was, that specie soon commanded a premium. A run commenced upon the banks, by the holders of their notes; but even this they could (most of them) have stood, but private depositors became alarmed, and withdrew their deposits, and hoarded them up; and the final consequence was the suspension of specie payments. Sir, thus by your own acts you have aggravated the very disaster which you produced, and which, in the first place, you ought to have prevented, and, in the second place, to have remedied. This state of things became contagious, and the contagion extended itself to every country, and to every interest, directly or remotely connected with us, with a violence proportioned to the intimacy of the connexion and the quantum of the interest involved. The extent of the injury sustained by the issuing of the Treasury order in council is not to be measured by its operation on the specie of the country, by diverting it from the channels in which the laws of trade required it to flow, but by the effect it produced on the public mind prejudicial to the credit, currency, and business of the nation. Sir, from the first moment I saw that order, I had no doubt of the approach of the final catastrophe. The banks, pressed on the one hand by the Government, and by their depositors and the holders of their notes on the other, were wholly unprepared and unable to stand up. I contend, sir, that the Government stimulated the banks to the unwarrantable expansion of their issues, in the first instance, by her measures; and then, by her counter-policy, produced the catastrophe which followed. I presume these measures were adopted from patriotic motives; but, sir, can there be a question as to their wisdom?

It is admitted by all, that the revenues of the Government must be collected and disbursed; and that, in order to perform this operation, fiscal agents must be employed. The great question, then, submitted to us, is, what shall be the agent? That we may decide that question, Mr. President, with all the lights of experience and reason before us, it seems necessary to recur to the past policy of the Government. I do not this, sir, for the purpose of criminating or reproaching others who have differed from me on this policy—far, very far, from it. I recur to it as a matter of history of past events, that should not be lost to the statesman of the present time, while anxiously seeking for the true position of the vessel of state, and for the best means of extricating her from her perilous situation. The people want to be placed in a condition that they can pursue their various avocations with safety. The matters connected with this bill should be finally and forever decided, not to be disturbed without good cause: for it would be better for the people to know what they have to depend upon, though it might not appear at first so beneficial to their interests, than to be eternally deceived and deluded by “experiments” and “expedients,” only proving that, even in these days, there are men who are “rich in promises, but poor in performances.” Sir, the fiscal operations of

SEPT. 21, 1837.]

Sub-Treasury Bill.

[SENATE.]

this Government have been, for a great portion of the time since the adoption of the Federal constitution, aided by a national bank. The first institution of the kind was established under the administration of, and approved by, President Washington, the father of his country. It passed a Congress composed of a large number of the very men who formed our glorious constitution. I mention this fact for the purpose of answering an objection to a national bank, founded on these positions: first, that it is unconstitutional; secondly, anti-republican, and dangerous to liberty. I hear these objections urged from all quarters, by the politicians of the present day. Do these gentlemen suppose that the framers of the constitution themselves did not know what powers were intended to be given by that instrument, or that they would so recently after its adoption wantonly violate its provisions? Or can they believe that these patriots and sages would have adopted a measure anti-republican, and dangerous to liberty, so soon after they had crowned themselves with unfading laurels, in that glorious struggle which ended in the prostration of regal power, and the establishment of these free institutions under which we live, at once the envy of monarchs and the pride of freemen? After this bank had discharged the duties assigned to it for the term of its charter, the local banks were tried, fairly tried, and proved wholly inefficient to discharge the duties which the United States Bank had performed; and the Government was compelled to ask for the charter of another national bank. This call was responded to, favorably, by almost the entire democracy of the nation, and by many who had voted against the old bank. The act was approved of by that great apostle of constitutional liberty, Mr. Madison; it subsequently received the approval of the highest judicial tribunal in your country, deciding the question of constitutionality—that great jurist, Chief Justice Marshall, on the bench. Sir, is this question of constitutionality never to rest? It has been decided in every way known to the constitution. Why, then, disturb it? I have said, Mr. President, that a great part of the time the Government has existed, she has used, as her fiscal agent, a bank of the United States; and, let me add, up to the day of the removal of the deposits, not one dollar was ever lost to the Government, from any mismanagement on the part of this agent. Her revenues were received and disbursed, in every part of the nation, with a promptness and safety almost incredible. The domestic exchanges of the country were aided, to the entire satisfaction of all concerned. The currency, the vital principle of industry, was sound, astonishingly sound; all of the banks redeeming their notes, on demand, with specie. Sir, it may safely be said, that no people ever before had so safe, so uniform, and so convenient a circulating medium. It was exactly suited to the enterprise of the American people—a mixed currency; a paper currency, convertible into the precious metals at the will of the holder. I would to Heaven, Mr. President, that we had just such a currency at this time, in lieu of the deranged circulating medium which has been forced upon us by the mistaken policy of the late administration. But, is this all? No, sir. The fiscal agent of the Government, the Bank of the United States, not only discharged all these duties to the Government without the loss of a dollar, but it actually paid to the Government the sum of one million five hundred thousand dollars, as a bonus for the privilege. Why, then, why, let me ask, did the Government abandon this agent; give up the bonus, which was increased to three million by the act which passed Congress, and met the veto power of the President; give up the benefits arising from a sound and wholesome state of the exchanges and currency, and ask to be delivered from that union? Sir, I was opposed to that divorce; first, because I thought the old matron a mainstay in the family; and, secondly, because I could not discover any of the predicted advantages that were to arise

from the new alliance with the local banks. I viewed the matter then, as those who are asking for a divorce from that union seem to view it now; and gentlemen will excuse me if I cannot have much confidence in the new “expedients” of those who, like the present Executive, with a full knowledge of the results of former trials of the State bank system, still urged it upon the American people as altogether entitled to their confidence and regard. I was somewhat surprised to see the open avowal of the President, in his message, read to us a few days ago. He says “local banks have been employed for the deposit and distribution of the revenue at all times, partially; and, on three different occasions, exclusively: first, anterior to the establishment of the first Bank of the United States; secondly, in the interval between the termination of that institution, and the charter of its successor; and, thirdly, during the limited period that has now so abruptly closed. The connexion, thus repeatedly attempted, proved unsatisfactory on each successive occasion.” Then why did they resort to it again? They openly avow, and admit the fact, that it (the “experiment”) had been tried twice before. But there two are simple facts, admitted by the President, that to me speak volumes in favor of the wisdom of a Washington, a Madison, and their cotemporaries, in establishing a national bank; they are these: that even the most desperate of the officers of the army that has been employed in the war against the bank while living, and against its ghost since its decease, cannot say—has not dared to say—that it had not at all times discharged its fiscal duties with fidelity; and, secondly, it is admitted that the operations of the Government became obstructed, in each case, when the Bank of the United States was dispensed with as a fiscal agent of the Government.

I come now, Mr. President, to speak of the bill before the Senate, known here as the divorce bill. I was opposed, as I have told you, to the original divorce; I was still more opposed to the object of your then choice; and had I been here, in the name of my country I would have forbidden the bans. But you married, and I now find the groom, and nearly all the wedding guests, in favor of another divorce. Sir, upon principles of common law, you are not entitled to it; you winked at—nay more, you seduced your bride from the path of virtue; and you ought not to be allowed to take advantage of your own wrong. But, sir, I am ready to confess that I am much more opposed to the object of your third union, than I am to a separation from the darling of your second choice.

Sir, this sub-Treasury scheme of divorcing the Government from the banks and people is, in my mind, the most alarming proposition that has ever been presented to the American people. In vain did our revolutionary sires shed their blood in the contest for liberty; in vain did the sages and patriots of that eventful epoch contend for the glorious privileges which we enjoy, if, at this day of the republic, we are to surrender up to the Executive, and to his immediate advisers, the liberties of this great people. Sir, when the patriot daily sees the immense powers claimed for, and exercised by, the Executive, has he not just cause for alarm? The veto power is his; the army is his; the navy is his; the appointing and removing power of all the inferior officers of Government is his; the sword is his; and he now asks for the purse. Shall we give it to him? Shall we surrender up the treasures of the nation—the hard earnings of the people—into his hands, as is proposed by this bill. Never, Mr. President, with my consent—never, never. I speak not with reference to the present Chief Magistrate. I am discussing this matter upon principle. Sir, I have reason for alarm, when I see the other powers of the Government surrendered up, one at a time, either before or after the exercise of the veto, to the will of one man. How can I forbear to look with jealousy and alarm at a power so inordinate in its desires, and so engulfing in

SENATE.]

Sub-Treasury Bill.

[SEPT. 21, 1837.]

its effects? This bill, sir, surrenders up the remnant of power which we had still left with us. I object to it because of the vast increase of Executive power and patronage it confers, first, by giving up the sole control of the revenues of the nation; and, secondly, by the vast increase of officers it authorizes. In addition to the land and custom-house offices now in existence, it will be necessary to establish a great many more as sub-treasuries; add to these the twelve thousand post offices, all of which are to be little treasuries, and, sir, then come the visiters and examiners of these offices—as the bill requires an examination once, at least, each year—and you have an army of officers traversing every part of the country at the bid of the Executive, paid from the public moneys by the President, and bound, upon pain of dismissal from office to obey the Executive or party fiat. Sir, I am unwilling, by any vote of mine, to contribute to this result. But, sir, will the public money be safe? This is a question of great importance. Experience tells us that it will not; and, my word for it, when it shall have been tried to the satisfaction of those who are now pressing it upon us, the defalcations will be found a much more formidable item in the unavailable funds than what appears against the national bank. But, in addition to this, you give up the bonus paid by the United States Bank. You give up the advantages resulting to the country from a well-regulated currency and a wholesome state of the exchanges, and you pay not less than \$100,000 annually to carry on the “expedient,” without one countervailing benefit.

Sir, there is another objection to this measure more formidable, in my mind, than any of those I have attempted to urge. You propose to separate your fortunes from the destinies of the great body of the people; to make this Government, which I have always understood to be a Government of the people, an alien to their interest; you propose to give the Government and its officers gold and silver, and leave the people to struggle on with such a currency as the States may furnish. Sir, I know this people love the Government; I am not unapprized of their deep-rooted devotion to the institutions under which they live. Have they not on all occasions, in times of peril, when the existence of the nation was threatened by a hostile foe, rallied to the standard of their country, and laid down their lives a voluntary sacrifice on the altar of liberty? And shall they then be told, in times of difficulty and embarrassment, that this Government will take care of itself—that it has no power to assist the people—that it will provide for its own officers the precious metals, although the consequence may be ruin to the people? Sir, let those who are pressing this matter upon them not presume too far. It is not your parchment roll, called a constitution, that holds this people together; it is a supposed community of interest: and whenever you shall satisfy them that the Government of their choice has no common interest with the people, the governed, that moment they will lose all attachment to the constitution, and either dissolve themselves from a Government of requisitions and burdens, and not of benefits, or they will seek redress in a change of rulers. Sir, I am no prophet; yet, judging from the voice you have heard from the West, and the responsive echoes from the East, if you carry these measures, in the course of my senatorial term of six years you will see these tables turned, and a confident majority reduced to a harmless minority here; and in that event—mark my words to-day—you will hear a voice long and loud coming from that minority crying for another divorce from the evils of this measure. I hope in this I may be mistaken; but such are my opinions of the evil consequences which must result from this measure, that I hazard the opinion.

But, sir, as the representative in part of one of the Western States, I protest against this measure as being of the most noxious character to our interest. Does not

every Western man see that its practical effect must be to drain all our specie from us, through the land offices and post offices, and expend it here and on the Eastern waters in the creation of a navy, breakwaters, light-houses, fortifications, &c.? Since you have abandoned the doctrines of internal improvement, we have no objects for national expenditure, except, to be sure, the Cumberland road; and the expenditure on that is a drop in the bucket when compared with the amount received by the Government from the people of the State. Again: I object to this bill as being wholly illusory, and presenting a false issue to the people. It is not a question now, whether the people will have specie or paper in their common business transactions. This Government has no power over the State banks; they are the creatures of the Legislatures of the different States; and whether this bill passes or not, the people of the States will have a paper currency: and the true question for them to decide is, whether they prefer a local paper exclusively, or whether they would prefer a national paper of universal circulation, controlling the State issues within wholesome bounds, and convertible into specie at the will of the holder.

Sir, let us examine for a moment the consequences that must necessarily result from any measure, at this time, reducing the property of this nation to a metallic value. Would it not at once amount, in effect, to a confiscation of at least two-thirds of the property in the country? Would it not increase, as two to one, the debts of the people? And how, let me ask, do gentlemen suppose the debtors—either merchants, banks, or people—can pay their debts, if specie should be required? Property must come to the hammer of the auctioneer; and the sacrifice would create ruin, wide-spread ruin. Sir, I would rather see a foreign army in your country, than to see the property of every debtor brought to the hammer on a specie demand. The desolation would be far less. Innocent and unoffending families, who are in supposed affluence to-day, would be beggars to-morrow; thrown upon the cold charity of an unfriendly world. Sir, I cannot see it. I would avert it if I could. But, if gentlemen will go on, let them take the responsibility. The Senator from South Carolina [Mr. CALHOUN] told you that the disease was debt, and he knew of no cure but to pay it. This may be true; but does not that Senator know that it is in vain to tell men to pay their debts, if you take from them the ability and means of payment? If you render the property with which they might pay valueless, how do you expect them to pay? Do gentlemen suppose that there is specie enough in this nation to pay the one-fourth of the debts, independently of answering the ordinary medium of circulation? If they do, I can only say that they have surely not examined the subject.

Sir, I have detained the Senate much longer than I had anticipated before I rose. I will say a few words relative to the amendments of the Senators from South Carolina and Missouri, [Messrs. CALHOUN and BENTON,] and resume my seat.

I cannot go for the amendment of the Senator from South Carolina. It assumes the same principle of the bill; that is, that the Government, in the collection of its dues, will, at given periods, refuse to take the paper of specie-paying banks, and will collect all its revenue in specie. I object to the principle, and cannot give any vote that can be construed into a sanction of such doctrines.

The amendment of the Senator from Missouri is still worse in principle. That amendment gives a premium on the part of Government of one per cent. for all the gold that may be paid by her debtors. What does this mean? What can be the object? Is it to draw all the gold of the country into the Government vaults, for the benefit of its favorites? For if the Government gives one per cent., surely she will not pay it out in her ordinary business transactions at par.

I cannot close my remarks, Mr. President, without say-

SEPT. 21, 1837.]

Sub-Treasury Bill.

[SENATE.]

ing that I entertained strong hopes, when I came here, that we should be able to unite on some measure that would restore confidence, regulate the currency, and give relief to the people. But I am now compelled to say that, in my opinion, we shall do nothing to meet their just expectations; and my fondest hopes will end in disappointment. I shall vote, as a choice of evils, for the bill of the gentleman from Virginia; but I must say I have little or no confidence in it. Still I do not think it so objectionable as the sub-Treasury scheme. My opinion has been, and still continues to be, that experience has proven that a national bank, properly guarded in its powers, is an indispensable fiscal agent to the Government, as well as absolutely necessary as a general regulator of the currency, and of the exchanges, and of the issues of the local banks. A majority here, however, think otherwise; and it will be for the people ultimately to decide the matter; and in that decision let all acquiesce. I am sure I have no personal interest in sustaining any bank. I never owned a dollar of stock in a bank in my life, nor do I expect to do so; but I have an interest in sustaining those measures that may benefit the people. Their interest is my interest, and my interest is their interest.

Mr. President, I know I have occupied too much of the time of the Senate; yet I offer no other apology than the importance of the subject: and, in resuming my seat, I return to the Senate my unfeigned thanks for the marked respect and attention which it has honored me with in this my first attempt to address it.

When Mr. SMITH had concluded—

Mr. STRANGE, of North Carolina, rose and said:

Mr. President: That our country is now in a most extraordinary and interesting crisis seems to be conceded on all hands; and the public mind is greatly distracted as to the causes of this crisis, its nature, and the course it behooves Congress to pursue under it. In this state of things, every man to whom a high trust is committed in relation to these subjects, and especially each member of this body, ought openly and frankly to offer his views and opinions concerning them. By public opinion all the measures adopted by Congress must ultimately be tested; and, that public opinion may have fair play, and our constituents an opportunity of judging of the fidelity of their representatives on every measure so important as the one under consideration, the reasons which have determined them should accompany their votes. It is this consideration that impels me to ask the attention of the Senate on the present occasion; for I know full well that I might as well address the marble pillars which surround us, as this honorable body with any reasonable hope of bringing conviction to a single mind. But I am solicitous that public opinion should be sound in the State which I have the honor in part to represent, and while I bring my own opinions in review before my constituents, I shall make an effort, feeble though it may be, to furnish them with the reasons on which they are founded.

I have said, sir, that three questions naturally arise out of this crisis. First, its causes, about which there is much contrariety of opinion. Many, resorting to the method so common with those who are determined to find fault, of using some general terms of censure, calculated to catch the public ear, and carry away the judgment, without presenting it with any distinct object upon which it may exercise itself, charge it to tampering with the currency by the Executive of the Union. This form of expression, like most others upon political subjects in use among us, is borrowed from England. It was freely used in that country during Mr. Vansittart's administration, when (as now with us) the paper currency being greatly inflated, an effort was made by those who saw the vortex of ruin towards which the nation was tending, to rescue it, with Mr. Canning at their head, and these were branded by the minister himself as tamperers with the currency. Experience, however, tri-

umphantly vindicated the former, and convicted the latter of the rankest empiricism in matters of currency. Our modern politicians, not content with the use of the term as it originally came from the lips of the British minister, have degraded it to a more fit expression of their own bitterness, and called it tinkering with the currency, as if they sought to lower the Executive of their country to equality with the mean and contemptible employment of a tinker. Others come forward and boldly specify the measures of Government which, as they say, have produced all this mischief. Of this latter course no one can complain. It is a fair and manly mode of treating the subject. It appeals to the high and intellectual faculties of our nature, and not to our low passions and ignoble prejudices. I hope never to see the day when the measures of any administration are not to be arraigned at the bar of public opinion, and fairly tried by the people of this country, and approved and applauded, or condemned and abandoned; and, if either the past or present administration has made any false step, I care not how soon it is pointed out, and every man in the country made to see it.

The immediate cause of our difficulties, every one, I believe, admits to be an undue spirit of speculation and overtrading. But it is said that the Government itself has stimulated that spirit, and given to it its undue action. That such, to some extent, may have been the accidental effect of the removal of the deposits, and the consequent destruction of the United States Bank, in suffering numerous local banks to come into existence, which could not else have lived, and thus swell the paper currency, is not improbable. But, then, it is to be remarked that this would have been very inefficient without the co-operation of other causes much more powerful, which I shall notice presently, and with which there can be no pretence for charging the administration; and, besides, it was not the direct action of this measure adopted by the administration, but the conduct of the States themselves, in the exercise of their free, sovereign power, in chartering banks over which the administration could exercise no control, which armed the measure with all its supposed power of mischief.

The next measure which can properly be called an administration measure, to which mischief is imputed, is the specie circular; and I, for one, am altogether willing that the present and past administrations should be made fully responsible for it. If it be true (and no one, I fancy, can deny it) that the evils of the times are the offspring of speculation and overissues of banks, it would seem to follow that any thing which had a tendency to check these causes in the full tide of their action, must have mitigated the evils they were producing, and partially averted the catastrophe they were preparing. Surely the land speculations have contributed largely to the evils of the times; surely extravagant bank issues have stimulated, if they have not been the very food of, the land speculations, besides having been the parent of other great and numerous evils. Did not the specie circular check the land speculations? Did not the specie circular check the banks in their career of expansion? If it did not this it did nothing, and is an idle subject either for praise or censure. But it did this, to some extent, and in so doing effected good, and my only regret is, it was capable of doing so little. Its effects have, I believe, been overrated, both by its friends and its enemies.

I know of no other measure which can justly be imputed to the administration, and to which any effect can be ascribed in the production of the present crisis. But there are two measures, which I shall notice in their order, having vast efficiency in bringing it about. The first is the act of Congress, passed in 1834, for altering the relative value of gold and silver. This measure met, I believe, with favor from all parties. In the pre-existing state of things, we seemed to be yielding to other nations a portion of the gold which, of right, belonged to ourselves, and all parties pat-

SENATE.]

Sub-Treasury Bill.

[SEPT. 21, 1837.]

riotically united in reclaiming our banished treasure, and cordially adopted the gold bill, as it is called. Nothing could be more specious than the advantages this measure seemed to promise us; and I will not say yet that its ultimate effect will not be beneficial. But its primary effect was to disturb that equilibrium which the currency had found under the existing state of things, and, like elevating or expanding any portion of a fluid body, the effect was that it came pouring over to find its level, and flowed freely into this country. Other causes were in action to promote this tendency. American stocks and American bonds were freely discounted upon in England, and, as the paper currency of England could not be used here, the proceeds came over in gold. This influx of gold, in place of occupying the channels of trade, which it must have done had they not been pre-occupied by paper money, flowed into the banks, who, as well from the natural struggle between their paper and the gold to occupy the aforesaid channels, as from the confidence with which the presence of the gold inspired them, continually expanded their paper issues, so that the more gold came, the more paper was thrown out to force it out of circulation and into the banks. Meantime the Bank of England found her specie leaving her, so that, from October 1, 1833, when it was £10,900,000, it was reduced by December 27, 1836, to £4,300,000: making a reduction in a little upwards of three years of £6,600,000; or within a little more than £300,000 of two-thirds of its whole specie. Well might the Bank of England become alarmed; and she did become alarmed, and refused further discounts for American purposes. What could be more productive of dismay to all connected with that kind of business than this determination of the Bank of England? Not only were expected future supplies cut off, but, as the natural consequence of the cessation of supply, return was demanded of what had been already furnished, at the first moment it could lawfully be done. Can any man fail to see in this abundant cause for the mercantile distress which followed? If there is any cause for wonder, it is that the distress has not been greater, especially when we look to another measure in this country, which must have accelerated the catastrophe and greatly added to its violence? This is the second of the two measures before alluded to, and is commonly called the deposit or distribution law.

This was no measure of the administration; on the contrary, the administration is known to have been hostile to it; but it was passed almost by acclamation by all parties in Congress, and received the unwilling assent of the Executive. Here is a cause adequate to have deranged the currency of the country in the most prosperous and tranquil times. It will be remembered that the opposition insist that the mere potential removal of the deposits of Government from one side of a street to the other, in the same city, (which deposits did not, at the utmost, exceed three millions of dollars,) was competent to the production of the utmost derangement and distress in the money market. What, then, must have been the effect of the removal of near forty millions from place to place; scattering it from one end to the other of this wide continent; subtracting it from those channels of trade where, by the laws of commerce, it had found its way, and forcing it where no channels were open for its reception, and where, consequently, they must be created by law, through schemes hurried into existence merely to find employment for the unexpected treasure? You find the States, in different parts of the Union, beset with devising plans for disposing of the money so unexpectedly poured into their laps, while those from whom it was subtracted are parting, as it were, with their very life blood to supply it to those who have no use for it. Meantime the money lies idle until the States have devised some plan for its absorption into the local circulation.

And do gentlemen rack their imaginations in search of causes, when one so adequate for the production of all the

phenomena before us is so ready at their hand? And, when complicated as it is with the operation of the gold bill, as I have already presented it, is not the wonder rather that matters are no worse? But, when we bring these causes into union with the general causes which seem to have agitated the whole commercial world, beginning, I believe, in China and affecting all Europe, both continental and insular, nothing, it seems to me, but an anxious desire to find fault would seek for the causes of the crisis in the measures of the Government only.

But I believe, sir, that the foreign causes which have affected us, and those measures at home to which I have adverted, would have passed by us altogether innocuous, or nearly so, but for another cause. Gentlemen have only adverted to what the physicians call the exciting causes of the disease; they have overlooked the far more important and radical cause—an injury which has been suffered by the constitution of the patient, and such an one as has been far more instrumental in the production of the present crisis than all the exciting causes before noticed. The history of our country has presented in its brief course more numerous and interesting crises than other nations have done who could boast centuries of duration. This is probably the joint result of the rapidity of our course and the novelty of the political problem we have been engaged in working. Launched by the result of our revolutionary struggle upon the wide waters of an untried political sea, we were without charts, and the voice of experience was heard in no distinct accents to direct our movements. Nothing, therefore, was left to us but to exercise the faculties we possessed in drawing upon analogy for guides in our trackless way. But I pause to correct myself; we had a chart, the most clear and explicit that the timid or skeptical could desire. But, alas! not one of those to whom has been committed the helm of state has scrupulously steered according to its indications, but, trusting to his own sagacity, has given to the vessel a wide berth, regardless of consequences; and the result has been that, amid clear skies and smooth waters, some hidden rock or shoal, against which the slightest attention to his chart would have secured him, has brought up the astonished steersman in his confident career. But the vessel has proved staunch, and, with nothing more than a change of hands for the control of her movements, she has stemmed every difficulty, and pursued her gallant course, the pride of her crew, and the admiration of the world. The improvident steerage of its predecessors had thickened dangers around her, more numerous than those which beset the fugitives from the destruction of Troy, when the late administration came to the helm; it is not to be wondered at, therefore, that it could pursue no direct and onward course, but was compelled to adopt expedients to shun this rock, and escape that shoal, according to the circumstances in which it found itself. Yes, Mr. President, it is to departures from the strict requirements of our constitution, that the chief, if not all, of our difficulties as a nation may be attributed. It is true that disappointment and calamity are the lot of man, whether we view him nationally or individually; but, generally, if not invariably, the inquisitive mind may trace calamities to the sufferer's own neglect, or wilful transgression of the laws of prudence. Happily, in both cases, timely repentance is competent to defeat the worst consequences of transgression; and, if the troubles in which we are now involved shall bring us to a conviction of our errors, and to sober resolution to sin no more, they will have answered a most invaluable purpose, and arrested us in a mad career, before we have involved ourselves in irremediable ruin. Suppose no tariff for protection had filled our coffers with useless and dangerous treasure; no United States Bank had triumphed over the constitution and the currency it had provided; no systems of internal improvement by the General Government, with all its attendant extravagances, had been adopted; how invulnerable

SEPT. 21, 1837.]

Sub-Treasury Bill.

[SENATE]

should we have been to the evils of which we now complain! But all these things were done, and our constitution, for the formation of which the blood and toil of our forefathers had been so liberally poured out and expended, was fast becoming an unmeaning thing—a dead letter; but the present crisis awakens us to a sense of our present condition, and brings us to reflection. A literal construction of that sacred instrument which we have all sworn to support, is, in my humble judgment, the only rational ground of hope for our happiness as a nation, the only guaranty against the evils of anarchy, violence, and fraud with which we are threatened.

Having thus glanced at the causes of this crisis in which we find ourselves, I come next to consider briefly its nature. But yesterday we boasted of an overflowing Treasury, and were at our wit's end for a place into which it might pour its superfluous riches. Real property was in demand at most extravagant prices; labor was high, and the products of the soil repaid to their hearts' content its industrious cultivators. Our merchants were daily becoming millionaires, rivalling in splendor and luxury the princes of lands where that title may be borne. Suddenly, as though smitten by the hand of some offended deity, or as if all that we beheld was a fairy fabrication, dependent upon some dissolving spell, the whole scene is reversed. Our bloated Treasury has collapsed; the millions we were beseeching somebody to keep for us have disappeared, and the public creditor applies in vain for payment in the constitutional medium. The possession of real estate but marks the poverty of him who owns it; the laborer is without employment, or toils for half his accustomed compensation; our products linger upon our hands, a prey to corruption and the moth; and our merchants send forth one universal wail from Maine to Florida. These are the gloomy features in the crisis, and by many they only are seen in their unmitigated darkness; but to me there are gleams of the most cheering brightness gilding the gloom, and, like the struggling rays of the sun upon the dark cloud of evening, come to the heart reflecting promises of hope and joy for the approaching morrow. The crisis is full of assurance that the wounds of the bruised and battered constitution will be healed, and that, stripped of all the extraneous appendages which have obscured its beauty and simplicity, it will be restored to its legitimate control over the affairs of this nation. So far as the Executive is concerned, he makes to us the declaration that the constitution will, in its literal simplicity, be the standard of his actions; and it remains for the two Houses of Congress to decide whether they will stand by him in the noble resolution. I trust they will, and, in that trust, I feel that this crisis is one for any thing but despair to the heart of the patriot.

I have now adverted to the causes and nature of the present crisis, matters in themselves of little consequence, and altogether inadequate to the time they have consumed, except so far as they may assist us in the determination of the third question, namely, what it behooves us to do in the present exigency. The evils we have seen are twofold: first, to the United States Government as a body politic, affecting its vital principle, the very current of its existence, its fiscal soundness; secondly, to the individuals, or some of them, composing the nation, in blasting their present pecuniary prosperity and their hopes for the future. These it behooves us to consider with a due sense of our responsibilities, and, if in our power, to provide for them a remedy. And here permit me to remark that the President has been most unjustly accused of having recommended nothing adequate to the occasion; of having indicated no relief for the sufferings of the people. Will no relief be found, I ask, in the emission of \$10,000,000 in Treasury notes to be thrown into circulation? If the want of a sound circulating medium be part of the distress,

will it not be thus supplied to the amount I have mentioned? And will it not be farther beneficial in infusing more vigor into the whole mass of the circulating medium, in increasing the proportion of undepreciated currency to that which is already depreciated? Is there no relief in extending for four, six, and nine months, the credits upon the duty bonds? Is there no relief in giving to the deposit banks additional time for settling the balances they owe? Let not gentlemen say, because the relief does not tally with their own unreasonable expectation, that therefore no relief at all has been extended. Great relief has, in my humble judgment, been afforded, and all that I think could in reason have been asked. But our first inquiry is, what it behooves us to do in reference to the revenue. And it is evident that the first thing is to make immediate provision for the supply of the exhausted Treasury, and put aside such claims as, in the present state of things, ought not to be made upon it. This, so far as the action of this House is concerned, has already been done in the passage of the bills for the suspension of the fourth instalment to the States under the deposit law, and the emission of the \$10,000,000 in Treasury notes, as before mentioned; and it is next to be decided what course shall be taken to avert, if possible, a recurrence of the present catastrophe to the revenue. For this three plans are presented to our consideration: First, a national bank; secondly, a continuance of the present deposit bank system, with some modifications; and, lastly, the plan recommended by the President and Secretary of the Treasury, and proposed by the Committee on Finance, of an independent Treasury. The first of these has probably but few advocates, and has not been distinctly brought forward by any one, but we well know that the anxious eyes of some of this body are turned to it as the panacea, the great catholicon, for all political disorders—as the only instrument through which the country can be saved; and we have heard as much from the gentleman who has just taken his seat. But to this measure many objections present themselves: First, public opinion is, as I believe, decidedly against it, and that, as I have already said, is at last the test to which every act of this body must be brought. Secondly, the present Chief Magistrate of the nation stands solemnly pledged against it, and must, of necessity, veto a bill for its establishment, even if a majority of both Houses of Congress could be induced to unite in its passage; and no one has the rashness to assert that it is to be spoken of as a possibility that two-thirds of these bodies would concur in overruling the President's veto. Thirdly, such a law would, in my humble judgment, be in conflict with the constitution of the United States. Tell me not that the contrary has been settled by authority. The simplicity of that instrument was never designed to be marred by the comments of the learned upon it. It was intended for the perusal of the plainest man in the country, and that he should understand it without any farther help than a knowledge of his vernacular tongue. Tell me not that in process of time the readings upon it are to be so multiplied, that, instead of a pamphlet of a few pages, volumes must be read to find out its meaning. No authority for a United States Bank is to be found in the language of the constitution; and I, for one, will listen to no sophistical refinements which may seek to place it there by inference. Fourthly, such an institution is altogether inexpedient, and totally inconsistent with the healthful action of our political system. As well might we expect the globe we inhabit to pursue the orbit marked out for it by the hand of its Creator, should some mighty comet come within the sphere of its attraction, as that our political system should quietly perform its proper functions with such a *magnum imperium* within its *imperio*. There is another reason urged with great force by the Senator from South Carolina, who sits near me, and that is the triumph which would thus be

SENATE.]

Sub-Treasury Bill.

[SEPT. 21, 1837.]

achieved by the bank over the Government. The attitude assumed by that Senator in relation to this whole subject, is one of high moral sublimity, in which he has nobly sustained himself, both by his matter and his manner; and the argument coming from him, that he would not yield to such a triumph over the Government of his country, is an argument which does credit to the heart which conceived, and the lips which uttered it.

The second plan is the one proposed by the Senator from Virginia, to which he will not find many supporters from any real regard to the plan itself; and if he succeeds in procuring its adoption, it must be through the instrumentality of those into whose motives it does not become me to inquire. But as that Senator has addressed his old friends, he will allow me in their name to address him in return, and to warn him that when with foreign aid he shall have succeeded in beating down his old allies, it will not be long ere he will hear the shout of triumph from the marble palace at Philadelphia. We would gladly, if we could, make common cause with him upon the ground he has assumed; but believing it untenable, we have retreated within the ramparts of the constitution, and should they be battered into fragments about our ears, and we ourselves prostrated and vanquished, we will still cry out "Live the constitution! live the republic!" I have said to the Senator from Virginia, that we think his ground untenable, and now proceed to offer some of the reasons for our so believing: "Thou hast been weighed in the balance and found wanting," was a portion of the sentence written by the fingers of an unseen hand upon the wall, against the King of Babylon, which caused that monarch's knees to smite together, and the sounds of guilty revelry to cease; and with great emphasis may we address the same language to the deposite banks. This the Senator from Virginia denies, and insists that the experiment has not failed. What would that Senator call a failure? Does he require that their buildings should be razed from their foundations, and made a heap, and that their piles of paper money should be committed to the flames, before he will acknowledge that they have failed? When a merchant in any mercantile community neglects to meet his engagements with punctuality, who pretends to question his failure? But these banks have not only failed to meet their engagements, but have flatly declared their determination not to meet them until it suits their own perfect convenience. What has brought us to our present condition but leaning upon these broken reeds? but imprudent confidence in these faithless agents? Should we have experienced any difficulty in meeting our fiscal engagements if they had, in fulfillment of theirs, promptly paid up the drafts of the Treasury upon them? Would the merchants have found any difficulty in paying up their duty bonds, had the banks, by redemption of their notes, preserved to them a sound currency in which to comply with their obligations? The application of the merchants for indulgence is based upon the ground that their inability to make payment is entirely owing, not to the want of funds, but of such funds as the Government would be willing to receive. Where is the individual who, having trusted a private banker with his funds, would trust him further, after his suffering draft after draft to come back dishonored, declaring publicly that he had the money to pay with, and justly owed the debt, but that he did not think it his interest to do so, nor would he do it unless his depositor would make arrangements with all persons in whose favor he should draw, to take the banker's own notes, and consider them as payment? Motives of friendship or of policy, or facility of disposition in a private individual, might induce a continuance of the trust, after it had been thus abused, upon proper concessions, and a reasonable assurance that faith would thereafter be kept. But are the depositaries of a nation's faith—the trustees of a nation's wealth—to be moved by such considerations to lend a credulous ear to

such promises? We have had such promises already, and have we any security that they will in future be more faithfully kept? Have not the banks pleaded the tyrant law of necessity to excuse their fault, and will necessity be less imperious in future than we find it now? It is folly to expect it. But while the Senator from Virginia is in one breath denying the failure of the banks, in the next he is offering apologies for that upon the existence of which he is vainly striving to close his eyes. He attributes it in the first place to some great mysterious convulsion, which he does not attempt to define, and which he assures us is never likely to occur again. Next, he refers to the deposite law and the specie order, as furnishing sufficient apologies for most eccentric movements in the pecuniary affairs of the country. But chiefly he imputes the failure of the banks to the withdrawal of the confidence of the Government, and insists that its restoration is all that is wanting to set all things right. But how, I would ask, is confidence to be created where it does not exist? Like love, and hope, and fear, it must be the spontaneous offspring of the bosom it inhabits. As well might the assassin, in a paroxysm of penitence, seek to rekindle the spark of life in the body of his victim, as this or any other legislative body to restore confidence to existence, after it has been murdered, either through accident or design. But grant that we could, by the fiat of this Legislature, wake up confidence to renewed existence in the bosoms of the people, ought we to do so when we ourselves have not confidence? Would it not be a legislative fraud? Could we say to them, You ought to have the most implicit confidence in these banks as perfectly safe depositories of your wealth; as sound regulators of the commercial affairs of the country; as prudent circulators of paper which they have at all times the power to redeem; unless we ourselves felt this confidence? And do we feel it? I for one must confess that I do not, and would be putting my signature to a solemn falsehood were I to say that I did. The Senator declares that the only reason why specie payments were maintained in England and suspended in this country is, that in the one confidence was sustained by the Government, and in the other prostrated. I have no hesitation in admitting that, but for the failure of confidence, the banks in this country could have maintained specie payments longer, and that the failure of confidence must necessarily precede the stoppage of specie payments. But the true question is, not whether confidence existed or not, but the causes of its failure or continuance. Now, it is manifest, as I conceive, why it continued in England, and perished in this country; not, as the gentleman supposes, by reason of the different action of the two Governments, but on account of causes which had passed beyond the reach of control from either Government.

Nature, by mysterious and immutable laws, has connected causes with their effects; and one is followed by the other with all the certainty of the revolving year; and he who finds a cause adequate to the production of a given effect followed by that effect, may fearlessly conclude that the latter is the offspring of the former.

It is equally a rule of sound philosophy, that nothing which does not in its nature appear adequate to the production of a given effect, is to be taken as its cause, however immediately it may precede it. Now, what act of the Government was adequate to the destruction of confidence? The most that can be said is, that some of its acts may have been calculated to enfeeble, but not one can be pointed out adequate to its destruction. But there are two causes immediately before us, sufficient, as I think, to account for the different effects upon confidence in the two countries when alarm was excited. The first is, that England was a creditor country, and this a debtor country. The debtor could never draw from the creditor against his will, while the creditor had a right to draw upon the debtor to the ut-

SEPT. 21, 1837.]

Sub-Treasury Bill.

[SENATE.]

termest farthing of his indebtedness. When, therefore, alarm was excited, the Bank of England had nothing to fear but from her own citizens; while, in this country, the banks were threatened with a drain from England as well as from their own countrymen. Standing as a creditor, the Bank of England was receiving more than she was paying out, and every day her situation was continually growing better; and if she was able to meet the engagements of to-day, she would be still better able to meet those of to-morrow. Not so with the American banks; theirs would be drain without replenishment; and, looking before them to a vast chasm yawning for the reception of their specie as fast as they could tell it out, despair seized upon them, confidence expired, and they refused to engage in a work in the accomplishment of which they must perish. Grant, say they, I am enabled to meet the engagements of to-day; those of to-morrow will be still more numerous and importunate. The balance of trade will give to our riches wings by which they must fly across the Atlantic, and be no more seen. We will take our stand at once, then, and not voluntarily pour out our own life-blood; but if it is taken from us, let it be by some slow and lingering process which will prolong our existence until some providential or fortuitous circumstance may interpose to save us from destruction. What more could be desired to account for the different course of the banks on the two sides of the Atlantic? But yet there is another circumstance, which, as a co-operating cause with the other, doubtless precipitated the stoppage of specie payments in this country, which had no existence, and, consequently, could have no action, on the other side of the water. The Bank of England is alone—a unit, an autocrat. She had but one will to consult, and that will could act at the critical moment when its action might be necessary. She could continue to pay out her four millions of specie until the last million was invaded, and then, if she thought it expedient, could cry “hold! enough!” But the banks in this country were legion; with them it was a *Bladensburg* race, each afraid that the other, in the struggle for specie, might exhaust its store, and crush it for ever; mutual fears prompted mutual forbearance, which could only be granted by a general stoppage; and the impatience of each to escape from the danger that threatened it, hastened a catastrophe which might otherwise have been longer deferred, if not altogether avoided. But whatever apologies may be offered for the failure of the banks, they have failed, signally failed; and if, as has been strongly remarked by the Senator from South Carolina, it be folly to try untried experiments, it is madness to repeat those which have already failed.

But if we shut our eyes to experience, we must be deaf also to the lessons of sound theory, if we adopt the system proposed by the Senator from Virginia. Not only have the banks failed, but the principle of failure is incorporated in their very natures. The system of banking, as practised in this country, never can be safe until it is radically altered. The best of them issue from two and a half to three paper dollars for one of specie, and some have even gone as high as seven; and as long as the physical laws of nature continue to act, it is manifest that the banks must depend upon the whim, the caprice, the hopes, the fears, the clemency, if you will, of their bill-holders, for their existence. And can that depository be deemed safe which carries within it such elements of self-destruction? But let us look a little farther. The banks will not take your deposits upon any other condition than that of predicating upon them a circulation of their notes. How, then, does the case stand? They take your deposits, and promise you to return them whensoever demanded; but at the very same moment they issue notes to twice or thrice the amount of their promise to you, by which they engage to pay to A, B, and C the identical sum they have promised to repay to you. And does not every one see the utter

impossibility of their meeting three or four different engagements to pay the same identical money? What, then, are they doing but running the gambling risk that they will be called upon for but one of these sums at a time? But we are told, when they issued their notes to A, B, and C, they took in exchange A, B, and C's notes, well secured, for a like sum. Grant it to be so; and that A, B, and C's notes are certainly ultimately good, is it not manifest that A, B, and C's notes are on time, and are not immediately convertible, and, in fact, that they would not be given but on time, while the notes of the bank are payable the moment they are issued, and all three sets might be immediately demanded? And why should they not be? The gambling hazard is taken that they will not. But, furthermore, is it not perceptible that this increase of the circulating medium must greatly increase the nominal value of property, and that property holders will thereby acquire a false reputation for wealth, which, acting upon themselves and others, must lead them into speculations which, upon any sudden denouement of affairs, bringing property to the specie standard of value, (and even below it, from the sudden panic produced,) will leave the banks not only unable to meet promptly the demands of the depositor, but even, after a great lapse of time, able only but partially to return the principal sum?

The banks have not only failed, then, but from their very nature are prone to failure; and a still further objection to the plan proposed, is drawn out of the natural liability of all the banks in the country to be operated upon by any cause injuriously affecting one. So that, however scattered your treasure may be, the same fell swoop which robs you of it in New York, does the same for you in New Orleans—the same reversed alchemy which converts your gold and silver to inconvertible and worthless paper in the one city, does so at nearly the same moment in the other. Your loss is not partial, but comes upon you in one sweeping desolation.

Again: if the misfortunes before referred to were most likely to happen at those times when the Government could best bear disappointment, it might be less imprudent to encounter the hazard. But the reverse precisely is the case. It is in times of difficulty and public distress, when the means of replenishing from other sources the failing supply of the revenue are cut off, that the banks will be most likely to disappoint you in their engagements. A war, for instance, is foreseen, and the Government has been hoarding its revenue to meet the exigency. It has laid up its millions in the deposit banks, and is only waiting until they have accumulated sufficiently to proclaim defiance, and chastise the insulters of the national flag: it is done. The cost has been counted, and it has been found that we have money enough and to spare for the projected enterprise. The star-spangled banner is given to the breeze, and the heart of every American is bounding with the pride of country. But, alas! the treasure upon which we had counted is deposited in the banks, and they have discounted freely upon it. War and commerce cannot go together, and commerce is the sole stay of inflated credit. Bill-holders become alarmed; and each one rushes in with breathless haste, fearful of being the last to present his claim. The banks, in their best condition, can do no more than pay about forty per cent. upon their circulation; and their specie, of course, must be immediately swept, or they must take a determined stand, and refuse payment. In this state of things, the Government draws upon the banks for some large sum to pay for the outfit of her army and her navy. The banks offer it in paper; but this will not answer, and they have nothing else that they are both able and willing to give you. I leave imagination to finish the picture.

The banking system, as practised in this country, is, in my judgement, one vast bubble; and it is not improbable

SENATE.]

Sub-Treasury Bill.

[SEPT. 21, 1837.]

that those now living will witness its bursting; and when the explosion has taken place, as, without reform, at no very distant day it must, the men who succeed us will look back upon our present infatuation with as much amazement as we do upon that of the adventurers in the South Sea scheme.

But I object farther to the plan proposed, on account of its tendency to place the Government in the power of a party. You have seen the natural effect of a foreign war upon commerce and the banks. Is it to be expected, then, that a commercial community could be calculated on as friendly to a war, even when necessary and just? I am the son of a merchant, and it cannot therefore be supposed that I would willingly cast reproach on the tomb of my father. I should be recreant to all the best feelings of the human heart were I to deny to the merchants, that intelligent and worthy class of citizens, all the commendation they may so justly claim. Among them still live some of the best and dearest of my friends; but still they are frail humanity; and who is there that can wish his interest and his duty to be brought in collision? It is in mercantile communities chiefly, if not altogether, that banks are to be found, and in these, under the deposit-bank system, your treasure must be placed. A war is thought necessary, but the interests of a mercantile community are opposed to it; and how easily therefore would they persuade themselves, as many of them did in the glorious strife of 1812-'15, that it was unnecessary, unnatural, and unjust; and how naturally would they unite themselves with that opposition which is never inconsiderable in any free country? Money is the sinews of war, and with how little trouble might an opposition cut those sinews at the very moment you were about to make use of them, by causing the deposit banks to suspend their payments? And ere a sense of their country's honor, and the danger of their fellow-citizens could triumph over their calculations of interest, and awaken that patriotism which was overlaid but not extinguished, the nation's flag might be dishonored, and her enfeebled army cut to pieces.

But a yet stronger objection than all that have preceded it, and that, indeed, upon which they mainly depend, is the difficulty of compelling these corporations to perform their engagements should they choose to neglect, or find it inconvenient to meet them. He who expects them punctually to meet their engagements, might as soon look for the rain to descend upon his thirsty fields at his bidding. The absolute control of wealth is essential to its enjoyment, either for a Government or an individual. That man is poor, and poor as winter, who calls countless millions his, which are yet beyond his reach, while hunger and thirst pinch him, and the inclement seasons beat upon his defenceless body. No man in his senses would willingly place himself in this situation; but yet it is precisely the predicament in which the Government is asked to place itself. What means have you to compel an unwilling corporation to surrender up its hoard? Do not reason and experience unite in teaching us that, as corporations are constituted and treated in this country, sums deposited with them, are placed measurably, if not absolutely, beyond the control of the proprietor? Look to the United States Bank, the creature of your own hands, and, therefore, as was once vainly imagined, subject to your own control. But you found yourself in your attempt to control it in the situation of the hero of one of Goodwin's novels, (Faulkenstien, if I mistake not in the name,) who, having acquired some magic power, created a monster, and infused into him the Promethean spark. He doubted not that the same hand which had created, could control. But that position is true in reference to one Power only. The monster of Faulkenstien turned upon his creator, and compelled him to fly for his life. In like manner did the creature of your hands defy your power, and continues to defy

it, holding on with the grasp of death to the treasure you have vainly striven to wring from it. With how much better reason, then, can you calculate on effectual control over lesser monsters which you did not create, and have no right to destroy? The truth is, they have already defied you, and you find yourself powerless before them. They have defied the true majesty of the country—its whole people. And have you still the vanity to suppose that, with powers so properly restrained and circumscribed as yours, with strength, gigantic as it may be, bound and shackled in the massy fetters of the constitution, you can bend to submission that which has defied the untrammelled might of the body from whom you derive the whole of your strength? But grant to yourself, if you please, power as extensive as you can well imagine, the laws of nature must be yet stronger than you, and these the banks, as constituted, will always be enabled to bring in conflict with you; nay, even to induce your own masters—those in whose breath you live, and move, and have your being, to array themselves against you for that brief and critical moment which embraces the main issue of such a struggle. For example: by extensive discounts and emissions of its paper, a bank may create such a demand upon its specie funds as to sweep them in a moment beyond your reach, and thus anticipate any process of seizure you can possibly devise, and leave nothing for you to reach, but irredeemable paper. Nay, even with issues at the most prudent rate, it might find its interest in the expenditure of its whole specie in the purchase of stocks, or other paper, not immediately convertible, and with the innumerable agents it could command, in the most secret manner convey it away while you were demanding payment, and thus foil you by that inflexible law, that impossibilities can be wrought by no man; that payment cannot be forced from him who has parted with the means of payment. But grant that the specie remains in the bank, as now, and its managers should deem it inexpedient, as now, to use it in the fulfilment of its engagements; by the use of no other art than that already so successfully practised, by interweaving with its own the pecuniary interests of the vicinity in which it might happen to be placed, it could cause every member of that community to spring forward as one man in its defence, and manly bosoms and warm hearts, excited and misled for the occasion, would present a living wall, over which you would not pass, if you could, to get at the insolent corporation defying your just claims. Did you not hear the Senator from South Carolina over the way, telling us a few days ago of the ramifications, not of the branches only, but of the roots also, of these institutions, penetrating as those of a tree do the natural soil, the whole ground of individual interest; tearing and subverting it wheresoever they are touched? What, then, must you expect, when you shake them for fruit, whether full or empty? What agitation, what commotion, what confusion, will you make, when time shall have given to these roots a yet wider spread and a firmer hold? When you have fixed chains upon the viewless winds, and dragged them in triumph at the wheels of your chariot, then may you find the power of controlling corporations, after you have trusted them, without violating and trampling under foot principles held sacred in the hearts of the American people. You stand in an attitude with these corporations, like that of a man who is engaged in strife with a woman; he may have the physical power to subdue her in a moment, but there are moral barriers stronger than any brute force, which surround and protect both the one and the other, and secure to them the victory in every contest. A wise man carefully avoids placing himself in the dishonorable and unprofitable belligerency before mentioned; and there is a similar chapter for us in the book of prudence. Neither will your boasted machine of a bankrupt law, such as has been proposed, avail you in the strife. It is not often that I differ from the Senator

SEPT. 21, 1837.]

Sub-Treasury Bill.

[SENATE.]

from Missouri, or the present Chief Magistrate of the nation, but I am compelled to say that, according to my present belief, no such bankrupt law as the one proposed, can be constitutionally passed. Congress has power, under the constitution, to establish uniform laws on the subject of bankruptcies throughout the United States; but its power is limited to the passage of uniform laws. It admits of very grave question whether any law can be considered uniform which is limited to particular classes of such persons as may be the subject of it. I know that it is insisted that bankrupt means, *ex vi termini*, a broken bank; and perhaps that may have been originally the sole use of the term; but I am induced to believe that in the construction of language we must take the one we now speak, as understood by those from whom we have derived it, our Anglo-Saxon ancestors. At any rate, we must look to the signification of language at the time it was used in the instrument to be construed, and we well know that at that time all persons who dealt on credit were held to be liable to bankruptcy; and, unless all such persons were made subject to the law, it might well be questioned whether it is uniform. But even if we allow that a law would properly be called uniform which contained the same provisions for every State in the Union, still, being a debatable question, it would excite the public mind; and in favor of the banks, the law would be rendered powerless by public opinion. This, then, is a mechanical power upon which you cannot rely, and none other is left to aid you in coercing the will of those corporations to the performance of duty.

I have thus suggested some of the objections which present themselves to my mind, to two of the plans: and the question may be asked—and it is proper it should be answered—whether any of them apply to the third and only remaining alternative measure? and my response is, no. It is not, like the United States Bank, at war with any declaration of public opinion. To that ordeal it is yet to be submitted, and I am well content that it shall be brought to so just a standard, and that it shall be pressed no longer than it is found in accordance with it. It has no hostility from the Executive to encounter; for it is his own offspring, and he stands pledged to give it a fair chance for existence. It implies the assumption of no powers not clearly granted by the constitution; and whether expedient or not, is the only question for which, I trust, before I have finished, I shall have succeeded in making at least a show of probability. It has never failed; for, so far as this Government is concerned, it is yet a matter of trial, and we are doomed to hear, in relation to it, the cry of experiment! experiment! experiment! until the ear aches with the sound. Like every thing human, it is liable to mal-administration, and of course to failure; but it carries within itself no principle of inevitable fallibility, like the banking system. Scattered as your treasure will be, under it, from one end of the continent to the other, it will not be likely to meet with any co-extensive agent of destruction; and, although some inconsiderable rill may be dried up here and there, the great river of your revenue will be supplied from others, and flow on copiously and freely. Times of difficulty will not disappoint you in the use of your fund in hand, for it will be in the solid metals—the most unchangeable and indestructible of sublunary things—and therefore so fitly chosen as standards of value. Being in the hands of the immediate agents of the Government, no party combination can be strong enough, without an actual revolution, to divert it from the use to which the people, through their constituted representatives, shall think proper to direct its application, and thereby subject those representatives to other domination than that of the will of their constituents, constitutionally expressed. Neither can any great difficulty be interposed by those who may be your depositaries, in the way of delivering it up.

There will be no middle man to stand between the actual custodian of the money and responsibility; there will be no community to back him in contumacious refusal to comply with his duty; no real or fancied inability to meet your demands can be offered in extenuation of neglect; no honest men, unconsciously enlisted by interest, by gratitude, by innumerable insidious appeals to ardent natures, be induced to step forward, and oppose their bodies to the execution of the laws. No party spirit can be rallied in behalf of the delinquent. No shout of party triumph will be heard to animate his soul to bold defiance; but he will stand alone, a conspicuous mark for that approbation which fidelity is sure to win, or the sober condemnation which is as certainly visited by enlightened public opinion upon a faithless or factious public servant.

The plan is recommended to us by its simplicity, according in this with the whole genius of our institutions. One main object of our political forefathers was to deprive Government of all that mysticism with which kinglycraft had invested it. It was intended that our system of Government should be so simple that every citizen (as all take part in its action) should be capable of comprehending it; that whosoever could read, or hear read, our excellent constitution, should understand its meaning, and be able to judge of the fidelity of those to whom its administration was committed. The simplicity of this plan, then, is in beautiful conformity with the rest of the system of which it is intended to constitute a part.

But it has the decision of time in its behalf. For aught we know to the contrary, it has been substantially the practice of all Governments, except our own, up to the present day. To various modifications it has doubtless been subjected; but, even in England, wide space is kept between the exchequer and the bank.

The perfect accessibility of the Government to its proper funds is a circumstance against which it would take much to weigh with any prospect of overbalancing it. Yet objections have been urged to the plan, and it is proper we should consider them. And, first, it is said the revenue will be exposed to speculation much more than it is at present. Why so? It is pertinently asked by the President in his message, do vaults become less secure in a Treasury Department than when located in a banking house? And it might have been also asked, do men change their natures less from becoming officers in a bank than in the employment of the Government? Surely the same securities can be provided in the one case as in the other. Nay, is not the advantage on the side of the Government? There is no limit to the penalties you may impose upon an unfaithful public agent. You may bind him hand and foot, and cast him into the most loathsome dungeon; and, if that be not enough, you can doom him to a felon's death; fasten upon him a stigma which will not leave him even in his festering shroud, but cling with relentless hold to his children after him. It is true, you cannot make men honest by legislation, but you can make it so obviously their interest to be so, as to enable them to overcome the temptations which beset them. It is the hope of escaping detection, for a length of time, and thereby increasing the probability of escaping altogether, that most commonly sustains men in the perpetration of deeds of fraud; but in the present admirable system of accounting with the Treasury of the United States, detection would be likely to follow so soon upon the commission of the offence, that little inducement would be found to engage in it. If it is to be received as a settled truth, that men cannot be trusted with money under any of the sanctions which the law is able to impose for its safe-keeping, we may as well make up our minds to abandon civil society at once as an impracticable absurdity. But the Senator from Virginia insists that experience is against us, and cites an instance from his own State, where high character and reputed integrity in the officer, had not

SENATE.]

Sub-Treasury Bill.

[SEPT. 21, 1837.]

been sufficient to protect the public treasure; but instances might likewise be cited, were I disposed to do so, where defalcation had taken place where it was the custom to make deposits in a bank, which custom was enforced by law. There is less danger, it is said, to the public under the banking system, although the stockholders may be exposed to the losses which would have otherwise fallen upon the Government. In answer to this, I say, in the first place, there never has yet been a winding up of the transactions of the Government with the banks, so that it is impossible to say what have been its losses; but granting the position to be correct, I answer further, that, in a national point of view, one evil is nearly as great as the other. But, after all, the same officers whom you are now required to trust with the collection of the money, and whose honesty must, of necessity, be subjected to that test, are those who, under the plan proposed, would be its depositories, and but little additional demand would therefore be made upon their integrity. Yet, for the sake of the argument, let it be conceded that each particular portion of the public Treasury would be subjected to some additional hazard; it seems to me altogether indisputable that the aggregate would be infinitely less exposed to be lost, or rendered useless; and who is there who would not be willing to put a portion of his estate in greater hazard, to render the balance more secure, or even to make an absolute loss by paying an insurance? This consideration alone is, I think, altogether sufficient to dispose of the argument.

I am glad to find that no gentleman has in debate seriously relied upon the additional expense to which the sub-Treasury system, as it has been called, would subject the nation; but it has been adverted to in the newspapers, and we may perhaps yet hear it on this floor. It is shown to be very inconsiderable; and, even if it were much greater, the advantages proposed are nothing, if that expense, in being weighed against them, would not be as a feather to a pound weight.

The Senator from Virginia objects to the plan proposed, on account of its tendency to produce another charter for a United States Bank. In the depreciation of such a result I will most cordially unite with that gentleman; but I differ with him altogether in his anticipations of the *modus operandi* of the two plans upon the public mind. I can see in the plan to which he clings with so much tenacity the most direct tendency to the re-establishment of that institution so odious to us both. Let the maxim once be settled that the fiscal concerns of this Government cannot be managed without bank agency, and the blade of wheat does not more certainly spring from the grain deposited in the earth, than a United States Bank will spring into being from that maxim. Every one must see, every one will come to see, that if this bank agency be necessary, a bank deriving its existence and form, and the law of its action, from the Government which uses it, must possess advantages over every other, and the constitution will be moulded to meet this conviction. But the direct tendency of resorting to an independent Treasury will be to impress the public with the belief that the Government can manage its affairs without a bank. If the plan operates successfully, this belief will gather strength from day to day, and anti-bank habits become established, while these institutions, deprived of the stimulus which the Government deposits have ministered, will gradually diminish in number until they become apportioned to the real commercial demands of the country. At the worst, should our scheme fail, it will merely bring us back to the position that bank agency is necessary for conducting the fiscal concerns of the Government, and we shall only have reached that degree of approximation to a United States Bank at which the Senator from Virginia sets out.

It is objected to the plan proposed, that it will increase Executive patronage. With a certain class of politicians

this has been a matter of vast alarm, and they have become so much accustomed to associate with this expression certain most deplorable incidents, that they can never hear it without having this horrible array presented to their imaginations. Now men are exceedingly prone to mistake names for things; and although there is something very imposing in the name of patronage, yet I am vastly mistaken if the Executive patronage of this Government is not to him who wields it a principle of weakness rather than of strength. For every one on whom it is in his power to confer an office, ten greedy expectants are disappointed, and feel that some great personal merit has been overlooked in them, or some important service ungratefully forgotten. How can one admire and support the man who has so little discernment as to be blind to one's merits, or so little heart as to be insensible to the zeal and devotion with which one has advocated his cause? And, what is still worse, it is by no means certain that the prizeholder will be true to his allegiance. So far as my experience goes, in a large majority of cases, a man no sooner receives an appointment than he becomes adverse to the administration from which he received it. This, at the first blush, may seem a little remarkable; but our wonder diminishes when we advert to the deceitfulness of the human heart, and find how large a portion of it is in the quiet possession of personal vanity and pride. Generally speaking, the incumbent has reached the acme of any reasonable expectations he could form; and hope, therefore, no longer keeps him steadfast with promises for the future. There is nothing then but the fear of removal; and this power of the Executive is watched by the public with so much jealousy, that few are willing to exercise it without some apparent and satisfactory reason. The mere change of political opinion will seldom do for a reason, and is therefore seldom relied upon. The danger, therefore, is just enough to enable a man to take credit to himself for great independence, who can say, "You see I am an office-holder, but that does not hinder me from differing from the Government, and finding fault when I see occasion." And what is there human with which one cannot find fault who has fame or any thing else to gain by so doing? But, granting that the patronage of the Executive was an available means of increasing his partisans, how much more efficient could that means be rendered through the instrumentality of the banks, than when brought directly to bear upon the individuals who might be applicants for office, as is urged, with great force and propriety, in the President's message. But this brings me to a view of the subject, startling, in the highest degree, in the contemplated continuance of the league of banks in connexion with the revenue of the country. At present the President and the money power of the country are in opposition, and happy will it be if they always remain so. But do you not see that the system proposed will have the tendency in the end to bring them to co-operation and alliance? Parties in this country may be subdivided as you please, but the grand distinction at last is that between those who are in favor of a strong and splendid central Government, absorbing all the sovereign powers once possessed by the States, by the most liberal and enlarged construction of the constitution of the Union, and those who are in favor of a limited and economical Federal Government, exercising no more powers than those expressly conferred by the constitution, and leaving all beyond to be exerted by the States. To the former of these, the mercantile classes, comprehending nearly all the moneyed power of the country, will generally be found to belong; and, if you want a proof of this, you will find it in their habit of looking up to this Government as the great *parens patriæ* in all emergencies, as on the present occasion. Accustomed to handle large sums of money, which they accumulate without much bodily toil, living in ease, and splendor not enjoyed by any other

SEPT. 21, 1837.]

Sub-Treasury Bill.

[SENATE.]

large class of community, the common principles of human nature incline them to aristocratic feelings. From whence, I pray you, is the failing aristocracy of England replenished, but from the mercantile classes? acquiring by their wealth consequence, and purchasing therewith baronial estates, the title in some way or other frequently follows. From the beginning of history to the present day, merchants have become princes, and constituted the aristocracy of their respective countries. Now, one of the dangers to which our institutions are exposed, and that of which many politicians feel, or affect to feel, the greatest dread, is from Executive usurpation, ending in the assumption of regal, imperial, or dictatorial power. To this, while the moneyed power of the country is adverse to him personally, it will present a most formidable barrier, and in its bold struggle in defence of its own liberty, will secure that of the whole nation. Who contributed so much to curbing the regal power in England, and placing the liberties of the people upon a firm basis, as the merchants of London? Mankind must ever be their debtor for their noble efforts in favor of free principles. But a President who would desire to make himself a monarch would seek to surround himself with an aristocracy devoted to his will; and where would he so naturally seek for one as in the moneyed power of the country? while, at the same time, by using it, he would be disarming the very opposition to his plans from whom he would have most reason to fear a defeat. But, stopping far short of that, in the nature of things, we might suppose the Executive of the country well disposed to give vigor to the central Government, and a union between him and the moneyed power of the land would, in the pursuit of such common design, go very far in its accomplishment. I believe the strife between the two great parties in this country one of the best securities for the liberties of the nation, and I do not desire that it should ever cease. Nature and art, in all their operations, proceed upon opposing to each other antagonist principles: the ship makes her way towards her destined port by means of the antagonistic action of her rudder and the wind; and the wise politician in this country will not desire to see a union of interest between the Government and its great moneyed power. Rather let them be kept in great opposition; and never let them be brought into united action.

Another objection which has been urged against the plan under consideration is, that it would be a virtual surrender to the Executive of the purse; and the old cry is raised of the union in the same person of the purse and the sword. Upon this point I have only to say, if it be so, it is the fault of the constitution itself. By it, only three classes of public agents are recognised—the executive, the legislative, and the judicial. The latter is out of the question, so far as the present matter is concerned; and, as respects the legislative, it is sufficient to say that it was never intended its sessions should be perpetual; and when those sessions are dissolved for any purpose of immediate action, the Legislature has no existence. Meantime the treasures which it has raised must be in the custody of some branch of the Government; and, from what has been already said, this can be the Executive only. No fourth estate, no bank power, is created or recognised by the constitution for this purpose, and its provisions are only fulfilled when the revenue goes into the hands of the Executive; but, under the name of the Executive, it is the President only who is pointed at in the expression of fears for the possession of the purse. And why should such fears be entertained? The President would be as far removed as now from any personal contact with the public treasure. The machinery is now in operation (and, if it requires improvement, so let it be done) by which the public treasure is to be received and paid out; and the hand of the President could not control a dollar, except for purposes prescribed by law, with-

out committing a burglary or a great public fraud. There would be at least two persons between him and the public money—the Secretary of the Treasury and the Treasurer; and it would be, I should think, a violent presumption, and one little creditable to us as a people, if one to whom we have confided so high and dignified a trust as the Presidency of these States could be guilty of a burglary or a great public fraud.

The Senator from Virginia has appealed to the wisdom of past ages, and meekly offers to subdue the dictates of his own judgment to their decisions; and, amongst others, he refers to the great apostle of liberty, Thomas Jefferson. The opinions of that distinguished man upon political subjects have always, with me, the greatest weight, and I think it will be found, that whenever in a situation to express his own deliberate convictions upon this important subject, they have uniformly been in our favor.

As a member of the first cabinet formed under our constitution, he recommended a plan similar to ours to President Washington, and in a comparatively recent letter written upon this subject, his sentiments are all with us. I will take the liberty of reading a portion of this letter to the Senate, and I will read the more of it because some few sentences have a bearing upon a subject discussed a few days ago, relative to the issue of Treasury notes. [Here Mr. S. read from the fourth volume of Mr. Jefferson's works, letter the 90th, to John W. Eppes, which is published as an appendix to this speech. When Mr. S. had finished reading, he proceeded.] I have thus, Mr. President, read from this letter, for the double purpose of showing Mr. Jefferson's views upon the matters in question, and of fortifying myself with his authority in an opinion expressed by me some time ago, that the banking system, as now practised in this country, is a manifest absurdity. I have now closed all that I have to say upon the matter under consideration, as touching merely the fiscal concerns of the Government, and will proceed to bestow a few reflections upon them as affecting the currency of the country, and its commercial prosperity.

I am next, as briefly as possible, to consider the subject as relates to the currency; and upon this point, I agree fully with the President that there is no constitutional power in Congress to regulate the paper currency of the States. The constitution truly has given the power to Congress to coin money, and regulate the value thereof, and of foreign coin. The power conferred, then, is over coin only; and whatever verbal disagreements may have arisen among us, no one, I presume, will contend that any species of paper money is included under the term coin. So much for the letter of the constitution; and the spirit of it I think (if gentlemen will insist that it has a spirit) is equally against it. Any one who will examine its various provisions, cannot fail to perceive that its wise and sagacious framers looked with the most jealous eye upon a paper currency, and fixed their hearts upon the precious metals as the only proper circulating medium for this great Union as sanctioned by public authority. To the General Government no power was given (and, as the history of the time shows us, was purposely withheld) to create corporations without the District, where its legislative power is absolute. The same power never having been taken from the States, (as has been expressly decided,) was left to them within their respective limits, and all of them have exercised it. To them, therefore, it belongs to regulate, if they can, these creatures of their own hands; certain it is no power is conferred upon us by the constitution to do so. It is contended, however, that although we have no direct power to regulate the paper currency of the States, we may do so indirectly. I admit that if in the pursuit of our legitimate objects we should incidentally adopt measures affecting the currency, we shall not be subject to blame, and if they affect it beneficially, so much the better. But we have no

SENATE.]

Sub-Treasury Bill.

[SEPT. 21, 1837.]

right, under the mere pretence of furthering an object placed by the constitution within our control, to be aiming in fact at the regulation of another not so placed. It is a fraud upon the nation, upon our constituents, and ourselves. Such was the process by which the odious, unjust, and unconstitutional measure of a tariff for protection was fastened upon us, in the resistance of which a portion of this Union was placed in hostile attitude against the remainder. Akin to this is the proposal of imposing a stamp duty on all bank notes below a certain denomination, and all other measures for the potential exercise of powers that we cannot openly claim.

But if you had the constitutional power, you have not the physical power to control a currency furnished by corporations. I have already made myself intelligible, I trust, upon that point, and shown that a bankruptcy law, the most probable means of control, is not within your reach. The plan proposed by the Senator from Virginia is altogether inadequate; it wants both vigor and quickness of action, and in my judgment he might as well attempt to sweeten the bit or waters of the Dead sea, by dropping in lumps of sugar, as to infuse health and soundness into the diseased paper circulation by his feeble process. It can only operate upon those banks who agree to receive your deposits, and whose paper you agree to receive in the payment of public dues. The notes of banks issuing small notes will either be taken by them, or they will not; if they do take them, they become as current as their own, and have within them as many principles of currency. If they do not receive them, they will still be current, and the more so, as the banks in league with the Government will be removed from competition in the small note circulation. The argument of the Senator from South Carolina who sits near me, was misunderstood by me, or it has been misunderstood by others, with regard to the currency of bank notes. He has been supposed to have said, that bank notes owe their whole currency to their being receivable in debts to this Government. I did not so understand him, and I do not admit the truth of the position. They unquestionably owe the larger portion of their credit to this cause, but then they derive a good portion of their credit from their being receivable in debts to the State Governments—to the confidence which many will always have in the institutions which issue them—to the established custom of the country which has rendered them current—and to the eagerness with which every thing at all akin to money is laid hold of when offered, lest nothing better may be presented, and the chance of getting even that pass away. These considerations will continue long to sustain the circulation of small notes, and many banks will find it too profitable to issue them to be tempted by any prospect of gain which you hold out to them in the plan of the Senator from Virginia to abandon it. Add to this, that while you continue your connexion with banks, you will never accomplish one of the great purposes of legislation—public repose and quiet. What we now do, ought, if possible, to be well done; and it is far more important than that it should be done hastily. In your partnership with the banks they will always find subjects of complaint against you, make one concession the ground of right to demand another, and, whenever refused, raise a clamor which will excite the elements of political strife from one end of the continent to the other.

I have said that it does not belong to this Government to regulate credit and paper currency, and I insist further that if this were an absolute, unlimited Government, it would be expedient for it to interfere as little with such matters as possible. In the first place, it is a subject to which nature herself has furnished laws, a few of which are simple and well understood; but many of them are very occult, and scarcely perceptible, and the most sagacious mind is incapable of foreseeing the result even of a few of their combinations, and must therefore act with great

rashness in meddling unnecessarily with matters in which great evils may be produced in the end, without any well-founded confidence of advantages in anticipation. The most enlightened writers on political economy, in modern times, denounce the ignorant quackery which formerly shackled trade with multifarious laws and regulations, and have discovered that freedom is her element. Every attempt to control her, diminishes her freedom; and those who are now beseeching Congress to take her under its special charge, would, if their prayer were granted, ere long discover, that when trade lays herself at the footstool of power for protection, she has deserted her native element, has voluntarily torn away the plumage which sustains her in her prosperous flight, and, having become faint and languishing, will sigh vainly for the return of her health and buoyancy. We are told, too, of the value of credit and its connexion with freedom; and if I may be allowed to refer to a letter made public some weeks ago, coming from a high quarter, I will take the liberty of saying that a clink of words, and apparent beauty of sentiment which it contains, is calculated to bear away the public mind to wrong conclusions. It is there said "that credit distinguishes the free Government from the despotic," and the connexion in which the expression is used would lead one to suppose that the truth of the sentiment implied that, to keep a nation free, you must maintain credit; whereas the real beauty of the remark is found in the truth being precisely the other way. You cannot make a nation free by giving her credit, but you can give her credit by making her free. Let us not mistake the relationship of freedom and credit; it is not collateral but lineal; and it is likewise important that we should not mistake the child for the parent. Credit is the offspring of freedom, and not freedom the offspring of credit. God forbid that I should be an enemy to credit; but I am desirous to see a natural, spontaneous credit, resting upon a sound basis; not a spurious, factitious credit, swelling like a balloon, with nothing but wind—as buoyant and as frail. You cannot legislate credit into healthy existence; but in the attempt to do so you may give it temporary plethora, destined to end in apoplexy and death. Credit is most delicate in its nature, and few hands are gentle enough to touch it. The slightest causes elevate or depress it. Its extreme sensibility is strikingly illustrated by a passage in Roman history, which now occurs to my mind. It was during what is called the piratical war, or the war against the pirates. Provisions at Rome and in the surrounding country had become extremely scarce, and could only be had at enormous prices. The supplies for the army and navy were nearly exhausted, and there was but a cheerless prospect of having them renewed. At this crisis, the Senate resolved to appoint Pompey the Great generalissimo of the expedition against the pirates, merely in reference to his military talents and successes; but, strange to tell, prices immediately came down, and provisions were abundant. Here, then, was a cause instantly and powerfully affecting prices and credit, which no one could have foreseen; and yet the writers of the day assure us it is so. And is it possible, while this Government remains so intimately connected with the paper currency and credits of the country, that it can fail greatly to affect them by every movement? Like a great giant, it has only to move one of its mighty legs or arms, and all the elements around it are immediately thrown into convulsions. This dangerous juxtaposition, therefore, ought to cease—so embarrassing to the Government and threatening to the paper currency and credit. No matter how urgent the necessity may be in other respects, Government must move with caution, or not move at all, lest she may derange the currency; or, if looking solely, or even mainly, to the constitutional ends of its creation, it does act, the air is immediately rent with cries of distress, and the Government is told it has done the mischief and must repair it; that it must bind

SEPT. 21, 1837.]

Sub-Treasury Bill.

[SENATE.]

up the wounds of a bleeding country; nay, and pour into them oil and wine, too, from the Treasury. Such was the outcry on the removal of the deposits; such upon the refusal to recharter the United States Bank; such upon the issue of the Treasury circular; all of them measures strictly political, and adopted with reference to the action of the Government as such; but complicated as it had become with the paper currency and credits of the country, nothing should have been done, every thing should have been left undone, it is said, which, in the end, happened to affect them. What remedy is there for this evil but the disconnection proposed?

But although the Government, whether united or not to the banks in her fiscal operations, can do but little legitimately towards regulating their paper currency, she can, by that union, do much to inflame the evils, and, by so doing, work much injustice. She can by that union greatly increase the credit of those institutions, and give a wider circulation to their paper issues, and in this way increase what are called mercantile facilities. The Senator from South Carolina has illustrated this matter by a figure so strong and forcible, that it could not fail, I think, to have brought conviction to all who heard him. Yes, sir, take the beggar from the street, and stipulate with him that nothing but gold and silver and his notes will be received in payment of debts to this Government, and Cæsar himself was never richer than he would instantly become.

But what right have the merchants or the banks to make a profit upon the Government funds, to the exclusion, or nearly to the exclusion, of all other classes? It is vain to set up the plea that the benefit of one class is the benefit of all; for the same plea is equally applicable to any act of inequality and injustice, however monstrous. Every one knows that bank stockholders are mainly confined to a very few classes, and it is those who make the profits upon the public funds while in the custody of banks. Tell me not that by expansion of the currency, the farmer and the laborer obtain better prices for their produce and their labor. Nominally it is so; but they must, in at least an equal proportion, pay for what they consume; and of those who are fortunate enough to lay aside anything above their actual expenses, the ordinary subjects of their investments increase in nominal value with the expansion of the currency, and they hold them liable to all the fluctuations of that uncertain element, rendered so entirely for the profit of others. But leaving, as time compels me to do, the inequality of its operations upon individuals, how much more unequal is it in its local operations? Where are the banks? In mercantile communities. Where are our mercantile communities? With a very few exceptions, in our north-eastern country. There, not only the bank stockholders and merchants, but all who are near them and around them, partake of the benefit in some degree, as the plat of ground which lies near a stream, although the prolific shower may not fall immediately upon it, is yet refreshed and fertilized by the moisture diffused through the atmosphere. Why is it that plenty and prosperity rest on the bleak and barren hills of the North, while the sunny and alluvial valleys of the South are daily becoming more and more impoverished? What is it but the result of the partial and unconstitutional system under which we have been living? In vain does the constitution declare that taxation shall be equal, if, when collected, some favored regions are to be fostered and enriched by it, while others are left to struggle on, worse than neglected, with no other benison but that of nature.

As a sort of balance to this argument, the Senator from Indiana, who has just addressed you, insists that the effect of collecting the Government dues in gold and silver, will be to drain all the specie from the West, as little or none of the public expenditures will be in that quarter. Now, I am at issue with that Senator, both as to the fact and

the inference he draws from it. I do not agree that the public expenditures have not been in greater proportions on the Mississippi than on the seaboard. If I am correctly informed, more money has been paid to the Indians for extinguishing their title to the lands in the Senator's own State, than the whole are worth; and I remember that no longer ago than last winter, I myself rose in my place, and protested against the whole of the public funds being swallowed up in the great valley of the Mississippi, so large were the appropriations in that direction. Doubtless ample expenditures will be made in the West. But, whether or not, if they have demand for specie in the West, thither it will go; and if it does not, it will owe its exclusion to the bank paper which the Western people will themselves think proper to substitute for it.

The Government, I have already said, cannot continue her connexion with the banks without stimulating them into factitious credit, and increasing the tendency to commercial and speculative enterprise, which is already great enough, Heaven knows, and subtracting from the laboring and productive classes, the real bone and sinew, the true human *materiel* of the country. This is too obvious, and the mischief too great to require elaboration. But besides this, extravagance will be the natural offspring of the system. We have already seen the tendency of this evil to increase; and increase it will under the continuance of the system, until republican simplicity will be annihilated among us. Extravagance, and its companion, idleness, were the overthrow of all the ancient republics; ay, and of the modern ones too; and little San Marino shines forth a phenomenon for admiration, saved from the wreck which has overtaken others, by her poverty and parsimonious economy.

The union of the Government with the banks, is calculated, I have said, greatly to influence the natural evils of the banking system. Some of them I have already mentioned; but one remains for me to advert to, not among the least, if not the very greatest. This is the mischief of sudden expansions and contractions. To this mischief no one can be insensible, for all have in one way or other felt its force. It has a tendency to make us a nation of gamblers, by the constant stimulus to that spirit which finds a place in almost every bosom, from the savage to the sage, and which it is one of the great objects of a wholesome education to subdue. But the frequent and sudden reverses to which every man is exposed, of being rendered a nabob to-day by an expansion, and a beggar to-morrow by a contraction, must, in process of time, engender all that loose morality which characterizes the professed worshippers at the shrine of fortune. Such is the effect upon holders of property; and upon the laboring man it is, if possible, still more baneful; for him there is no hour of prosperity, but he suffers greatly, if not equally, both in the ebb and flow of the tide. In a contraction, money of course becomes scarce, and the laborer, whose only commodity is his labor, is compelled to bring it daily into the market, and take whatever price it may command; while the holders of provisions, less limited in point of time for the conversion of their commodities into money, hold them back, not willing to submit to the diminished prices, and in the meantime the laborer must starve, or buy at the price demanded. On the other hand, when an expansion takes place, and money becomes plenty, labor is the last thing to find the level. The continual necessity which the laborer is under to bring his commodity into the market, prevents any competition in demand, and it is not until the general spring which is given to enterprise has opened for it new resources, that an increased demand for labor makes an increase in price. In the meantime the laborer must purchase those commodities upon which speculation is most apt to seize—the necessities of life. It is impossible for the Government to remain connected with the banks without contributing to

SENATE.]

Sub-Treasury Bill.

[SEPT. 21, 1837.]

this mischief; for when the supplies exceed much the necessities of the Government, they must lie in the banks, whose directors must resist the strongest, or, at least, most general passion of the human heart—cupidity, if they suffer them to remain unused, and in using them, an artificial expansion of the currency is of course created. On the other hand; when the Government shall find it necessary to make heavy drafts upon the deposit banks, a great contraction is the inevitable consequence. These are evils which the Government cannot prevent, but she should abstain, as far as possible, from exciting them; and this she can do only by disconnexion.

These evils, if they go on to increase, as they must and will do, if the exciting causes are continued in action, (and no exciting cause is equal to the union of the banks with the Treasury,) will, in the end, bring upon this country a pecuniary catastrophe which it is frightful to anticipate; and so strong, in that event, will be the revulsion of public opinion against them, that their real capacity for utility will be overlooked, and the whole of them cast away among the lumber of past ages. In this view, no sincere and enlightened friend of those institutions should desire a continuance of the imprudent connexion. But the separation will not be merely negative in its effects. It will create a demand for specie in this country, and water does not more certainly follow the ditch you excavate below the level of a pond with which you connect it, than specie finds its way wherever a particular demand is created. This specie will naturally flow at first into the banks, and, widening their specie basis, give them additional strength; their notes will still supply as much as ever the ordinary channels of trade, whilst their specie, having no tendency to emigration, will only be drawn out as the Government demands shall accrue. But when thus drawn by the Government into the Treasury, it will not remain there in large quantities, but, being required only for the payment of the Government creditors, will thus, or the greater portion of it at least, be thrown again into circulation by those creditors, (who are seldom hoarders of money,) and gradually find its way back to the banks, to be again drawn out in redemption of their notes; repeat the process of going to the Treasury, to be paid out again to the Government creditor, and be by him thrown into circulation, to return once more to the banks. This rotation must have a healthful operation upon the currency, and upon those who supply it; and, in addition to this, it will have a tendency to prevent that great aggravator of other evils—banking upon bank paper; for the demands then made not being confined to bank upon bank, cannot be met by the mere presentation of other bank paper; but every bank being liable to be called upon with a considerable portion of its notes for specie, must keep itself prepared to meet them, and must regulate its issues accordingly. Another advantage to the banks, by no means inconsiderable, I think, resulting from disconnexion, is that their own operations would be greatly simplified and their perils diminished. No unlooked for treasure would flow in upon them in deposit, demanding some provision for its use, and thus disturbing the even tenor of their course. No sudden demand for what had been deposited would put them at their wit's end for the means of returning it; but, pursuing a regular system, not subject to such unforeseen fluctuations, they would accomplish legitimate, just, and praiseworthy objects—the realization of reasonable profits, with safety to themselves, and convenience to the community.

To these advantages some objections are opposed; and here I must be allowed to say, that from the high-minded, honorable, and talented Senator from Virginia, an argument has proceeded, which I am surprised to hear upon this floor, and especially from him. I have seen it among the newspaper slang of the day, to which I thought it adapted. The Senator from Virginia disclaims it as an *argumentum*

ad captandum. I believe him sincere. I am persuaded he did not so intend to use it. But, after all, it can claim no higher rank. It has a specious acceptability to the popular ear, but embodies no element of sound argumentation. It is, that, by the adoption of the system proposed by the committee, with the amendment offered by the Senator from South Carolina, one currency would be provided for the Government, and another for the people—the better for the former—the inferior for the latter. I am sickened and amazed at a practice recently but too fashionable, and upon which my colleague has already so properly and forcibly remarked, of treating the Government as something alien from the people. What is the Government, and who compose it? Is not the Government a mere agency created by the people, for certain specified purposes—a perfect nonentity beyond those purposes? Is it a thing which can have interests separate from the mass of the people? Are not the individuals in whose persons this ideal existence is temporarily incorporated themselves portions of the people? and are not the interests which they have in their national existence, as a portion of the people, infinitely beyond any separate one they can possibly claim, for the brief hour in which they strut and act their parts upon this elevated stage? This is the people's Government; it exists but by their will, and when they have done with it, or it acts in opposition to that will, they can dissolve it as by a breath. Resistance on its part would be as vain as that of a school boy with a reed to a Roman soldier in full armor. Government can have no interests but those of the people; but the people themselves have interests as a body politic, and they have interests as individuals; the former mainly are committed to us, and the latter to the respective States. But how, I pray you, upon this imaginary division of interests, is there proposed by the measure a sounder currency for one than for the other? Does the gentleman admit that the paper money is inferior in value to the gold and silver? If he does so, is not the admission *felo de se* to his proposal—which is defended, if I have understood him, upon the ground that paper is not depreciated, and can be saved from depreciation, and is therefore equal to gold and silver? And, between equal things, how can the terms better and worse, inferior and superior, be applied? But I do not admit that they are equal; and it is mainly upon the ground that they are not equal, and, although men may so imagine, that they can never be really so, that I am opposed to this scheme. For the people, as individuals, I have no right to legislate, and I therefore leave them in the enjoyment of their birthright, to take what they please, and call it money. But for this Government Congress has a right to legislate; and I esteem it, for one, a part of my duty, as a portion of that body, to demand for the people, in their political character, the currency which the constitution acknowledges; the currency which admits of least fluctuation; the currency which the public creditor has a right to demand, and that which can be collected and disbursed with least injury to the public. But, in pressing the argument, it is said the public creditors, while thus nominally receiving their stipulated dues, are in fact receiving more. Which, I pray you, is the standard of value—gold and silver or paper? If the latter, it is idle to argue; and if the former, I would further ask if it is not in that you have promised to pay them? And if so, is it a ground of complaint that you have fulfilled your engagements? If you paid the public creditor by force in paper, he might well complain that you had paid him so much per centum less than you had promised; but it never could justly be said, when you paid him in gold, that you had paid him more. But a fancy picture has been drawn of the officers of Government filling their coffers with golden deposits, which they receive in compensation for their services. Is it not a picture merely imaginary, contradicting all truth and experience? It is

SEPT. 21, 1837.]

Sub-Treasury Bill.

[SENATE.]

notorious that public men, both in England and this country, (exclusive of the pension system, which is there in extensive use,) who are dependent upon their compensation, seldom know affluence; on the contrary, they live from hand to mouth. Every dollar they receive is spent as soon as they receive it; and, such as it is, enters into the general circulation, through their tailors, their shoemakers, their butchers, their bakers, &c.; and, so far from hoarding, they are lucky if they do not of necessity anticipate their means, and plunge themselves in debt; and if the public does not bury them when they die, it is because it will not, and leaves it to private charity to perform that office.

But the time is deemed unsuitable for any change in the measures of the Government. It is said the country is now in great agitation and distress, and we ought to postpone any important change to a season of more quiet and prosperity. Now, sir, it strikes me that the very time for a change of measures is when the country does not seem to be happy under those which are in operation, and that nothing could be more unwise than to make changes when the country was quiet and reasonably prosperous. What would be thought of the physician who, being called to the bed-side of a sick man, should say to him, "my friend, you are quite sick, it is true, but I do not think this is the time to give you medicine. Were I to do so, it would irritate your stomach, and throw your system into commotion, and you would probably feel even worse than you do now. For the present, therefore, I will leave you to your chance, and you may possibly die; but should you be so fortunate as to get better, why then I will physic you." Such seems to me to be in substance the argument against present action upon the important alternative before us.

The wisdom of the past, the practice of our own and other nations, is cited against the plan of an independent Treasury. Our own nation, I believe, stands alone in the intimate connexion which exists between the banks and the Treasury; and I have already shown, by the letter which I have read to the Senate, how much our practice is at war with the considerate opinion of one of the most enlightened of our statesmen. In England, too, where the connexion is much less intimate than here, many of her wise men do not hesitate to pronounce it, such as it is, injurious both to the bank and the State. In other nations, I believe the connexion is unknown.

The measure, finally, is spoken of as being considered a war between the Government and the banks; and this, it is said, is a false issue. I agree, Mr. President, that it is a false issue—a very false issue; so false that I, for one, would never be a party to it. I would never consent to join the Government in making war upon any class of citizens, or any class of citizens in making war upon the Government. In advocating this measure, I look to the banks as only incidentally concerned. It is a measure of great public interest, and, as I believe, of great public utility. If the banks should happen to suffer by it, I shall regret it; and if they are benefited by it, it will add to the satisfaction I expect to derive from its otherwise benign operation.

In conclusion, I must object, with my colleague, to the gloomy colors in which the condition of the country has been drawn. Some difficulties, some distresses, there may be: but the great elements of prosperity are yet rife in our land; we have yet the genial skies and fertile soil with which Nature blessed us; the flag of our country yet waves proudly in the face of the world; and she may turn, as did the Roman matron, to her industrious, talented, and gallant sons, and as Cornelia did to her beautiful and virtuous daughters, exclaiming, "These are my jewels." While these remain to her she can never be ruined; never justly complain that she is unhappy.

APPENDIX.

[From Jefferson's Correspondence, vol. IV, page 189.]

"I am sorry to see our loans begin at so exorbitant an interest. And yet, even at that, you will soon be at the bottom of the loan-bag. We are an agricultural nation. Such an one employs its sparings in the purchase or improvement of lands or stocks. The lendable money among them is chiefly that of orphans and wards in the hands of executors and guardians, and that which the farmer lays by till he has enough for the purchase in view. In such a nation there is one, and one only, resource for loans sufficient to carry them through the expense of a war; and that will always be sufficient, and in the power of an honest Government, punctual in the preservation of its faith. The fund I mean is *the mass of circulating coin*. Every one knows that, although not literally, it is nearly true that every paper dollar emitted banishes a silver one from the circulation. A nation, therefore, making its purchases and payments with bills fitted for circulation, thrusts an equal sum of coin out of circulation. This is equivalent to borrowing that sum; and yet the vender, receiving payment in a medium as effectual as coin for his purchases or payments, has no claim to interest. And so the nation may continue to issue its bills as far as its wants require, and the limits of the circulation will admit. Those limits are understood to extend with us, at present, to two hundred millions of dollars—a greater sum than would be necessary for any war. But this, the only resource which the Government could command with certainty, the States have unfortunately fooled away—nay, corruptly alienated—to swindlers and shavers, under the cover of private banks. Say, too, as an additional evil, that the disposable funds of individuals, to this great amount, have thus been withdrawn from improvement and useful enterprise, and employed in the useless, usurious, and demoralizing practices of bank directors and their accomplices. In the war of 1755, our State availed itself of this fund, by issuing a paper-money bottomed on a specific tax for its redemption, and to insure its credit bearing an interest of five per cent. Within a very short time, not a bill of this emission was to be found in circulation. It was locked up in the chests of executors, guardians, widows, farmers, &c. We then issued bills bottomed on a redeeming tax, but bearing no interest. These were readily received, and never depreciated a single farthing. In the revolutionary war, the old Congress and the States issued bills without interest, and without tax. They occupied the channels of circulation very freely, till those channels were overflowed by an excess beyond all the calls of circulation. But, although we have so im providently suffered the field of circulating medium to be filched from us by private individuals, yet I think we may recover it in part, and even in the whole, if the States will co-operate with us. If Treasury bills are emitted on a tax appropriated for their redemption in fifteen years, and (to insure preference in the first moments of competition) bearing an interest of six per cent., there is no one who would not take them in preference to the bank paper now afloat, on a principle of patriotism as well as interest; and they would be withdrawn from circulation into private hoards to a considerable amount. Their credit once established, others might be emitted, bottomed also on a tax, but not bearing interest; and, if ever their credit faltered, open public loans, on which these bills alone should be received as specie. These, operating as a sinking fund, would reduce the quantity in circulation, so as to maintain that in an equilibrium with specie. It is not easy to estimate the obstacles which, in the beginning, we should encounter in ousting the banks from their possession of the circulation; but a steady and judicious alternation of emissions and loans would reduce them in time. But, while this is going on, another measure should be pressed to recover ultimately our right to the circulation. The States

SENATE.]

Annexation of Texas—Sub-Treasury Bill.

[SEPT. 22, 1837.]

should be applied to to transfer the right of issuing circulating paper to Congress exclusively, *in perpetuum*, if possible, but during the war at least, with a saving of charter rights. I believe that every State west and south of Connecticut river, except Delaware, would immediately do it; and the others would follow in time. Congress would, of course, begin by obliging unchartered banks to wind up their affairs within a short time, and the others as their charters expired, forbidding the subsequent circulation of their paper. This they would supply with their own, bottomed, every emission, on an adequate tax, and bearing or not bearing interest, as the state of the public pulse should indicate. Even in the non-complying States, these bills would make their way, and supplant the unfunded paper of their banks by their solidity, by the universality of their currency, and by their receivability for customs and taxes. It would be in their power, too, to curtail those banks to the amount of their actual specie, by gathering up their paper, and running it constantly on them. The national paper might thus take place even in the non-complying States. In this way, I am not without a hope that this great, this sole resource for loans in an agricultural country might yet be recovered for the use of the nation during war; and, if obtained *in perpetuum*, it would always be sufficient to carry us through any war: provided that, in the interval between war and war, all the outstanding paper should be called in, coin be permitted to flow in again, and to hold the field of circulation until another war should require its yielding place again to the national medium.

But, it will be asked, are we to have no banks? Are merchants and others to be deprived of the resource of short accommodations, found so convenient? I answer, let us have banks; but let them be such as are alone to be found in any country on earth except Great Britain. There is not a bank of discount on the continent of Europe (at least there was not one when I was there) which offers any thing but cash in exchange for discounted bills. No one has a natural right to the trade of a money-lender but he who has the money to lend. Let those, then, among us who have a moneyed capital, and who prefer employing it in loans rather than otherwise, set up banks, and give cash or national bills for the notes they discount. Perhaps, to encourage them, a larger interest than is legal in the other cases might be allowed them, on the condition of their lending for short periods only. It is from Great Britain we copy the idea of giving paper in exchange for discounted bills; and, while we have derived from that country some good principles of government and legislation, we unfortunately run into the most servile imitation of all her practices, ruinous as they prove to her, and with the gulf yawning before us into which those very practices are precipitating her. The unlimited emission of bank paper has banished all her specie, and is now, by depreciation, acknowledged by her own statesmen, carrying her rapidly to bankruptcy, as it did France, as it did us, and will do us again, and every country permitting paper to be circulated, other than that by public authority, rigorously limited to the just measure for circulation. Private fortunes, in the present state of our circulation, are at the mercy of those self-created money-lenders, and are prostrated by the floods of nominal money with which their avarice deluges us. He who lent his money to the public or to an individual before the institution of the United States Bank, twenty years ago, when wheat was well sold at a dollar the bushel, and receives now his nominal sum when it sells at two dollars, is cheated of half his fortune. And by whom? By the banks; which, since that, have thrown into circulation ten dollars of their nominal money where was one at that time."

When Mr. STRANGE had concluded his remarks,

On motion of Mr. TALLMADGE, the Senate adjourned.

FRIDAY, SEPTEMBER 22.

ANNEXATION OF TEXAS.

Mr. DAVIS presented petitions from inhabitants of towns and places in Massachusetts, remonstrating against the annexation of Texas to, or admission into, the Union, signed by 6,000 persons.

Mr. D. observed that, as the subject-matter of these remonstrances was not before Congress, he should have postponed the presentation until some question arose which would make such a step appropriate, but he noticed other gentlemen had presented like memorials, which had been laid on the table, and thus, being in possession of the Senate, could be called up at any time, and he moved that the same disposition be made of these.

Mr. D. also presented two petitions upon the same subject from East Windsor and Suffield, in Connecticut.

SUB-TREASURY BILL.

The Senate then resumed the consideration of the bill providing for the collection and custody of the public revenue.

Mr. TALLMADGE rose and addressed the chair as follows:

Mr. President: The bill on your table proposes to establish for the reception, safe-keeping, and disbursement of the revenues of the Government, what is generally termed the sub-Treasury system. This measure has been brought forward in pursuance of the recommendation of the President of the United States, in his recent message to Congress. I do not flatter myself that I can add much to the arguments which have been so ably and so eloquently urged, by my friend from Virginia, [Mr. RIVES,] against this measure. But, coming from a State where its practical operation, for good or for evil, must be so sensibly felt, I deem it my duty to give frankly to the Senate the views which I entertain in relation to it.

Sir, I have bestowed upon this subject all that reflection which is due to it, from the high source from which it emanates. Every consideration, both personal and political, would incline me to its support, if my judgment could be satisfied that its adoption would promote the great interests of the country. Natives of the same State and of the same county, the President and myself have been, from my first entrance into political life down to the present time, on terms of intimacy. In his political career he has on all occasions received my cordial support. It has been my fortune to be placed in situations, at certain trying periods of his history, which have enabled me to render him "some service." It is with no ordinary sensation, therefore, that I find myself constrained, by higher considerations than those of political attachment or personal friendship, to differ from him on the question now before us—considerations of public duty which involve the public weal. But, I have the satisfaction to know, that he neither expects nor desires me to support this or any other measure merely because it bears the stamp of an Executive recommendation. In submitting this sub-Treasury system, the President has only obeyed an injunction of the constitution, which he is sworn to support, and which declares that "he shall, from time to time, give to the Congress information of the state of the Union, and recommend to their consideration such measures as he shall judge necessary and expedient." This is one of those measures—the President has discharged his duty in recommending it to our consideration, and I trust we shall discharge ours by giving to it that calm investigation and free discussion which are so well calculated to produce correct results, in regard to measures that involve the great and vital interests of the people.

The President himself anticipated much diversity of sentiment on this subject. He anticipated also that Congress might, in its wisdom, adopt some other system; and he

SEPT. 22, 1837.]

Sub-Treasury Bill.

[SENATE.]

gave the assurance of his co-operation in any other plan which might be "ultimately established." He says:

"With these views, I leave to Congress the measures necessary to regulate, in the present emergency, the safe-keeping and transfer of the public moneys. In the performance of constitutional duty, I have stated to them, without reserve, the result of my own reflections. The subject is of great importance, and one on which we can scarcely expect to be as united in sentiment as we are in interest. It deserves a full and free discussion, and cannot fail to be benefited by a dispassionate comparison of opinions. Well aware myself of the duty of reciprocal concession among the co-ordinate branches of the Government, I can promise a reasonable spirit of co-operation, so far as it can be indulged in without the surrender of constitutional objections which I believe to be well founded. Any system that may be adopted, should be subjected to the fullest legal provision, so as to leave nothing to the Executive but what is necessary to the discharge of the duties imposed on him; and, whatever plan may be ultimately established, my own part shall be so discharged as to give to it a fair trial and the best prospect of success."

I trust, then, that the friends of the administration will view this question as one of expediency, and not suffer any difference of opinion between themselves to become a difference of principle upon which they are to divide. If it be not so viewed, who will take the responsibility, and who will vouch for the consequences of a contrary course? It is a subject on which men may honestly differ; and it is for that reason, amongst others, that such difference should be expressed with perfect frankness and with the utmost freedom. My mind has long been made up against it; and the reasoning of the message, whilst it has not convinced me to the contrary, has only served to confirm my previous opinions—I am therefore bound to say, from a sense of the most imperative duty, that, in my judgment, this measure is fraught with more mischief than any scheme which has heretofore been broached in reference to the finances of the Government and the currency of the country. In saying this I certainly intend none other than the most profound respect for the distinguished individual who has, in an official form, brought it to our notice.

Neither is this scheme new to the democracy of the country. It has once been passed upon by them, through their representatives in Congress, and received their unqualified condemnation. It was brought forward in the House in the session of 1834-'5, by a member of the opposition. After an animated debate, it was most signally defeated. It was put down by every administration vote save one. It is, however, due to the opposition to say, that it was received with so little favor by them as a party that only thirty-three members could be found who were willing to record their names for it on the journal. The defeat of this measure, at that time, was a matter which every friend of the administration, from President Jackson down, had very much at heart. We all took a deep interest in it. We all looked upon it as calculated to undermine our free institutions; as subversive of the very principles of the party to which we belonged; as accumulating power and patronage in the hands of the Executive, to which we had always been opposed; as uniting in his hands the purse and the sword, about which so much had been said on a then recent occasion, and which we had repelled in a manner and with a spirit which became those who were honestly desirous of preserving the powers of the Government as they were originally intended to be distributed by the constitution. Nay, sir, we went further; we denounced it as a "proposition disorganizing and revolutionary, subversive of the fundamental principles of our Government, and of its entire practice from 1789 down to the present day." We denounced it as a scheme which would "bring the public treasure much nearer the actual custody and control

of the President than it is now, and expose it to be plundered by a hundred hands where one cannot now reach it." The party was never more unanimous on any occasion than this—their abhorrence of the scheme was universal; so powerful were the arguments against it, both in and out of Congress, by the republican Representatives and by the republican press, that it received no favor in any quarter. Even the opposition, notwithstanding they were against the State banks as depositories of the public money, could not be brought to the support of this measure, although it was introduced and urged by one of their own number. So mischievous in its tendency, so unsound in principle did they deem it, that they united with the friends of the administration to defeat it. But what do we now behold? Whilst they, as a party, are still against the measure, we, as the friends of the administration, are called upon to support the same proposition now, which we as friends of the administration put down then—put down, did I say? which we denounced as "disorganizing and revolutionary," and as exposing the public treasure to be "plundered by a hundred hands where one cannot now reach it." The objections to it then were inherent in the system; and, being so, no state of things has since occurred, or can hereafter occur, which can remove those objections. Still, we are now asked to change our ground, and to adopt a proposition as a matter of expediency, which received our decided disapprobation, at that time, as a matter of principle. No question was ever better settled on principle than this; and no state of things can make that expedient now which was wrong in principle then.

Sir, at that time, the adoption of the State banks as depositories of the public money was the favorite measure of the administration. Whilst the contest with the Bank of the United States was going on, this was the ground taken by the whole party. It was openly and publicly avowed by President Jackson, and by every friend of his administration. Sir, in the Senate chamber, the question was frequently and pertinently put by the friends of the United States Bank, to those who were opposing it, what will you do for a substitute for this institution if it be not rechartered? The answer invariably was, the State banks are the substitute. They are equally adequate to the reception, safe-keeping, and disbursement of the public revenue. They will equalize the currency and facilitate the exchanges of the country. In truth, the leading friends of the administration deemed the State banks competent to perform all the duties to the Government and to the country which the Bank of the United States had performed. For my own part, I never believed they could perform those duties, in all respects, as well. They lacked the capital and the concert of action necessary to render them equal to an institution which had its branches at all the great business and commercial points of the country; and which, by one common interest and by one common impulse, could operate more successfully, and with more facility, than the State banks could do, with less means and with less concert. But I conceived there were other objections to that bank, which more than counterbalanced any supposed advantages which it possessed over the State institutions. Be that, however, as it may, they were put forward by the administration as the only practicable substitute for a Bank of the United States. After the deposits were removed from that institution, they were placed with the State banks, which entered into an arrangement with the Government to perform all the duties which had been required of and had been performed by the Bank of the United States. They entered upon those duties—they performed them to the entire satisfaction of the President and the Secretary of the Treasury. The annual messages of the one, and the annual reports of the other, bear ample testimony to their competency and fidelity. For three successive years was the whole nation congratulated on the entire success of this

SENATE.]

Sub-Treasury Bill.

[SEPT. 22, 1837.]

experiment upon the finances of the Government and the currency of the country. Nay, the people were congratulated upon the "better currency," which had been introduced, and upon the reduction of the domestic exchanges from one end of the Union to the other, by reason of the superior advantages and the wiser management of the State banks, to which these duties had been entrusted. If such were the result of the experiment with the State banks, why are we now asked to abandon them, and to try the "untried expedient" of the sub-Treasury scheme? Why are we asked to adopt a measure which we declared, when it was formerly presented, was "an effort to enlarge Executive power, and put in his hands the means of corruption?" Why are we asked to substitute it for a system which the Secretary of the Treasury, at that time, declared was "much superior to individual agents of the United States?"

The answer to all this is, that the experiment has failed. Does the failure of the experiment remove the objections which were so strongly urged against the scheme which we are now called upon to adopt? Does it make that scheme less "disorganizing," less "revolutionary?" Does it render the public treasure more safe and less liable to be "plundered?" Does it cease to "enlarge Executive power," and does it take from "its hands the means of corruption?" No, sir, it does no such thing. These objections stand in full force against it. They cannot, in the nature of things, be removed from it. Then why insist on its adoption? These objections forbid it, even if the experiment of the State banks had failed. But it has not failed. It has never been fairly tried. The pecuniary pressure and embarrassment which have been felt throughout the United States are without a parallel in the history of our Government. Every class in the community, but more especially the mercantile class, has suffered from the great derangement of the monetary concerns of the country. This derangement has not been confined to us. It has pervaded Great Britain, and in a greater or less degree, other countries of Europe. Intimately connected as England and the United States are in their commercial relations, any cause which materially affects the one cannot fail, in some sort, to affect the other. It is not my intention, on this occasion, to trace the causes of the pecuniary embarrassment which has pervaded both countries. I intend merely to advert to some of the more immediate, and which might, perhaps, be termed secondary causes, so far as they have a bearing upon the alleged failure of the experiment of the State banks. Whilst I agree with the President in some of the causes assigned by him, I do not think he has taken as comprehensive and enlarged a view of them as further examination and reflection would have enabled him to do. But, enough has been said to show that the banks could no longer hold out against the pressure which was made upon them, from whatever causes it may have originated. Public confidence had become impaired. Confidence, the very basis of bank credit, as well as commercial credit, was taken from them. The suspension of specie payments was the inevitable consequence. It was without fault on their part. I know they have been charged from a high source with treachery and bad faith towards the Government and the people. Sir, I regret, more on account of the source from whence such a charge comes, than for any other reason, that it should have been made against them. It must have been made from misconception or misapprehension, and not from a real knowledge of their situation, or of the causes which led to the catastrophe so much deplored. Sir, there was no proper effort, on the part of those who could have done most towards it, to maintain the confidence of the community in them. On the contrary, every thing was done to impair it. No sooner had the war against the Bank of the United States ceased, than a war more violent and

more unrelenting was waged against the State institutions. Every means was employed to impair public confidence. They were denounced in our legislative halls and by the public press. They were denounced at public meetings by those who advocated an exclusive metallic currency. The jacobinical terms of "rag barons" and "rag money" were familiarly introduced into our highest legislative assemblies, and adopted by our highest political journals. The levelling resolutions of ward and town meetings were responded to by men in high stations, who were thereby tacitly assenting to, and encouraging the anti-bank as well as anti-social doctrines put forth on such occasions. To cap the climax, the "specie circular" was issued by the Executive, directing that gold and silver should be received in payment for public lands, instead of the notes of specie paying banks, as authorized by the joint resolution of 1816. By this act, on the part of the Executive, the confidence of the Government was withdrawn from the banks, and was a signal to the people to withdraw theirs also. It cannot be expected that the community shall maintain its confidence in any institutions when the confidence of the Government is once withdrawn.

The manner in which the specie circular was issued was another item in the want of confidence which prevailed through the country. It was issued by the Executive after a decided expression of one branch of Congress against the propriety of its adoption. The proposition was introduced by the Senator from Missouri, [Mr. BENTON,] in the shape of a resolution, in April, of the session of 1836, and was rejected by an almost unanimous vote. It was again brought forward the latter part of June, near the close of the session, in the shape of an amendment to some public bill, and was again rejected, and with the same unanimity. Such was the opinion of the Senate, at that time, on this measure, and such was its decision twice distinctly made. It was considered by every one, too, as a subject for legislative action. What was our astonishment, then, when immediately after our adjournment, and before we reached our homes, we saw the same measure adopted by Executive authority, which had twice been rejected by the legislative action of the Senate? It is not my intention to examine the power by which the Executive issued this order, and thereby created a distinction between the kind of medium in which different branches of the revenue were to be received. I do not doubt that the Executive acted from the most honest and patriotic motives; and there are those who believe the order operated well, although I am not one of that number. It was intended to diminish the amount of the proceeds of the sales of the public lands. Before its adoption the amount of sales had rapidly declined, and would have declined still more rapidly without any interference of this sort. But, when this circular was issued, speculation, which had begun to flag, again revived; and I have heard of several well authenticated cases, where associations and companies, seeing this attempt to shackle the sales of the public lands, and believing that, at the then next session of Congress, the President would recommend to limit the sales to actual settlers, determined to avail themselves of the present opportunity and purchase more than they otherwise would have done. Such purchases were more extensively made than they would have been if the order had not been issued. No, sir, it did not effect the object of diminishing the sales. They had already begun to fall off rapidly, and would have fallen off still more but for the specie circular. These large associations and companies had no difficulty in commanding the specie for all their purposes, and with almost as much facility as they could have commanded the notes of specie paying banks. It was no great hardship on them; but it fell with peculiar force upon the individual purchaser who had merely means sufficient to buy a quarter section. He was compelled to pay a premium for

SEPT. 22, 1837.]

Sub-Treasury Bill.

[SENATE.]

specie, which, according to his means, rendered it oppressive to him. I say then, sir, that this order did not answer a single purpose for which it was issued, but, on the contrary, was productive of great and incalculable mischief. I speak not now of the hardship to individuals; I allude to the general derangement produced by it to the moneyed concerns of the country. The withdrawal of specie from the Atlantic cities, where it was wanted, to the Western and Southwestern States where it was not wanted, was the cause of general distrust and alarm. It was ordering it to move against the current. It was commanding it to flow up stream. It was deranging all the concerns of the business community at the East without producing any corresponding benefits at the West. It was, in fact, injurious to the West. Any effort to force gold and silver from one part of the country to another, contrary to the regular course of business and the laws of trade, is ever productive of injury. Gold and silver, like water, will always find their level. They will go where trade and commerce call them; and if impeded in their regular channel, like a cataract which has been obstructed, instead of irrigating and fertilizing the lands through which it naturally flows, it will carry desolation and destruction to the whole country, from the accumulated force and pressure which it has acquired. There was scarcely a bank in city or country in the Northern and Eastern States but what felt this constant drain. It thus became the source of alarm, and the lack of confidence thus manifested by the Government became the fruitful source of distrust in the community at large.

This specie circular became the subject of political discussion at the elections which took place that season. The public mind was agitated—Congress assembled, and immediately took measures to rescind this order, which had been issued against the clear and almost unanimous expression of the Senate, at the previous session. The currency bill introduced by my friend from Virginia, [Mr. Rives,] was intended to rescind it. Sir, it is not necessary for me to recapitulate the circumstances attending the progress of that bill. They are familiar to most of us. Suffice it to say, that it passed the Senate with only four dissenting votes, and in about the same ratio in the House. This bill was retained by the late Executive in the manner and for the reasons which have heretofore been given to the country. I will not dwell on them. There is to my mind no pleasure in the contemplation of them. I could wish that the whole transaction were blotted from my memory. I only allude to it, for the purpose of showing its effect on the public mind in reference to public confidence, and for no other purpose. I desire to speak of it in no other light. The attention of the whole country was turned to Congress, and was watching the progress of this bill; and when it passed both Houses by such a powerful vote, new light seemed to beam upon those who were looking to it as the source of relief in maintaining and restoring confidence which had been so much impaired by the issuing and continuance of the original order. But those who expected this relief were doomed once more to disappointment. They had seen that the subject was one which peculiarly belonged to Congress; that the only power the Executive had over it was derived from the joint resolution of 1816; and whenever Congress saw fit to resume that power, in whole or in part, they anticipated no obstruction from the Executive branch of the Government. They had read the constitution as it was understood by its original framers. They had heard Executive power defined as one "giving effect to the behests of other powers which have a right to command." They supposed that the will of Congress, on a subject peculiarly belonging to the legislative powers of the Government, would have prevailed, and that the country would have been relieved from the embarrassment of a measure about which, whatever

difference of opinion might have existed as to its inception, there was none as to its continuance. In this, I repeat, they were grievously disappointed. They, nevertheless, clung to the only hope that remained. The citizens of New York, who felt the most intense interest in this matter, knew that on the fourth of March their "favorite son" was to assume the reins of Government; and they believed that in this eventful crisis he would not be unmindful of his native State, whose fate was suspended by the brittle thread of confidence which remained, although attenuated by the adverse action of the Chief Magistrate who had just retired. Sir, after the adjournment of Congress, and when on my way home, I reached the city of New York, I found "expectation stood on tip-toe." Inquiries, as frequent as they were anxious, were made of me as to the probable action of the President in reference to this order. I assured them, from what I deemed satisfactory authority, that it would be rescinded, or would be modified in a way equivalent to rescinding it. Joy and satisfaction beamed on every countenance. Life and animation were restored. Confidence was revived, and the whole business population of the city were ready to exclaim,

"Now is the winter of our discontent
Made glorious summer by this son of York."

Sir, whilst thus elated with the prospect of relief, the cup of confidence was again dashed from their lips. The President declined to interfere with the order, which had been handed down by his predecessor as a legacy to him, and left an anxious community in that condition where "hope never comes that comes to all." Far be it from me to blame the President for the course taken by him. He, doubtless, had reasons satisfactory to himself, and it is not for me to censure where one acts according to his own judgment, and the dictates of his own conscience.

Sir, I would not be understood as supposing, that the rescinding of the specie circular would have been a panacea for all the evils which then afflicted the community. I know that there were many other causes operating to produce the pecuniary embarrassments under which the country then labored; and I believe if public confidence had been maintained, the country would have borne even a greater pressure, without the necessity of a suspension of specie payments by the banks. Is this not evident from what the Secretary of the Treasury states in his report? He says:

"As a whole, their specie, compared with their circulation, continued to be almost as large in May as in November. It averaged more than one to three, or much more than has been customary with the banks in this country, and was over double the relative quantity held by all the banks in England at the same period, and was in a proportion one-fourth larger than that in the Bank of England itself. Their immediate means, compared with their immediate liabilities, were somewhat stronger in November than in May, but were at both periods nearly 1 to 2½, or greater than the usual ratio, in the best times, of most banks which have a large amount of deposits in possession."

Where, then, was the necessity of suspension, but from want of public confidence? With all the elements of prosperity around us, with more than eighty millions of dollars in specie, it is difficult to conceive, notwithstanding any overaction in trade or in other branches of business, how such a necessity should exist. Confidence may be destroyed or sustained by imaginary as well as real causes. It was not material, therefore, whether the rescinding of the specie circular would in itself have produced the beneficial effects which were anticipated from it. It is sufficient that it was looked to as a source of confidence, and as long as it answered that purpose, it was of no consequence whether it was a real or an imaginary cause of the confidence which it created and sustained.

Sir, I might illustrate my idea by what is generally term-

SENATE.]

Sub-Treasury Bill.

[SEPT. 22, 1837.]

ed the panic session of 1834. It is now conceded that the causes of the pressure at that time were imaginary; that the removal of a few millions of dollars from one place to another could not, of itself, produce the alarm and distress which followed. The community, however, believed there was sufficient cause for it all, and that was the same as if it actually existed. The distrust which prevailed was extended to our State institutions. There was great apprehension of their suspending specie payments. In this crisis, the State interposed, and loaned its credit to the banks to the amount of six millions of dollars. No sooner was this done than confidence was again restored, and the State never had occasion to issue a single dollar of the six millions thus proffered for their support.

Had the large amount of specie, about which so much has been heard, been governed in its movements by the regular course of business and the laws of trade, we should not have encountered the evils which are so loudly complained of; confidence would have been maintained, and a suspension would not have followed.

I know, sir, that the banks have been charged with treachery and fraud, and of stopping for sinister purposes. In regard to the banks in my own State I feel bound to repel the imputation thus cast upon them. I speak from personal knowledge and observation when I say, they stopped not from choice, but from the most imperative necessity. In the city of New York, they were amply prepared to meet all the demands of bill holders, but they could not answer the demands of alarmed depositors—alarmed not as to their eventual responsibility, but lest, in case of suspension, their funds should be put beyond their control until the liquidation of the concerns of the banks in the hands of receivers. Sir, they held out till the last moment that prudence dictated, and when they suspended, it was with the approbation of every class of the community. The Legislature of the State, which was then in session, by an almost unanimous vote in both Houses, sanctioned the suspension, and relieved the banks, for one year, from the forfeiture of their charters.

I maintain, then, that these banks suspended specie payments from causes entirely beyond their control, and without fault on their part. If they have over-banked, they have been stimulated to it by the action of the Government, and by the unusually and extraordinarily large surplus in their possession, the evil effects of which were intended to be remedied by its gradual withdrawal under the deposit act. They were urged by the Secretary of the Treasury to be liberal in their accommodations to the merchants, and through them to benefit every class of the community. The public deposits were the means by which these accommodations were to be made. They were used as the Secretary of the Treasury desired, until the banks themselves became alarmed at the consequences which might result from an over-extension, and from the political agitation which would follow it. The evil effects of this large surplus, and which was constantly increasing, were seen by the banks. They were desirous of averting them. And when the question of depositing it with the States was before Congress, some of the principal ones were in favor of the measure. In the course I pursued, I acted under the advice of some of their principal officers; and the very proposition which I submitted to the Senate, in the shape of an amendment, and which was adopted with great unanimity, was suggested by one of them. He said that as long as the moneyed concerns of the country were made the subject of political discussion, so long would business and the mercantile community be in constant agitation and alarm—that this surplus ought to be disposed of, and thus restore peace and harmony in our money matters, which could not be anticipated whilst it remained in its present position. The proposition for disposing of it was that of a business man. It was to deposit it with the States in the ratio of

representation; to take their certificates of deposit, in the nature of stock, redeemable at their pleasure; and that the Secretary of the Treasury should, at any time, for want of other money in the Treasury to meet appropriations made by Congress, be authorized to sell these certificates in the market, and in the hands of the purchaser they should bear an interest of five per cent. This would have been a regular business transaction. It would have required no legislation on the part of Congress or the States to reach the money. It would have been always within the power and control of the Secretary of the Treasury. The States would have had the benefit of it without interest, until it was required for the wants of the Government, and then would have merely provided for the five per cent. interest on that which was sold, and redeemed the principal at their pleasure. It was in this shape that the bill passed the Senate. It was amended in the House, for reasons familiar to all who were here at the time, and which it is not necessary for my present purpose to repeat. Had the bill passed as it went from the Senate, we should not now be called on to replenish an exhausted Treasury. The Secretary would, at this time, have at his control the three instalments already deposited with the States, amounting to some twenty-eight millions of dollars. These certificates could, at any time, have been sold, and, once in the market, would have gone very far towards liquidating our foreign debt.

Sir, I am aware, that the execution of the deposit act was a source of inconvenience, and in some instances of embarrassment at those points from which large sums were to be transferred. But much of this inconvenience and embarrassment arose from the manner of its execution. I will not undertake to say how far the Secretary of the Treasury, under the provisions of this act, and under the general authority of his Department, could have made the transfers other than he did. But I will say, if they had been made as a mercantile man would have made them, they would have materially aided the domestic exchanges of the country, and would have promoted, instead of deranging, the regular business of the community. I am aware, too, sir, that some were opposed to this act, on account of the necessary withdrawal of a portion of these funds from places where they had been loaned out by the banks. Such do not reflect that, if this law had not passed in 1836, thus giving a year to the banks to make their arrangements to comply with its provisions, the next Congress would have made a similar disposition of the surplus, which proved to be much larger than many had predicted or anticipated. The inconveniences of such a disposition of it, after the banks had used the accumulated fund for another year, would have been much greater than those which were experienced under the law as it passed. But I do not intend to go into the merits of that measure; I have merely alluded to it from its connexion with the banks, and to show, that if the use of this surplus was one cause of the suspension of specie payments, by reason of any alleged over-issues on their part, they were stimulated to it by the action of the Government itself. The suspension, therefore, was not the result of treachery or bad faith on the part of the banks, but was the result of circumstances over which they had no control, and of the destruction of confidence produced by no fault of theirs.

These banks are now as able, with the aid and confidence of the Government, to perform all the duties required of them as they were before. We have the testimony of the President and the Secretary of the Treasury that they performed them as well as the Bank of the United States. They are capable of doing the same again in the same way. I am not, therefore, prepared to say that, on account of the calamity which has befallen the country, the experiment has failed, and they ought not to be employed a second time. No, sir; such a catastrophe may not occur again in the course of a century. One reason assigned for it now

SEPT. 22, 1837.]

Sub-Treasury Bill.

[SENATE.]

was the existence of an enormous surplus in the Treasury. This cause is not likely to exist hereafter, for every man is willing to bring down our receipts to the measure of our wants; and under that, as a general rule, such a catastrophe might never happen again. The banks have abundance of means to meet all their engagements. Such being the case, all that is necessary is, to create confidence, to restore confidence, and they will be found able to perform all that is required of them. Let that confidence be extended to them by the Government in good faith, and let them be placed on their former footing. Let the Government pursue a system which has been tried, and which we know will prove effectual, instead of attempting an "untried expedient," the disastrous consequences of which cannot be anticipated, and which, I fear, imagination can scarcely depict.

This new experiment consists in a "divorce of bank and State." This is a mere catch-phrase, which was originally introduced by artful and designing politicians to impose upon the credulity and honesty of the people. Many have adopted it without reflecting or inquiring as to its import, or its consequences. First impressions are favorable to it; it summons to our recollection our early impressions of a "divorce of church and State." But it is the duty of wise statesmen and discreet politicians to consider well the evils which must follow the adoption of any system heretofore untried and of doubtful policy, however euphonious the phrase may be which designates its character before the people.

The proposition contained in these few catch-words, strikes at the very foundation of the credit system of the country. It does not stop with the destruction of bank credit, but strangles, in its withering grasp, commercial credit also. It establishes a depreciated paper currency for the people, and an appreciated specie currency for the incumbents of office, and for Government contractors. It gives the baser currency to the master, and the "better currency" to the servant. In a Government like ours, it is impossible long to preserve our institutions or our liberties, if such distinctions are to prevail. It separates the Government of the people from the people themselves, as if those whom the people have chosen to direct their affairs were of a superior order, or distinct class in society, endowed with peculiar privileges beyond the rest of the community. It has a tendency to alienate the affections of the people from the Government. They will come to consider it not as a Government identified with their feelings and interests, but as something foreign to them. This is not all. The Government itself will lose, in a measure, the idea of dependence on the people. This want of dependence is too much felt already. Put this additional power into its hands, and the identity of interests which exists, or ought to exist between them, is done away.

The Senator from North Carolina [Mr. STRANGE] admits that the people will, under this system, have a depreciated currency, whilst the Government will enjoy the benefits of gold and silver, whatever they may be. But he says they make that currency for themselves—they need not take it except at their own option. Sir, it is the common ordinary currency of the country. It has hitherto been good enough for the Government, for the people, for us all; but now, by your own act, you depreciate it, and, after making it the worse currency, you leave it to the people, and take the gold and silver to yourselves! The result is, that you give to the servants of the country a kind of money worth more than the people's currency. You isolate the Government, so that it becomes no longer a part of the people. You reverse the relation which has always existed between them: the Government becomes the master, and the people become the servants. By this means, the salary of every officer is raised several per cent., according as specie is more valuable than paper; and this difference, too, created by your own act! Sir, it is a distinction which will

not be tolerated; and those who undertake to make it, will find, in the end, that they have presumed too far on the want of intelligence, and on the subserviency of the people of this country.

But, the project does not stop here. It does not merely give to the people a depreciated currency, but, by-and-by, they will be deprived of any currency which will be adequate to carry on the business of the great and diversified interests of this community. Under this system, the specie of the country will be drawn from circulation, and from the vaults of the banks, where it is the basis of circulation and of confidence, and deposited in these sub-Treasury vaults, till the country is left without a sufficient circulating medium to transact its ordinary business. The farmer, the merchant, the manufacturer, and the mechanic, will be unable to command the means to pursue their ordinary avocations, no matter what their property may be. They may be rich in houses and lands, in goods and merchandise, in manufactures and machinery, in materials, in tools and implements of trade, nay, they may possess the best of bonds and mortgages, and every species of stock which has heretofore been deemed equivalent to money, and still they will be unable to carry on their ordinary business for want of a circulating medium by which to transact it. Credit is the poor man's capital, as well as the auxiliary of the rich. Deprive him of this, and his habits of industry, his character for probity, his good name and reputation avail him nothing. He has no means by which he can rise above the ordinary occupation of a day laborer. With a growing family, and the increased expense of living, he is doomed to abject poverty, without the slightest hope of ever gaining that standing and that condition in society which a "well-regulated credit system" always holds out to the enterprising, the honest, the industrious portion of the community.

Sir, this sub-Treasury scheme strikes at the very root of our prosperity. It not only separates the Government of the people from the people themselves, but, in its practical operation upon the credit and currency of the country, it reduces the price of labor—it depresses every species of property. The farmer who has given \$5,000 for his farm, and paid \$4,000, will have it sold from under him to pay the \$1,000 which remains due on it. The day laborer will be compelled to receive shillings where he formerly received dollars. Such will be the practical effect of this scheme, if carried out to its legitimate consequences. Why, then, adopt it, when it must result in disasters which no imagination can paint? It will carry home to the business and bosoms of the community "a spectacle of horror which cannot be overdrawn." Let no one be deluded with the vain hope of better times under such a system. The scenes of trial through which the country has passed, are mere holidays compared with what will follow its adoption. The great distress has hitherto been confined to our commercial cities and manufacturing towns. Those scenes will be renewed. That hope which has hitherto sustained them will become extinct. That little confidence which remained will be taken from them. By the action of the Government, the banks will be compelled, in self-defence, to call on their debtors. They will be unable to give farther indulgence. Business must, of necessity, be brought to a stand, and one universal bankruptcy ensue. The distress which has heretofore prevailed in the large towns will extend to the country. The farmer will find no market for his wool, his grain, and other products, or, if he does, it will be at a price which will not pay the cost and labor of production. The merchant will be compelled to suspend business, the manufacturer to close his establishment, the mechanic to dismiss his hands, and the laborer to go without employment. I warn the country, and the farming interest in particular, against these utopian schemes, which will sap the very foundations of their prosperity and of their hopes. By this scheme, the confidence of the Government is not only withdrawn from

SENATE.]

Sub-Treasury Bill.

[SEPT. 22, 1837.]

our banking institutions, which furnish a currency for the people, but, by receiving nothing but gold and silver in the payment of public dues, the very basis of the currency which remains is withdrawn also. Thus the people are left to return, comparatively, to a state of barter, whilst their servants are enjoying a currency vastly increased in value by the very depreciation and deprivation of the other. It is a scheme to make the rich richer and the poor poorer.

But, sir, why this warfare against the banking institutions of the country? For, disguise it as you may, it is no more nor less than a war upon the whole banking system. Gentlemen may not be willing to avow this; they may not intend it. I feel well assured that the President does not so intend it. But, I will venture to say that, if a scheme was devised for the express purpose of subverting the entire banking system of the country, it could not be more skillfully planned than the one which is now under consideration. It meets the cordial approbation of those who have all along been in favor of abolishing all banks; and for the very reason that it is so well calculated to accomplish that object. I shall endeavor, at the proper time, and before I conclude my remarks, to show how this is to be effected.

Sir, I am aware of the prejudices which honestly exist with a portion of the community against any thing like "associated wealth." I am aware how easily those prejudices may be wrought on by demagogues and designing politicians. But, those who are sent here to legislate for the great interests of the country should be extremely careful how they minister to such prejudices. Whilst it is admitted that the banking system has its evils, its superior benefits, nevertheless, recommend it to the candid consideration of every statesman and patriot. It should be his object to correct the evils and retain the benefits. "Preserve and regulate, but not destroy," should be his motto. It has existed and been recognised from the earliest foundation of the Government down to the present time. It has been identified with the interests of the Government. These institutions, in some shape or other, have been employed by the Government during that whole period. It is through their agency and instrumentality that these much-abused and despised merchants have been enabled to pay into your coffers the vast amount of revenue which has sustained you in peace and in war. Yes, these very merchants who have been represented as men not to be relied on in times of peril—whose patriotism is in their ledger, and whose field of glory is in their counting-room—men who are the most forward in the pursuit of gain when all is peace and quiet, but who shrink from responsibility when danger presses. Sir, I have, for a long time, looked with horror upon the ruthless warfare that has been carried on against the mercantile interest. I have seen with alarm the attempts which have been made to set up other portions of the community against them. I have heard them branded as swindlers for collecting their honest dues at home, and as traitors for paying their honest debts abroad. Sir, the interests of all classes in this country are reciprocal. Neither the farmer, the manufacturer, the mechanic, nor the merchant can get on advantageously the one without the other. But, it is to the merchant, more especially, that the Government must look for the immediate means of support. It is the merchant that stands between the Government and the consumer. It is the merchant that shoulders the responsibility and pays into the Treasury the enormous amount of revenue which keeps the whole machinery of Government in motion. It is the merchant that maintains the credit of the country abroad, by the scrupulous fidelity with which he endeavors to meet all his engagements. In short, the character of an American merchant is a passport through any country in the world. And still this class of citizens, that command universal respect abroad, cannot be relied on, in times of peril at home! Sir, in what period of our history have the

merchants been obnoxious to this charge? None were more patriotic during the revolutionary war—none contributed their means more largely or more freely. And who, let me ask, occupied a prouder position during the late war? When the credit of the Government was at its lowest ebb, who furnished the means to carry on the war? The merchants. When the Government wanted money, and could not command it on its own responsibility, who stepped in to its assistance and provided a credit on which it could be raised? The merchants. Yes, sir, when your troops were famishing for want of supplies, and disheartened for want of pay, when you could not raise a dollar on your own credit, it was the merchants, through these much-traduced and vilified banks, that took your depreciated paper which had no currency with the people, and gave their own in exchange, in which the country had confidence. Sir, I am tired of these incessant efforts to excite one portion of the community against the other. There is no class to whose patriotism you may not appeal when the country requires their services. The agricultural interest, from the very nature of their employment, will always stand pre-eminent. But, it is to the merchants, more than any other class, that you are to look for the ready means to aid you in time of war. Sir, they have always responded to your call. They were never found wanting in the most perilous periods of your history. Whatever of glory, or of honor, or of prosperity this nation enjoys, it is indebted in no small degree to the patriotism of the merchants. They have contributed their full share towards establishing your national character at home and abroad. They will continue to sustain it, until their broken and subdued spirits shall think it no longer worth preserving.

Sir, the great desideratum in this as well as in every new country is *capital* to carry on its business. This cannot be found to the extent that it is desired. In our own country we have all the substantial elements of prosperity: with an extent of territory surpassing the proudest kingdoms of Europe; with every variety of soil and climate; with popular institutions, and a free Government, and combining all the advantages which make up the sum of a people's happiness and a nation's greatness; we lack but the capital necessary to bring all these elements into life and being. This can only be obtained by well-regulated banks and by paper credit; credit is the only substitute for capital in a new country. Old countries, where capital has been accumulating for ages, may more easily dispense with it; but a new one, like our own, cannot do without it. Look to western New York for its magic influence. See it in a few years converted from a wilderness to fruitful fields. Look to the Western States, now exhibiting the proud evidences of rapid and progressive improvement, where but a few years since there was no trace of civilization. By its means the whole country is more than half a century in advance of what it would have been without it. This system of credit has heretofore been appreciated by our own people, and I trust it will continue to be appreciated by them, notwithstanding the efforts that are making to undervalue it, and eventually to prostrate it. It has been, perhaps, still more appreciated abroad than by us. It has become the admiration of all Europe. For a time, the infant strides of our young and growing republic astonished the world. The old Governments of Europe saw us springing, at one bound, from childhood to the manhood of our existence. They saw that credit was the nurture of our infant growth, as well as the support of our maturer years. To this cause, some of the ablest writers of Great Britain attribute our unparalleled improvement in all that renders a people prosperous, and a nation powerful. I cannot forbear, on this occasion, to quote the language of one of them:

"Every body knows that the States of the Union embrace a territory, most of it of the highest fertility, equal

SEPT. 22, 1837.]

Sub-Treasury Bill.

[SENATE.]

to the surface of all Europe, including Russia, on this side of the Ural mountains, about eighteen times the whole area of France, and *thirty times that of the British islands*. In this immense territory there is a population of about twelve millions of men, almost all active, industrious, and energetic, doubling every thirty years, and capable, if sustained at the same rate of increase, of producing, in two centuries, two hundred millions of human beings in comfort and happiness. What, then, is wanting to sustain the fortunes of a State in such unparalleled circumstances of abundance? Nothing but CAPITAL. This, however, is indispensable; and it is obviously impossible, even with the most industrious, saving, and active population in the world, that the existing wealth can be proportioned either to the boundless extent of waste land capable of cultivation, or the constantly increasing wants of a growing and indefatigable people. It is in such a state that the utility of banks and paper credit is most strongly felt, and that a paper circulation, based on sound principles, becomes an indispensable element in the progress of social improvement.

"Banks are the great instrument by which integrity and talent supply the want of capital; by which prudence and industry, setting out on the basis of paper credit, attain at length to the solid advantages of substantial capital. Such a system quadruples at once the active capital of the country, by producing a paper capital based on credit, which, as long as that credit remains unshaken, answers all the purposes of encouraging industry just as well as the metallic treasures of Mexico and Peru. It prevents a large portion of the national wealth from being absorbed in the unprofitable and unproductive form of a metallic currency, and provides for the necessary circulation at a fifth part of its cost. Old States, in which capital is redundant, and all home employment nearly filled up, may dispense with a paper currency, just as the finished scholar may discard the rudiments, or the accomplished equestrian forget the lessons of the *manège*; but, till that last stage has arrived, it is the greatest act of national insanity to destroy or restrain, except within those limits which the public safety requires, the invaluable ally of a paper circulation. It has quadrupled in the last half century the wealth of Scotland, and multiplied ten-fold that of America. But for the powerful impulse given by the advances of bankers, and the large capital which they put in motion, the industry of the United States, instead of having long ago crossed the Alleghany mountains, and given birth to four millions of men in the valley of the Mississippi, would have been still slowly advancing along the shores of the Atlantic, and not yet have pierced the profound solitudes of the Ohio or Missouri."

"And it is apparent that such establishments, if rightly understood, are eminently favorable to the progress of freedom, and the real interests of the working classes. Capital—solid wealth—is ever essentially aristocratic. It never can be very generally or widely diffused, at least in large masses; and, therefore, banks which lend a helping hand to enterprise and activity in the earlier and more eventful periods of their career, and enable them to maintain the struggle with older establishments, having the advantage of long-tried connexions and realized wealth, are eminently favorable to the popular classes, and the best support to the cause of liberty. Without banks, a commercial State must ever speedily fail, and ever has fallen, under the dominion of a few overgrown mercantile establishments; industry and activity can never maintain their ground in the competition from want of capital. The banker with his notes has done as much for the cause of freedom as either the printer with his printing-press, or the schoolmaster with his grammar."

To this authority, permit me to add that of the philosophic and liberal democratic French traveller, Mr. Chevalier:

"Credit is the primary element of life in the United States; they literally live on it. Without credit, those populous towns which arise on all sides, as if by enchantment—these rich States which fringe the margin of the Atlantic, which stretch to the west of the Alleghany, and extend along the course of the Ohio and the Mississippi, would have been still savage forests and bottomless morasses."

"The banks have acted as the lever which has enabled the Americans to establish among themselves, to their own great profit, the agriculture and industry of Europe, and which has covered their territories with cities, canals, railroads, manufactories, and fertile fields; in a word, every thing which constitutes civilization. Without the banks, the cultivator would have been destitute of capital for his most necessary advance; he would have had no instruments for the clearing of his farm; and, if the system has led in many cases to absurd and gambling speculations, it is the same system which has enabled the farmer to purchase land for two dollars the acre, which he afterwards sold for ten or a hundred. The mechanics, who are now so loud in their condemnation of the banking system, forget that it is to that they owe the industrial activity which has enabled them to earn from five to eight shillings a-day of wages. They forget that it is it which has furnished them with the means, of which so many have availed themselves, of rising to opulence and comfort; for, in America, every enterprising man, who can give the guarantee of a tolerable character, is sure of obtaining credit, and thus has the means of making his fortune."

Such are the views of enlightened foreigners in regard to the banking institutions of our country. I know the system may be abused. No one is more desirous or more anxious to correct those abuses than myself. No one would go farther to throw around it additional guards and additional restraints. No one is more solicitous to enlarge the specie basis, and thereby render more stable our paper circulation. But it is this indiscriminate assault upon the whole banking system of the country to which I object. It is this attempt to excite the prejudices and passions of the people in regard to them to which I am opposed. It is this spectre of an exclusive metallic currency, which still flits across the vision of certain gentlemen, against which I protest. For, disguise it as you may, "to this complexion we must come at last," if the schemes which are now on foot can be carried out. But they cannot be carried out. There is a physical impossibility to their success in a country like ours. Still, I am unwilling that the country should pass through such an ordeal. I am unwilling that the present generation shall be killed off for the sake of making a doubtful experiment for the benefit of posterity.

Sir, I was surprised to hear the Senator from North Carolina [Mr. STRANGE] condemn our whole banking system as an utter absurdity, and which he predicted would be looked upon by those who come after us with as much astonishment as we look upon the South Sea bubble. In this enlightened age, at this late period of our history, after what we have seen of the effects of the credit system upon the country, with the evidence of our own senses, and the testimony of all Europe in favor of it, I confess my amazement at hearing such sentiments uttered on this floor. I have not language, consistent with the high respect which I entertain for that honorable Senator, [Mr. STRANGE,] to express my astonishment; and I, therefore, can only say,

"Tis Strange, 'tis passing Strange!"

The tendency of this scheme is to bring the country, virtually, to an exclusive metallic currency. Whatever gentlemen may say on this subject, this wild and visionary theory is gaining ground with a certain portion of our population. It is propagated by reason of the countenance which it is supposed to receive from men in high places. Meetings have been held in New York and elsewhere, at

SENATE.]

Sub-Treasury Bill.

[SEPT. 22, 1837.]

which an exclusive metallic currency has been resolved on as the only true policy. All paper money of every description has been repudiated, as contrary to the genius of our Government and the spirit of our institutions. In the same resolutions, men in elevated stations have been applauded by name for maintaining the same doctrines. The proceedings of such meetings have been responded to in terms of approbation, thereby tacitly acquiescing in all the principles set forth in them, and thus giving currency to them with the people. It is the belief that such principles are recognised by those to whose approval they are submitted, that excites the alarm and apprehension which pervades the rational and thinking portion of the community. It is this, too, which gives countenance to the idea that the sub-Treasury scheme is intended to bring about an exclusive metallic currency. The suggestion of the Secretary of the Treasury may also go far to confirm it. He says:

"The people of the whole United States do not, in a sound state of business and prices, need over one hundred and ten millions of an active circulating medium for all their currency. This would be a larger proportion of currency to our present population than the average has been from the adoption of the constitution; and if an exclusive metallic currency could be deemed desirable, would require only about thirty millions more than the specie which is supposed now to exist in the country."

It is true, the Secretary does not recommend this, but, under the present state of things, thinks "some paper will, probably, always be found convenient for commercial operations." Still it will be perceived that, if by this scheme, or any other, banks can be dispensed with, then, in the opinion of the Secretary, we should, with thirty millions more of specie, be able to transact the thousands of millions of business of this rapidly increasing and enterprising country. Those who make such estimates, seem to overlook the fact, that the notes of banks and specie together, form but a small part of our actual circulation; for, in one sense, domestic exchange is a portion of the circulation, and a very large portion, too, very far exceeding the aggregate of bank notes and specie. This kind of circulation is essentially promoted by bank facilities and bank credits. So that by dispensing with banks, although you should have the hundred and ten millions of specie, you would curtail, to a most destructive extent, the domestic exchange, which, after all, forms the principal circulation.

But, whether an exclusive metallic currency be intended or not, this scheme will, if adopted, virtually accomplish that object. I will take the city of New York for example. My remarks will apply, in the ratio of business, with equal force to every other portion of the Union. New York collects about three-fifths of the whole revenues of the Government accruing from customs. They have amounted in some years from fifteen to eighteen millions of dollars. But, let us assume the year 1834, which the Secretary takes as the criterion for future years. In that year the receipts of New York for customs amounted to some twelve millions of dollars. Now, I ask, how is it possible for the merchants of that city to pay that amount in specie? In what way can they command it? Even if they could procure it, it would be by withdrawing it from circulation from other parts of the country, or by taking it from the banks, where it is the basis of circulation as well as the basis of confidence to depositors. If this amount of specie was to be disbursed immediately after its receipt that would, in a measure, obviate the difficulty so far as New York is concerned. But it is not so disbursed. We all know, as a general rule, that of the appropriations for the year, there remains sometimes one-half of the amount in the shape of "unexpended balances" at the close of the year. Of course there must remain a large amount of the money which is received into this sub-Treasury unexpended. This amount, therefore, is taken out of circulation, or from

the banks, and does not again go into circulation, nor into the banks. The receipts are much greater and more rapid than the disbursements. So that there must remain a large sum on hand which cannot be disbursed. Let no one, then, be deluded with the idea that this is to be a constant round of receipt and disbursement. It is no such thing. I have examined the statements of the amount standing to the credit of the Government in the deposit banks in 1834. I find the permanent average balances to be about five millions of dollars, when at the same time there was not half that amount of specie in the vaults of all the banks in the city. Here, then, we see five millions of dollars, in the shape of permanent average balances, beyond all disbursements, "salted down" in this sub-Treasury vault, of no more use to the Government, nor to the people, than if was cast "into the bottom of the deep, where fathom line has never reached the ground." Sir, it is impossible that this system can be carried into effect in the city of New York. The merchants cannot command the specie; and, if they could, it would be drawing it from distant parts of the country, and the vaults of the banks, by which the whole course of business would be disturbed and deranged from New York to the remotest points of the Union. I have said that about five millions of dollars would remain as a permanent average balance in deposit beyond the disbursements of the Government. Of the amount of twelve millions collected at New York, according to the above estimate, about seven millions would be disbursed. But, even this disbursement is not made where the money is collected. In 1834, in the whole State of New York, only \$1,650,000 was disbursed within its limits. We here have the astounding fact, that while the city of New York pays \$12,000,000 and \$7,000,000 of that sum is disbursed, only \$1,650,000 is paid out within the State. I am not complaining that a larger sum is not expended there—for those expenditures must be made where the interests of the country require them—but I am complaining of the proposed system by which you require this enormous amount to be paid in specie, when so small a portion of it is paid out where it is collected. But, it is better that it be disbursed elsewhere than not disbursed at all. And we have already seen that about \$5,000,000 must remain in permanent deposit, beyond the amount disbursed, and thus be buried, like the talent of the unprofitable servant, where it is of no use to the Government nor to the people, but of detriment to both. But once adopt this burial system, and where will you find the resurrectionary power that can call back to life the hourly increasing deposits in this fiscal charnel-house?

It is said, however, by gentlemen, that this money belongs to the Government, and that the people have no right to the use of it. Is this not an additional evidence of the attempt to separate the Government from the people? Is this not the money of the people? How does it become the money of the Government, as contradistinguished from the people? The Government, or the officers of Government, are the agents and servants of the people. They are mere trustees to execute certain powers committed to them—this money is collected from the people by direction of the people themselves, not for the purpose of being hoarded up, but to be used for their benefit in the disbursements of the Government, and to promote the great interests of the country. To hoard it is contrary to the spirit of our institutions, and more especially when its custody and control are given to Executive officers, where it may be used for sinister purposes by unworthy incumbents. Such a principle has never attained before in this country; the surplus revenue collected from the people, beyond the wants of the Government, has always been placed in a situation to be used for the benefit of the people. This has been done by depositing it with the banks, which have undertaken, in consideration of it, to perform certain duties

SEPT. 22, 1837.]

Sub-Treasury Bill.

[SENATE.]

to the Government, in the way of collections, transmissions, and disbursements, without charge. This fund thus deposited, beyond the regular disbursements of the Government, became, through the banks, a useful agent in the regular commercial business of the country. It is collected from the merchants, and it is perfectly proper that they should, in this indirect way, have the use of it in their regular business transactions. By this means the whole community feels the benefits; for whatever aids the merchants in their operations, must of necessity aid, in the regular course of business, every other class in society. The merchants are the mere factors or distributors for the other classes. They are the agents, and any benefits extended to them, are for the advantage of their principals. Sir, this idea of locking up this money is a new one. It has not prevailed heretofore; its adoption now, however, is no more strange than the proposed system which is under discussion. It naturally results from it, and the one cannot be carried out without the other. President Jackson and all the friends of his administration, opposed the sub-Treasury scheme in 1834; and in 1836, President Jackson, in his message, expressed his opinion as to the use of the public money, in which all his friends acquiesced. He said:

“To retain it in the Treasury unemployed in any way, is impracticable. It is, besides, against the genius of our free institutions to lock up in vaults the treasure of the nation. To take from the people the right of bearing arms, and put their weapons of defence in the hands of a standing army, would be scarcely more dangerous to their liberties than to permit the Government to accumulate immense amounts of treasure beyond the supplies necessary to its legitimate wants. Such a treasure would doubtless be employed at some time, as it has been in other countries, when opportunity tempted ambition.

Has any thing occurred since 1836, which has altered the nature of our free institutions, so that it is now in accordance with their genius to lock up the treasure of the nation, which was so contrary to it then? Sir, I feel humbled to hear such principles avowed. I feel mortified to see some of my political friends taking a position directly the reverse of the one we have all along occupied in relation to this whole subject. If we were not committed on the record we might more easily change our ground; or if it was a mere matter of expediency we might tack about without such an accumulation of obloquy and reproach as must now rest upon us. We have heretofore treated these questions as matters of principle. We put ourselves on the record in some shape or other against the very doctrines for which we are now contending. And, from President Jackson down to the humblest member of the party, we are committed, in the most explicit manner, against the whole scheme and all its consequences, which we are now called upon to support. No party, I will venture to say, ever placed itself in so unenviable a light. How can we expect to be sustained by the people when our solemnly expressed and established principles one day are repudiated the next? How can we expect the people to embrace one set of principles one day, and the reverse of them the next? Sir, it cannot be. You must appeal to their reason. You must satisfy their judgment, and adhere to your principles when once established. The great body of the people are honest. They ask nothing, they want nothing, but wholesome laws, and a faithful administration of them. But they will not be content with such fickleness of purpose as requires them to maintain opposite doctrines at every alternate election.

Sir, I need not describe the effect of this measure on the whole country. If the banks in New York are embarrassed in their operations by it, every branch of business must be embarrassed. Those portions of the country where there is the least capital, but which have substituted credit in its place, will feel it the most sensibly. To western New York,

and to the Western States it will be like a mildew. What would have been the situation of those regions but for the free use of credit? What will be their situation when credit shall be withdrawn from them? Let Western gentlemen look to it. Those States are to come in for the full share of suffering in the course of this new experiment. The money collected for public lands is to be paid in specie. But very little of it is disbursed there. There will, therefore, be a constant drain upon the Western States for their specie in the disbursements of the Government, thereby deranging all the regular business operations of the country, and keeping the public mind in constant agitation and alarm. If the money was disbursed at the places respectively in the same proportion as it is received, the evil would not be so great. It would still be deranging the natural flow of specie by arbitrary regulations, and taking it from the banks where it is the basis of circulation.

The effect of all this upon the general credit of the country cannot be fully appreciated. Our currency has generally been of about the same character and value with that of England. We should endeavor to keep it of the same value. England is the great money market, and the great money regulator of the world. Our institutions assimilate more to this than to the other portions of Europe. We are intimately connected with England in our commercial relations, and our intercourse with her is more frequent and more easy than that between many portions of our own country. Her currency, therefore, has an important bearing upon ours. The prices of property depend much upon this. It would be the height of folly for us to adopt any measures which should curtail or sink our currency below hers. It would bring on a ruinous depression of prices, and affect the interests of every owner of property throughout the country. You might as well attempt to establish a metallic currency in one of the States of this Union, whilst all the others maintained a paper circulation, as to do any thing which shall materially change ours from what is the general currency of England. I know, sir, that appeals are made to the prejudices of the people against paper money. But, see what it has done for England. It has enabled her to fight the battles of the world; for a quarter of a century she has relied on an irredeemable, unconvertible paper currency, and successfully resisted the conqueror of Europe. It has given her a moral influence which is felt throughout all nations. It has secured to her own people more practical liberty than is enjoyed in any other nation except our own. In time of war the banking institutions of England, like our own, are identified with the interests of the country. Ours are dependent on the people, and so is the Government. In such a time, we are all embarked in the same bottom, and it is idle to say that there is any diversity of interests between the Government, the banks, or the people. In the experience of this country during the late war, our banks fought our battles as much as the Bank of England fought the battles of Europe.

Sir, I cannot but look at the effects of this system upon the city of New York, as of the most fatal tendency. It must tend to curtail the operations of the banks, and add to the general stagnation of business. Already are more than fifty thousand of her population out of employment, with all the horrors of an approaching winter before them. Unless something be done to revive the business of that city, that number will be doubled, and no one can foresee the consequences of such a state of things. Nothing is now wanting but the favorable action of the Government to change the whole face of things. But the evils to that devoted city do not end there; they necessarily extend to the whole country. If you cripple the operation of the banks there, and thereby cramp the business of the city, the same effects must be felt by the banks and business of the country; for you cannot strike a blow at New York without its being felt in a greater or less degree in every State of the Union.

SENATE.]

Sub-Treasury Bill.

[SEPT. 22, 1837.]

New York is the great commercial emporium; like the heart, its pulsations are felt to the remotest extremities, and whenever it ceases to beat, the whole limbs of this great body politic will become cold and lifeless.

These effects will be felt by the local banks of the several States, the stock of many of which belongs to the States themselves. If gentlemen, then, have no regard for individual stockholders, they ought to look to the interests of their respective States where the stock of the banks is thus held. This remark would apply to Pennsylvania, North Carolina, Alabama, Mississippi, Louisiana, Tennessee, Kentucky, Indiana, Illinois, and Missouri. [Mr. BENTON signified his dissent.] The Senator from Missouri, said Mr. T., shakes his head. He may have a system of banking there different from all the rest of the world, namely, that of issuing only one dollar of paper for one of specie in the vaults of the bank. If this be so, I would not willingly deprive him of the benefits of his system! But whilst I will not object to such a Procrustean bed in Missouri, I will not consent that it shall be transferred to New York, and that the honorable Senator shall stretch our man upon it and lop him off at both ends in order to fit him to his standard.

Sir, another serious objection to this measure is, that it will postpone perhaps indefinitely, the resumption of specie payments by the banks. There is no portion of the community more anxious for such resumption than the banks themselves. They have done every thing in their power to enable them to do it at the earliest possible day. They have determined that, as the stoppage was no fault of theirs, so neither shall the omission to resume be charged to their account. All that is required to enable them to resume by next spring, is the confidence and co-operation of the Government. Our foreign debt is estimated by some at about twelve millions of dollars at this time. This will be liquidated by the coming crop, and then there will be nothing in the way of the resumption by the banks, but the want of confidence on the part of the Government and the people. Without the co-operation of the Government, this confidence cannot be anticipated. If you make your collections in gold and silver, it seems to me impossible that they can resume. I have heretofore shown your current receipts into the sub-Treasury in New York to be in ordinary years about twelve millions of dollars, and that about five millions, after all the disbursements of the Government, will remain as an average balance in deposit. Let it be remembered, too, that about the time proposed for them to resume, there will be due on the merchants' bonds some five millions more, and which, under this "experiment," is also to be paid in specie! Now, sir, let me ask, how is it possible, under the present state of things, that the banks can resume, when by the last returns the aggregate amount of specie in their vaults is less than one million eight hundred thousand; and, in addition to the accruing revenue, there is to be five millions provided for the merchants' bonds. If this scheme shall be adopted they cannot resume. Let, it therefore, be distinctly understood that it is the fault of the Government, and not theirs, if they do not resume by the time I have indicated. They cannot command nor retain the confidence of the community, as long as the Government not only withholds from them the legitimate means which it possesses in the restoration of confidence, but withdraws from them their specie, which is the very foundation of confidence when once restored.

But, even if the banks should resume, they will be compelled under this system to stop again. The drain of specie from them to meet the exactions of the Government would render it impossible for them to continue. They must either suspend all business, or they must suspend specie payments. Either event would be equally disastrous. In either case, it would be death to the whole business of the country. If they should suspend specie payments

again after having resumed, the Legislature would be appealed to to grant no further indulgence, but forthwith to forfeit their charters, and put their concerns into the hands of receivers. If the prejudices of the community could be sufficiently wrought on, such would be the consequence. Any one who foresaw the effect of such a course last spring, if the Legislature had not interfered, can judge of the disastrous results of such a proceeding now. And that such would be the inevitable result, if this measure of separating the Government from the banks and the people be persisted in, no one can doubt. I will not say that gentlemen who advocate this scheme design to accomplish that object, but I do say, that if a scheme was devised for that express purpose, it could not be more adroitly planned.

If the banks do not resume—and it is certain they cannot and will not, if this system be carried into effect—what will be the consequence? It is alarming to contemplate! The worst passions of ignorant men, of men waked up to blind fury by false views and false representations, will be let loose, and they would be called upon to destroy the "little monsters" which would be made to appear to their maddened zeal as the nuisances of the community! The banks throughout the country, though sound and solid institutions, will be obliged to fall under the violence of the tempest which will be made to rage against them. This will be the inevitable effects of such measures as are now proposed. If it should so happen that the State Legislatures do not come to their aid, exhibiting more wisdom towards them than Congress seems disposed to exhibit, the results I have pointed out will inevitably happen, and they will have to wind up their affairs! Again, let me ask, what would be the effects of this unhappy result? The effects are too alarming—too distressing to make it credible that there exists the man willing to inflict so much suffering upon his countrymen! The people of the State of New York, for example, are indebted to the banks more than sixty millions of dollars; there are abundant means to pay, but in the hands of receivers all would be sold, and the property would be sacrificed; the receiver would buy the whole, as no one would have the means to buy. Can it be believed that gentlemen wish to see a scene such as this? My State (said Mr. T.) is so deeply concerned in the effects which will flow from this measure of the Government, that I can see already, as plain as the sun at noonday, that it would even be better for the country that a tornado or an earthquake should spread its desolation around, than that we should have this scheme inflicted upon us!

Why bring forward such a system as this, when, by the testimony of the President himself and of the Secretary of the Treasury, the State bank system worked so well? Such a crisis as the present may never again occur: it is an exception to a general rule, and who will not acknowledge that a worse guide for legislation than exceptions to general principles could not be procured? Again, what is there in this new system better than in the State bank system? What improvement has it met with since the day when it was held in the utmost abhorrence; when it was denounced by the party, and when it could only command 33 votes in the other House? How is it now suddenly discovered to be so much better than a system which, by the declaration of the best authority, answered all our anticipations? When this very same scheme was brought forward in 1835, we all of us believed that the public money would not be safe in the custody of officers of the Government, what reason is there now to change our minds, and to think that it will be safe there? But the President says we can construct a vault as firm, as strong, and as solid, as the vault of a bank. Yes, certainly, (said Mr. T.) we have no deficiency of mechanical means to make such a one, but who are to be its guardians? And though the vault may be secure, can we be certain that the guardians will be as solid and secure, and as well

SEPT. 22, 1837.]

Sub-Treasury Bill.

[SENATE.]

to be trusted as the vault? What security, sir, can we have for individuals? Whereas, when the money is deposited in banks, all the credit, and capital, and resources of those banks are pledged for the safety of the depositors, and are a certain guaranty of their safety! Such is the security afforded by the banking system; but by the sub-Treasury system, we have nothing but the naked, bare security of individuals! And who can tell, sir, what sort of an individual this may be? What honest man will be eager to throw himself into a situation of such danger, such temptation, and such immense responsibility? Who that has a proper appreciation for his family and children would be willing to assume duties of such a dangerous character? If the vault were plundered, he, let him be ever so innocent, will be immediately pronounced guilty; thenceforth he is a ruined man, his family ruined, his name a mark for disgrace, and himself an object for the finger of scorn to be pointed at! No prudent man who has a proper regard for his character and reputation, would be found ready to accept such an invidious and dangerous post.

But the President informs us that, on an average, there will not be above \$30,000 as the sum to be placed in the custody of each officer. This is a most fallacious idea. It is true, if you take all the officers and then strike an average, it might be that no more than that sum would fall to the share of each to take care of, but there must be large amounts concentrated at a few particular points, and it is not in the nature of things possible to spread out the whole revenue in such equal portions throughout this extensive Union. Or if the average was to be forcibly maintained, by removing the excess above the \$30,000 from one officer to other officers in other places, who can tell the disturbing effects which would follow from such transfers? I am surprised, therefore, that any one for one moment could linger upon this idea, as affording an argument for the safety of the public money under this system. We are told again that we have other pledges for the safety of the funds, in the sureties which each officer will be required to give to the Government for the funds committed to his care. I look upon the sureties to be given, as affording no security whatever. Men will not be found ready to sacrifice their property, and abandon it all to the Government in payment for what they have neither eaten nor drank; and when they put their property out of the reach of Government, they will only be praised for their care and prudence by the people of their neighborhood. What security, then, is afforded on this ground? Not an atom!

Gentlemen are very anxious, apparently, for this divorce, as they are pleased to term it. I would remind them, however, that whilst they are talking of a divorce, they are getting up an incestuous union between members of the same family—a marriage which is unlawful; and which I would say comes within the Levitical degrees, and therefore ought to be forbidden.

This union which is now proposed is a most unsafe and dangerous one. It reminds me of an anecdote of a captain of a packet with whom I was acquainted, who informed me that he always found it indispensably necessary for the safety of the ship's stores, to have his cook and his steward of different families, and if possible of different colors, and if he could get up a fight between them, it was all the better; for if they were connected together in a common bond of interest or affection, the stores were apt to be wasted. So here, I think our stores, the stores of the ship of State, will not be safe, if a union takes place between the Government and the public Treasury, which ought to be separated in different sets of hands, and those, too, antagonist hands.

The officers to be employed under this system, so far from being antagonist to the Government, are officers ap-

pointed by the Government, entirely dependent on it, and who may be removed by its fiat at any moment from their offices. There is positive danger in the scheme. All the deposits of the public money, all the Treasury, together with the other Executive powers, will now be united in the same family, and in the same hands. I see no security, but absolute insecurity, absolute danger, in the proposed system. But let us consider the chances of security which the system offers for the safety of the public moneys. The Senator from North Carolina tells us the public funds will hardly fail to be safe, for if the officer should appropriate them to his own use, he may be hung up by the neck until, to use the forcible repetitions of that gentleman, he is dead, dead, dead! What security is there here, sir, when the money is already gone? Will the dead body answer any of the purposes of security? Or does the gentleman really imagine that the penalty of death itself will prevent the possibility of defalcation? Does not the experience of all countries show that the severest penalties do not operate as preventives of crime of any kind? We have only to look to our own country for illustrations of the insufficiency and insecurity of the proposed system. What, for example, is thought to be the best system for the collection of the tolls on the New York canals. It is the system of deposit with the banks. The money is rapidly brought into the banks, and the least possible means are left in the power of the collectors. The great mass of the funds collected are therefore always on deposit in the banks, which credit the Government with the amount. It is owing to this system of removing responsibility for such large sums of money from individuals, and reposing it upon banks, that from the very first period of the formation of the canals down to the present moment the State has not lost one single dollar of the canal funds, though millions and millions have been collected. If the system were proposed in the State Legislature to take the personal responsibility of the officers employed in the collection, together with security, such as is proposed to be done by the present scheme, it would not be able to command a single vote! How then can it be here maintained by gentlemen that such an objectionable plan, rejected altogether by prudent and experienced legislators, is the best plan, and ought to be adopted? There is a law now on the statute book that certain disbursing officers shall deposit whatever public funds come into their hands, in the bank nearest to them until required to be paid out. Whence comes the necessity of such a law? why does the law exist, if penalties and securities make the money as safe as when deposited in the banks?

The truth of my position is illustrated by the financial history of the Government. In 1820, Mr. Crawford, then Secretary of the Treasury, reported that the amount of revenue from customs, from the commencement of the Government to the end of the year 1819, exceeded \$351,000,000. He also states that the amount of revenue lost by the insolvency of those who became bound for the payment of duties, together with the amount at that time doubtful, was not quite equal to forty-five hundredths of one per cent. upon the aggregate revenue which had accrued since the organization of the present Government! Yes, sir, the whole loss to the Government upon merchants' bonds and their sureties, in the collection of more than \$351,000,000, was less than one-half of one per cent., and this enormous amount was principally collected through the agency of the banks. Yet it is these merchants and these banks that have been so much disparaged in our public discussions, as well as in the public prints. Mr. Crawford also states, in the same report, that the amount of loss from the collectors of revenue from imports and tonnage, from the collectors of the internal revenue and direct tax, and receivers of public moneys, nearly equals that which the Government sustained on the collection of

SENATE.]

Sub-Treasury Bill.

[SEPT. 22, 1837.]

more than \$351,000,000 from the merchants! He also estimates that the losses, by the misapplication of the public money by officers of Government employed in disbursing it, greatly exceed those which have been incurred in the collection! Sir, these statements present a most appalling foretaste of what we are to expect under this sub-Treasury scheme. If collectors and receivers, and disbursing officers, have swindled the Government of such enormous amounts, whilst the money was merely passing through their hands, what are we to expect when they become the permanent depositaries?

Every fact goes against the system as proposed by this bill, and at the same time every fact goes in favor of the system which it is now suddenly proposed to cast aside! Can it be possible that gentlemen wish to expose the Treasury as it will be exposed by this scheme? I do not wish to disparage our public officers or those who may be employed under this system. But, I look at human nature as it is. I look at the temptations to which they are exposed. The confidence of individuals in their own integrity may be unbounded, and they will never suspect it till put to the test of such temptations as will be presented under this system. I mean no unnecessary or improper disparagement when I say, I have no faith in the safety of the public money if this scheme goes into operation. There is danger in every stage of it. And no opportunity will pass unimproved where the temptation is sufficiently presented. There is no safety in it.

"You may as well spread out the unsunn'd heaps
Of miser's treasure by an outlaw's den,
And tell me it is safe, as bid me hope
Danger will wink on opportunity."

So far from there being no danger in the plan, there is no safety in it. But in the other there is the absence of danger.

It has been argued that the public money by being placed in deposit with the banks goes to assist them, and the gentleman who has advanced this idea thinks that it ought not to be so. But I affirm, on the contrary, that it is right and proper that the public money should answer so useful a purpose—should go to promote and assist the objects of the commerce of the country. The people are entitled to this benefit. But if you take away all the specie from the vaults of the banks, you take away their means; they will not be able to do any thing; and not only will they lose the advantage of operating with the amount deposited, but you take away confidence from them, and they can do nothing.

It is objected against the system of depositing the public funds with the banks, that they operate injuriously as a means of stimulating to speculation and overtrading. There is, however, a bill before you which will effectually prevent overtrading. I mean the warehousing system bill, by which merchants will pay the duties in cash, not on long credits, but on receiving their goods from the public warehouses. The danger of overaction, in reference to importations, will be by this system removed, as the merchants will have to pay the duties, not, as under the existing system, after the goods have been thrown into market and disposed of, but at the period of bringing them into the market, so that they will not import fresh quantities of goods before the duties are paid on former importations.

Why do gentlemen wish, after the experience of a good system, to adopt a new experiment? for let it be remembered, the banking deposit system has worked well, and the present crisis is truly an exception to a general rule. You might as well say when a steamboat had burst its boiler, that we ought, in consequence, to abandon the use of steam, and in place of it try the experiment of balloons. The consequence would be we should come down again to our mother earth with broken bones or with a broken neck. Such, indeed, will be the result of the adoption of this scheme.

There is no other mode to enable the banks to resume specie payments than the mode proposed by the Senator from Virginia, [Mr. RIVES.]

This amendment will create confidence, and when confidence is revived they will be able to resume. That time is not far distant if the confidence of Government was not withdrawn from them; but if the measure of this bill is carried into effect it will be impossible for them to resume.

With respect to the subject of Executive patronage, it is not my intention to detain the Senate with any remarks upon this part of the scheme. What the Senator from Virginia has said upon it is forcible and conclusive on this point. Let us, however, bear in mind, that we are not now legislating either for the present or for the past, but for the future. I apprehend no danger from the present Executive. In him I have perfect confidence. I have known him from early manhood walking within the bounds and limits of the constitution; but the day may arrive when the chair of the Chief Magistrate may be filled by an individual ready to abuse his trust, and then our action will have furnished him with the means and the power.

Mr. President, this is a most important crisis in the affairs of the country. I wish other gentlemen could appreciate it as I do. We might then avert the evils which are impending over us. Sir, we are asked to adopt a system, which I fear will prove most disastrous in its results if carried into execution, but which I apprehend it will be physically impossible to execute. I will not attempt to describe the consequences of such a state of things. I hope my anticipations may not be realized; but I look forward to the consummation of this measure with the most painful forebodings. And I shall be happily disappointed if it does not involve the people, the country, and its institutions, in one great and common calamity.

When Mr. TALLMADGE had concluded,

Mr. STRANGE offered a few explanatory remarks in reference to what he had said yesterday, for the purpose of correcting some unintentional misrepresentations which the Senator from New York [Mr. TALLMADGE] had made.

Mr. TALLMADGE replied, that nothing was farther from his intention than to misrepresent the gentleman, and if he had misapprehended him, he regretted it, and stood corrected.

Mr. CALHOUN rose, and observed that there were now only two plans proposed, both which were before the Senate. The first of these was the bill reported by the Committee on Finance, together with the amendment proposed by himself, (Mr. C.,) the other was the plan proposed on a former day by Mr. RIVES. Between these two plans, the Senate had now to choose. If Mr. C. fully understood the plan offered by Mr. RIVES, it appeared to him subject, at first view, to an usuperable objection. The honorable Senator proposes to offer to the banks the condition that, if they will resume specie payments, their notes shall be exclusively received by the Government, while the notes of all other banks which do not resume shall be excluded. It appeared to Mr. C. to be a question whether, by such terms, we should not be entering into a compact with those banks which resumed; and what sort of compact would it be? It was no less a compact than this, namely, that the Government engages to surrender the great and invaluable privilege of endorsing the notes of those banks forever. Mr. C. put it solemnly to the Senate and to Mr. RIVES if they were willing to make such a compact. It was only the other day he had heard the deposit law urged as being a compact not to be violated. Only the most vigorous banks would be able to profit by this compact; and could any one not perceive the operation? There would be a combination of banks in order to obtain to themselves the privilege; they would combine to prepare for resumption, and to prevent the other weaker banks from resuming. Such was Mr. C.'s view of the case. Did not Mr. RIVES see what

SEPT. 22, 1837.]

Sub-Treasury Bill.

[SENATE.]

would be the effect? The Bank of the United States has means; it is strong; and would not his measure offer a chance to that bank, an inducement to make great sacrifices in order to obtain the privilege? And, if it did so, then what would be our condition? We should then have a Bank of the United States! We should have a United States Bank, too, in a worse form than the local banks, because it would be without any control from the Government. If Mr. C. was right in these views, then, of the two plans before the Senate, that of Mr. RIVES being thus defective, we had no choice but to take and adopt the plan of Government, viz. the sub-Treasury system, a divorce from banking institutions, and the reception of nothing but gold and silver. Mr. C. thought it was a duty of the Government to receive nothing else but gold and silver, because it was its duty to prevent the recurrence of another catastrophe similar to the present, and he thought this plan would prevent it. If the divorce was not now made, when could it be made? Now was the time, or never. If Government was not divorced from the banks, where would it end? In a few years, we have proceeded, from a small number of banks, to eight hundred, and when would it stop? He thought never.

Mr. RIVES expressed himself astonished at the views he had just heard brought forward by Mr. CALHOUN. Astonished from various causes, and, above all, because they were in direct contradiction, not only to that gentleman's words, but also to his actions. Mr. CALHOUN had gravely told the Senate that his (Mr. RIVES's) proposition was a compact! That, if it was adopted, then in all future time the Government would be bound to receive, yes, absolutely bound to receive the notes of the banks. This declaration on the part of that gentleman was the more surprising when we consider that Mr. CALHOUN himself had brought forward a proposition to violate a similar compact, (if any compact be implied in the proposition he (Mr. R.) had submitted.) How could the honorable Senator talk of perpetual and binding compacts when his own proposition goes to violate the compact, which, if there be any in his (Mr. R.'s) proposition, equally exists in the joint resolution of 1816? The proposition of Mr. RIVES was identical with the resolution of 1816, which was at this moment the law of the land, (a compact, if the gentleman pleases,) which law he now brings forward a proposition to overthrow, by excluding altogether the notes of specie-paying banks, and yet talks of the sanctity of a compact! If his (Mr. R.'s) proposition was a compact, the resolution of 1816 was one also, and Mr. CALHOUN's proposition went to violate that compact. What Mr. CALHOUN participated in doing in 1816, he now calls inadmissible, and says that it is subject to insuperable objection. Does the honorable gentleman forget that he himself, as chairman of the Committee on Currency, in 1816, reported a bill of pains and penalties against the banks if they did not resume specie payments? And now he professes to be opposed to coercion! Did he not propose a stamp tax on the notes of banks which should not resume? Did he not also support the resolution of 1816? If the present proposition was a compact, was not the proposition he then supported a compact too? But did he then treat it as a compact? Does he now regard it as a compact, with a bill in his hand to repeal it? The resolution of 1816 made the notes of specie-paying banks receivable; his (Mr. R.'s) proposition did the same thing. There is no difference between the two, and he invited Mr. C. to make the comparison and to point out any difference.

Mr. RIVES farther remarked that it was not necessary for him to go into general considerations on the subject of the bill (introduced by him,) as he had already said all he could well say without repeating. But he thought it extraordinary that the Senator from South Carolina [Mr. CALHOUN] should speak of the bill as entirely inefficient, when he himself had asserted that the credit of bank paper

was derived exclusively from its endorsement by Government, by its receiving it for the public dues. [Mr. CALHOUN. If I said so, it was not my intention; it was a most absurd thing to say.] Mr. R. resumed. It was sufficient that the Senator now diavowed it. Mr. R.'s own opinion was that a certain degree of credit was derived by bank paper, by its being received for the public dues, but not the whole. It was his idea at the last session of Congress, when he introduced a bill similar to this, that it would have a certain degree of influence on the credit of bank paper; and it was his anticipation that the legislation of Congress on the subject would constitute a standard to which public opinion might rally, and to which the Legislatures of the States might conform. Mr. R. wanted here a model of legislation on the currency, to which the States might adapt their action, and gradually and progressively suppress the small notes. A proposition to that effect had, he understood, been heretofore made by the Secretary of the Treasury to the deposit banks, several of whom had signified their willingness to accede to it.

As both bills (that of Mr. R. and the sub-Treasury bill) had reference to the same general object, and as the honorable Senator regarded his amendment as the principal provision to be embraced in the bill, and as constituting the principal difference between the two measures, Mr. R. would beg leave to conclude by moving, if it was in order, that the whole sub-Treasury bill, after the enacting clause, should be stricken out, and that Mr. R.'s bill, making the notes of specie-paying banks, under certain limitations, receivable by Government, should be inserted in lieu of it.

Mr. CALHOUN said this was not in order; the question (on Mr. C.'s amendment) now before the Senate must be put first.

That the Senate might judge between the bill introduced by the Senator, and the resolution of 1816, he would ask permission of the Senate to read that resolution. [The resolution of 1816 was then read.] This resolution, Mr. C. said, it appeared to him, simply directed the Secretary of the Treasury to receive nothing but gold and silver, Treasury notes, and the notes of specie-paying banks. But this bill went further, and excluded the bills of all banks that should not resume specie payments by a given day. There was something onerous to be performed by the banks; and the inducement was, that if they would do it by a given day of the year, their notes would be received, to the exclusion of all other banks. Now, said Mr. C., if the United States Bank of Pennsylvania, and the strong banks associated with it, which only, Mr. C. maintained, would so manage as to resume specie payments on the given day, and thus become exclusively entitled to the benefits of the bill; if they only should thus conform to the requisitions of the act, would it be good faith to repeal it the day after? Mr. C. said he was not a lawyer, and he therefore did not feel competent to judge in the case. But he thought that if just expectations were excited by the bill when enacted, those expectations would possess the nature of a compact. The expectation in this case would be, that their notes would be exclusively received for the public dues. This was a powerful temptation to them, and well might they try to resume specie payments, to borrow abroad, and press their creditors for such a boon. They would draw on the weaker banks, and embarrass them so that it would be impossible for them to resume; and they only (the United States Bank and its associates) would seize the golden prize.

There was no such promise as this in the resolution of 1816. That resolution came originally from the Senator from Massachusetts, [Mr. WEBSTER,] and received Mr. C.'s sanction; but he never dreamed, nor did he now think, that it had the slightest appearance of a compact. If it had, Mr. C. was in great error; and he was glad and thankful to the Deity that circumstances had swept away

SENATE.]

Sub-Treasury Bill.

[SEPT. 22, 1837.]

such a compact, and without a failure on the part of Congress.

The Senator rested wholly on the point of a virtual compact, the existence of which, should the bill pass, Mr. C. had alleged; and had not touched the other points to which Mr. C. had adverted. The possible incorporation by Congress of the United States Bank of Pennsylvania, Mr. C. thought, might be worthy of his consideration.

Mr. RIVES said, with all deference to the advantages of the honorable Senator, he (Mr. R.) could not see any sort of difference, either technically or practically, between the resolution of 1816, and the bill which he had introduced. The Senator's distinction was founded on the provision in Mr. R.'s bill, fixing a day for the resumption of specie payments. But the resolution of 1816 did essentially the same thing, naming the 20th of February, with a provision that, after that time, yet future, the notes of specie-paying banks only should be received, and excluding, of course, the notes of non-specie-paying banks.

The Senator had said that Mr. R. had not adverted to the other point of his observations. He (Mr. R.) had not the remotest idea of introducing a stipulation for the benefit of the Pennsylvania Bank of the United States; on the contrary, it was precisely the Bank of the United States that, in his opinion, was least likely to be benefited. It was Mr. R.'s conviction that the United States Bank was not desirous of resuming specie payments, in consequence of those commercial operations in which it had been extensively engaged, for paying off its foreign debt. It was understood to be so engaged now, and Mr. R. had no idea that the consequence of his bill would be such as Mr. C. had represented. Mr. R. was perfectly clear that there was nothing in the bill of the nature of a compact.

Mr. CALHOUN said if the wording of the resolution of 1816 was not plain, the facts were. At that time Congress had incorporated the Bank of the United States, and felt independent, therefore, of the State banks. They could go on without them, unless they should choose to fall in with the current. But Mr. C. thought this bill did create an expectation on the part of the banks. It proposed something to be done by them, which, if they did, Congress was to do something in return, and the responsibility of doing was assumed on their part. Mr. C.'s colleague had insisted that there was a virtual compact between the Government and the States in relation to the deposits; though Mr. C. had regarded that as only a discretion to the Secretary of the Treasury. He believed the Senator from Virginia was mistaken in the opinion that the benefit of his bill would not be monopolized by the United States Bank and its associates. It was a high boon; and Mr. C. was certain that bank would regard the bill as a compact; and it had the capacity, through its connexion with the money holders in Europe, to fulfil the condition of the bill, and it would fulfil it, and take the benefit, and insist on the bill as a compact.

Mr. RIVES said he understood the Senator now to say that it was no part of the policy of the Government, in the resolution of 1816, to present an inducement to, and excite an expectation in, the State banks.

[Mr. CALHOUN said he meant to say that such was not the leading object of Congress; they had a bank of the United States, and could do without the State banks.]

The object was, Mr. R. said, to present to the State banks an inducement to resume specie payments. It was then thought very important that they should resume; and Mr. Dallas, then Secretary of the Treasury, urged upon Congress that they should address every inducement to the State banks to a resumption. This was then the policy of the Government; and therefore it might be said, with the same propriety as in relation to the present bill, that they had paid a valuable consideration by resumption, and were therefore entitled, forever thereafter, by a virtual compact,

to the benefit of having their bills received in payment of he public dues.

But, in regard to the other matter, the high and principal consideration, of the bill probably enuring to the benefit of the Bank of the United States, the assertion was wholly gratuitous on the part of the Senator from South Carolina. He had adduced no reasons to induce the Senate to believe that that bank would resume specie payments sooner than others. They would remember certain facts that were known to all the world. They had seen the circular of the banks in New York, inviting other banks to take the preliminary steps to a return to specie payments, in which they said the banks might and must so return between the 1st of January and the middle of March. The United States Bank refused to unite in the measure, and referred the whole matter to Congress. The banks generally had manifested a design to return to specie payments. The banks of Virginia, by their officers, had given their opinion that the banks in Virginia, and throughout the United States, would be prepared to resume specie payments in January or February. My friend from New York [Mr. TALLMADGE] stated upon the authority of one well versed in such matters, that the balance of debt abroad was \$12,000,000, which, by the exportation of cotton and other productions, would, by that time, be totally extinguished, and all the banks would simultaneously resume specie payments. If there was legislation on the part of Congress, fixing a given day, and that not distant, there would be no difficulty in resuming by all banks that were sound and solvent, all at the same time; and there was no evidence that there would be such a monopoly as had been intimated by the Bank of the United States. Other banks would probably resume before that, or all at the same time, in February or March.

Mr. CALHOUN said he had read the reply of the Bank of the United States to the banks of New York hastily; but he understood it to say that it was impossible to resume specie payments without the action of Congress; and that no relief could be afforded without the aid of Congress; and Mr. C. knew of no greater aid that could be rendered the United States Bank than for the Government to say that if the bank would resume it would receive its bills. The Bank of the United States was in a remarkable attitude, and had a remarkable man at its head, who was not surpassed by any financier in Europe, or any other country. This was the strong institution of the country—had more credit here and abroad than any other, and was able to turn these times to immense profit. If this new temptation were placed before him, the policy of the president of that bank would be entirely changed. No man saw more clearly the advantages of such a measure as this than Mr. Biddle. He was opposed, at bottom, to the creation of a United States Bank, lest it should overshadow his own, and he should become the mere planet of a greater corporation. There would be a real struggle with the Government, in Mr. C.'s opinion, were he first to receive the prize held forth by this bill. Mr. C. respected the man, for he knew he had done his duty well, and with great fidelity on behalf of the two institutions over which he had presided. He was worthy of the high destinies which he had attained; but Mr. C. would resist him more now than if he were certain there would be a new bank of the United States; and, in doing so, he would act as a Senator from South Carolina ought to act, looking back at the course which he had pursued for the benefit of his constituents and the people, not only of the whole Union, but of the particular section which he represented.

Mr. BENTON rose to offer the aid of his voice in favor of the amendment, and in favor of the bill to which it was proposed to be attached. He considered the amendment and the bill as one measure, indissolubly connected in their nature; and that the bill would be of little value, unless

SEPT. 22, 1837.]

Sub-Treasury Bill.

[SENATE.]

the amendment was made. There might have been some difference of opinion as to the time and mode of adopting the provisions contained in the amendment—whether it should be done at this session, or at the next; and whether it should be effected by an amendatory clause, or by a separate bill. There might have been room for difference of opinion on these points a few days ago; but, since the amendment is offered, and opposed, it must be carried, or the bill itself considered as lost. He held the vote upon the amendment to be a vote upon the life and death of the bill; for it will decide whether the principle of the amendment is to become law; and if it is not, the bill becomes nugatory; for what advantage can there be in having separate keepers of the public moneys if they are only to keep the paper promises of the banks? The banks themselves, who hold the thing promised, will still be the real keepers. They will still be the treasurers. They will hold the substance, and our officers will have the shadow. They will have the money, and our officers will have the promise. They can break the promise at any time, and our officers cannot help themselves. State Legislatures may interpose, and the Federal Government cannot help itself. To make this more clear, let it be supposed that this bill, without the amendment, had been the law of the land heretofore, and had been in force in May last, when the banks stopped payment. There were thirty-two millions of public money in deposit with banks at that time, and not a dollar of real money could be got for it. Now, suppose these thirty-two millions had been received by our own officers in the notes of the banks; the result would have been precisely the same; the banks would not have paid the notes; and the acts of State Legislatures would have sanctioned the refusal; for they were just as applicable to notes as to deposits. Not a dollar could have been got upon them. The banks stopped payment on their notes as well as on their deposits. The holder of their notes, and the depositor, were alike repulsed; and thus our treasurers, holding thirty-two millions of their notes, would have been penniless.

The bill is to divorce the Government from the banks, or rather is to declare the divorce, for the separation has already taken place by the operation of law and by the delinquency of the banks. The bill is to declare the divorce; the amendment is to exclude their notes from revenue payments, not all at once, but gradually, and to be accomplished by the 1st day of January, 1841. Until then the notes of specie-paying banks may be received, diminishing one-fourth annually; and after that day, all payments to and from the Federal Government are to be made in hard money. Until that day, payments from the United States will be governed by existing laws. The amendment does not affect the Post Office Department until January, 1841; until then, the fiscal operations of that Department remain under the present laws; after that day they fall under the principle of the bill, and all payments to and from that Department will be made in hard money. The effect of the whole amendment will be to restore the currency of the constitution to the Federal Government—to re-establish the great acts of 1789 and of 1800—declaring that the revenues should be collected in gold and silver coin only; those early statutes which were enacted by the hard money men who made the constitution, who had seen and felt the evils of that paper money, and intended to guard against these evils in future by creating, not a paper, but a hard-money Government.

I am for this restoration. I am for restoring to the Federal Treasury the currency of the constitution. I am for carrying back this Government to the solidity projected by its founders. This is a great object in itself—a reform of the first magnitude—a reformation with healing on its wings, bringing safety to the Government and blessings to the people. The currency is a thing which reaches every individual and every institution. From the Government to the washer-woman, all are reached by it, and all con-

cerned in it; and, what seems paradoxical, all are concerned to the same degree; for all are concerned to the whole extent of their property and dealings; and all is all, whether it be much or little. The Government with its many ten millions of revenue, suffers no more in proportion than the humble and meritorious laborer who works from sun to sun for the shillings which give food and raiment to his family. The Federal Government has deteriorated the currency, and carried mischief to the whole community, and lost its own revenues, and subjected itself to be trampled upon by corporations, by departing from the constitution, and converting this Government from a hard-money to a paper-money Government. The object of the amendment and the bill is to reform these abuses, and it is a reform worthy to be called a reformation—worthy to engage the labor of patriots—worthy to unite the exertions of different parties—worthy to fix the attention of the age—worthy to excite the hopes of the people, and to invoke upon its success the blessings of heaven.

Great are the evils, political, pecuniary, and moral, which have flowed from this departure from our constitution. Through the Federal Government alone—through it, not by it—two millions and a half of money have been lost in the last four months. Thirty-two millions of public money was the amount in the deposit banks when they stopped payment; of this sum twenty-five millions have been paid over to Government creditors, or transferred to the States. But how paid, and how transferred? In what? In real money, or its equivalent? Not at all! But in the notes of suspended banks—in notes depreciated, on an average, ten per cent. Here then were two and a half millions lost. Who bore the loss? The public creditors and the States. Who gained it? for where there is a loss to one, there must be a gain to another. Who gained the two and a half millions, thus sunk upon the hands of the creditors and the States? The banks were the gainers; they gained it; the public creditors and the States lost it; and to the creditors it was a forced loss. It is in vain to say that they consented to take it. They had no alternative. It was that or nothing. The banks forced it upon the Government; the Government forced it upon the creditor. Consent was out of the question. Power ruled, and that power was in the banks; and they gained the two and a half millions which the States and the public creditors lost.

The Senator from New York, [Mr. TALLMADGE,] who had just spoken with so much ability, and who is opposed both to this bill and this amendment, has predicated an argument in favor of the local banks on account of the small amount of the public money which has been lost in their hands; but here is two and a half millions in a single operation, and without going back to the period of bank stoppages in 1819 and 1814. He confines himself to direct losses, but that is a most imperfect view of the question. The full view embraces, besides direct losses, all that are incidental to the use of depreciated paper money; increased prices—disappointed operations by sea and land in time of war—and embarrassed operations in time of peace; per centums shaved off at every step; the ignorant, the helpless, the necessitous, imposed upon; and one vast scene of pushing off bad paper on each other exhibited all over the country.

I do not pretend to estimate the moneyed losses, direct or indirect, to the Government alone, from the use of local bank notes, in the last twenty-five years, including the war, and covering three general suspensions. Leaving the people out of view, as a field of losses beyond calculation, I confine myself to the Federal Government, and say, its losses have been enormous, prodigious, and incalculable. We have had three general stoppages of the local banks in the short space of twenty-two years. It is at the average rate of one in seven years; and who is to guaranty us from another, and from the consequent losses, if we continue to

SENATE.]

Sub-Treasury Bill.

[SEPT. 22, 1837.]

receive their bills in payment of public dues. Another stoppage must come, and that, reasoning from all analogies, in less than seven years after the resumption. Many must perish in the attempt to resume, and would do better to wind up at once, without attempting to go on, without adequate means, and against appalling obstacles. Another revulsion must come. Thus it was after the last resumption. The banks recommenced payments in 1817—in two years, the failures were more disastrous than ever. Thus it was in England after the long suspension of twenty-six years. Payments recommenced in 1823—in 1825 the most desolating crash of banks took place which had ever been known in the kingdom, although the bank of England had imported, in less than four years, twenty millions sterling in gold, about one hundred millions of dollars to recommence upon. Its effects reached this country, crushed the cotton houses in New Orleans, depressed the money market, and injured all business. Why was this? Why was it that, within two years after resumption, both in England and in our America, these disastrous revulsions ensued? Loss of confidence was the cause; and that loss resulting, not from the act of Government, but from the conduct of the banks themselves. The banks had failed, and, therefore, could fail. The people had seen them fail, and, therefore, they feared they might do so again. There was no confidence in them; no more than the coachman places in the balking horse when he comes to the hill. The gentleman from Virginia [Mr. Rives] wishes the Government to do something to reanimate confidence in these banks. Could a law of Congress inspire confidence into his coachman, and give him faith in the balking horse? No more can it be done in relation to these banks. They have stopped, universally and simultaneously, in a season of profound peace and general prosperity—no war, no pestilence, no famine—with four times as much specie in the country as ever was in it before; and this stoppage has killed confidence. It is dead by the act of the banks, and cannot be legislated into existence again by act of Congress. Confidence is a plant of voluntary and not of forced existence. It is said by an eminent man to be a plant of slow growth. We all know it to be so; and we know, besides, that when this plant is once pulled up by the roots, it rarely takes root again in the same place.

The Senators from New York and Virginia [Messrs. Tallmadge and Rives] push this point of confidence a little further; they address a question to me, and ask if I would lose confidence in all steamboats, and have them all discarded, if one or two blew up in the Mississippi? I answer the question in all frankness, and say, that I should not. But if, instead of one or two in the Mississippi, all the steamboats in the Union should blow up at once—in every creek, river and bay—while all the passengers were sleeping in confidence, and the pilots crying out all is well; if the whole should blow up from one end of the Union to the other just as fast as they could hear each other's explosions; then, indeed, I should lose confidence in them, and never again trust wife, or child, or my own foot, or any thing not intended for destruction, on board such sympathetic and contagious engines of death. I answer further, and tell the gentlemen, that if only one or two banks had stopped last May in New York, I should not have lost all confidence in the remaining nine hundred and ninety-nine; but when the whole thousand stopped at once; tumbled down together—fell in a lump—lie there—and when one of their number, by a sign with the little finger, can make the whole lie still, then, indeed, confidence is gone! And this is the case with the banks. They have not only stopped altogether, but in a season of profound peace, with eighty millions of specie in the country, and just after the annual examinations by commissioners and legislative committees, and when all was reported well. With eighty millions in the country, they stop even for change! It did not take a

national calamity—a war—to stop them! They fell in time of peace and prosperity! We read of people in the West Indies, and in South America, who rebuild their cities on the same spot where earthquakes had overthrown them; we are astonished at their fatuity; we wonder that they will build again on the same perilous foundations. But these people have a reason for their conduct; it is, that their cities are only destroyed by earthquakes; it takes an earthquake to destroy them; and when there is no earthquake, they are safe. But suppose their cities fell down without any commotion in the earth, or the air—fell in a season of perfect calm and serenity—and after that the survivors should go to building again in the same place; would not all the world say that they were demented, and were doomed to destruction? So of the Government of the United States by these banks. If it continues to use them, and to receive their notes for revenue, after what has happened, and in the face of what now exists, it argues fatuity, and a doom to destruction.

Resume when they will or when they shall, and the longer it is delayed the worse for themselves, the epoch of resumption is to be a perilous crisis to many. This stopping and resuming by banks is the realization of the poetical description of the descent into hell, and the return from it. *Facilis descensus Avernii—sed revocare gradum—hoc opus, hic labor est.* Easy is the descent into the regions below, but to return! this is work, this is labor indeed! Our banks have made the descent; they have gone down with ease; but to return—to ascend the rugged steps, and behold again the light above—how many will falter, and fall back again into the gloomy regions below.

The day of resumption will be a day of peril, and of death to many. It is a penalty which their extraordinary stoppage has imposed. Many must fail in the trial; probably a new panic and pressure take place; and those who must attribute every calamity to the misrule, the ignorance, and the misgovernment of the republican party, had as well be preparing their accusations in advance; for the contingency will come, and a cause for it must be found in the misconduct of the Government. Let them prophesize in advance, and show their capacity for political divination by vaticinating beforehand, and exhibiting now a political cause for an event to arise hereafter out of the natural progress of banking.

Banks of circulation are banks of hazard and of failure. It is an incident of their nature. Those without circulation rarely fail. That of Venice has stood seven hundred years; those of Hamburg, Amsterdam, and others, have stood for centuries. The Bank of England, the great mother of banks of circulation, besides an actual stoppage of a quarter of a century, has had her crisis and convulsion in average periods of seven or eight years, for the last half century—in 1783, '93, '97, 1814, '19, '25, '36—and has only been saved from repeated failure by the powerful support of the British Government, and profuse supplies of exchequer bills. Her numerous progeny of private and joint-stock banks of circulation have had the same convulsions; and, not being supported by the Government, have sunk by hundreds at a time. All the banks of the United States are banks of circulation; they are all subject to the inherent dangers of that class of banks, and are, besides, subject to new dangers peculiar to themselves. From the quantity of their stock held by foreigners, the quantity of other stocks in their hands, and the current foreign balance against the United States, our paper system has become an appendage to that of England. As such, it suffers from sympathy when the English system suffers. In addition to this, a new doctrine is now broached—that our first duty is to foreigners! and, upon this principle, when the banks of the two countries are in peril, ours are to be sacrificed to save those of England!

The power of a few banks over the whole present a new

SEPT. 22, 1837.]

Sub-Treasury Bill.

[SENATE.]

feature of danger in our system. It consolidates the banks of the whole Union into one mass, and subjects them to one fate, and that fate to be decided by a few, without even the knowledge of the rest. An unknown divan of bankers sends forth an edict which sweeps over the empire, crosses the lines of States with the facility of a Turkish firman, prostrating all State institutions, breaking up all engagements, and levelling all law before it. This is consolidation of a kind which the genius of Patrick Henry had not even conceived. But while this firman is thus potent and irresistible for prostration, it is impotent and powerless for resurrection. It goes out in vain, bidding the prostrate banks to rise. A veto power intervenes. One voice is sufficient to keep all down; and thus we have seen one word from Philadelphia annihilate the New York proposition for resumption, and condemn the many solvent banks to the continuation of a condition as mortifying to their feelings as it is injurious to their future interests.

Again, from the mode of doing business among our banks—using each other's paper to bank upon, instead of holding each other to weekly settlements, and the liquidation of balances in specie, and from the fatal practice of issuing notes at one place payable at another—our banks have all become links of one chain, the strength of the whole being dependent on the strength of each. A few govern all. Whether it is to fail or to resume, the few govern; and not only the few, but the weak. A few weak banks fail; a panic ensues, and the rest shut up; many strong ones are ready to resume; the weak are not ready, and the strong must wait. Thus the principles of safety and the rules of Government are reversed. The weak govern the strong; the bad govern the good; and the insolvent govern the solvent. This is our system, if system it can be called, which has no feature of consistency, no principle of safety, and which is nothing but the floating appendage of a foreign and over-powering system.

The Federal Government and its creditors have suffered great pecuniary losses from the use of these banks and their paper; they must continue to sustain such losses if they continue to use such depositories and to receive such paper. The pecuniary losses have been, now are, and must be hereafter great; but, great as they have been, now are, and may be hereafter, all that loss is nothing compared to the political dangers which flow from the same source. These dangers affect the life of the Government. They go to its existence. They involve anarchy, confusion, violence, dissolution! They go to deprive the Government of support—of the means of living; they strip it in an instant of every shilling of revenue, and leave it penniless, helpless, lifeless. The late stoppage might have broken up the Government, had it not been for the fidelity and affection of the people to their institutions, and the eighty millions of specie which General Jackson had accumulated in the country. That stoppage presented a peculiar feature of peril which has not been brought to the notice of the public; it was the stoppage of the sums standing in the names of disbursing officers, and wanted for daily payments in all the branches of the public service. These sums amounted to about five millions of dollars. They had been drawn from the Treasury, they were no longer standing to the credit of the United States; they had gone into the hands of innumerable officers and agents, in all parts of the Union, and were temporarily, and for more safe-keeping from day to day, lodged with these deposit banks, to be incessantly paid out to those who were doing work and labor, performing contracts, or rendering service, civil or military, to the country. These five millions were stopped with the rest! In an instant, as if by enchantment, every disbursing officer, in every part of the Union, was stripped of the money which he was going to pay out! All officers of the Government, high and low, the whole army and navy, all the laborers and contractors, post-offices

and all, were suddenly, instantaneously, left without pay, and consequently without subsistence. It was tantamount to a disbandment of the entire Government. It was like a decree for the dissolution of the body politic. It was celebrated as a victory—as a conquest—as a triumph, over the Government. The least that was expected was an immediate civil revolution—the overthrow of the democratic party, the change of administration, the reascension of the federal party to power, and the re-establishment of the condemned Bank of the United States. These consequences were counted upon; and that they did not happen was solely owing to the eighty millions of hard money which kept up a standard of value in the country, and prevented the dishonored bank notes from sinking too low to be used by the community. But it is not merely stoppage of the banks that we have to fear; collisions with the States may ensue. State Legislatures may sanction the stoppage, withhold the poor right of suing, and thus interpose their authority between the Federal Government and its revenues. This has already happened, not in hostility to the Government, but in protection of themselves; and the consequence was the same as if the intention had been hostile. It was interposition between the Federal Government and its depositories; it was deprivation of revenue; it was an act the recurrence of which should be carefully guarded against in future.

This is what we have seen; this is a danger which we have just escaped; and if these banks shall be continued as depositories of public money, or, which is just the same thing, if the Government shall continue to receive their "paper promises to pay," the same danger may be seen again, and under far more critical circumstances. A similar stoppage of the banks may take place again—will inevitably take place again—and it may be when there is little specie in the country, or when war prevails. All history is full of examples of armies and navies revolting for want of pay; all history is full of examples of military and naval operations miscarried for want of money; all history is full of instances of Governments overturned from deficits of revenue and derangements of finances. And are we to expose ourselves recklessly, and with our eyes open, to such dangers? And are we to stake the life and death of this Government upon the hazards and contingencies of banking—and of such banking as exists in these United States? Are we to subject the existence of this Government to the stoppages of the banks, whether those stoppages result from misfortune, providence, or bad faith? Are we to subject this great and glorious political fabric, the work of so many wise and patriotic heads, to be demolished in an instant, and by an unseen hand? Are we to suffer the machinery and the working of our boasted constitution to be arrested by a spring-catch, applied in the dark? Are men, with pens sticking behind their ears, to be allowed to put an end to this republic? No, sir! never. If we are to perish prematurely, let us at least have a death worthy of a great nation; let us at least have a field covered with the bodies of heroes and of patriots, and consecrated forever to the memory of a subverted empire. Rome had her Pharsalia—Greece her Cheronea—and many barbarian kingdoms have given immortality to the spot on which they expired; and shall this great republic be subjected to extinction on the contingencies of trade and banking?

But what excuse, what apology, what justification have we for surrendering, abandoning, and losing the precise advantage for which the present constitution was formed? What was that advantage—what the leading and governing object which led to the abandonment of the old confederation, and induced the adoption of the present form of Government? It was revenue! independent revenue! a revenue under the absolute control of this Government, and free from the action of the States. This was the motive, the leading and governing motive, which led to the

SENATE.]

Sub-Treasury Bill.

[SEPT. 22, 1837.]

formation of this Government. The reason was, that the old confederation, being dependent upon the States, was often left without money. This state of being was incompatible with its existence; it deprived it of all power; its imbecility was a proverb. To extricate it from that condition was the design, and the cardinal design, of the new constitution. An independent revenue was given to it— independent even of the States. Is it not suicidal to surrender that independence, and to surrender it, not to States, but to money corporations? What does history record of the penury and moneyed destitution of the old confederation, comparable to the annihilation of the revenues of this Government in May last, when the banks shut down, in one night, upon a revenue in hand of thirty-two millions; even upon that which was in the names of disbursing officers, and refuse a nine-pence or a picaillon in money from that day to this? What is there in the history of the old confederation comparable to this? The old confederation was often reduced low—often near empty handed—but never saw itself stripped in an instant, as if by enchantment, of tens of millions, and heard the shout of triumph thundered over its head, and the notes of exultation sung over its supposed destruction! Yet, this is what we have seen—what we now see—from having surrendered to corporations our moneyed independence, and unwisely abandoned the precise advantage which led to the formation of this Federal Government.

I do not go into the moral view of this question. It is too obvious, too impressive, too grave, to escape the observation of any one. Demoralization follows in the train of an unconvertible paper money. The whole community becomes exposed to a moral pestilence. Every individual becomes the victim of some imposition, and, in self-defence, imposes upon some one else. The weak, the ignorant, the uninformed, the necessitous, are the sufferers; the crafty and the opulent are the gainers. The evil augments until the moral sense of the community, revolting at the frightful accumulation of fraud and misery, applies the radical remedy of total reform.

Thus, pecuniary, political, and moral considerations require the Government to retrace its steps, to return to first principles, and to restore its fiscal action to the safe and solid path of the constitution. Reform is demanded. It is called for by every public and by every private consideration. Now is the time to make it. The connexion between bank and State is actually dissolved. It is dissolved by operation of law, and by the delinquency of these institutions. They have forfeited the right to the deposits, and lost the privilege of paying the revenue in their notes, by ceasing to pay specie. The Government is now going on without them, and all that is wanting is the appropriate legislation to perpetuate the divorce which, in point of fact, has already taken place. Now is the time to act; this the moment to restore the constitutional currency to the Federal Government; to restore the custody of the public moneys to national keepers; and to avoid, in time to come, the calamitous revulsions and périlous catastrophes of 1814, 1819, and 1837.

And what is the obstacle to the adoption of this course, so impudently demanded by the safety of the republic, and the welfare of the people, and so earnestly recommended to us by the Chief Magistrate? What is the obstacle—what the power that counteracts the Executive recommendation, paralyzes the action of Congress, and stays the march of reform? The banks—the banks—the banks, are this obstacle, and this power. They set up the pretension to force their paper into the Federal Treasury, and to force themselves to be constituted that Treasury. Though now bankrupt, their paper dishonored, their doors closed against creditors, every public and every private obligation violated, still they arrogate a supremacy over this Federal Government; they demand the guardianship of the public moneys,

and the privilege of furnishing a Federal currency; and, though too weak to pay their debts, they are strong enough to throttle this Government, and to hold, in doubtful suspense, the issue of their vast pretensions.

And what new power is this, so formidable, and so daring, and the name of which is not seen in our constitution? Whence its origin, its progress, and its present pretensions? Sir, its origin is humble; its first progress slow; its vast pretensions of recent date. In the year 1780, the first petition was presented to the Congress of the confederation for the establishment of a bank; ten years afterwards there were but three in the country; in twenty years more there were only a few dozen; now nearly a thousand, and constantly multiplying. The first petition was bottomed solely upon patriotism, without the least design of pecuniary advantage to the projectors, and intended wholly to aid in furnishing supplies to a detachment of the revolutionary army. I will read the report of the committee of Congress upon that petition, that the Senate may see the progress which banks have made since that day, and the change which has since taken place in their character and views.

CONGRESS OF THE CONFEDERATION, June 22, 1780.

Report of a committee.

“Whereas, a number of the patriotic citizens of Pennsylvania have communicated to Congress a liberal offer, on their own credit, and by their own exertions, to supply and transport three millions of rations, and three hundred hogsheads of rum, for the use of the army, and have established a bank for the sole purpose of obtaining and transporting the said supplies with the greater facility and despatch; and whereas, on the one hand, the associators, animated to this laudable exertion by a desire to relieve the public necessities, mean not to derive from it the least pecuniary advantage, so, on the other, it is just and reasonable that they should be fully reimbursed and indemnified: *Therefore, resolved*, That Congress entertain a high sense of the liberal offer of the said associators to raise and transport the before-mentioned supplies for the army, and do accept the same as a distinguished proof of their patriotism. *Resolved, further*, That the faith of the United States be, and the same hereby is, pledged to the subscribers to the said bank, for their effectual reimbursement in the premises.”

Such is the recent and humble origin of banking in this country. How gigantic has been its progress since that day! It is now the predominating power in our America. Great as it now is, what must it be in a few years more, if it continues growing and expanding at the same rate? What must it be in a few years, if it succeeds now in this contest with the Federal Government, and imposes its paper currency upon the Federal Treasury, and continues to be the keeper of the public moneys? The administration is accused of making war upon the local banks. Was it war to give them forty millions of money to keep? Was it war to receive their notes in payment of revenue? Is it war now to give them time for the payment of balances? Is it war upon them to ask to be separated from them? Is divorce war? Is it war to decline receiving their paper promises instead of the gold and silver of the constitution, and to decline the further deposits of public money with them? Is it war? No, sir, it is peace, and the means of preserving peace. It is concord and amity that this Government wants, and is taking the safest way to secure, by declining to have any more causes of collision with them. It is the local banks, and especially the miscalled Bank of the United States, which are pursuing the Federal Government, refusing to let her alone, offering their notes for currency, and their vaults for depositories, and laboring to force these favors upon us. This is the state of the contest. The local banks are the actors, the pursuers, the assailants; the

SEPT. 22, 1837.]

Sub-Treasury Bill.

[SENATE.]

Federal Government is on the defence. All she asks is to be exempted from the future causes of collision with them. They have incurred the penalties of separation. They have incurred the penalties. The very act which created them depositories, and made their notes receivable, denounced the loss of both in the event of failing to meet their liabilities in specie. That act is but little more than one year old; it was not a year old when the condition was violated, and which remains yet violated. Separation has resulted from their own conduct; separation now exists; cause for separation still continues; the Government says, let it be perpetual; the banks say no! Receive us again; receive us before we reform, before we repent, before we make amends; and if you do not, it is war upon us. This is the state of the contest between the Government and the banks. It is attack, or, at all events, forcible embrace and conjunction on their part; it is defence and refusal on ours.

The President, in his message, recommends four things: first, to discontinue the reception of local bank paper in payment of federal dues; secondly, to discontinue the same banks as depositories of the public moneys; thirdly, to make the future collection and disbursement of the public moneys in gold and silver; fourthly, to take the keeping of the public moneys into the hands of our own officers.

What is there in this but a return to the words and meaning of the constitution, and a conformity to the practice of the Government in the first years of President Washington's administration? When this Federal Government was first formed, there was no Bank of the United States, and no local banks, except three north of the Potomac. By the act of 1789, the revenues were directed to be collected in gold and silver coin only; and it was usually drawn out of the hands of collectors by drafts drawn upon them, payable at sight. It was a most effectual way of drawing money out of their hands; far more so than an order to deposit in banks; for the drafts must be paid, or protested, at sight, while the order to deposit may be eluded under various pretexts.

The right, and the obligation of the Government to keep its own moneys in its own hands, results from first principles, and from the great law of self-preservation. Every thing else that belongs to her, she keeps herself; and why not keep that also, without which every thing else is nothing. Arms and ships—provisions, munitions, and supplies of every kind—are kept in the hands of Government officers; money is the sinew of war, and why leave this sinew exposed to be cut by any careless or faithless hand? Money is the support and existence of the Government, the breath of its nostrils, and why leave this support, this breath, to the custody of those over whom we have no control? How absurd to place our ships, our arms, our military and naval supplies in the hands of those who could refuse to deliver them when requested, and put the Government to a suit at law to recover their possession? Every body sees the absurdity of this; but to place our money in the same condition, and moreover to subject it to the vicissitudes of trade, and the perils of banking, is still more absurd; for it is the life blood, without which the Government cannot live—the oil, without which no part of its machinery can move.

England, with all her banks, trusts none of them with the collection, keeping, and disbursement of her public moneys. The Bank of England is paid a specific sum to manage the public debt; but the revenue is collected and disbursed through subordinate collectors and receivers general; and these receivers general are not subject to the bankrupt laws, because the Government will not suffer its revenue to be operated upon by any law except its own will. In France, subordinate collectors and receivers general collect, keep, and disburse the public moneys. If they deposit any thing in banks, it is at their own risk.

It is the same thing in England. A bank deposit by an officer is at the risk of himself and his securities. Too much of the perils and vicissitudes of banking is known in these countries to permit the Government ever to jeopard its revenues in their keeping. All this is shown, fully and at large, in a public document now on our tables. And who does not recognise in these collectors and receivers general of France and England, the ancient Roman officers of *questors* and *pro-questors*? These fiscal officers of France and England are derivations the from Roman institutions; and the same are found in all the modern kingdoms of Europe which were formerly like France and Britain, provinces of the Roman Empire. The measure before the Senate is to enable us to provide for our future safety, by complying with our own constitution, and conforming to the practice of all nations, great or small, ancient or modern.

Coming nearer home, and looking into our own early history, what were the "continental treasurers" of the confederation, and the "provincial treasurers and collectors," provided for as early as July, 1775, but an imitation of the French and English systems, and very near the plan which we propose now to re-establish? These continental treasurers, and there were two of them at first, though afterwards reduced to one, were the receivers general; the provincial treasurers and collectors were their subordinates. By these officers the public moneys were collected, kept, and disbursed; for there were no banks then! and all Government drafts were drawn directly upon these officers. This simple plan worked well during the Revolution, and afterwards, until the new Government was formed; and continued to work, with a mere change of names and forms, during the first years of Washington's administration, and until General Hamilton's bank machinery got into play. This bill only proposes to re-establish, in substance, the system of the Revolution, of the Congress of the confederation, and of the first years of Washington's administration.

The bill reported by the chairman of the Committee on Finance [Mr. Wright of New York] presents the details of the plan for accomplishing this great result. That bill has been printed and read. Its simplicity, economy, and efficiency strike the sense of all who hear it, and annihilate without argument, the most formidable arguments of expense and patronage, which had been conceived against it. The present officers, the present mints, and one or two more mints in the South, in the West, and in the North, complete the plan. There will be no necessity to carry masses of hard money from one quarter of the Union to another. Government drafts will make the transfer without moving a dollar. A Government draft upon a national mint, will be the highest order of bills of exchange. Money wanted by the Government in one place, will be exchanged, through merchants, for money in another place. Thus it has been for thousands of years, and will forever be. We read in Cicero's letters that, when he was Governor of Cilicia, in Asia Minor, he directed his *questor* to deposit the tribute of the province in Antioch, and exchange it for money in Rome with merchants engaged in the Oriental trade, of which Antioch was one of the emporiums. This is the natural course of things, and is too obvious to require explanation, or to admit of comment.

The Senator from Virginia, who sits over the way, [Mr. Rives,] to whose very able speech I listened with great attention, and certainly with instruction on several points, has brought in a bill, antagonistical to the plan of the Government, and going to continue the receivability of local bank paper, and the deposit of the public moneys with the local banks. It is the same bill, with some modifications, which he brought in last winter, and which it was my fortune then to oppose. To speak against the bill of that Senator now, would be to repeat the numerous

SENATE.]

Sub-Treasury Bill.

[SEPT. 22, 1837.]

speeches which I then made, reinforced by the experience of the last four months; an experience compressing into a few months, the events of an age; an experience surpassing all that I then dreaded; an experience transcending all argument, and throwing the public mind a century ahead. I do not design to repeat what I then said on the Senator's plan, wherein it remains unaltered; but there is a feature in it to which I much objected then, and which I find more objectionable now, from the modification it has undergone. I allude to the conditions on which the notes of the local banks were to be received, and which, in my opinion, amounted to a compact with the banks, and a compact of the most disadvantageous kind to the Government. That feature is continued, and aggravated by taking the form which may enable a few strong banks to monopolize the business of furnishing paper currency to the Federal Government. This is what I then said:

"In the next place, he [Mr. BENTON] objected to the committee's bill, because it proposed to make a bargain with each of the thousand banks now in the United States, and the hundreds more which will soon be born, and to give them a right—a right by law—to have their notes received at the Federal Treasury. He was against such a bargain. He had no idea of making a contract with these thousand banks for the reception of their notes. He had no idea of contracting with them, and giving them a right to plead the contract clause of the constitution against us if, at any time, after having agreed to receive their notes upon condition that they would give up their small circulation, they should choose to say we had impaired the contract by not continuing to receive them; and so, either relapse into the issue of this small trash, or have recourse to judicial process to compel the United States to abide the contract, and to continue the reception of all their notes. Mr. B. had no idea of letting down this Federal Government to such petty and inconvenient bargains with a thousand moneyed corporations. The Government of the United States ought to act as a Government, and not as a contractor. It should prescribe conditions, and not make bargains. It should give the law."

What I objected to then was the contract, and the paper currency; what I object to now is the same contract, the same currency, and the monopoly which may be given of it to a few strong banks—to the misnamed Bank of the United States, for example, and a favorite selection of its affiliated institutions. This privilege of supplying paper money to the Federal Government, is to be limited to those banks which shall resume specie payments within a given day. The design is to encourage a resumption of payments; but what will be the effect? The effect will be, that the strong will resume, and take the prize? The English connexions of the Bank of the United would throw it tens of millions to enable it to clutch the prize, and to crush competitors. The Senator from South Carolina [Mr. CALHOUN] has presented the view of this danger; the Senator from Virginia [Mr. RIVES] has disclaimed all intention of aiding that institution, misnamed Bank of the United States. Certainly he needs no disclaimer, neither on this floor, nor to the country; his inexorable opposition to that institution, or to any similar one, is universally known. Still his personal intentions cannot control the effect of his bill, if it becomes law; and that effect will go to give a monopoly of the right to supply the Federal Government with paper money to the strongest, or a few of the strongest, of the institutions. The misnamed Bank of the United States will be the monopolizer; for, though the most encumbered with debt of all the institutions, yet her English backers and stockholders, for such a prize as would be presented, would throw in the millions necessary to carry it. The Senator from Virginia [Mr. RIVES] cannot see this effect of his bill; but let him look over his right shoulder, and he will see those who do. He

will there see the phalanx which supports the Pennsylvania Bank of the United States, all anxiously watching the progress of his bill, and ready to give their votes for it, as the certain means of aiding their great and cardinal object.*

Objections are taken to the capacity of the country to furnish the quantity of gold and silver necessary to pay the revenues of the Government in coin. It is supposed there is not hard money enough for that purpose? This objection induces two inquiries. First, how much specie will be required for that purpose? Secondly, what is the present amount in the country, and what the prospect of increase? In reply to the first of these inquiries, it is to be remembered that the President, in his message, supposes ten millions will be enough; and the Secretary of the Treasury, in his report upon the finances, supposes that eight or ten millions will do. Having paid some attention to this point, I have come to the conclusion that the one-fourth part of the amount of the annual revenue will be sufficient to pay the whole; and this opinion is formed upon an observation of the fact, that in a regular state of the finances, when no more revenue is raised than the Government needs, about one-fourth of the whole is always on hand, of course that not more than one-fourth is taken out of circulation. Upon this data, a revenue of twenty millions would require but five millions to pay it; and a revenue of twenty-five millions would require but six and a quarter millions to meet it. A reduction of revenue to the wants of the Treasury is the policy of the administration; no more surpluses is the language of the republican party. About twenty-five millions may, therefore, be the maximum; and the payment of this sum, it is shown, will not employ above six or seven millions. Now, what is the capacity of the country to furnish this amount? How much specie have we, and what is the prospect for more? It is well remembered that eighty millions was the computed supply at the end of the last fiscal year; to that amount we have to add the increase of the present fiscal year, being about five millions; namely, an excess of imports over exports of above four millions, and the coinage of near a million of gold. The future prospect is most encouraging. The export of specie is over; it is a drug in London; it can be borrowed there at $2\frac{3}{4}$ per cent. per annum, and three per cent. is a common interest. What has been forced out is ready to flow back. A large import must be expected; and if this bill passes to increase the demand for it at home, and if the suspending banks are made to resume payment, not less than fifteen or twenty millions of dollars may be expected within the ensuing year. This, then, is our condition; upwards of eighty millions now in the country, and the means in our power to increase it largely. Now, cannot a revenue of twenty-five millions, which will never require a greater amount than six or seven millions to be taken out of circulation at any one time; cannot such a revenue be met from these resources? I say it can; and I say this upon data, and will exhibit that data to the Senate, that they may judge of the correctness of my opinion. First, I take the evidence furnished by the history of our own country. The first revenue act of 1789 prescribed "gold and silver coin only" for the payment of the Federal revenue; the revenue was then about four and a half millions of dollars; and the whole amount of specie in the Union was estimated at ten millions of dollars. Here then was a revenue, nearly half the amount of the specie in the country, ordered to be

* Mr. RIVES replied to this allusion, the next day, as if Mr. BENTON had said that, by looking over his right shoulder, he would see his guides and leaders. Mr. B. disclaimed both the expression and the thought. Mr. R. answered that he had not heard distinctly what was said, but was informed that such were the expressions. Mr. B. denied them, and said that he only spoke of the effect of the bill, and referred to the support which the friends of the Bank of the United States were giving it, as evidence that they understood its effects as he did.—Note by Mr. B.

SEPT. 22, 1837.]

Sub-Treasury Bill.

[SENATE.]

collected in specie. I speak of the law which ordered it to be so collected, and to which there was no objection, on account of the inadequacy of specie, either in Congress or out of Congress. The revenue was paid without complaint, and without difficulty, and, in all probability, did not abstract, at one time, a million of dollars from circulation. But General Hamilton, the Secretary of the Treasury, permitted notes of banks to be received. Certainly he did, and, just as certainly, for no reason founded on the inadequacy of the specie circulation to meet the demands of the Government. His reasons, as seen in his report to Congress, were altogether of a different class; they were to enable the banks to increase their paper circulation; to increase paper money; and to diffuse it generally over the Union. There were then but three banks in the United States, and those three to the north of the Potomac; they issued no small notes; their aggregate circulation was inconsiderable; and it was the plan of General Hamilton to increase their number, and diffuse their paper. This was his reason for admitting bank paper to be received; and to do so, he had to nullify, by construction, the clear enactment of positive law.

The next piece of evidence I furnish is drawn from the history of England, in the reign of William III, immediately preceding the establishment of the Bank of England, and the introduction of the paper system, and the funding system, into that kingdom. The taxes were then four millions, and the specie of the kingdom sixteen millions. These taxes were paid without difficulty; for they probably did not abstract one million sterling from circulation. The last data I shall produce is from the history of France, during the first administration of Neckar, which about covered the period of our Revolution. I speak of the first administration of Neckar, and when the finances of France were in a regular state, and not of his subsequent administration, when the extravagances of the day and the subservience of the ministers Calonne and Brienne had involved those finances in a ruin from which the talents of Neckar could not extricate them. What was the revenue and the specie circulation of France at that time? I say specie circulation; for the Mississippi scheme of John Law had cured the nation of paper money, until the assignats of the Revolution came upon the stage, and lived their brief day. What was the revenue, and the specie circulation out of which it was paid, in the prosperous period of the French finances to which I have alluded? Twenty-two millions sterling of revenue; about 110,000,000 of dollars; and ninety millions sterling of circulation; about 450,000,000 of dollars. This vast revenue, equal to one-fourth of the whole circulation, was regularly paid; and this establishes the only point for which I refer to it. Now to apply this historical experience to our own country, and to the present times. Our revenue may be about 25,000,000; one-fourth of that sum will pay it; we have upwards of eighty millions of specie in the country, annually increasing, and certain to increase to the utmost extent of our wants, if we create a demand for it. One hundred millions of exportable productions will bring back just as much specie as the country wants. The objection, then, to the inadequacy of the specie in the country falls to the ground. We have more than enough for that purpose. We have but two branches of revenue—the lands and the customs, and both voluntary sources of income; for no person is under compulsion to purchase the public lands, and no one is under compulsion to import foreign goods. These are the sources of our revenues. Their payment is voluntary; and even during this summer, since the suspension of specie payments, the income from one of these sources (the lands) has been equal to the best years before the two great years of speculation. I will answer for this branch of revenue. Bring the new lands into market, and reduce the price of the old lands, and the Government

will get ten or twelve millions of gold and silver from them in the next year.

I am free to admit that the whole of this eighty millions is not now in the hands of the people; that much of it is locked up in the vaults of the banks. But this is temporary; it cannot last much longer; public opinion is omnipotent, and must prevail; that opinion is against the conduct of the banks; and in the progress of it they must see their own doom. Their vaults are shut, but their eyes must be opening; and with these eyes they must begin to see what the public is beginning to think of a banking system which, in a season of peace, tranquillity, and general prosperity, and with a hundred millions of exports, and four times as much specie as ever was in the country before, are either unable, or unwilling, to meet any part of their obligations in specie—even to pay out picayunes—and have driven the people to the use of irredeemable paper and shillasters, and the Federal Government itself to an issue of Treasury notes.

We are taunted with these Treasury notes; it seems to be matter of triumph that the Government is reduced to the necessity of issuing them; but with what justice? And how soon can any Government that wishes it, emerge from the wretchedness of depreciated paper, and stand erect on the solid foundations of gold and silver? How long will it take any respectable Government, that so wills it, to accomplish this great change? Our own history, at the close of the Revolution, answers the question; and more recently, and more strikingly, the history of France answers it also. I speak of the French finances from 1800 to 1807; from the commencement of the Consulate to the peace of Tilsit. This wonderful period is replete with instruction on the subject of finance and currency. The whole period is full of instruction; but I can only seize two views—the beginning and the end—and, for the sake of precision, will read what I propose to present. I read from Bignon, author of the civil and diplomatic history of France during the Consulate and the first years of the empire; written at the testamentary request of the Emperor himself.

After stating that the expenditures of the republic were six hundred millions of francs—about one hundred and ten millions of dollars—when Bonaparte became First Consul, the historian proceeds:

“At his arrival at power, a sum of 160,000 francs in money [about \$32,000] was all that the public chests contained. * * * * *

In the impossibility of meeting the current service by the ordinary receipts, the Directorial Government had resorted to ruinous expedients, and had thrown into circulation bills of various values, and which sunk upon the spot fifty to eighty per cent. A part of the arrearages had been discharged in bills two-thirds on credit, payable to the bearer, but which, in fact, the Treasury was not able to pay when due. The remaining third had been inscribed in the great book, under the name of consolidated third. For the payment of the forced requisitions to which they had been obliged to have recourse, there had been issued bills receivable in payment of the revenues. Finally, the Government, in order to satisfy the most imperious wants, gave orders upon the receivers general, delivered in advance to contractors, which they negotiated before they began to furnish the supplies for which they were the payment.”

This, resumed Mr. B., was the condition of the French finances when Bonaparte became First Consul at the close of the year 1799. The currency was in the same condition—no specie—a degraded currency of assignats, ruinously depreciated, and issued as low as ten sous. That great man immediately began to restore order to the finances, and solidity to the currency. Happily a peace of three years enabled him to complete the great work, before he was called to celebrate the immortal campaigns ending

SENATE.]

Sub-Treasury Bill.

[SEPT. 22, 1837.]

at Austerlitz, Jena, and Friedland. At the end of three years—before the rupture of the peace of Amiens—the finances and the currency were restored to order and to solidity; and, at the end of six years, when the vast establishments, and the internal ameliorations of the imperial Government, had carried the annual expenses to eight hundred millions of francs, about one hundred and sixty millions of dollars; the same historian copying the words of the Minister of Finance, thus speaks of the Treasury, and the currency:

“The resources of the State have increased beyond its wants; the public chests are full; all payments are made at the day named; the orders upon the public Treasury have become the most approved bills of exchange. * *

The finances are in the most happy condition; France alone, among all the States of Europe, having no paper money.”

What a picture! how simple, how powerfully drawn! and what a change in six years! Public chests full; payments made to the day; orders on the Treasury the best bills of exchange; France alone, of all Europe, having no paper money; meaning no Government paper money, for there were bank notes of five hundred francs and one thousand francs. A Government revenue of one hundred and sixty millions of dollars was paid in gold and silver; a hard-money currency, of five hundred and fifty millions of dollars, saturated all parts of France with specie, and made gold and silver the every-day currency of every man, woman, and child in the empire. These great results were the work of six years, and were accomplished by the simple process of gradually requiring hard money payments; gradually calling in the assignats; increasing the branch mints to fourteen, and limiting the Bank of France to an issue of large notes—five hundred francs and upwards. This simple process produced these results, and thus stands the French currency at this day; for the nation has had the wisdom to leave untouched the financial system of Bonaparte.

I have repeatedly given it as my opinion—many of my speeches declare it—that the French currency is the best in the world. It has hard money for the Government; hard money for the common dealings of the people; and large notes for large transactions. This currency has enabled France to stand two invasions—the ravaging of 300,000 men—two changes of dynasty, and the payment of a milliard of contributions; and all without any commotion or revulsion in trade. It has saved her from the revulsions which have afflicted England and our America for so many years. It has saved her from expansions, contractions, and ruinous fluctuations of price. It has saved her, for near forty years, from a debate on currency. It has saved her even from the knowledge of our sweet-scented phrases, “sound currency, unsound currency; plethora, dropsical, inflated, bloated; the money market tight to-day, a little easier this morning;” and all such verbiage, which the haberdasher’s boys repeat. It has saved France from even a discussion on currency; while in England, and with us, it is banks! banks! banks! morning, noon, and night; breakfast, dinner, and supper; levant and couchant; sitting, or standing; at home or abroad; steamboat, or railroad car; in Congress, or out of Congress, it is all the same thing; banks! banks! banks! currency! currency! currency! meaning, all the while, paper money and shinplasters; until our very brains seem as if they would be converted into lampblack and rags.

The Senator from New York, [Mr. TALLEMAGE,] in his very able speech, has referred to the overthrow of Bonaparte, effected by the paper system of England. Without going into the question of the causes of that overthrow—without looking to the ice of Russia and the non-arrival of Grouchy on the field of Waterloo, and without considering the numerous incidents, often trivial in themselves, on which the fate of battles and of empires depend—it will be sufficient to consider what would have been the fate of this

paper system of England, if, like the system of France, it had been exposed to the shocks of invasions, conquest, and changes of dynasty; and, leaving out this supposed view, it will be sufficient to look at it under its real aspect, and to see its present effects on the condition of the British empire. What are those effects? They are, in brief, an increase of taxes from 1694, when the Bank of England was chartered, from four millions sterling (twenty millions of dollars) to forty-five millions sterling, (two hundred and twenty-five millions of dollars;) an increase of the public debt from twenty-one millions five hundred and fifteen thousand seven hundred and forty-two pounds, thirteen shillings, eight pence, and two farthings, (to be precise,) in round numbers about one hundred millions of dollars, to near nine hundred millions sterling, or four thousand five hundred millions of dollars; and the increase of paperism, until three millions of people grace the list. These are some, for I omit, as too well known, the average septennial convulsions of that system; these are some of the evils of the paper system in England. But take another view: take some points of comparison between the national expenditures of France and England, when contending together, and see how the account, in point of economy between paper money and hard money will stand. Let us take the year 1806, when England was subsidizing Russia and other Powers against France, and when the great Emperor frustrated the effect of all these subsidies, and consolidated his power by the victory of Friedland, and the peace of Tilsit. What were the expenses of the two contending empires for that year? They were these: For England one thousand seven hundred and seventy-two millions of francs, (about three hundred and sixty millions of dollars;) for France, seven hundred and seventy-eight millions of francs, (about one hundred and sixty millions of dollars;) in other words, the expenses of England exceeded those of France by about one thousand millions of francs, or two hundred millions of dollars. Such was the difference between the economy of paper money and hard money; and the same proportion holds good in every station in life, from the Emperor and his empire, to the washerwoman and her household.

The amendment now depending, on the motion of the Senator from South Carolina, [Mr. CALHOUN,] is the same in substance with the bill which I brought in upwards of a year ago, to re-establish the currency of the constitution for the Federal Government. That bill was in these words:

“That bank notes and paper currency of every description shall cease to be received, or offered in payment, on account of the United States, or of the Post Office, or in fees in the courts of the United States, as follows: of less denomination than twenty dollars, none shall be so offered after the 3d day of March, 1837; of less denomination than fifty dollars, none after the 3d day of March, 1838; of less denomination than one hundred dollars, none after the 3d day of March, 1839; of less denomination than five hundred dollars, none after the 3d day of March, 1840; of less denomination than one thousand dollars, none after the 3d day of March, 1841; and none of any denomination from and after the 3d day of March, 1842.

“Sec. 2. *And be it further enacted*, That any person holding an appointment under the laws of the United States, and any bank employed to keep public moneys, which person or bank shall neglect, evade, violate, contravene, or in any way elude, or attempt to elude, the provisions of this act, shall be guilty of an offence against the laws; and the person so offending shall be liable to be dismissed from the service, and the bank so offending shall, on satisfactory information, be discontinued as a depository of public moneys.”

The only direct action of this bill would have been on the receipts of the Federal Treasury. It has been extensively represented as a bill to impose hard money upon the

SEPT. 22, 1837.]

Sub-Treasury Bill.

[SENATE.]

States, but such is not its character, but the reverse; it was to prevent the local paper of the States from being imposed on the Federal Government. Its indirect and consequential action have been to increase the specie circulation of the whole Union, by creating a demand for it. The present amendment will operate the same way; it will increase the quantity of hard money every where. Yet two objections, neither of them well founded, and each inconsistent with the other, have been taken to it; one is, that it proposes to take the better currency for the Government, and leave the baser to the people; the other is, that it is going to impose this better currency upon the people also; and so destroy all paper money at once, reduce every thing to the specie standard, and ruin all debtors. Each of these objections are equally unfounded. Taken singly, they are each erroneous; taken together, as we often find them in the same speech, and they belong to that class of arguments which the logicians call the *argumentum ad ignorantiam*: that is to say, an argument addressed to the supposed ignorance of the hearers. This class of arguments has been freely used by gentlemen of the opposition for a long time; with what effect the issue of the elections has often told. It is time to quit it, and to address the intelligence of the community. Take the better currency to itself. Why, the Government does not eat the money, but pays it back again the next day to the people. Impose hard money upon the States! The mere reading of the amendment, or my bill, which is the same in substance, disproves the assertion. No, the effect of the measure will be to increase the gold and silver circulation for the whole country. Thus it has been already. Five years ago we began our system of measures to revive the gold currency, and to increase the specie circulation. There was then twenty millions of silver in the country, and no gold; there is now upwards of eighty millions, of which fifteen is in gold. True, the banks have suppressed all this circulation for the present; they have shut down the hatches upon the whole of it; but this suppression cannot continue much longer. The law of the land, or of public opinion, will soon prevail, and these institutions will have to submit.

The bill before the Senate dispenses with the further use of banks as depositories of the public moneys. In that it has my hearty concurrence. Four times heretofore, and on four different occasions, I have made propositions to accomplish a part of the same purpose. First, in proposing an amendment to the deposit bill of 1836, by which the mint, and the branch mints, were to be included in the list of depositories; secondly, in proposing that the public moneys here, at the seat of Government, should be kept and paid out by the Treasurer; thirdly, by proposing that a preference, in receiving the deposits, should be given to such banks as should cease to be banks of circulation; fourthly, in opposing the establishment of a bank agency in Missouri, and proposing that the moneys there should be drawn direct from the hands of the receivers. Three of these propositions are now included in the bill before the Senate; and the whole object at which they partially aimed is fully embraced. I am for the measure, fully, cordially, earnestly for it.

Some Senators suppose that it will be a great injury to the local banks to refuse their notes in revenue payments; I think otherwise, and that it will be a great injury to receive them; for they will be taken out of circulation, and returned in masses on the banks for redemption. They cannot be paid out by the Government, and, therefore, will have to be presented for redemption to the banks. The act of 1836 cuts them off from all payments from the Federal Government, or the post offices. That act contains three limitations upon the payment of these notes: first, no note under twenty dollars is to be paid out: and that cuts off the greater number: secondly, no note is to be paid

out which is issued at one place, and made payable at another; thirdly, no note of any kind is to be paid out, unless it is equal to gold and silver at the place where offered, and convertible into specie upon the spot, at the will of the holder, and without loss or delay to him. This is the strongest limitation, and cuts off all payment in notes unless where the bank itself is situated. The three limitations taken together, and they are all in full force, cut off bank paper from nearly every payment to be made, either by the United States or by the Post Office Department.

I do not pretend to exhaust this subject; I only touch the leading objections to the further use of bank notes by the Government, and the future use of banks as depositories of public moneys. It is a practice fraught with mischief to both parties, and has been so proved by repeated experience. To receive the notes of banks for revenue, if they are to be paid in good faith, is merely to take them out of circulation, and return them in masses for redemption, to the great peril and alarm of the bank. If they are not to be paid, their receipt is a fraud upon the Government. So said Mr. Crawford, when he was Secretary of the Treasury, and when members of Congress, marching in column upon him, backed by legislative petitions, were demanding this privilege for so many local banks. Importunity and legislative interference most usually prevailed; and in almost every instance to the injury of the bank, and to the loss of the Government. So will it be again, if the practice is resumed.

Again: It is tempting the banks into ruinous expansions thus to give them the credit and the domain of the United States to bank upon. They put out flood of notes, because receivability at the custom-house, the land-office, and the post office, gives them credit and circulation. After some months, pay-day comes. Federal credit, which got the notes into circulation, will not pay them; the bank stops; depreciation ensues; the loss falls upon the Government, and upon the uninformed holders of the notes.

Again: It is a false credit given by the Government to the whole issues of any bank whose paper is so received. It is endorsement without responsibility. People take it, because the Government takes it; and when the bank fails, the Government does not indemnify those who have been deceived by an endorsement, valid for deception, and invalid for responsibility.

Again: This Government receivability enables notes to stray from their known orbit of circulation; to go off into distant parts, where they are unknown; to live there awhile in the sunshine of Federal favor; to circulate awhile on land-office and custom-house credit; and, finally, to sink as insolvents upon the hands of strangers.

Again: There must be selection of banks, or universality of reception. If selection, then favoritism, patronage, caprice—refusal to-day, reception to-morrow—imposition on some, undue advantage to others—come into play. If receivability is universal, then a thousand banks now in existence, and thousands more to be created, all become furnishers of Federal currency; and in a few years the public lands are changed into paper—the custom-house revenue becomes a bale of paper—and this paper worth as little as it would be if it was decomposed and restored to its original state of lampblack and rags.

Again: To take the promissory notes of the banks for lands, customs, and postages, is to extend a credit to the banks which is denied to the community. The farmer is required to pay ready money for the public lands; but if the note of the bank is received, this is a credit to the bank—a credit to a barren moneyed corporation, which is denied to a productive, meritorious citizen. The same of postages; and the same is, in some degree, the case at the custom-houses now, and will be fully, when ready money payments are required there, as another bill before the Senate now proposes.

SENATE.]

Sub-Treasury Bill.

[SEPT. 23, 1837.]

Again: To make the banks depositories of our moneys, involves the use, or the prohibition of the use, of these moneys. If the former, then the revenues are as much jeopardized as ever; if the latter, then the bank has no benefit from the deposite.

Again: To continue these banks as depositories, is to create an interest—a powerful, active, concentrated interest, in Congress and out of Congress—in favor of high taxes, and low appropriations. The late Bank of the United States was such an interest during the whole time of its existence. It was the ally of high tariffs, and the enemy of appropriation bills. Its principle of action was, take from the people, and leave with us! and so it will be with a league of local depository banks. Their presidents and directors; their stockholders and attorneys, with all their friends and debtors, will be a unit, to keep up taxes and to keep down appropriations. The Government should not create, for itself and for the people, so formidable an antagonist.

The friends of the banks treat it as their ruin, as a grievous outrage and indignity, for the Government of the United States to refuse to take their notes, and to refuse to use them as depositories; yet this was their condition during the whole time of the existence of the Bank of the United States, and yet they made no objection to it then. This is strange! but what is more so is, that while thus struggling against the Government, they are, many of them, in favor of re-establishing a national bank; the first act of which will be to strip them of Government deposits, and exclude their paper from Government receivability!

Congress has a sacred duty to perform in reforming the finances, and the currency; for the ruin of both has resulted from Federal legislation, and Federal administration. The States at the formation of the constitution, delivered a solid currency—I will not say sound, for that word implies subject to unsoundness, to rottenness, and to death—but they delivered a solid currency, one not liable to disease, to this Federal Government. They started the new Government fair upon gold and silver. The first act of Congress attested this great fact; for it made the revenues payable in gold and silver coin only. Thus the States delivered a solid currency to this Government, and they reserved the same currency for themselves; and they provided constitutional sanctions to guard both. The thing to be saved, and the power to save it, was given to this Government by the States; and in the hands of this Government it became deteriorated. The first great error was General Hamilton's construction of the act of 1789, by which he nullified that act, and overturned the statute and the constitution together. The next great error was the establishment of a national bank of circulation, with authority to pay all the public dues in its own paper. This confirmed the overthrow of the constitution, and of the statute of 1789; and it set the fatal example to the States to make banks, and to receive their paper for public dues, as the United States had done. This was the origin of the evil—this the origin of the overthrow of the solid currency which the States had delivered to the Federal Government. It was the Hamiltonian policy that did the mischief; and the state of things in 1837, is the natural fruit of that policy. It is time for us to quit it—to return to the constitution and the statute of 1789, and to confine the Federal Treasury to the hard money which was intended for it.

I repeat, this is a measure of reform, worthy to be called a reformation. It goes back to a fundamental abuse, nearly coeval with the foundation of the Government. Two epochs have occurred for the reformation of this abuse; one was lost, the other is now in jeopardy. Mr. Madison's administration committed a great error at the expiration of the charter of the first Bank of the United States, in not reviving the currency of the constitution for the Federal Treasury, and especially the gold currency. That error

threw the Treasury back upon the local bank paper. This paper quickly failed, and out of that failure grew the second United States Bank. Those who put down the second United States Bank, warned by the calamity, determined to avoid the error of Mr. Madison's administration: they determined to increase the stock of specie, and to revive the gold circulation, which had been dead for thirty years. The accumulation of eighty millions in the brief space of five years, fifteen millions of it in gold, attest the sincerity of their design, and the facility of its execution. The country was going on at the rate of an average increase of twelve millions of specie per annum, when the general stoppages of the banks in May last, the exportation of specie, and the imposition of irredeemable paper upon the Government and the people, seemed to announce the total failure of the plan. But it was a seeming only. The impetus given to the specie policy still prevails, and five millions are added to the stock during the present fiscal year. So far, then, as the counteraction of the Government policy, and the suppression of the constitutional currency, might have been expected to result from that stoppage, the calculation seems to be in a fair way to be disappointed. The spirit of the people, and our hundred millions of exportable produce, are giving the victory to the glorious policy of our late illustrious President. The other great consequences expected to result from that stoppage, namely, the recharter of the Bank of the United States, the change of administration, the overthrow of the republican party, and the restoration of the federal dynasty, all seem to be in the same fair way to total miscarriage; but the objects are two dazzling to be abandoned by the party interested, and the destruction of the finances and the currency, is still the cherished road to success. The miscalled Bank of the United States, the soul of the federal dynasty, and the anchor of its hopes—believed by many to have been at the bottom of the stoppages in May, and known by all to be at the head of non-resumption—now displays her policy on this floor; it is to compel the repetition of the error of Mr. Madison's administration! Knowing that from the repetition of this error must come the repetition of the catastrophes of 1814, 1819, and 1837; and out of these catastrophes to extract a new clamor for the revivification of herself. This is her line of conduct; and to this line, the conduct of all her friends conforms. With one heart, one mind, one voice, they labor to cut off gold and silver from the Federal Government, and to impose paper upon it! they labor to deprive it of the keeping of its own revenues, and to place them again where they have been so often lost! This is the conduct of that bank and its friends. Let us imitate their zeal, their unanimity, and their perseverance. The amendment and the bill, now before the Senate, embodies our policy. Let us carry them, and the republic is safe.

When Mr. BENTON had concluded,
On motion of Mr. KING, of Georgia,
The Senate adjourned.

SATURDAY, SEPT. 23. SUB-TREASURY BILL.

The Senate resumed the consideration of the bill providing for the collection and custody of the public revenue. The question being on the amendment offered by Mr. CALHOUN, to separate the Government from the banks.

Mr. KING, of Georgia, rose and said that he had not intended to address the Senate on the subject before it until yesterday evening. He had great difficulty in making up his mind between the projects urged by different gentlemen, and as he was not satisfied with either of them, he had thought it best to postpone the subject till the regular session, and offer some remarks in explanation of his reasons for doing so.

SEPT. 23, 1837.]

Sub-Treasury Bill.

[SENATE.]

Two plans were, he said, urged upon the Senate: one reported by the Committee on Finance, as proposed to be amended by the Senator from South Carolina; the other the State bank system, which had already been tried, and failed.

As to the last, various apologies had been made here and elsewhere, for its failure; and it had been insisted that it had not had a fair trial, and therefore could not be said properly to have failed. The most able and ingenious advocates and apologists of this system that he had heard were his friends from Virginia and New York. If they had not succeeded in convincing the Senate that the system should be re-adopted, (with the modifications proposed,) conviction might be considered hopeless. He certainly agreed with them, that the system had not had a fair trial. The pets had certainly had a hard time of it under their Executive patron; but he had never had confidence in them from the beginning, and, in truth, the system had never succeeded for one moment. The history of the world furnished no instance in which an administrative measure, so vitally interesting to the whole community, had been so long sustained by a system of mere assumption, deception, and puffing. Business men were rarely deceived by these means; but a large portion of the people were less informed, and believed the statements which were from time to time imposed upon them. Why, (said Mr. K.,) I lately saw in one of the numerous apologetic essays on this subject, even when the exchanges had got into such confusion as to render it impossible to deceive any body, that the system had been one of the most beautiful in its operation ever devised by the wisdom of man. The author regretted very much that he was not entitled to any share of the honor of having first conceived it; which honor was all due to the great financial wisdom of the ex-President. The fruits of this mighty conception had, however, been blasted by the stupidity of Congress, who had passed, contrary to the known will of the Executive, the obnoxious measure for the distributive deposit with the States in June, 1836. A beautiful system, truly, for the administration of the public finances, that should wither at a hint that we should want a portion of the public treasure in quarterly instalments, the first becoming due more than six months ahead. But (said Mr. K.) unfortunately, this bill was passed rather too late to afford even a pretext to the advocates of the late President's experiment. I state to the Senate as a fact coming within my own knowledge, that, before the distribution bill was passed or talked of, the president of a Southern institution passed through this city with a large amount of specie in his possession, on his way to New York, there to purchase Southern and South-western exchanges. The same operation had been made by others. Was such an operation ever made or dreamed of during the existence of the Bank of the United States before the withdrawal of its branches? A beautiful system of exchanges this which would lead men a thousand miles from home to shave the commercial paper of their neighbors!

Here are the evidences of the fulfilment of the promises, that the experiment would give us a better currency, safer depositories, and a "cheaper" system of exchanges. The local banks, whilst the deposits in their vaults were large, the currency expanding, and speculation furnishing demands for money every where and credits every where, afforded exchanges tolerably well between the most commercial points; but the moment these causes ceased to operate, and the branches of the United States Bank were withdrawn, the exchanges fell into the utmost confusion, and every pretension after this that they were furnishing exchanges as cheaply "as the United States Bank ever did," has been mere assumption, and not calculated to deceive any business man in the community. Sir, (said he,) I have gone to the very counters of these banks and asked

for exchange at the published rates. The answer generally was, that, "if they were drawing," they would sell at the published prices, but they rarely had any to sell.

Now, sir, what kind of a profit do you suppose could have induced the strange operation I have described? I have been informed it frequently amounts to 15 and 17 per cent.; sometimes less, but always enormous. The operation, if I understand it, was this: A bill was purchased in New York on the debtor of the drawer in the South or West, or Southwest, at a discount of from 4 to 6 per cent. and perhaps sometimes higher. If the bill were paid the purchaser (being established between the drawer and drawee) again sold a bill drawn on the fund, and charged a premium; for these great regulators were in the habit of shaving in every direction. They would buy Southern funds at a heavy discount, and sell a bill on it at a heavy premium. This was the operation if the bill were paid, but if the bill were dishonored, as frequently happened before, and nearly always after the adoption of the specie circular, the bill went back upon the New York drawer with an accumulation of charges, and 5 per cent. damages for the dishonor. The drawer had it to pay, though he had suffered a heavy loss on the discount. This payment of bill and damages furnished the drawer with a Northern fund, on which he could again draw at a premium of 5 per cent. Thus the Senate will see the enormous profit that was often made by the discount of a single bill.

It was from exchanges, added to other profits, Mr. K. said, that accounted for the enormous profits and heavy dividends that had been made by some of the banks, some of which he mentioned to have been prodigious within fourteen months preceding the first of March, 1837. Where did these enormous profits come from, and who ultimately paid them? Why, they were shaved from the hard earnings of the industrious classes, being clearly a tax on the circulation of the products of labor.

Mr. K. said he would not detain the Senate by going fully into the capabilities of the State bank system to perform the services promised by it. He stood upon firm ground on this subject. His friends could not charge him with change or inconsistency in this matter; and, as was well known, he had generally predicted, step by step, the consequences that would follow from the financial experiments that had afflicted the country, beginning with that unfortunate and unnecessary measure, the removal of the deposits in 1834. It would be seen that he had no strong predilection for the State bank deposit system, though he admitted that it might have done, and still could do much better than heretofore, if the Executive would consent to let it alone, and cease the continual interferences by which the banks have been tormented, and the commerce of the country deranged, ever since the Executive had taken the control of the finances.

Mr. K. then proceeded to notice the plan of the committee as proposed to be amended. This he looked upon as a new experiment, though it had been alleged to be otherwise by the Senator from Missouri. The Senator insisted that we were ahead of our destiny, and ought to go back to the glorious days of the Roman empire to learn lessons on finance and political economy. This plan was strongly recommended as having been that under which the Roman quæstors made their mild exactions from the people. It was also recommended most warmly by the Senator, because it was that under which the war levies of Napoleon were made, and the finances of Spain and Turkey collected and disbursed. Upon the first recommendation, the Senator had given us a most eloquent discourse upon Roman heroism; bloody battles, and the levies of the quæstors. He had spoken of the great pleasure with which he read Roman history on these subjects, and the delight with which he contemplated the renown of this great people. Well, Mr. K. said he had read some Roman history too,

SENATE.]

Sub-Treasury Bill.

[SEPT. 23, 1837.]

though certainly not as good an historian as his friend from Missouri. But if any thing in Roman history had made a strong impression upon his republican mind, it was the heartless cruelty, the unfeeling rigor, and pitiless tyranny with which exactions were made upon the people by the Roman quæstors; and, unfortunately for the Senator's Roman precedent, when these exactions had been made by plundering the Roman people and provinces to support heroism in the trade of conquering and plundering the rest of mankind, these exactions were deposited with Roman bankers appointed for the purpose.

As the Roman precedent was not found exactly satisfactory to Mr. K., he proceeded to notice the system so warmly recommended as the plan of that great democrat and ardent lover of liberty and free institutions, the Emperor Napoleon. His friend from Missouri had stated that when the Emperor mounted the throne of power, he found the State coffers empty, or nearly so; but in a short time they were filled to overflowing. Thereupon the Senator produced a book, or a document, to prove the important fact. The fact was not doubted; but how were these wonders of finance accomplished? Let his impoverished country and the blood and tears of unhappy Germany answer the question. However, perhaps the financiering of this great economist was strongly recommended from the fact that the largest and most timely accession to his finances was made by the robbery of a bank; and that too a bank belonging to one of the freest and most commercial cities of Europe.*

Mr. K. said he saw nothing in these imperial precedents, ancient or modern, very applicable or very captivating; and as he saw nothing in the happy and prosperous condition of the people of those free and commercial nations (Turkey and Spain) to excite his envy, he would rather consider this as a new and untried experiment, and digest it a little better before it was adopted. Mr. K. added, that the system was already in operation, as the changes proposed did not alter essentially the specie system adopted by the Executive since the suspension of specie payments. The postponement would give us a little more time to observe the workings of the system, and ascertain the wishes of the people. He was glad to see the finances restored to Congress, their lawful guardian, on almost any terms; but really they were in such a worthless and ragged condition, from Executive manipulation, that it was difficult to say what disposition had better be made of them.

Mr. K. said he doubted whether he ought to detain the Senate to say any thing upon the causes of the present distress, which had called Congress together. As this subject had been dwelt upon, however, by every speaker who had preceded him, and was certainly of great importance to the country, it was perhaps the duty of every member to give his views upon the subject. The subject, said he, is too important to be trifled with. It comes to the doors and dwellings, and reaches the bread and business of every citizen, of every condition; and I shall give my views, however unwillingly, uninfluenced by all personal friendships and party associations. Unless we ascertain the causes which have so strangely brought the country into its present distressed condition, in a time of profound peace, we shall neither know how to apply present remedies nor avoid similar evils in future.

Mr. K. then said he had not the slightest doubt that our difficulties were owing entirely to the unfortunate policy and violent measures of the Executive in relation to the finances for several years past. This was the only cause, and this was abundantly sufficient. Mr. K. said he could prove this to any one who would not shut his eyes to facts, and close his understanding against correct information on the subject. He had felt and expressed his astonishment when he first read the President's message, at the state-

ments of the President in relation to these causes; and he had been equally astonished at hearing his friends from Connecticut and North Carolina adopt these statements, and take them as admitted truths. The President was entirely mistaken in these statements, and to allow them to remain uncorrected would only continue to obscure and mystify the subject.

For the better understanding of the subject he would read the passages alluded to. Mr. K. then read the passages which follow:

"However unwilling any of our citizens may hertofore have been to assign to these causes the chief instrumentality in producing the present state of things, the developments subsequently made, and the actual condition of other commercial countries, must, as it seems to me, dispel all remaining doubts upon the subject. It has since appeared that evils, similar to those suffered by ourselves, have been experienced in Great Britain, on the Continent, and, indeed, throughout the commercial world; and that in other countries, as well as in our own, they have been uniformly preceded by an undue enlargement of the boundaries of trade, prompted, as with us, by unprecedented expansions of the systems of credit. A reference to the amount of banking capital, and the issues of paper credits put in circulation in Great Britain, by banks, and in other ways, during the years 1834, 1835, and 1836, will show an augmentation of the paper currency there, as much disproportioned to the real wants of trade as in the United States. With this redundancy of the paper currency, there arose in that country also a spirit of adventurous speculation, embracing the whole range of human enterprise. Aid was profusely given to projected improvements; large investments were made in foreign stocks and loans; credits for goods were granted, with unbounded liberality, to merchants in foreign countries; and all the means of acquiring and employing credit were put in active operation, and extended, in their effects, to every department of business, and to every quarter of the globe. The reaction was proportioned in its violence to the extraordinary character of the events which preceded it. The commercial community of Great Britain were subjected to the greatest difficulties, and their debtors in this country were not only suddenly deprived of accustomed and expected credits, but called upon for payments which, in the actual posture of things here, could only be made through a general pressure, and at the most ruinous sacrifices.

"In view of these facts, it would seem impossible for sincere inquirers after truth to resist the conviction, that the causes of the revulsion in both countries have been substantially the same. Two nations, the most commercial in the world, enjoying but recently the highest degree of apparent prosperity, and maintaining with each other the closest relations, are suddenly, in a time of profound peace, and without any great national disaster, arrested in their career, and plunged into a state of embarrassment and distress. In both countries we have witnessed the same redundancy of paper money, and other facilities of credit; the same spirit of speculation; the same partial successes; the same difficulties and reverses; and, at length, nearly the same overwhelming catastrophe. The most material difference between the results in the two countries has only been that, with us, there has also occurred an extensive derangement in the fiscal affairs of the Federal and State Governments, occasioned by the suspension of specie payments by the banks."

Now, that over-banking, over-issuing, &c., as mentioned by the President, have been operating causes, is only a common belief. But where did they originate, and who produced them? That is the first question. And here Mr. K. stated that the President was mistaken in every fact assumed by him to exculpate our own Government from the charge of being the original cause of the

* Hamburg.

SEPT. 23, 1837.]

Sub-Treasury Bill.

[SENATE.]

mischief. Other countries have been suffering no "evils similar to those suffered by ourselves," *except those which they have suffered by their connexions with and losses by us.* And "a reference to the amount of banking capital, and the issues of paper credits, put in circulation in Great Britain, &c., during the years 1834, 1835, and 1836," *will not* "show an augmentation of the paper currency there as much disproportioned to the real wants of trade as in the United States. *Nor has there been in England any general rise of prices;* nor do we witness "in both countries the same redundancy of paper money and other facilities of credit," or "the same spirit of speculation." These positions of the President are entirely erroneous, and the facts he supposes have not a shadow of existence.

He said he did not, of course, make these contradictions in an offensive sense, or in a way disrespectful to the President. He had been in favor of his election, and did not regret it. He moreover believed him to be a man of patriotism and integrity, as well as intelligence, and he hoped to be able to support his administration. But if he was (as he was doubtless) a "sincere inquirer after truth," he would be glad to be corrected in views calculated to deceive the people, and divert their minds from the true agency by which they have been overwhelmed. The President's "difference," in fact, ought to have shown him where the fault lay. He states that one nation has become bankrupt. The other sustained itself, and is now nearly recovered. Why this "difference?" Why, simply because ours is the distress of the debtor unable to pay the debt; theirs is the distress of the creditor for want of the money due him. The creditor of a bankrupt is frequently much injured for want of his money, but it does not necessarily follow that he also fails. And in no case is he chargeable with the follies and extravagances that brought about the disaster. He may have been too confiding, but there his fault ends. The injudicious prodigal, with bad advisers, may contract debts, multiply obligations, make experiments, and become embarrassed and bankrupt. The confiding neighbor who trusted him too far may feel sensibly the want of his debt, be obliged to curtail his expenses, or otherwise economize for a while; but, being the creditor, and therefore most likely the richer of the two, he is not so likely to be ruined. [Here Mr. K. read an extract of a letter from a gentleman of Liverpool, stating that "there is no distress in England except that which grows out of American connexions; and that is passing off, though much of the debt remains unpaid."] England, we are told from all quarters, is now easy, and, with an abundance of capital, prepared to make investments, and engage in new enterprises. Yet a mere check to the lavish accommodations of the capitalist, by the embarrassment of his debtor, is analogized, with the utmost complacency, to the prostrate and helpless condition of his bankrupt debtor himself!

Those, he said, who insisted that the national distress could not have been occasioned by the acts of our own Executive, because there had been some distress in those commercial nations with whom we trade, put him in mind of that great philosopher who stumped his toe in the darkness of midnight, and railed out against the sun for not shining in the night instead of the day; alleging, as the result of his most profound observation, that there was light enough in the day without him. They confounded cause and consequence, and lost all connexion between them. It never occurred to the philosopher that the sun might itself be the cause of light, and these gentlemen cannot see our own agency in producing this embarrassment abroad, though the one agency is just about as plain as the other.

Mr. K. said he would try and remove the difficulty of those who felt so much embarrassment on this subject by proving—

1. That there had been no redundancy of the currency in England between 1834 and 1837; but, on the contrary,

the value of money during this period had greatly increased by the increase of national wealth, whilst currency remained about stationary.

2. That there had been in England no national overtrading, and that her exchanges had been depreciated by receiving our credit in exchange for her cash and commodities.

3. That our extraordinary, but speculative, demand for the products of English labor had created some activity, especially to the manufacturing interests. Our increased demand for the products of their labor, counteracting our unnatural credit demand for their money also, and thereby only maintaining prices which otherwise (so far from a speculative rise) would have been depreciated by an appreciation of money.

These propositions, Mr. K. said, would rather astonish those who had taken it for granted, without inquiry, that, by some magical fatality, the whole world had been guilty of folly similar to our own, and visited with similar punishment. But if they would take leave of mere assumptions, stump-speeches, party presses, and vagrant conjectures, and be content with the plain evidence of their senses, he thought he would maintain every proposition to the satisfaction of all who would listen to him.

On the first proposition, let us see whether "a reference to the amount of banking capital, &c., in Great Britain during the years 1834, 1835, and 1836, will show an augmentation of paper currency there as much disproportioned to the wants of trade as in the United States."

Mr. K. then read the following table, (prepared from official statements:)

Circulation of the Bank of England, joint-stock, and private banks.

	B'k of Eng.	Jointstock.	Private.	Total.
Jan. 1833	18,318,000	1,315,000	8,836,000	28,469,000
1834	18,377,000	1,258,000	8,733,000	28,568,000
1835	18,100,000	2,188,000	8,231,000	28,519,000
1836	17,427,000	3,095,000	8,357,000	28,875,000
1837	17,868,000	3,755,000	7,258,000	28,881,000

The foregoing table is made from the February monthly returns of the Bank of England, and the December to March quarterly returns of the joint-stock and private banks, as being the most likely way to approximate to the aggregate for the month of January. The original official returns were before him, Mr. King said, and were at the service of any gentleman; and the monthly and tri-monthly variation in the entire circulation was so trifling that it was scarcely worth naming. It would be seen, from the above table, that the entire "augmentation of paper currency" in England during the years 1834, 1835, and 1836, the period mentioned by the President, was only £323,000, or about one-third of one per cent. on the currency, estimating the whole currency of England at £200,000,000; and the entire "augmentation" during 1833 to 1836 inclusive, (commencing one year earlier,) was only £412,000, or not quite one-half of one per cent. on the whole currency, and about one and a half per cent. on the paper circulation. Now, let us see whether this increase is "similar to our own" during the same period.

Mr. KING then presented a statement which he believed to be as accurate as it could be made by a collection and continuation of the returns of local banks up to 1st January, 1837. It was more likely to be an under than an over estimate, from the great difficulty of finding new banks, and getting statements of their issues. The following is the statement:

SENATE.]

Sub-Treasury Bill.

[SEPT. 23, 1837.]

On the 1st of January, in the following years, the state of the banks was this:

Number of banks.	Capital.	Loans.	Bills in circulation.	Deposites.	Liabilities on bills and deposits.
Millions of dollars.					
1830—320	145	200	61	56	117
1834—506	200	324	95	76	171
1835—558	231	365	104	83	187
1836—567	252	458	140	115	255
1837—677	324	591	186	155	341

By the above table, it will be seen that, when we add the estimated amount of specie in 1834 and 1836, respectively, we find an augmentation of the entire currency of nearly 94 per cent., and an augmentation of paper circulation of nearly 96 per cent. Our own entire currency, then, "during the years 1834, 1835, and 1836," has increased nearly 94 per cent., and our paper circulation, during the same period, nearly 96 per cent.; whilst the entire currency of England has increased about one-third of one per cent., and her paper circulation, during that period, having fluctuated a mere trifle at any time, and sometimes even contracted, is found, at the end of the period mentioned, to have increased only about $1\frac{1}{2}$ per cent. He had not given himself the trouble to be very minute in the calculations above, and had used round numbers; but no use of authentic materials could vary the result more than a mere fraction, and strict accuracy would most likely make the comparison more unfavorable to the statement of an equal expansion in the two countries during the period referred to.

Instead of equality, then, we had, for England, an increase in the entire estimated currency of the nation of about one-third of one per cent.;

In the United States, an increase of about 94 per cent.;

In England, an increase of paper currency of about $1\frac{1}{2}$ per cent.;

In the United States, an increase of about 96 per cent.

So much (said Mr. KING) for an equal expansion of the currency in both countries. As to the "other credits," they were not tangible, but every man of any observation must know that on this item we should suffer in the comparison more than in the other. Credits were certainly multiplied in England, in some districts, by the increase of the number of joint-stock banks, by which new connexions were formed, and the number of checks, drafts, &c., increased. But the increase of joint-stock banks (deducting the private banks melted into them) bears no comparison to the increase of banks in this country, as we find from official statements. The consequent increase of credits, though they cannot be ascertained with precision in either country, may be compared by the result. The increase of credit in England has been based on the same national cash capital, as appears by the unchanged quantity of the currency, as exhibited by the tables. And, that it has not been redundant is unanswerably proven by its having produced no general speculative rise of prices. To speak of a redundancy of currency or credit, when no speculative rise in commodities has taken place, is perfect nonsense. Where facts have been stated and not proved, I have taken issue and disproved them by facts fully established. Where facts are conjectured, I will presently introduce evidence to prove the conjectures groundless, by proving the absence of consequences invariably connected with them. The only way in which a redundancy of currency or credit depreciates foreign exchange is, by producing a speculative rise in prices,

and a consequent overtrading. England has not overtraded; on the contrary, she has exported more than she imported, and left us enormously in her debt. But, whilst she had a large balance against us, exchange was against her, and making a continual drain upon her bullion! This strange financial and commercial anomaly, so embarrassing to the English, I will hereafter explain, after having completed the proof on the first proposition.

He then read the evidence of Mr. Gurney, a man of so much intelligence and authority on these subjects as to be called before the joint-stock bank committee lately appointed by Parliament. This witness shows remarkable intelligence on the subject of finance, but is here strangely embarrassed for want of facts, of which he seems entirely ignorant. [Here Mr. K. read the evidence of Mr. Gurney as follows:]

"Evidence of Mr. Gurney before the Committee of Joint-Stock Banks."

"Question 2,592. Has there been any change of late in the state of the London money market?"

"There has been a gradual increase in the value of money."

"Q. 2,594. To what do you attribute that altered state of the money market in London?"

"One cause has been the exportation of bullion to foreign countries; but, I apprehend the main cause is, the circulating medium existing in Europe and the mercantile parts of America(!) is not increased in proportion to the transactions, and that the same quantity of circulating medium, or perhaps, even a reduced quantity, has to perform a much larger amount of transactions."

"Q. 2,595. Would not the effect of it, if owing to that to which you have alluded, be rather indicated in a fall in the money prices of commodities?"

"That is the tendency of it; but there are conflicting causes that have marvellously maintained (not increased) the value of commodities generally."

Mr. Gurney is a bill broker, who procures the discount or rediscount of country bills in the London market. He was, therefore, well acquainted with the facts, and the subject on which he speaks, so far as England was concerned; and he tells us that "the value of money had gradually increased." And in another part of his evidence he tells us that the increase is about 20 per cent. He knew this as a fact, and in England he was enabled, in some measure, to account for it; for he knew that currency had not increased, whilst, from the progressive increase of national wealth, commodities and transactions had. He could, therefore, account for the depreciation of exchange, and export of gold to America, on no other supposition than that the currency of the "commercial parts of America" was even more contracted and disproportioned to commodities than in England. But why was not the appreciation of money "indicated by a fall in the money prices of commodities?" Though this was the natural "tendency," "conflicting causes marvellously maintained prices." What were the conflicting causes referred to by Mr. Gurney? Evidently the "increased activity in the manufacturing districts" by the increased demand for the products of English labor for American consumption. The depreciation of commodities by the appreciation of money was counteracted by an appreciation of commodities by an increased demand for them. Though the ideas of Mr. Gurney seem clear, he seems, for want of facts, to be involved in embarrassment and apparent contradiction. That the value of money was raised in England by an insufficiency in quantity, was inconsistent with the exportation of gold, unless in America, also, the currency was contracted. And yet a contraction of the currency in America was inconsistent with our increased demand for English manufactures. Had the witness, however, known that, so far from a contraction, our currency had expanded near 100 per cent., and that exchanges were in our favor whilst there was a large balance against us;

SEPT. 23, 1837.]

Sub-Treasury Bill.

[SENATE.]

that we were draining them of their gold, in defiance of this heavy debt and redundant currency, his embarrassment would have increased, until he ascertained that we were performing all these commercial miracles under a new system of finance, by which we exchanged our credit for their capital, and, after going in debt for a large commercial balance, borrowed a still greater amount, and thereby turned the exchanges against them by borrowing their own money.

Mr. K. further sustained his proposition, and strengthened his evidence upon this point by introducing official tables from England of some of the principal articles of raw produce for English manufactures, &c., entered for home consumption, and the official and declared valuation of exports: both embracing the period in question, except the official valuation for 1837, which he had not been able to obtain.

The following are the tables produced and read by Mr. KING:

"Quantities of several principal articles of raw produce of manufactures, &c., entered for home consumption in the years ending January 5th, respectively, with the absolute and proportional increase from 1834 to 1837."

Articles.	1834.	1835.	1836.	1837.
	Pounds.	Pounds.	Pounds.	Pounds.
Cotton	296,497,167	308,002,601	333,043,464	370,350,569
Silk, raw	3,838,795	3,346,761	4,151,008	4,372,498
thrown	268,367	165,763	254,578	294,334
Wool	39,133,463	41,113,448	43,119,993	60,724,794
<i>Absolute increase.</i>				
Cotton, pounds	-	72,348,168	20.20	nearly.
Silk, raw "	-	1,025,747	30.	do.
thrown "	-	129,166	50.	do.
Wool "	-	19,611,346	50.	do.

Table of the produce and manufactures of Great Britain exported to foreign parts, calculated at the official and declared rate of valuation.

OFFICIAL VALUATION.			
1834.	1835.	1836.	
69,633,853	73,495,535	77,932,616	
Increase official value 5.9.			
DECLARED VALUATION.			
1834.	1835.	1836.	1837.
39,305,512	41,286,594	41,437,123	46,796,937
Increase declared value 12.9.			

By the above official tables, (Mr. K. said,) it would clearly appear that the national wealth and industry had greatly increased, whilst the currency had remained about stationary, as previously established. Mr. K. thought he had now fully established that the currency of England had not been equally expanded with our own, but, on the contrary, there had been actually "a gradual increase in the value of money."

The second proposition (Mr. K. said) scarcely needed proof from its close connexion with the first. He would put the matter at rest, however, by the production of evidence that ought to be satisfactory to all. This evidence was the perfect agreement, on this point, of Mr. Horsley Palmer and Mr. Knowles in their controversy concerning the action of the joint-stock banks and the conduct of the Bank of England. Mr. Palmer, in apologizing for the contraction of the bank, and alluding to the causes, &c., says: it is necessary to state these, as they seem, in no degree, to have arisen from overtrading or any undue speculative advance in commercial prices." Mr. Knowles, however, is not satisfied with this admission, but, wishing the fact established beyond doubt, he asserts the same thing, and refers to the proofs. Mr. Knowles, after proving that the legitimate demand for currency had been increased by the increase of national wealth, says: "A table of prices, had I time to prepare one, would prove beyond question

that so far from a rise in prices generally, in many cases there has been a fall even with decreasing stock; a fact quite incompatible with an over-issue and depreciation of the currency. While, again, where a rise in the prices has taken place, it is distinctly referrible to causes prospectively affecting the market as to supply." Some fluctuations were doubtless exhibited in the manufacturing districts in particular articles, and especially in articles for American consumption, which, from the heavy increased demand for them, could not be readily supplied by existing establishments. This, however, "is distinctly referrible to causes affecting the market as to supply," and was no evidence of a redundancy of the circulation. The distinction might always be settled by an observation of the following rules: that whenever there is a great fluctuation in the value of a particular article or commodity, whilst the value of the property of the country generally remains unaffected, we may take it for granted that the fluctuation is owing to a change in the relation between the demand and supply. For instance, if there be a short crop of corn, the supply will fall short of the demand, and the price of corn will rise, whilst all other commodities may stand firm. This rise is occasioned by the change in the relation between the supply and demand. But if we find the price of every commodity raised to an unusual elevation, (as lately in the United States,) we may take it for granted that the price is owing to the change in the relation between currency and commodities; in other words, that currency or credit, or both, has been greatly increased and consequently depreciated. This partial and local fluctuation, then, where it existed, amounted to nothing, as it was trifling and partial, and attributed to a fluctuation between supply and demand—a fluctuation to be found to some extent in all countries and at all times. Doubtless some additional activity was occasioned by our artificial and credit demand for manufactures, attended also with an increase of manufacturing stock. It is very likely, also, some local overaction in the joint-stock banks was occasioned by the large profits they derived from the discount of American securities and credits to supply our credit demand for money; for under our preposterous system, adopted in 1834, of importing borrowed money to multiply credits upon, we have been willing to take all their cash as well as their commodities, and give more than any body else for them, if they would only let us have them on credit. These partial fluctuations were uncertain and unimportant, and, so far as they did exist, if at all, are easily accounted for, and principally, if not entirely, to be attributed to a connexion with us. In no view of the subject could they be used as evidence of a national redundancy of currency or credit, or of a national overtrading, neither of which, as we have seen, had taken place.

Mr. K. said the latter part of the second proposition, and the whole of the third, seemed to be established by inference from the positions already established, and the proofs already adduced. The only further proof that could be deemed necessary on these points, was to establish the fact that at the very time we were importing large sums of specie under the encouragement of the wise policy of the Executive, as it was called, we were enormously indebted, not only on a commercial balance, but also for money borrowed in the very face of this commercial balance against us.

Mr. K. said, it here again became his unpleasant duty to prove that the President was mistaken in his estimate of the amount of our foreign debt. It was important to notice this mistake with another view. We would not act in reference to our true situation as debtors, if we believed we owed nothing. The President gives the estimate of our foreign debt in March last at thirty millions of dollars. The President could have had no unworthy object in this under-estimate; but still it is a mistake, and one that should be noticed and corrected. If the estimate of the President were correct, the debt had evidently been paid, and over-

SENATE.]

Sub-Treasury Bill.

[SEPT. 23, 1837.]

paid. He had seen an estimate more than two months ago, which seemed reasonable, and probable in all its details, which estimated the liquidation of our foreign debt since the suspension of specie payments at thirty-two millions of dollars. We had been remitting specie, and exchange, and shipping cotton ever since; and he had not the slightest idea that we had paid and liquidated in different ways, since March last, less than forty-five, and perhaps fifty millions of dollars: and yet we find the exchanges heavily against us. He hoped, then, our banks would not begin to expand, and our people to overtrade, on the presumption that Europe was indebted to us.

Mr. K. said no one could pretend to accuracy as to the amount of our foreign debt in March last, but he thought he could satisfy the Senate that, if every species of obligation were taken into account, it was much nearer one hundred and thirty than thirty millions of dollars.

Mr. K. then proceeded to furnish the Senate with such evidence as he had to offer on this subject. In the first place, he took the commercial balance alone for the year 1836, as reported by the Secretary of the Treasury, at upwards of sixty millions. It seemed, by the report furnished at this session by the Secretary, that he estimated the commercial balance which remained as a foreign debt, at over thirty millions; and perhaps this statement misled the President, who took the Secretary's commercial balance of one year for the entire balance at the period referred to. He thought, however, that the Secretary was mistaken even as to this commercial balance for 1836. He seemed to have deducted thirty millions from the sixty (as Mr. K. supposed,) for our share of the profits of trade. Mr. K. thought not a cent should be deducted. We had it from English accounts, and had too much reason to believe the fact, that the principal articles of American exports declined from thirty to forty per cent. between July, 1836, and April, 1837. He believed, then, we had lost on our exports the full amount of profit, and perhaps more; and that the gross amount of balance might safely be estimated as a foreign debt against us for the year 1836 alone.

Mr. K. then proceeded to show the amount of money we had borrowed in Europe in the space of one year ending in the fall of 1836. As Europe owed us nothing on an exchange of commodities, of course, the amount of specie (beyond that included in the statement of imports) which we obtained from them, must have been obtained on credit, in some form or other. It was impossible to get at any thing like correct official information on this subject. As there was no duty or prohibition either on exports or imports of specie, there was but little attention paid to it at custom-houses either in Europe or America. Large bankers, whose business gives them an interest, as well as knowledge of loans and specie shipments, were the only class from which much information could be obtained, and they rarely knew of any except large and notorious transactions. A statement made by Mr. Fayot, of Paris, a man of great research and many opportunities, he believed as much to be relied on as any other. This statement was made in the latter part (if he mistook not) of 1836, and purported to be an estimate of the specie shipped from Europe to America during the year preceding the statement. This statement Mr. K. read, as follows:

Statement from Frederick Fayot's essay, published in Paris in 1836, of the amount of specie shipped from Europe to America, in one year previous to the date of the essay.

England, from documentary evidence, say -	£6,041,666
Holland, two loans, forming together	
£2,500,000, one-half shipped in specie -	1,250,000
In France, the indemnity 18,000,000 fr. and	
Hottinguer loan, 14,000,000 together -	1,333,333
	£8,624,999

If the above statement be correct, (and it was certainly more likely to be under than over the true amount,) we had imported near forty millions of dollars in one year, besides the indemnity, which, if the laws of trade had been allowed a free operation, would have been more profitably drawn for than imported. Adding the above sum to the commercial balance of sixty millions, and we had evidence of about one hundred millions, less only the specie included in imports. In addition to this, it was well known, he said, that we had been issuing credits to a greater or less extent ever since the commencement of 1834, and the entire foreign debt might safely be put down at much more than one hundred millions in March last. The debt being established, it follows that the state of our foreign exchanges have been false and delusive, and, having been effected by the use of credit, have been no indication of the true balance of trade on a fair exchange of commodities; credit having the same effect on the exchanges as the exportation of an equal value in commodities. Mr. K., however, concluded this branch of the subject by adding that it would not be necessary to pay the whole debt before exchanges would be equalized; a very large portion of it having assumed the form of investments, on which we should only have to pay the interest; and, moreover, the nature of the commerce between the two countries will bear a very considerable foreign debt against us, without affecting the exchanges.

Mr. K. said that he hoped he had proven to the satisfaction of the Senate, that the causes of the present distress were not common to other commercial countries, which, in fact, had suffered only by their connexion with us. They had not over-traded, over-issued, nor had any speculative rise in prices similar to our own. The causes, then, must be located in our own country; and Mr. K. said he would endeavor to explain when, how, and by what agency they originated here.

He then went back to the removal of the deposites in 1833—a measure that he had frequently spoken of before, as having been productive of much mischief, and no counterbalancing good. He had briefly noticed its agency in bringing the country into its then present condition at the last session; and every prediction then made had become true, and each cause had operated in the manner there stated, so far as they had been since developed. He would only now say of it what all admitted—that it produced a panic which greatly depreciated every article of home consumption in the latter part of 1833 and part of 1834, whilst the price of our exports was not affected by the measure in the foreign market. The immediate effect was a rise in our foreign exchanges, and twelve or fourteen millions of specie poured in upon us. This effect was not anticipated by the President, as we could see by an exposition of his views when the measure was adopted. He had no more idea of bringing specie, than he had of bringing London to America by the removal of the deposites. Yet the friends of the measure immediately boasted of it, as one of the happy results of that wise measure, from which many and countless blessings were to flow in upon the country. Well, sir, the currency was already full, if not redundant; and that this specie, thus suddenly forced in upon us by violently striking down the value of home consumption, would displace an equal amount of paper circulating in good credit, was one of those strange experimental notions by which people unacquainted with the subject have been deluded, and our finances ruined. Paper must first be expelled, and then specie will fill the vacuum, by a law of currency. Expulsion must precede, and cannot, under such circumstances, be expected to follow, the introduction of specie, which, instead of expelling paper, will become the basis of further issues by banks, if they be left uncontrolled by any restricting or regulating power. Accordingly, much of this specie went into banks, or was collected together in

SEPT. 23, 1837.]

Sub-Treasury Bill.

[SENATE.]

the formation of new banks, the whole continuing to expand, and produce a speculative rise in prices, which, by a reciprocating operation, produced still farther expansions, by a well-known law of finance. This, of course, produced speculation at home and heavy importations from abroad, which at last even extended to the necessities of life. Our people being intoxicated by this delusive prosperity, every species of property was embraced in the wide range of speculation, which speedily taught the public lands. Every one seemed to think it much easier to get rich by speculating in land than by cultivating it; and, by large land sales, added to heavy importations, soon produced an enormous surplus in the Treasury, which was distributed in a great number of banks. There was a great anxiety to recommend State depositories to the people, and reconcile them to the loss of the United States Bank, by proving that institution to be unnecessary, and accordingly they were stimulated to accommodate the community by the use of the public funds. In this way banks were multiplied, paper issues were multiplied, speculations were stimulated, and produced that bloated and diseased condition which began to manifest itself in the summer of 1836.

It may be necessary in this connexion more particularly to notice the means by which we were enabled so long to keep up this forcing process, and prevent an earlier reaction by the operation of our foreign debt. This was plain enough when the facts were known, though it had continued long to puzzle the best financiers of Europe. The natural effect of the general speculative rise of prices here, from a redundancy of our currency and credit, was to depreciate our foreign exchanges, and produce a call for the balance of our foreign debt. Yet we prevented this, by sending them bonds, bank shares, State stocks, and credits of various descriptions, to a greater amount than we owed them. By these means we raised our own exchanges and depreciated theirs, which drained them of their bullion, (as before intimated,) by means of the credits they extended to us. These speculations at home had produced almost an unlimited demand for money, and we would take all their cash, as well as all their commodities, and overbid their own capitalists to get them, provided we could make the operation on credit. Thus we continued inverting the laws of trade, and utterly confounding the bank directors and capitalists of England, until the summer of 1836. We find that the bank directors then made the discovery that the United States had been draining them of their gold "on credit," and they took steps to prevent it, by increasing the rate of interest in June to 4½, and in August to 5 per cent.

Let us now return to the United States. In June, 1836, the ruin threatened by so large an accumulation of the public money, and the uses that were made of it, and the unsound state of the currency generally, was so manifest that all parties united in the opinion that something must be done with it. After full discussion and great deliberation, Congress, with uncommon unanimity, adopted the law to distribute the deposits among the States. Though no measure could be free from objection, this was certainly the wisest that could have been adopted in reference to the end proposed. It depleted the Treasury, and checked over-issues, by a public law, with full notice, easy terms, and ample time for its execution. The President was, unfortunately, opposed to it, and seemed determined, not only to use every means to prevent its efficiency, but to prevent its operation on the Western and Southwestern deposit banks, which, in fact, most needed its operation. With this view, he adopted the famous specie circular—a sort of order in council—though the identical measure had been a few days before proposed as a legislative measure, and, with almost perfect unanimity, rejected by the Senate.

The principal, perhaps only object of this measure was

to save from explosion some of the tottering deposit banks in the West and Southwest, when they should be called on to comply with the deposit law, and surrender the public money. His object could not have been to prevent over-issues, such an object being inconsistent with his opposition to the deposit bill, which was certainly, of all others, the best conceived for that purpose. Whatever might have been the motive, the measure was an unwise and unfortunate one, deranging the whole internal commerce of the country, producing panic, breaking up exchanges, and destroying credit, at the very time, of all others, when the country should have been permitted to make the best of its resources, without violence or surprise.

Mr. K. said he was sorry to see his friends who had voted against this Executive measure throughout, now coming forward sanctifying an Executive triumph over the legislative authority, by acknowledging their error. His worthy friend from Connecticut had said that though he had voted uniformly against it, yet that it "might have done some good in saving the banks." This confession of his friend was, perhaps, a harmless offering to Executive power; but as he did not approve of such gratuitous benevolence at the cost of consistency, in a matter of such importance to the country, he must say to his friend that he entirely disagreed with him, and must call upon him for some of the beneficial effects of this wise and salutary measure. The Senator himself told us in the next breath that the deposit banks, and all other banks are broken, and that the public money, both specie and paper, have become unavailable in their vaults. The patient is dead, and yet the treatment is lauded. If a quack, in defiance of all remonstrances, continues his treatment, and the patient dies, we may conjecture that he would have done no better with a different treatment, or without treatment; but how he could have done worse it is somewhat difficult to conceive. This measure, then, condemned by the Senate, condemned by the Cabinet, condemned by the people, after full trial, condemned by the whole legislative authority, and condemned by the strong evidences of the mischief it has produced, is still persevered in by the Executive, lauded for its "salutary effects," and was referred to by one Senator (looking at Mr. BENTON) as "the glorious specie circular." [Mr. BENTON. "Yes, the ever-glorious specie circular."] Mr. K., with great animation. Ah, yes, it is all glory and no good. Where are the evidences of your glory? Is there any thing glorious in the present unhappy condition of the country? Your Government insolvent and disgraced. Our people branded by foreigners as a nation of fraudulent bankrupts and swindlers; your merchants bankrupt; your manufacturers languishing in idleness and distress; your planters ruined, and two-thirds of the laboring population of the United States threatened with actual starvation. These are the evidences of the "salutary" effects of the measures we are called on to glorify. Why, sir, the Senator must have forgotten that glory has depreciated in the market. Like paper currency, it has been redundant, and is now almost as much below par as rag money; very much for the same reason, too. On examination, we find that neither has had a very solid basis to rest upon.

So much (said Mr. K.) for the glory of this order. I now propose to take a more dispassionate, and better reasoned view of it as a financial measure.

The plain objection to the circular as a financial measure is, that it did violence to all the laws of trade and commerce by the forcible interference of the Government. The easing operations of exchanges, so useful and necessary in adjusting ascertained balances between different sections of the country, were suddenly and violently interrupted. The useful admonition of an unfavorable balance, as indicated by the exchanges, was not only disregarded, but that balance forcibly increased. The destructive tendency of such interference by Government in the com-

SENATE.]

Sub-Treasury Bill.

[SEPT. 23, 1837.]

merce of the country has been acknowledged by the Senator from North Carolina, [Mr. STRANGE,] though I thought the principle might have been better applied by him. Such measures produce the same effects in the same way, whenever and wherever applied in a free commercial country; always taking the people by surprise, and breaking up the established order of things. The business of the country is as effectually deranged and disorganized by such violence as is the human system by the destruction of the heart.

Commerce has its laws. The people study them, and by study, observation, and experience, become acquainted with them, to a very great extent, and make their calculations and regulate their business accordingly. They always most greatly suffer when forcibly deprived of these advantages; and particularly if the force be applied to a paper or mixed currency. Doubtless the evils of a paper currency (though it has some advantages) are very great. I do not know, in many respects, that they are over-estimated by the Senator from Missouri. I hope he, however, after the most fatal experience to the country, will come to the conclusion that the evils of the system can only be reached by a legislative authority that can reach the system itself. It is acknowledged we have no power over the system, and yet, by this Executive lashing, and fretting, and chastising, and torturing, we keep the country and the currency in a perpetual fever and fluctuation, giving us all the evils of the system without its advantages. Sir, you might as well undertake to make a full-grown intellectual man, with trowel and mortar, and regulate the circulation of his blood with a tinker's tools, as to undertake to make a uniform standard of value of a paper or mixed currency, and regulate its functions, as money, by the continual tinkering, and the successive and sudden application of force by the iron hand of Government. Sir, you can't do it; you have neither the materials nor the laws for such a consummation. You may do infinite mischief, but you will never do any good. You may break up business, and ruin the industrious classes, but you will do no good to any class, except such as know how to profit by confusion, and speculate on the misfortunes of their fellow-men.

He said that at the very time this strange order was issued, exchange was already sufficiently high against the Southwest and West, to have made the transmission of specie a profitable operation. This was seen by the Senate when they with such unanimity refused to take the responsibility of the measure. The effect, as foreseen, was first to raise the exchanges, and then break them up. Why, sir, said he, if the whole currency of the country had been specie, any measure opposing the force of Government to the laws of trade, the practical effect of which should be to require the actual transmission of specie against the rate of exchange, would so far double the exchanges, upon a mathematical principle, by requiring two transits of specie instead of one. So true is the operation of this principle, that even an arbitrary requisition that the paper money alone of the Atlantic seaboard should be received for public lands would have produced a heavy effect upon the exchanges, because, in the exchanges, it would have added to the wrong side of the account.

But, sir, when we come to the actual operation in question; when we come not only to take money from a point where it is due, and send it to a point from which it is owing; to take it from the creditor and send it to the debtor, but perform this rough and anti-commercial operation by taking away the very basis upon which five-sixths of the currency rests, you produce effects that can never be arithmetically calculated, and of which no adequate conception can be formed, except by witnessing the actual effects almost immediately produced by the measure on the commercial seaboard, and those sections upon which the measure was intended to operate. An exact ratio would con-

tract the whole currency in the money market, from which the specie is thus drawn, in the proportion in which paper is based on specie, thereby contracting six millions for every one thus abstracted, if the proportion be five paper dollars based on one of specie. But we all know that such measures do not operate in an exact, but in a loose ratio, from the apprehension, the confusion, panic, and alarm which they create, and the commercial resources they cut off. This measure cut off, to a great extent, the resources of the Atlantic merchants in the enormous amount of debt due them from the West and Southwest; for it not only unnaturally sent their money from them, but prevented any coming to them. But, determining to have some friends to the measure, it has been insisted that although it may have ruined the Atlantic merchants, and done injury to creditors, yet it was a great blessing to the people of the West. These people, however, it seems, are not so easily gulled by these forced blessings; for, after a full trial of it, their representatives, with great unanimity, voted last session to repeal it. The able speech of one of their representatives [Mr. WALKER,] at the last session, explained to us the nature and operation of this blessing, and the Legislature of his State had, by a resolution, unanimously sustained him. He did not know how grateful his friend felt for these blessings forced upon him by the Executive, and which had contributed so largely to bankrupt his constituents; but for himself, Mr. K. said, (to use a rustic phrase,) he would not like to be *funnelled* even with champagne.

But what was its "happy effect" upon the West and Southwest, whilst it ruined the seaboard? Was the debtor aided whilst the creditor was oppressed? Not at all, sir. Whilst this specie was on the voyage of its exile, and after it reached the deposit banks, so far as the commercial and planting interests were concerned, it might as well have been buried in the middle of the earth, or carried back to the mines of Mexico. Did it aid the merchants in paying his Northern and Eastern debts? No; it immediately increased the cost to him of such payment, by increasing the rate of exchange, whilst, at the same time, it closed upon him all the usual resources of obtaining money. This increase in the rate of exchange increased the danger of a demand upon the banks by the merchants, whilst they had also to answer the demands of their bill-holders, who might want to purchase the public lands. What Northern exchange they had was soon exhausted in reducing their circulation, whilst they could not prudently do any business that would place their own issues in the hands of the business part of the community. Against the business part of the community, both merchants and planters, they were suddenly and effectually closed. They could not pay out paper for fear specie would be demanded for it, for the reasons before named. They could not pay out specie or discount for merchants, because the high rate of exchange and difficulty of procuring it at any price would have started it back in twenty-four hours to the section from which it had been unnaturally exiled. They could not pay out specie to the planters, for they owed the merchants, and its destination would have been the same. If, then, they did any business at all, they must do it with the purchasers of public lands, in which they were secure of a return of the specie deposits. Accordingly, they favored this class of customers, in order to do any business at all, and the President himself, in his message, refers to the circular operation by which they contracted many millions of debt upon a few millions of specie; and yet one popular catch to recommend this measure has been, that it was aimed at land speculators.

The measure, Mr. K. said, seemed to have been attended with unmitigated mischief. Even the sales of public lands had most probably been increased by it, before the suspension of specie payments. There was no other way

SEPT. 23, 1837.]

Sub-Treasury Bill.

[SENATE.]

of accounting for the heavy amount of those sales, after the mania for speculation had already begun to decline. Money became dear and difficult to procure, and all the public lands in market very much culled and selected. The deposit banks in the new States had been devoted almost exclusively to the use of speculators, as before stated, and, moreover, a great number were induced to go into the business after the adoption of the order, who otherwise would not have thought of it. Ours, he said, is an enterprising, speculative people; and whenever Government commits an error, or adopts an unusual measure, they begin to think what can be made of it in a financial point of view. Accordingly, the impression was very general that this measure would greatly check purchases, and that the monopoly of those who would raise specie for the purpose would be much more valuable than if no step had been taken to destroy competition. He said he knew of several himself who collected their capital, turned it into specie, and went into the business, who, but for the order, would not have thought of it. For these reasons, an intelligent gentleman from the West had given it to him as his opinion that the sales had been much increased by the operation of the order, and he (Mr. K.) believed it. If then, it were so desirable to check the sales of the public lands, the object had failed: even the President acknowledges, in the message, that the effect of the order in that particular had been over-estimated. But this was not the object of the order. The object of the order was to prop up a few tottering deposit banks, against the combined but salutary operation of the distribution law, and a heavy exchange. The President, or his advisers, saw that some of the deposit banks in the West and Southwest had expanded enormously, and were in a precarious condition, and exchange already sufficiently high to endanger demands on them for specie; and he feared that, when asked also for a portion of the public money, they would explode, and give a triumph to his enemies, by the failure of his favorite experiment. He determined to sustain them at every hazard, and without a sufficient regard to the interests of the people. Did he succeed in this object? No. On the contrary, in this last grand *coup d'état*, or, rather, *coup d'argent*, to sustain his experiment, by succoring a few tottering pet banks, he broke the whole; yes, sir, broke the whole; for, although I do not intend to attribute to this order more importance than it deserves in bringing the country into its present condition, yet I have not the remotest conception that we should have had a general suspension of specie payments, and a national bankruptcy, but for the adoption of this order. He said he believed he could prove this to the satisfaction of all who would listen to the facts, and impartially attribute to human passion its natural agency in stimulating human action.

What, then, would probably have been the condition of the country, if this measure had never been adopted? It was, before the adoption of the order, in a diseased, bloated and feverish condition, entirely at the mercy of our foreign creditors. The Bank of England had already taken steps to prevent the further extension of our credits there, and by the advance in the rate of interest had stopped our credit drain upon their bullion, before or about the time the order went into operation. This raised the value of money on the seaboard, where the European debt was owing. Credits to Western and Southwestern banks, and individuals, which had been greatly extended by Northern and Eastern banks, had been checked, and balances were expected to aid in adjusting the foreign debt. This debt, every intelligent merchant saw, must now press upon us to a very considerable extent. The foreign exchange would have pressed upon the seaboard; the seaboard would have pressed upon their Western, Southern and Southwestern debtors. Much of the specie of the banks of this section would have gone back to the seaboard, from which it had

been taken, and gone to Europe, from which it had been first borrowed. We should have had a great pressure, some bankruptcies among merchants, and many failures among speculators; many of whom, however, never had any thing, and therefore could lose nothing but their credit. A great number of imprudent and unsound banks would also have exploded, as they should have done; and the impurities of the system would have run off. Many of these banks were mere fancy affairs—the mere funguses of the Treasury—built up without capital, and managed without prudence. Banks that could not sustain themselves under the legitimate operations of trade and commercial demand, should have been permitted to stop. The public good, and even of prudent and solvent banks, required it. What signified a few millions of unavailable funds, in a few imprudent deposit banks, (even if this measure had saved them, which it had not,) compared with the mischief and loss resulting from breaking up the exchanges, destroying credit, choking up the natural channels of commerce, and preventing the resources of the country from flowing to those points where the demands of commerce required them? The condition of the country was known, and the necessity of preparing for a heavy revulsion began to be felt. As usual, however, in the financiering of the ex-President, what was raised by unsuccessful experiment, must be torn down by passion. Never, at any period in our history, did we so much need the privilege of making the best of our resources, by a free and undisturbed circulation of our means. Because the patient was diseased by experiments, was this a reason that he could not be killed by quackery? His condition required the greater care, and a freer circulation; but the President's reinedy was like turning the patient heels upwards to cure him of the apoplexy; or putting him to the rack, to reduce a paroxysm of the fever. Fifteen millions of specie—perhaps much less—shipped precisely at the time, from the points and at the rates which should have sent it to meet our foreign debt, would have satisfied our foreign creditors for the present, maintained the value of our exports, and given us time to meet the balance, by economy and another crop.

Men are operated upon by the same passions, whether acting in numbers or as individuals. If one man, by extravagance or bad management, becomes indebted to another more than he has immediate means to pay, but honestly acknowledges the debt, pays down, with punctuality, all the ready means he has to spare, and asks for time to collect his means, and make another crop, the indulgence will be granted. But if he insultingly tells the creditor he had no business to trust him—that his debt shall not be paid, and adopts measures to run off his means into the wilderness, to keep his creditor from getting hold of them; openly boasts of the tricks by which the creditor is thus defrauded; the latter immediately stops all credit, and, instead of receiving part, he demands the whole, and resorts to the most summary and violent process to collect the debt.

This was precisely the relation between England and this country when this order went into operation. The Bank of England ascertained early in 1836 that the United States had been draining them of their bullion "on credit." They adopted the most gentle means in their power, to restore the exchanges and bring back a part of their bullion. The drain was stopped, but nothing or but very little returned to them. By the adoption of the circular, specie was drawn out of active circulation to a great extent, and bore a premium which drew it in the wrong direction. This premium in the West was, at one time, 5 and 10 per cent. It was drawn from the commercial points by some to sell to small dealers; all emigrants drew and carried it, besides what was drawn by others for larger speculations. But it was not only carried off by a premium in the wrong direction, but that which was so carried off, and all other specie, was locked up and prevented from

SENATE.]

Sub-Treasury Bill.

[SEPT. 23, 1837.]

flowing to the points where it was required. What was the result? Why, the usual rate of exchange did not carry off the specie except to a very small extent. While the foreign exchange pulled one way, the strange policy of the President was pulling the other; and exchange was 12 or 14 per cent. before the suspension of specie-payments. Our enterprising merchants saw their danger from this unnatural warfare against them, but still continued manfully struggling to save their own credit and the honor of the nation. This fact shows how unjust and cruel have been the charges heaped upon the merchants, of conspiring against their own country by a run upon the banks. They conspired to prevent a run, as appears by the premiums they consented to pay for exchange, rather than demand specie. Even their interests, in fact, is a sufficient answer to the reckless charges which have been made against them.

Well, sir, we left England in expectation of getting some remittances to restore a part of the money we had borrowed from her. These remittances, however, were made to a very trifling extent. In the meantime, the President and his friends were boasting of the wise policy of the President in forcibly preventing the operations of exchange, and preventing the payment of our foreign debt. This circular, with the eulogiums on this "wise policy," reached England, and the enemies of the Bank of England began to taunt them with the impotency of the means they had adopted to get back the gold which it was alleged their own mismanagement and want of foresight had suffered to be drawn from them. The temper inspired by this measure, and the taunts and boastings which followed it, was natural enough, and may be seen by the language of the deputy Governor of the bank. It will be recollected that it is admitted on all hands that it was the last action of the Bank of England on American credits that produced our suspension. If I prove that this action was made necessary, or provoked by the specie circular, and what followed it, I have fully established my conclusion from admitted premises.

What says this officer of the bank in reference to the vaporings of the debtor who tricks and defies his creditor instead of paying him, or showing a willingness to pay him? I will read to the Senate his own words.

Mr. KING then read from a late English pamphlet written by Horsley Palmer, the deputy Governor of the Bank, in answer to the charges of Mr. Lloyd:

"In answer to the fifth objection, it is to be stated that no expectation was intended to be held out that gold would return from America so long as it proved more advantageous to ship silver; but the expectation meant to be conveyed was, that notwithstanding all the bombast of the American President, bullion would shortly return to Europe from the United States, and that belief is now in the course of being fulfilled by the daily expected arrivals of silver, with which gold is procurable in the markets of Europe."

The "expected arrivals of silver," or gold either, however, did not come, or at most were very trifling. Our modern financiers had put a clamp upon it, with about as much wisdom as would have been indicated by seizing upon and stopping the exportation of our cotton when more valuable in Europe than here. The principle of expediency is precisely the same. There was one mode by which we could be crushed in an instant. It was "to blow upon American credits" when offered for discount or rediscount by the American houses, or the joint-stock banks. This was postponed to the last, from the disastrous consequences apprehended to the manufacturing interests. The temper displayed in the above extract, however, will show that they were ready to do that, if absolutely necessary, to prevent an insulting triumph. The "bombast" and the circular were continued; "the bank blew on American credits;" our whole foreign debt came upon us at once; a panic was produced; a short struggle was made by the merchants; but a run upon the banks followed: they suspended; the

Government suspended; the nation became bankrupt; and we are now assembled to contemplate the wisdom and glory of turning the commerce of a country upside down to make it prosper, and burying its resources to enable it to pay its debts. Who cannot plainly see from this connexion of facts and inferences, causes and consequences, that this unwise interference with the finances produced the action of the Bank of England, which is admitted to have produced the suspension? This is all plain enough, but an effort is made to draw our attention from the true causes by crying out conspiracy; yes, a conspiracy between our merchants and English bankers and the Bank of England, to defeat the Executive policy!! Never was a man so beset with plots and conspiracies as our venerable ex-President. Whenever a new financial system explodes, or one of his experiments fails, he insists it is the result of a vile combination against him and his policy, and calls upon the democracy to rescue him from the hands of his enemies. Now, the interests of the parties is a sufficient guaranty against this, and it again most unfortunately happens to be contradicted by a known and notorious historical fact; the bank applied to Government to drive American securities out of the market! They were saved by the liberals. A curious conspiracy this; and rather an unprofitable one, too, methinks, for merchants and bankers to engage in. John Bull will probably lose twenty-five or thirty millions by it!

But, (continued Mr. K.) we are told of frequent convulsions before. Unfortunate references, Mr. K. thought, for those who made them. What were they when compared to the present? That of 1819 arose from too hasty an effort to restore the confusion into which the finances had fallen under the State banks; that of 1825 was known to have been brought upon us by England; and was short in duration and comparatively trifling in consequence; and what was that of 1832, that is so much harped on? Why, but for the diligence of gentlemen in looking up evidences of these great revulsions, they would not have been known or recollected out of the seaports, and hardly there. He recollected some short paragraphs in 1832, alluding rather timidly to the "rattling of specie in Wall street;" this continued a few days; about five millions were shipped; the Bank of the United States drew bills for about an equal amount; the foreign creditor was satisfied, and the panic ended. We had then no Executive financiering; no specie circulars; trade was left in the hands of its lawful guardians; specie went off when the rate of exchange required it; and, by the prompt payment of five millions, the Bank of the United States got the nation a credit for the balance, which was paid by the crop and a diminished import.

Yet such had been the nature of the warfare against the bank whilst in life, and now against its ghost, that his friend from Connecticut, in the next breath after having praised the circular, made a furious attack upon the bank, for interfering with the laws of trade in 1832, and preventing the export of specie to the whole amount of the foreign debt. How this argument was to be reconciled with the specie circular and the whole "policy" and arguments by which it has been lauded and justified, Mr. K. would leave to the Senator and the friends of that measure to settle among themselves. This charge against the bank, he thought, carried the true doctrine to the opposite extreme. A demand for a cash balance always admonishes the nation that it has over-traded; and unless it has the whole amount to spare, it is frequently an advantage to pay a part and have time to adjust the balance. He thought then the bank had done well in 1832 to pay what was required in specie, and get the nation credit for the balance until the crop of exports could be sold. It was frequently of advantage to an individual, he said, when he had become unexpectedly indebted, to pay what ready money he had, and

SEPT. 23, 1837.]

Sub-Treasury Bill.

[SENATE.]

get credit for the balance until the sale of his crop; and one advantage of a national institution was, that its credit always enabled it in such circumstances to get indulgence for the nation, as a friend was sometimes useful in getting credit for an individual. Sir, said he, the fate of this institution was most extraordinary. If Mr. Biddle expanded, he was bribing the country: if he contracted, he was ruining the country: if he imported specie, he was speculating upon the country: if he exported specie, he was conspiring against the country: if he stood up, he was impudent: if he sat down, he was suspicious: if he lay down, he was useless: and whenever he made a move, whether he crossed above or below the Executive, he equally muddled the waters.

He thought the Senator from Connecticut had made another mistake in stating that the expansion of the bank occasioned the speculative rise in prices, and our importations of 1831. The over-importation preceded the expansion, and the expansion was avowedly intended to circulate the increase of commodities occasioned by the over-importation. The speculative rise, and over-importation of 1831, were owing to a cause as natural as the ebb and flow of the tides, and almost as periodical. They arose from the preceding low prices, which had stimulated consumption, and exhausted the stocks in 1830. These fluctuations are always going on in every nation to some extent, and arise from the impossibility of keeping up, in the extended business of a nation, an exact relation between supply and demand.

Mr. K. said the United States Bank, though no longer in existence, had been the theme of every gentleman who had addressed the Senate. He should say no more of it than was necessary to justify and defend himself, and the numerous friends of the administration who had believed in the utility of that institution. His defence was fully justified; for, although that institution was established by the democratic party, every friend of it was placed, in sweeping denunciations, among aristocrats, rogues, and conspirators; ranked with the "Biddles and the Barings, and the banks;" and set upon in full cry by dunces and demagogues, anxious only to turn attention from their own mischievous blunders and errors.

When he came to maturity, he said, he found the Bank of the United States in successful and happy operation. He learned its history, and found that it was established by the party to which he had always been attached, with the immortal Madison at their head; who after fatal experience had changed his opinion on the subject. This paternity recommended it, but reflection as well as experience convinced him of its great utility as a financial agent to the Government, as an aid to internal and external commerce, and a wholesome regulator of an otherwise unregulated paper system. As an original question, he was and ever had been opposed to the whole paper system, but the system certainly had many advantages in a free country, and moreover was fixed upon us, and no one generation either could or would bear the sacrifices it would cost to get rid of it. And (added he) the progress we should make in getting rid of the system and its abuses, by putting down the Bank of the United States, was predicted by me in the Senate in 1834. Sir, the great temperance president, or temperance reformer, Mr. Delavan, who sends us so many temperance papers, might just as well have undertaken to encourage the cause of temperance in which he is engaged, by breaking up one respectable grocery in Chestnut street, that he might raise up 500 grog shops in the Liberties, the villages, and the Western wilderness. He thought it the part of wisdom not to waste itself on impracticable extremes, but to secure the blessings of the system, and avoid as many of its evils as possible. This he thought was best effected by a national bank, with the aid of the Treasury. The vast extent of our country gave full time to such an institution to lop off redundancies and fill up

deficiencies on notice of an irregularity in the currency, in any particular sections before the effect became general. It was clearly the interest of such an institution to perform these duties faithfully. Its own successful operation in a great measure depended on it; which was the best guaranty to the public that they would be so performed. He also believed that the money of the nation could be entrusted to no agency so little dangerous to liberty, or so unlikely to use it for political purposes. Experience proved the truth of this opinion. We had again the best of all security—that is, the security of interest. To engage in politics, or unite itself with a political party, is death to the institution. What evidence had been shown, or could be shown, that the bank ever hinted an interference with politics, until it supposed the Executive to make an overture for that purpose? In 1829 the Executive commenced a correspondence with the bank to procure a change in the president of the New Hampshire branch. He did not say that any thing improper was intended by the Executive, but it was the first interference of the kind, and the bank supposed it to be an attempt to enlist it in politics, and unite the power of the bank with the power of the Government. It declined on the ground that the bank never had and could not now think of interfering in the politics of the country. The rest is known. The message followed with a charge of what nobody had ever heard of before, and recommending a Treasury bank, uniting the power and patronage of a bank to that of the Government. From that time forth the Executive continued to struggle for the money power until it took possession of it in 1833, by the removal of the deposits. I only mention these facts, sir, to prove the great reluctance with which such an institution will always engage in politics. Its interest requires the custom and friendship of both political parties, and it cannot prosper against a war by either. The money power of the Treasury is great, let it be lodged where it will; but, for the reasons stated, I believe it is less in a national bank, connected with and dependent on the business of the country, than in any other. There was no danger of the political influence of a bank, if the Executive would let it alone. Some admitted that the bank had been improperly attacked, but that, being attacked, it had over-issued and otherwise mismanaged in its struggles for a recharter. This might be true to some extent, but, if so, it is more an objection to the direction than the institution, and might be prevented by a simple provision in the charter, which the old charter ought to have contained.

Sir, these are the opinions I have always entertained, and were the opinions of my then colleague, when I came into the Senate; they were known to our constituents. But as this was a matter of expediency, on which they had a right to judge, they expected to be, and shall be, represented; and their wishes, when I last heard from them, were against a national bank. In fact, although I believe it unfortunate that the old bank was destroyed, the question of establishing a new one, at this time, is a very different question. Under our anti bank administration, the bank capital has been much more than doubled in a few years. Is it expedient to add to it? If so, the practicability of controlling it, by a national bank of permissible size, and the manner of doing it, are important questions. The present rate of exchange, too, would render it difficult to procure specie for the institution, and create a demand for it, that would, for the present, add to the distress. There were some other reasons that had been referred to, but which he could not, at this time, notice.

But, we are gravely told, sir, that the "Bank of the United States, with its 'still greater strength,' has not been able to prevent the present state of affairs; that it 'has not been able to check other institutions, or save itself.'" This reference to the bank would have done very well for a party newspaper; but, I must confess, I was somewhat astonished

SENATE.]

Sub-Treasury Bill.

[SEPT. 23, 1837.]

to find it in a message of the President of the United States. Can it be supposed that the most ignorant can be deceived by this catch at a mere name? Whoever thought of holding the Bank of the United States responsible for the currency, or as a financial regulator, after the withdrawal of its branches, or even after the removal of the deposits? What obligation was it under to the public, after the public had taken away the deposits and dispensed with its services? Was it under any very strong obligation, if it had the power, to aid the Executive in an experiment made at its expense, and intended for its destruction? I should think not; and to hold a State bank responsible because it is called "the Bank of the United States," is absolutely ridiculous. It has fallen into line with the multitude of State banks created under the late administration. It has supported his "policy" by importing specie on credit, that it might hatch more paper upon it. It has gloried in the confusion of the exchanges, by which it has made millions. In short, like the rest of the State banks, it has gone for making money; it has joined its fortunes with the State banks; it has borrowed specie like the State banks; has expanded with the State banks; has shaved with the State banks; has failed with the State banks, and is a State bank, and yet it is held responsible to the country as a national bank. Sir, it is no more a United States Bank, and not so much as the little Burlington bank, which produced such a happy effect with a modicum of the spoils sent to it, and pressingly sent for more to operate on the elections, "in anticipation of the wool clip." There is a United States Bank for ye, established by the Executive to prevent the public money from being employed to operate on the politics of the country!

Why, then, these valiant charges upon a ghost? this war upon a sign? these tilts upon a tombstone? They are about as useful, and about as rational, as the charges of the redoubtable Don Quixote upon the windmills.

In connexion with these perpetual efforts to frighten us with ghosts and "things that are not," Mr. K. said he had never had his democratic feelings so shocked as they had been by a sentiment of the Senator from South Carolina, [Mr. CALHOUN,] warmly applauded by his friend near him, [Mr. STRANGE.] We were told that, though expedient, we should not make this State bank a depository, "because it would be a triumph over the Government!" What Government? The "Government" at the Hermitage, or the Government at the White House? These Governments were both, to be sure, supposed to be inimical to the present State bank, because they did not like Mr. Biddle, its president, who was formerly president of the national institution. But what had the Government had to do with the present State institution? He had supposed, until lately, that the Government meant the legislative power, as established by the constitution; and, if the people, through their representatives, according to the forms of the constitution, should deem it expedient to make any State institution a depository, it would be no objection with him that either the ex-President or present Executive was supposed to be inimical to one of its officers. I do not propose (said he) to make this institution a depository, and nobody has proposed or thought of proposing it, so far as I know. Why, then, this war-whoop against it? To show our devotion to the supposed Executive will? "A change, what a change," has been produced in the tone of American feeling by these violent encroachments and recent triumphs of the Executive over the Legislative authority, in relation to the finances! All eyes are turned to the Executive. The spirit of our fathers has fled. The blood of '76 has run out. Sir, there have been more gray hairs brought upon the head of our youthful and vigorous republic in the last four years, than ought to have grown upon it in one entire century of quiet and peaceful administration, with the constitutional co-operation of the legislative departments.

My friends need not be astonished at the freedom with which I express these sentiments. They believe with me, they have acted with me. We have vainly stood up together against the will of the Executive. Our efforts have been impotent. We have been trampled under foot. The Executive has had his way, and we see the result. I only wish my friends to join me in taking a firm stand, to teach the Executive that his friends are to be consulted in measures of such immense importance to the people as those by which our finances have been ruined. I have no idea of deserting them, sir; they need not apprehend that. I am only expressing freely sentiments I and they have entertained, and not very carefully concealed. I am a party man, sir. All I am as a politician I was made so by party. I have no sympathies with any other party except that with which I have always acted, and by which I have been honored. I respect my political opponents as my fellow-citizens, living under the same laws, subject to the same Government, and equally honest and patriotic with myself. But I differ with them in some of the essential and fundamental principles upon which our Government should be administered, and have nothing to ask, and nothing to expect from them.

I am a democrat, a real democrat. I do not make the profession *ad captandum*; I fear it is becoming rather unpopular; but my early habits and youthful associations made me so. In fact, the sentiment was planted in my heart by nature, cultivated by education, and approved by reason. I believe a democratic republic to be the most philosophical government, and best calculated to develop the energies and sustain the dignity of man, so long as the people have sufficient intelligence to qualify them for self-government. I, therefore, abhor tyranny and irresponsible power in every possible form in which it can be presented; whether it be presented in the hypocritical garb of republican homespun, or tinselled over in the glittering trappings of royalty. I go for a strict construction of the constitution, limited Executive patronage, and an economical administration of the Government; and you will never find me here, sir, with democracy and economy upon the lips, and tyranny and plunder in the heart. "I borrow no false lives from heaven to serve the devil in."

Mr. K., after some further remarks, concluded this branch of the subject by saying, that he had full confidence that the President, when some present difficulties were removed, would administer his department with wisdom and patriotism, and he hoped and expected to be able to give him his feeble support. But he just wished to tell him now that, if he intended "to tread in the footsteps" of his predecessor, in trampling on the legislative authority, in the management of a subject of all others of the most importance to the people, he should feel it his duty to jostle him out of them. He never would consent (he said) to surrender the finances to the exclusive control of the Executive. If we did this, we should share the fate of every other nation who had submitted to Executive financiering: we should first become a nation of beggars, and then a nation of slaves.

Mr. K. said he had been led on to a length altogether unexpected to himself, and he feared tiresome to the Senate. Several other topics had been suggested by the remarks of other gentlemen, that he would like to touch, but he would dispense with them, and come to a conclusion, after a few words more upon the bill and amendment under consideration. As to the separation from the State banks as depositories, he conceived that a matter of no great consequence, if in the details we could provide safety to the money, and guard against too much patronage and expense. But the bill he thought imperfect and obscure on both these points. And when we had passed the bill, we should have but little idea of what we had done.

As to the amendment proposed, which restricted the receipts of the Government to gold and silver, he could never

SEPT. 23, 1837.]

Sub-Treasury Bill.

[SENATE.]

consent to think of it, without hearing from his constituents, so long as specie is not the common currency, used by the people in the business transactions of the country. They are never prepared with a currency not in common circulation, and would often and truly be reminded of the Roman quæstors, who were in the habit, among other acts of tyranny, of demanding particular kinds of money for the purposes of extortion. Here, 11,000 specie gatherers, demanding a currency not furnished the people by their own States, or by the ordinary circulation, will give them more trouble than all their other pecuniary transactions, and, being different to the demands made upon them for State taxes, will give to the Federal Government an alien character of tyranny and oppression. He could not conceive, he said, of a measure better calculated to give to the Government of the Union the appearance of a foreign Government, and alienate the affections of the people from it, than the measure proposed.

But, we are told that the Government only demands the constitutional currency, and therefore only asserts a right. This is true, sir; but is it the part of practical wisdom to exert all the power we have, and assert all the rights we claim? Every man has a right to demand specie at a.1 times for every sale he makes, and for every debt due him. But suppose every body were to do it, whilst paper is the common currency, what would become of the country?

Suppose all the merchants of a single city were to suddenly demand specie for all dues from their customers for sales made and to be made, they would only assert a right: and yet what would be the result? The effect would be such upon their debtors and dealers, that they would probably mob the merchants out of the city. You propose that the Government shall do that with the people which people dare not do with each other. Look at the conduct of the people towards the banks ever since they have stopped payment, and specie is at a large premium: do they assert their rights, though they have every inducement to do so! I will refer to my own State as a strong argument to dissipate theoretical beauties by practical consequences. There the banks are by law compelled to pay 18 per cent., on a refusal to pay specie. They are good, and every bill-holder could get his principal and his 18 per cent. in specie, if he were to demand and insist on it. No man of capital could make so good an investment as to get a large sum in Augusta bank bills, make a demand, and hold them till the bank resumes specie payments. Yet nobody does this; and why? Because they are all friendly to banks! Not at all, sir. It is because they are frightened at a view of the consequences, and yield their own to the interests of the community. They know that if specie is forced from the banks, the banks will have to force it from the merchants, and the merchants from the planters, and the great mass of consumers; and, before the matter wound up, its effects would be equal to the confiscation of one-third of the property of the country. The laborious and industrious classes constitute the debtor class, which are much the most numerous, and much the most needy. On this class the sacrifice would ultimately fall. The benefits would be confined to a few creditors, capitalists, and money-lenders. And the measure you propose (said Mr. K.) will operate precisely in the manner I have described, though perhaps not to the same extent. It will do to talk about and speak about here, and some people may think well of it, whilst they think it is only going to put the merchants to a little trouble; but when they find, from experience, that the merchants are only their factors, and the operation falls on them, they will be prepared for a more practical view of the subject.

Mr. K. said he was, to be sure, opposed to the banking system, particularly its abuses. But the people had established it, become accustomed to it, and it now seemed necessary to their business and prosperity. He saw no rea-

son or expediency in taking away the discretion of the Secretary of the Treasury to receive the notes of specie-paying banks when they resume, disburse them for Government purposes at the points where collected, and call on the banks for balances, when necessary for transfers of the Government funds from the points where collected, to the points where needed.

Mr. K. here commented upon the estimates which the Senators from Missouri and North Carolina had put upon current bank bills, and the losses which the bill-holders had sustained by the suspension of specie payments. They seemed to estimate the actual value of a bank bill by the proportion which the specie in the vaults of the banks bore to the aggregate of circulation and deposits; as though the banks had no other means to pay their liabilities but specie. In this way the Senators make out the loss of the people by the banks to be immense. Could there be any advantage in propagating errors so palpable? As a practical question, so far from the bill-holders having lost, they had generally gained by the suspension. Mr. K. here discussed the nature and purposes of money. Money, said he, represents commodities. Its uses are to command them at pleasure, and circulate them with convenience. Whatever answers this purpose, answers the purposes of money. Its value depends on the quantity of commodities it will command, and this again depends on the relation which the quantity of money bears to the quantity of commodities.

The active circulating medium has been greatly reduced in quantity since the suspension, not only by withdrawing specie from circulation, which has become a commodity, but by a reduction of bank paper; and hence it is that current bank paper is *now* much more valuable than gold and silver *was* before the suspension, whilst the whole currency, both paper and specie, was depreciated by its redundant quantity. Are the passions and prejudices of men to be wrought upon when their senses may direct them? Do we not know as an admitted fact, that current bank bills are more valuable now than before the suspension? Let me ask one of these suffering bill-holders what he wishes to do with his money which he held at the time of the suspension? Does he owe a debt? If so, his creditor will be glad to receive it, and expects nothing else. Does he wish to buy provisions for his family? If so, he gets them cheaper than he could before the suspension of specie-payments. Does he wish to buy real estate or stocks? If so, he can get them from thirty to fifty per cent. cheaper than he could before the suspension of specie payments. In short, there is no purpose for which money is used, for which bills are not now more valuable to the holder than before the suspension, whilst the whole currency was depreciated by its quantity, except for the payment of a foreign debt. Those, then, who clamor most about their losses have lost nothing, but generally gained. The merchants sustain the whole loss that is sustained, for they receive it from their debtors at par, and have to pay a premium for specie to pay their foreign creditors.

Strictly and logically speaking, Mr. K. said, paper was now depreciated, when compared now with silver, by the amount of premium on specie, because we had no other legal standard to go by. All he meant to say was, that paper was more valuable now than specie was before the suspension, and, therefore, the holder had lost nothing. So glaring was the fallacy of estimating the loss of the community by the difference between the amount of specie in their vaults and the liabilities of the banks, that the community owed the banks more than the banks owed the community. Each has a right to claim specie; and with a little time for adjustment, the banks could settle every dollar against them without a dollar in specie. He did not wish to be understood as advocating or even apologizing for an irredeemable bank paper; it was too precarious, and subject to fluctuation. But, as practical legislators, we should

SENATE.]

Sub-Treasury Bill.

[SEPT. 23, 1837.]

view things as they are, and he could see no expediency in endeavoring to impose such fallacies on an already excited community.

Mr. K. concluded by saying that he had no wish to postpone discussion, and therefore was indifferent as to the present fate of his motion. But as he did not like either project, as presented, and wished time to digest a better, he could not consistently make any other motion, and therefore moved the postponement of the whole subject to the first Monday in December next.

Mr. STRANGE said he would not do the Executive of this country the injustice to assume upon himself the office of its vindicator, while so many more able were at hand; but I choose (said Mr. S.) to defend opinions entertained and even uttered by myself before they found a place in the President's message. The Senator from Georgia has been pleased to impute common errors to the President, the Senator from Connecticut, and myself; and so far as we are identified in the charge, the defence of one must *pro tanto* be the defence of all. He alleges that we have imputed the present difficulties in this country exclusively to foreign action, and then proceeds to show that, from the fact of our being a debtor nation, this cannot be the case. Now this statement of our position is not in the fairness which I expected from my friend from Georgia. Neither the President, nor any of those who have spoken on the same side of the question with myself, have pretended that the immediate cause of our difficulties was not to be found in the action of our own people. On the contrary, we have all expressly insisted that it was so. We have not attached blame to the bank or the people of England; but have argued that we, as individuals, and not as a Government, had put ourselves in the power of the Bank of England; and she, in the pursuit of her own real or supposed interests, had made us feel our situation. All arguments are in fairness to be considered in connexion with the issue to be tried, and the issue in this case is, whether the present difficulties are imputable to the administration of the country. The negative of this proposition it was the object of this part of the message and its advocates to maintain; and, in the effort to do so, it would have been very foreign to our purpose to deny that the people of the United States had been themselves the authors of their own misfortunes, or to seek to fasten exclusive blame upon those on the other side of the Atlantic.

It is said we have improperly assumed that there was any commercial distress beyond the limits of this country other than that created by our indebtedness to foreigners. I am far, very far, from being convinced of error in this particular; on the contrary, the newspapers, according to my belief, have for the last few months been teeming with accounts of commercial difficulties on the other side of the Atlantic.

We are further charged with error in intimating that there had been any paper expansion in England, and statistics have been resorted to to fix upon us this charge. Now I confess, not having anticipated this denial, I am not prepared either to admit or deny the correctness of the statistics of the Senator, or to produce others in answer to them. But taking the Senator's own statements, in connexion with another known fact, so far from disproving, I think they fully substantiate our position. I doubt not there is some mistake or omission with regard to the issues of the joint-stock companies in the statistics presented, which, if corrected or supplied, would show upon paper a vast actual increase of bank issues; but grant that it is not so, the Senator himself shows an actual increase of £400,000, or thereabouts. It is true, in this the circulation of the Bank of England is reduced about £2,000,000, and this, it is said, cannot be an expansion; but the gentleman overlooks the fact, that while the circulation of the Bank

of England was about £20,000,000, her specie was nearly £11,000,000; while when it was reduced to about £18,000,000, her specie was reduced to only £4,600,000, making an excess, in proportion of her issues to her specie, of nearly £10,000,000. Now paper issues are redundant or otherwise in the proportion which they bear to the specie they represent. But this result in figures is met by a fact, from which it is inferred that the paper issues could not have expanded; and that is, that the value of money in England had rather advanced than depreciated; and here, sir, we detect the great liability we are under to fall into mistakes from too ready an assumption of fiscal maxims. In general it is true that it may be safely affirmed that the currency is not expanded where money continues to advance in value; but there may be circumstances in which the reverse would be the case, and the circumstances of England at the time referred to, are precisely such as would produce such a result. Allowing it to be true that the paper circulation of England had expanded only £400,000, yet we find that specie was withdrawn from the Bank of England, most of which probably came to this country, and of course left England, amounting to £6,300,000; so that the actual circulation of England was reduced about £6,000,000, and money would of course appreciate as the circulating medium would bear a so much less proportion to the property of the country; yet the paper credits of the country would be increased by the amount of whatever (be it bonds, notes, or stocks) was received in exchange for the specie transported to this country, and in proportion to the specie by the difference of the ratio of £20,000,000 to £10,000,000, and about £26,000,000 to £4,600,000; or throwing out of view altogether the amount received in bonds, notes, stocks, or other credits received in exchange for their expatriated specie, still there would be, as before stated, this difference in the state of the currency at the two periods, as far as the Bank of England alone is concerned. At the first her circulation was £20,000,000, or thereabouts, and her specie £10,900,000; and at the latter her circulation was £18,000,000, and her specie £4,600,000. So that, even upon the Senator's own facts, in every point of view, our allegation is made good.

But I am still more surprised at hearing from a gentleman of the high financial attainments of the Senator from Georgia, the position, that because as much property could be bought with a given amount of paper now as formerly, it was not depreciated; or because it will pay as much debt now as ever, that therefore is not depreciated. The true question is, will it bring as much gold and silver now as ever? And as the answer must be in the negative, the depreciation of the paper is unquestionable.

In conclusion, we are told that we ought no longer to submit to being the mere registers of Executive fiat, and that the Executive should consult his friends, and not assume upon himself the dictation of important measures without such consultation. Sir, I have never looked upon this body as the mere register of Executive fiat; nor have I ever understood there was any impropriety in the President submitting to Congress his views of what was required for the public necessities; on the contrary, the constitution expressly requires him to do so, and does not enjoin on him previous consultation with any one. Had the President on the present occasion forbore to indicate in his message such measures as he deemed it expedient, we should have heard the stale cry of "non-committal, non-committal," ringing from every quarter of this continent, and it would have been justly said he had shrunk from his duty; and now that he has frankly and faithfully performed it, we are tauntingly told of dictation and submission.

Mr. NILES said, he rose only to notice one or two observations of the Senator from Georgia, which related to some remarks of his a few days since. It was far from his purpose to enter the lists against his honorable friend from

SEPT. 23, 1837.]

Sub-Treasury Bill.

[SENATE.]

Georgia. Of all the men with whom he had ever been acquainted, that gentleman was the last with whom he should ever volunteer to engage in a contest. Sir, in the extraordinary and very able speech we have just heard, we have a specimen of the mode of warfare of the Senator. He prepares himself for a contest in a peculiar manner, and arms himself with unusual and extraordinary weapons—weapons with which most of us are wholly unacquainted, and still less acquainted with their use; bowie knives and other weapons, hostile, bloody, deadly. The gentleman has also a mode peculiar to himself in using his weapons; he wields his bowie knife both to cut and to thrust; and he strikes indiscriminately at all that stands in his way, whether friends or foes; the only difference being that he is careful when he aims at a friend to strike a heavier blow, and inflict a deeper wound. The Senator says he is friendly to the President, and Mr. N. knew him too well to doubt it for a moment; but he had a very odd way of showing it. The gentleman entertains peculiar notions about his duty to his friends, and seems to have a very strange way of backing them; he appears to consider it as his principal duty to chasten them. Perhaps he thinks they deserve it.

Mr. N. said there was another reason why he would avoid a contest with the Senator. He has a sort of magical power over facts. In his hands facts are very much like the man of mortar to which he has alluded, and called on the Senator from Missouri to breathe into the breath of life; he moulds and fashions facts to his own liking. His naked assertions, not only unsupported, but directly opposed to known truths, were made with such force and gravity, and such strong apparent conviction of their truth, that they would almost be assented to, when known to be without the least foundation. Such was the Senator's power over facts, that he experienced none of the difficulties which others did, because he could make his facts to suit his arguments, as he had occasion for them. It is as much as most of us could do to supply arguments, especially such as are worth using; but his friend from Georgia, with his fertile mind, could supply facts with the same facility as arguments. Mr. N. said he would not, therefore, think of contending with so formidable and dangerous an antagonist, but would only venture to examine some of the gentleman's facts on those points that related to himself.

The Senator thinks that the statement made by him, (Mr. N.,) that the Bank of the United States had stimulated the excessive importations in 1831, was incorrect, and says that the expansion of the bank did not commence until after that period. But the Senator is mistaken; he has not, in this instance, moulded his facts to suit his argument. The bank did stimulate the excessive importations of 1831. It began its rapid expansions in November, 1830, and by the month of May, 1832, had enlarged its discounts twenty-eight millions of dollars. This was a pretty rapid expansion, and calculated to give a dangerous enlargement to the bounds of trade. But Mr. N. said that he not only charged the bank with stimulating the excess of importations in 1831, but of having interfered, in violation of the laws of trade, and prevented a correction of the evil. The exchanges having become unfavorable in the latter part of 1831, in consequence of the large importations, the bank was fast being drained of its specie. It had parted with five millions, and, to save what it had left, it issued seven millions in drafts on Europe, for the purposes of remittance. This operation saved its specie, and renewed the stimulus to excessive importations. Had not the bank interfered, and arrested the laws of trade, exchange would have continued to rise, more specie would have been drawn from the banks, (which would have forced them to curtail discounts,) foreign goods would have fallen, and all the consequences followed which would have reduced importations the next year. But the interference of the bank, by interposing its credit, prevented this.

The Senator asserts that the principal cause of our difficulties is owing to the irregular and improper commercial and financial transactions with England for several years, and the measures which such transactions forced that country to adopt. The general proposition was one of great importance, and he (Mr. N.) thought it was substantially correct. But the error of the gentleman was, that, from his great zeal to back his friends, he had attributed the commercial and financial transactions of this country with England to the measures of the administration, which had in reality little more influence upon them than facts appear to have had on the gentleman's speech.

Our foreign commerce had been of an extraordinary character since 1831, and particularly the last three years. Our importations for the last three years have exceeded our exports to the amount of nearly one hundred and twenty millions; and, during the same period, when we have had this great excess of importations, there has been specie imported beyond what has been exported to the amount of about thirty-two millions. This was in direct violation of all the ordinary laws of trade. That a large excess of importations should continue for six years in succession, was, he believed, unprecedented in this country, or perhaps any other. But it was still more extraordinary that, during this period, there should be a large importation of specie. This seemed to be a double violation of the laws of trade; it was a violation of the ordinary laws of commerce, that an excess of importations should continue for so many years; and it was another violation that, during such excessive importations of goods, there should be a large importation of specie. An unfavorable balance of trade ordinarily leads to the exportation of specie, and the reduction of imports in the following years—a portion of the exports being required to liquidate former balances. An unfavorable balance of trade usually produces an unfavorable state of exchange which has not generally been the case during this period. Mr. N. said he recollected very well that this peculiar state of our foreign trade was the subject of much remark here at the first session of the last Congress, and particularly by a distinguished gentleman, who seems to consider himself as the organ of the commercial interest. That Senator had much to say about the extraordinary state of our monetary affairs; money being scarce—a severe pressure coming upon the country, and interest rising in New York to two or three per cent. per month, whilst exchange on England was favorable. So extraordinary a state of things, it seems to have been supposed, must have originated from the measures of the Government, although it was not easy then to tell what measures, as it was before the Treasury circular.

The distinguished Senator from Massachusetts, so learned and skilled in subjects of commerce and finance, could not understand this inexplicable state of things. But the mystery is revealed; the mist which hung over the subject is dissipated, and the whole truth has come to light. This unnatural state of things has been brought about by the agency of credit in our foreign trade, and by loans and the sale of stocks in England, not connected with trade. The large excess of importations has been continued, and the exchange kept favorable by the bankers on both sides of the Atlantic, who loaned their credit to our importing merchants. As long as American merchants could import goods on credit obtained abroad, the exchange would remain favorable; and even the credit of the United States Bank, in the form of drafts or bonds, payable in Europe, produced the same result.

The great American houses in England, the Wildes, Wilson, and Wiggins—the three W's, as they have sometimes been called—which have since all exploded, in co-operation with the United States Bank, have been the principal cause of the excess of our foreign importations. The sale of American stocks, and the negotiation of loans

SENATE.]

Sub-Treasury Bill.

[SEPT. 23, 1837.]

by the same bankers, have increased the difficulties, and swelled our debt in England, as the Senator from Georgia says, to one hundred and ten millions of dollars. American credit was drawing off the capital of England to this country, which was draining the Bank of England of its specie. The Bank of England had to contend against American credit, which was a contest it could not stand. Its only resource was to attempt to destroy that credit, and the only way to do that was to destroy the credit of the houses through which American credit found its way to the British market. This led to those measures on the part of the Bank of England to which the Senator alluded, intended to discredit the American houses, and strike down at a blow the price of the great American staple. These measures on the part of the Bank of England, occurring at a time when there was a pressure from other causes, brought on the great crisis in this country.

The gentleman from Georgia says these results have been occasioned by the Treasury circular, and other measures of the Government; he says the Government has encouraged the importation of specie; that it has induced the deposit banks to import specie. Mr. N. knew of no such act of the Government. These transactions, both commercial and financial, were of a private character, occasioned by the enterprise of this country, and stimulated by the abuse of bank credit on both sides of the water.

Mr. N. said he repeated his charge made the other day against the Bank of the United States, that it had been the principal agent which had deranged our foreign commerce, and brought the country into its present difficulties. Previous to the interference of that bank in our foreign trade, it was stable; now it was deranged. It had been constantly interfering since 1831; and Mr. Biddle boasts of having, on one occasion, he believed in 1832, saved the whole commercial community from a terrible explosion, by hurrying across the Jerseys between two days—not as Washington did, pursued by the British army—to New York, where, by the use of the credit of the bank, he saved the country. Surely, our trade must rest on a sound foundation, indeed, when it is indebted to a night's journey of one individual for escaping ruin!

The Senator from Georgia thought he (Mr. N.) had changed his sentiments regarding the specie circular; but he had changed them only so far as circumstances had changed. He voted for superseding it last session, believing the exigency had gone past, and still thought he was then right; but from circumstances which have since occurred, he believed the order had had a salutary influence. It has not only kept specie in the country, and saved the Western banks, but it had secured one or two millions for the uses of the Treasury, which had been an essential aid to it in the crisis it had gone through. The Secretary foresaw the coming storm, and, some weeks before the explosion took place, sent circulars to the deposit banks in the West, requiring them to keep their specie for the use of the Treasury; and a large sum has been conveyed across the mountains for that purpose.

The Senator says Mr. N. approves of the Treasury circular, for its operation in preventing the exportation of specie, and condemns the Bank of the United States for measures which prevented the exportation of specie. In reply to this, Mr. N. said, that, as a general or permanent rule, he was opposed to all interference, whether by Government or by banks, with the course of trade, and was opposed to all measures intended either to encourage the importation of specie, or to discourage its exportation. But there were exceptions to general principles; and at a peculiar crisis, when the credit and paper system of two great commercial nations had been greatly and unduly extended, and both were apprehensive of an explosion, and the question was, which should explode, the sudden abstraction of specie, which sustained the floating mass of paper, might be at-

tended with the most serious consequences. It was only in this view of the subject, that he regarded the Treasury circular, as having had a favorable influence in preventing the exportation of specie.

Mr. N. said he would allude only to one topic more. The Senator said that Mr. N. and the Senator from North Carolina [Mr. STRANGE] had approved and endorsed the reasons assigned by the President in his message for the revulsion which had overtaken the country. Mr. N. said he had in his speech barely alluded to that subject, without going into an examination of its merits. He, however, did approve, then and now, of the brief but very clear and satisfactory exposition of the causes of existing embarrassments contained in the message. He would readily endorse that portion of the message, notwithstanding the strong condemnation of the Senator. The gentleman having read this portion of the message, remarked that this might be all very well; that he knew of but one objection to it, and which was, that there was not one word of truth in the whole statement. This was certainly very strong language; but Mr. N. supposed it was only the gentleman's peculiar mode of backing his friends.

Sir, what is this statement, which is thus summarily despatched by the gentleman's hostile weapons? Is there any thing new or extraordinary in it? Does the President pretend to have made any wonderful discovery, or to have looked deeper into the causes of our difficulties than other intelligent individuals? The general cause which he assigns is the natural, the ordinary cause of commercial revulsions; he might almost say that, with the exception of some extraordinary causes, such as "war, pestilence, and famine," it was the only cause of such embarrassments. The general cause assigned was over-trading, over-action, in every department of industry, and an undue extension and abuse of credit. These causes are said to be induced by a great expansion of the paper medium. Is not the statement, so far, correct? Has there not been over-trading, speculation, and gambling, of every kind, in the foreign trade and the domestic trade, in wild lands and city lots, in stocks, in every thing? Are not these facts universally admitted? Are they denied by any one—by the Senator himself? He (Mr. N.) did not understand that they were. And has there not been an excessive and alarming expansion of the paper medium? This is equally notorious, and cannot surely be controverted by the Senator; for he has himself stated that the currency had, within a few years, increased 200 per cent. In this important fact the message is impregnable. Well, what is there, then, in this exposition of the President, which should call forth such a bold and daring assault? What is there in the statement which should have provoked such a desperate thrust of the gentleman's deadly weapons? Why, sir, the President says that this revulsion has not been confined to the United States; that it has prevailed in England, and, to some extent, in all the commercial countries in Europe; and from this he infers that the causes have been similar; that the spirit of over-trading has been rife in England as well as in the United States, and induced there, also, by an expansion of the currency. In all this we are told he message is entirely at fault. There is not one particle of truth here, says the Senator. There has been no expansion of currency in England, no over-trading, no speculation, no distress or commercial embarrassments; no failures; every thing has gone on quietly and smoothly. There has been no Treasury circulars there; no distress for money; John Bull has been at his ease, whilst Jonathan has been in trouble; Englishmen, under a more wise and beneficent Government, have been prosperous and contented, whilst the poor Yankees have had to suffer.

Such is the picture which the Senator drew of the condition of the two countries. He would not say it was a fancy sketch; it was only an instance of the Senators command over facts; but he would say that he did not think

SEPT. 23, 1837.]

Sub-Treasury Bill.

[SENATE.]

there was ever but one similar picture drawn before, and that was the Senator's own description of that hardy and meritorious class of settlers the *squatters*, who were transformed from an honest race of pioneers, into a predatory banditti, who stole their lands from the United States, and their provisions from the Indians.

But is it really so, that there have been no failures, no distress in England? He (Mr. N.) had really supposed there had been. He had read some of their periodicals, from penny papers to stately quarterlies, and of different politics, whig and tory, radical and conservative; and all, he had supposed, admitted the existence of serious embarrassments and distress, whilst they attributed them to very different causes. But the Senator says that there has been no expansion of the paper currency in England, or not to exceed one and a half per cent., whilst in this country it has expanded two hundred per cent. This last statement was another instance of the Senators power over facts. He knew not where the gentleman got his information, or on what data the statement was based. By the report of the Secretary of the Treasury, it appears that in 1834 there was about eighty millions of paper currency; and in his report last December, he states the paper currency at one hundred and twenty millions, which would be an increase of a little over forty per cent. This was a small inaccuracy, although, perhaps, hardly worth printing.

As respects the expansion in England, the gentleman had read statements from which it appeared there had been little or none, if they rested on good authority. He had heard the statements with great surprise, as he had supposed the fact was otherwise. In all the English publications he had seen, the expansion seemed to be admitted and universally regarded as the cause of the commercial difficulties; and the only dispute appeared to be where the blame belonged—one party charging it to the Bank of England, the other to the joint-stock banks. One thing was certain, and that appeared from the statement read by the Senator, there has been a great increase of the issues of the joint-stock banks, amounting to some three millions of pounds, or near fifteen millions of dollars. The currency of these banks is very frail, and very different from that of the Bank of England; and what may have been the disturbing effect of this large increase of a weaker paper medium, and corresponding diminution of a better currency, he was not financier enough to say.

But does the statement read by the Senator prove that there has been no increase of the paper circulation in England which has occasioned over-trading? Is there no other paper but the bills of the Bank of England, and the private banks, and the joint-stock banks? Is there not another description of paper, commonly called commercial paper, which would have perhaps the same tendency to stimulate over-trading? Are there not bills of exchange and acceptances issued by the great bankers, which form a sort of commercial currency? And would not the expansion of this have a direct tendency to over-action in trade? What had caused the explosion of the three great American houses—the three W's—which had failed for two or three millions each? Had not these houses expanded their paper to a most dangerous and ruinous extent? for it had proved their ruin. The enormous extension of commercial credit by these houses, was the principal cause of our excessive importations, and the derangements of our foreign trade. Thus trade had been stimulated by credit, and carried on by credit, and this credit was principally in England. Sir, steam has been regarded as a powerful agent, and one of the greatest discoveries of modern times; but a much more powerful agent has of late been discovered, which is credit, factitious, artificial credit. The expansive power of credit is vastly beyond that of steam; it is almost as uncontrollable, and as boundless as thought. Yet even credit, that most subtle of all agents, has its limits;

and he thanked God it was so. If it had not, credit would destroy all property, all faith, all honesty, and would overwhelm society in one indiscriminate ruin. If there had been no excess of credit in the form of currency in England, there had been a rapid enlargement of commercial credit.

But the Senator says there has been no over-trading in England. What! no over-trading! How is this? There has been over-trading in the United States, and that in our foreign trade, to the amount of more than sixty millions, and this trade has been principally with England. Here are two great commercial nations, and, in the commerce between them, one has largely over-traded, and the other has not over-traded at all. It seems, according to the gentleman's logic, that the trading has been all on one side. We have imported to excess, but England has not exported to excess; we have bought sixty millions more goods than we ought, but they have not sold any more than to supply the usual demand. He had always supposed that, in the intercourse between two nations, if one party had traded to excess, the other had necessarily traded to excess also; if one had imported to excess, the other had exported to excess. Where the fault lay, which party was most to blame, or which had acted most rashly and imprudently, was another question. So far as respects their trade with America, which, he believed, comprised more than one fifth of the whole commerce of England, it was certain that country had over-traded; and he believed in the India trade there had been a like excess, for the larger houses engaged in those two branches of trade appeared to suffer most. As to internal trade, all accounts he had seen agreed that a spirit of speculation and gambling in stocks, and every kind of property, real or imaginary, has been as rife in that country as in the United States. This part of the President's statement, Mr. N. thought, had a little more than one particle of truth in it.

But the Senator informs us that there has been no distress in England, and that on this point the message is entirely mistaken. Well, how does he make this out? Why, he says that England is the creditor country, and America the debtor country; and, therefore, the commercial revulsions have not occasioned distress there; the debtors have been in distress, not the creditors. Is this correct? If debtors fail and cannot pay, do not creditors lose their debts? and does that not occasion distress? In times of general commercial embarrassments and bankruptcies, it might be difficult to say which suffered most, debtors or creditors; he believed, however, that creditors, generally, had the worst of it. The Senator often illustrates his subject by throwing in an anecdote, and he (Mr. N.) would give him one applicable to this question. It was well known that that extraordinary man, Charles J. Fox, was very improvident, and usually involved over head and ears in debt. His father, Lord Holland, once remonstrated with him on the subject, and, after inquiring something into his private affairs, observed that he wondered how he could sleep of nights and owe so much money. You ought rather, said Fox, to wonder how my creditors can sleep. He believed that creditors, generally, had the worst of it, in times of pressure and panic. But are not creditors and debtors united, not only in the same community, but usually in the same individuals? Show me a man who is a creditor to the amount of half a million, or any other large sum, and I will show you a man who is a debtor to a considerable part of the same amount. Let us test the Senator's argument in a case at home. The city of New York is a creditor community in relation to other parts of the Union. There is a very large balance due to it from the whole country, and particularly from the South-Western States. It would, therefore, follow, if the argument was a sound one, that the late revulsion in trade would not have occasioned any distress in New York, be-

SENATE.]

Sub-Treasury Bill.

[SEPT. 23, 1837.]

cause she is a creditor city. Her merchants have sold an immense amount of goods to the Senator's constituents and others, and by the knocking down of the price of the great staple of the South, they have been wholly unable to pay their debts in New York. But the loss of these debts will not affect the merchants of New York, as they are creditors, and creditors cannot be distressed. But, from some cause or other, New York has been overwhelmed with bankruptcies and distress, in spite of the Senator's reasoning.

Mr. N. said he had detained the Senate longer than he had intended, as he only rise to put himself right.

Mr. CALHOUN rose and said that he greatly regretted that the Senator from Georgia had thought proper to make the motion to postpone the bill. Its effect, should the motion succeed, would be highly injurious to the country generally, and especially to the South. It was conceded that there was a vast amount of capital locked up, waiting the decision of Congress on this highly important subject; not less, probably, than from sixty to one hundred millions; which would flow into the business channels of the country as soon as the decision was made. This, he would remind the Senator, was the commencement of the business season for the great staples of the South. The cotton and rice would soon be prepared for market, and the tobacco would follow them. The entire machine of commerce, by which these great products were to be exchanged with the world, is deranged, he might say broke, and would not be reconstructed till it was ascertained what was to be done here. If the question is postponed till the regular session, there will be no final action till the spring; during all of which time, comprehending the almost entire business season, things would remain in their present uncertain and deranged condition. The consequences would be a very heavy loss to the planting interest of the South, not to mention other portions; a loss, he would venture to say, of many millions to the planters alone; which would be of vast detriment to that great interest, embarrassed as it now is by heavy debts. After full reflection, he did not think the loss on the coming crop of cotton alone, from delay of action here, would be less than one or two cents the pound, and more than a million and a half on the whole crop. But there was another reason, to his mind, still more powerful against the postponement. We are on the eve of a great revolution in regard to the currency. The first step in that revolution is the separation of the Government and the banks, which he sincerely believed the good of both required. That once made, and each left to move in its own proper sphere, unembarrassed by the other, the change in the credit system, which he held to be inevitable, would, in all probability, be gradual, and without a shock, or injury to any of the great interests of the community. But, if the question of separation be left open; if it is to run into the politics of the country, and be made an engine to act on the presidential election, there is no answering for consequences. A direct issue will be made; and, when passions were roused, there would ensue a conflict between the Government and the banks, which may become violent and convulsive, and shake our system to the centre. For these reasons he deemed it highly desirable, on all sides, that the motion to postpone should not succeed.

The Senator made a remark which had a personal bearing, which he (Mr. C.) could not pass unnoticed. He expressed great abhorrence at the declaration that he (Mr. C.) would not (if there were not other and powerful reasons against it) agree to employ Mr. Biddle's bank as our fiscal agent, because it would give that institution a triumph over the Government, and go far to make it the Government itself.

There was (said Mr. C.) no disputing about taste. We were so dissimilarly constituted, that what was sweet to one was sometimes bitter to another. But he was inclined to think that in this case the difference did not result so

much from any organic dissimilarity between him and the Senator, as from the different aspect under which they regard the controversy between General Jackson and the bank. The Senator regards it, as is manifest from the whole tenor of his remarks, as a mere personal affair between General Jackson and the president of the bank; or, at best, between the Executive branch of the Government and the bank; in which, let which side prevail that might, it would be but the triumph of one individual over another, or of the bank over the Executive, or the reverse. Thus regarding it, he was not at all astonished that the Senator should indulge himself in the strong expression that he did; but he must say that he was not a little astonished that the Senator, knowing him and his past course, as he did, could for a moment suppose that he (Mr. C.) regarded it under that aspect. When did he ever utter a sentiment, or do an act, which could by possibility give countenance to the attributing such a sentiment to him, as to consider General Jackson, or the whole House, or the Executive department, as the Government? He would suppose that he was the last man to whom such a sentiment could be attributed. In making the declaration he did, he viewed the subject far more comprehensively. He regarded the controversy under all its circumstances, and looked to results as testing the relative strength of the Government and the banks. He saw the most popular and powerful President that ever filled the chair of State, with boundless patronage, and sustained by a well-formed and compact majority in the Union, and both Houses, (of which the Senator was one,) waging war against the bank, and striving, with all his energy and power, to put it down. Whether right or wrong, (wrong he believed him to be, and still believed,) he was backed by the entire power of the Government, and a great majority of the people. Now, sir, I ask if, after all this, that bank should prove to be so indispensable to the Government as to force itself on it, notwithstanding all these powerful opposing obstacles, greater than can ever again be arrayed against any similar institution, would it not prove that the bank had become stronger than both Government and people? And would it not go far, as he confessed himself, to make the bank the Government? It was under this aspect that he obviously regarded the struggle; and he must say, that, if the Senator, looking on it in the same light, did not regard it with similar sentiments, he could neither envy him his feelings nor his patriotism.

Mr. TIPTON rose and said, the question now under consideration was of so much importance to the people of the State which he had in part the honor to represent here, that he felt it to be his duty to claim the indulgence of the Senate a short time, while he gave his views on some of the topics that at this time engaged the public attention from one end to the other of the country. In a time of profound peace, surrounded, as we thought, by all the elements of prosperity, we are suddenly arrested in our onward march by a wide-spread desolation, commerce crippled, public credit injured, private fortunes ruined, and the public Treasury bankrupt. The late session of Congress had but just closed, the members had scarcely had time to return to their homes, when we are summoned to return to Washington to legislate the Government out of its difficulties, and we find ourselves here in September instead of December, engaged in deliberation on the mode and manner of relieving the distresses of our country.

The inquiry naturally addresses itself to every mind, why is this so? What has produced it, and what is the remedy to be adopted? The honorable Senator from South Carolina, [Mr. CALHOUN,] when he proposed his amendment to the bill under consideration, a few days ago, told us that this question should be met boldly and manfully; to use his own words, let every one (said he) show his hand. I (said Mr. T.) respond to that noble sentiment of the

SEPT. 23, 1837.]

Sub-Treasury Bill.

[SENATE.]

honorable Senator; the question should be met boldly and fairly; this is a time of deep anxiety with our constituents; there should be no skulking among their public servants; every one should speak freely of the causes which have produced the present embarrassment, and act promptly on such measures as will relieve the people.

It was his opinion that the putting down of the Bank of the United States was the first step to the present embarrassment; the transfer of the public deposits from that bank to the local or State banks stimulated these institutions to extravagant issues, far beyond their ability of redemption; they discounted notes on the public deposits, extending their lines of discount beyond the bounds of prudence: the people in the neighborhoods of the banks, finding that bank accommodations could be had with facility, entered largely into speculations in public lands, town lots, and other property; extravagance in living as well as in dressing increased their indebtedness; in a word, sir, the whole country overtraded, ceased to labor, and contracted debts beyond their ability to pay; speculations were uppermost in the minds of every one.

The Executive of the United States, seeing the public domain rapidly exchanging for credit on the books of the banks, determined to check it, and issued his Treasury order of July 11, 1836, directing that nothing but gold and silver should be received in payment for the public lands. Under the operations of this order, those engaged in purchasing public lands had to procure bank paper, draw the specie from bank and transport it to the land offices; it was no sooner paid into the land offices than the receivers of public moneys deposited it again in the banks to the credit of the Government; thus the indebtedness of the banks was daily and rapidly increasing; the bankers, fearing that the public deposits would be called for in metal, became alarmed at their own condition, closed their doors, and suspended specie payment, thereby putting it out of the power of this Government to pay the public dues according to law, in specie or its equivalent.

This (said Mr. T.) is a brief statement of the causes which have produced the present embarrassment and distress that surround us; it was an unfortunate tampering with the currency and the public deposits by the Executive of the United States. Our troubles have come sooner, but come lighter than they would have done had the Treasury order never existed.

Now for the remedy. The bill reported from the Committee on Finance, imposing additional duties on public officers, as he understood it, intends to cut loose the Government from all banks, and to authorize the Treasury Department to keep and disburse, as well as collect, the whole revenue of the Government, dispensing with banks as fiscal agents altogether. This policy, he thought, might well be questioned; it would strike a portion of the American people like a shock of electricity, on account of the increased patronage and power it must confer on the Executive arm of the Government. He would not declare in advance that he would not go for it, but he would be slow in yielding it his support; and he hoped that a better remedy could be found. He had never been an advocate for using a litter of State or local banks as fiscal agents of the Government; they contain within themselves antagonist principles, each possessing separate views, and looking to the interest of their own stockholders: they cannot or will not act together in transmitting or disbursing the public money of the United States; and so long as they are used as depositories of the public money, embarrassments and occasional losses may be expected.

Mr. T. said that he was opposed to taking any course here that would have a tendency to cripple or to break down the State banks; the people were encouraged to establish State banks, to keep down a Bank of the United States; they had vested their capital to a very large amount in these

institutions; many of these banks were perfectly solvent and safe; none more so than the banks of the State from which he came. The banks of Indiana were waiting to see what Congress, the Executive, and other banks could or would do, intending, at an early day, to resume specie payment, and honestly to redeem all their paper; and he could give no vote to discourage or procrastinate so desirable an object. It was true that the banks had not acted well in suspending specie payment and embarrassing the Government, but we should deal mercifully with them; a single breath from the Executive, saying to the State banks we will no longer receive your paper in payment of duties and sales of the public lands, will strike fifty per cent. off the value of all the property of our constituents vested in these banks, indeed of all the property of every description; and he was not prepared to sanction such a course. In the language of the West, give us land-office money; whatever will buy land is as good as gold—is at par in all moneyed transactions in the Western States. No matter however old or ragged paper may be, if it contains words, letters, and figures enough to be receivable for public lands, it is as good as gold, and it matters not what kind of money it may be; if not received in the land office, it is of uncertain and changeable value. It finds its way into the hands of the poorer classes of the community; they are liable to be imposed on and shaved by the rich, in whose hands the better currency was always found. This would be the effect on the Western people, if we refuse to receive the paper of their banks in payment for the public lands; and he left it for Senators representing the interests of banks east of the mountains to say what would be its effect on the interests of their constituents, should the General Government refuse to receive their bank paper in payment for revenue; above all things, Congress should establish and maintain a uniform currency. Have gentlemen forgotten how forcibly the honorable Senator from South Carolina [Mr. CALHOUN] described the influence of this Government on currency the other day, when he said if the United States would but endorse the note of the beggar, it will pass at par? And will that Senator now say to a very large proportion of the people of this country, we cannot receive the paper of your banks for public dues, when by that single act he will bankrupt thousands who have strong claims both on the justice and the clemency of this Government?

Mr. T. said he would not detain the Senate by an attempt to show what effect the measures before it would have on our commerce or exchanges; he left that to able hands. He pretended only to take a plain common sense view of the mischievous tendency on the interest of his immediate constituents, and to enter his protest in their behalf against the ruinous consequences that must follow the passage of the bill with the amendments proposed. He said the course that he had marked out for himself to pursue compelled him to vote against the amendments proposed to this bill by the honorable Senators from South Carolina and Missouri. Their amendments, if adopted, looked to a refusal on the part of this Government, at an early day, to receiving or using, in the ordinary transactions of this Government, the paper of all banks, and a return to a metallic currency. This, said he, looks well on paper, but it was impossible, in his opinion, to reduce it to practice. There surely was not metal enough to answer one-half the business transactions of this great and growing country. It was on a mixed currency, partly paper issued on a metallic basis, that our country reached the summit of its prosperity; and who could ask more than to be placed where we were in 1831?

He would vote for the proposition offered by the Senator from Virginia when it came up. It looked more like preserving the property of the people vested in the State banks. Let us collect from the late depositories the public money now in their vaults; but, in doing so, let us give

SENATE.]

Sub-Treasury Bill.

[SEPT. 23, 1837.]

time for them to pay us without crushing these institutions. This would enable the banks to indulge their creditors, and go far to relieve the embarrassment under which our country was suffering. He cared not what those in high places thought; he considered the duty of this Government to relieve the people, when that could be done with an eye to public justice. Congress now had the power of relief, and, in his opinion, this was a proper occasion on which to exercise it.

The frequent charges thrown out by the late President in his messages to Congress against the Bank of the United States had a tendency to discredit it with the people, and we all witnessed its downfall. The constant lauding of the State banks by the President and his Secretary of the Treasury, as depositories of the public moneys, encouraged the people to take stock in these banks. They grew up, as it were, under Executive favor; and will Congress now lend itself to break them down? The regulation of the currency, and the deposits of public money, if we intend to avoid embarrassment and loss, should be under laws passed by the joint wisdom of Congress, and not left to the whim of a President and his Secretary of the Treasury.

If the bills which had passed the Senate authorizing an issue of Treasury notes, and that authorizing the collection from the deposit banks, became laws, he would be glad to see this extra session come to a close, and let us return to our masters, the people, and consult them on what is further to be done. He did not stand here to register the Executive will; he looked to the boys of the West, those with hard hands, warm hearts, and strong arms, who fell the forest, hold the plough, and repel foreign invasion, for his instructions; it was their voice he felt bound to obey; it was their wishes and interests he came here to represent. If the Executive desires the additional responsibility of keeping and disbursing, as well as of collecting, the revenue of the country, he now enjoys it under the regulations of the Treasury Department since the suspension of specie payments by the deposit banks; and he warned honorable Senators, who, like himself, wished to sustain the present administration, provided its conduct entitled it to the support of the people, to be careful how they entered on new and dangerous experiments. If he were bent on breaking down an administration, he would give up to it the unlimited control of the public money of this Government. He could not vote for the bill reported from the Committee on Finance, but he would vote for the motion of the Senator from Georgia to postpone this whole subject to the next session of Congress, when we shall have an opportunity to ascertain the wishes of our constituents: it is good for us occasionally to consult the sovereign people.

Mr. RIVES rose, and said he would ask leave of the Senate to say a few words which he meant to say yesterday, but was prevented by the speaking of another Senator [Mr. BENFON.] Mr. R. said he rose to protest against the manner in which this question had been, and continued to be, treated by the Senator from South Carolina. That gentleman argued as if there were some proposition before the Senate to re-establish the Bank of the United States, or to confer upon the existing Pennsylvania Bank of the United States some special and important privilege. But, sir, is there any question of that sort really before the Senate? The question presented by the proposition on your table is, whether the notes of banks generally, when they shall have resumed specie payments, ought not, under certain limitations, to be received in payment of the public dues, as they heretofore have been from the origin of the Government down to the present time, or whether they shall be altogether excluded in future, and nothing be received in payment of the public revenue but gold and silver? The question, then, is one which involves alike the whole eight hundred State banks in the Union, constitut-

ing that system of credit under which, whatever may have been its occasional excesses, the country has heretofore attained an unparalleled height of prosperity, and has no special reference whatever to the Bank of the United States.

But the honorable Senator, in his remarks yesterday, which the rising of another gentleman to speak, before I could get the floor, then prevented me from answering, said that Mr. Biddle had his eyes steadily fixed on recovering the Government deposits, that all his measures were shaped with that view, and that if the proposition I had offered should be adopted, he would unquestionably accomplish his object. Now, sir, my proposition has not one solitary word or provision in it relating to the Government deposits. It relates exclusively, and this far more for the convenience of the people than for the interest of the banks, to the receivability, under certain limitations, of bank notes, when convertible into specie, in payment of the public revenue. This is a question altogether distinct from that of the Government deposits. It is comparatively a small boon, and one already enjoyed by the banks under existing laws, whenever they resume specie payments—by the Pennsylvania Bank of the United States, as well as by any other bank which shall redeem its notes in specie. I have already stated to the Senate what seems to me conclusive considerations to show that a large majority of the State banks are in a far better situation to make an early resumption of specie payments than the Pennsylvania Bank of the United States. In regard to the Government deposits, on which the honorable Senator says Mr. Biddle has his eyes steadily fixed, I repeat that my proposition, which that gentleman so earnestly opposes, has not a solitary word on the subject. It relates to another matter wholly distinct, and leaves the question of the Government deposits where the law now places it, which, the Senator well knows, refers the selection of the banks to be charged with the public deposits, in the first instance, to the judgment of the Executive. Surely the honorable Senator is not afraid that either the President or the Secretary of the Treasury would select the Pennsylvania Bank of the United States. On that subject, the gentleman may, I think, feel perfectly secure, as the country most assuredly has every reason to do.

It does seem to me, Mr. President, that this perpetual and gratuitous introduction of the Bank of the United States into this debate, with which it has no connexion, as if to alarm the imaginations of grave Senators, is but a poor evidence of the intrinsic strength of the gentleman's cause. Much has been said of argument *ad captandum* in the course of this discussion. I have heard none that can compare with this solemn stalking of the ghost of the Bank of the United States through this hall to "frighten Senators from their propriety." I am as much opposed to that institution as the gentleman or any one else is or can be. I think I may say I have given some proofs of it. The gentleman himself acquits me of any design to favor the interest of that institution, while he says such is the necessary consequence of my proposition. The suggestion is advanced for effect, and then retracted in form. Whatever be the new-born zeal of the Senator from South Carolina against the Bank of the United States, I flatter myself that I stand in a position that places me, at least, as much above suspicion of an undue leaning in favor of that institution as the honorable gentleman. If I mistake not, it was the Senator from South Carolina who introduced and supported the bill for the charter of the United States Bank in 1816; it was he, also, who brought in a bill in 1834, to extend the charter of that institution for a term of twelve years; and none were more conspicuous than he in the well-remembered scenes of that day, in urging the restoration of the Government deposits to this same institution. In every situation of public trust in which I have been placed I have been the constant and unvarying oppo-

SEPT. 25, 1837.]

Sub-Treasury Bill.

[SENATE.]

nent of that institution; and in this body, in 1834, while the Senator from South Carolina, with his accustomed ability, was urging the restoration of the public deposits to it, (a triumph, indeed, over the Government of the country, which the honorable Senator now so bitterly deprecates,) I stood up here and resisted that measure with every faculty I possessed, and sacrificed, as is well known, my political existence to the force of my convictions on the subject; convictions which, I take leave to say, have strengthened with every day's observation and reflection since. When I recollect these things, it seems to me "strange, passing strange," that the Senator from South Carolina should now appear as the especial and sworn adversary of the Bank of the United States, while I am held up in the attitude of promoting the views and favoring the interests of that institution.

While I am up, (said Mr. R.) I beg leave to say a word in answer to an observation of the Senator from Missouri, [Mr. BENTON.] That gentleman said, if I wished to understand the true character of my proposition, I had only to look over my right shoulder, and see who were likely to support it. [Mr. CLAY, Mr. WEBSTER, and other gentlemen of the Opposition, sit in that direction from Mr. RIVES.] I thank God, Mr. President, that I have a higher rule of action on this floor than any consideration of who is, or who is not, to vote with me. I look at the merits of the proposition itself; and if it be for the good of the country, I go for it, whoever may vote with me or against me. If the Senator knows that I am to derive support to my proposition from gentlemen over my right shoulder, he knows more than I do. I have had no communication with any of those gentlemen, which authorizes me to expect their support. Many of them voted, during the last session, for the same proposition, in common with five-sixths of the friends of the administration, and they may do so again. I occupy the same position now that I did then. If other gentlemen have seen cause to change their views, I have not. On the contrary, the present condition of the country furnishes, in my estimation, new motives to bring forward the proposition, which then received nearly the unanimous sanction of both Houses of Congress. It is impossible that the banking institutions of the country, on whose speedy return to specie payment the soundness of the currency and every other interest of society now depend, can rise up from their prostrate condition, without some measure of this sort. The people wish to see an end of this paper money, (properly so called when inconvertible into specie,) which the gentleman from Missouri so much deprecated. No one has a stronger sense of its evils and dangers than I have. But we shall in vain attempt to get rid of it, in my humble judgment, without some measure of the character I have proposed. I am unwilling to go back to my constituents without having first done something for the relief of the people, as well as the Government. I am unwilling that the American people shall witness any adjournment of this body without the passage of some measure of a healing and salutary character, in relation to the currency of the country.

In regard to the personal appeal of the gentleman from Missouri, if I stand in the position he indicates, what, permit me to ask him, is his own? If I am to look over my right shoulder for the supporters of my proposition, may I not return the compliment by asking him to look only in front of him for his file leader? [Mr. CALHOUN sits in front of Mr. BENTON.] This is, indeed, a singular transposition. The honorable Senator from Missouri, who has so long taken the subject of the currency under his particular charge, is now content to furnish facts and make suggestions to another party leader.

When the sub-Treasury scheme was introduced into the House of Representatives in 1834, out of the meagre number of 33 votes it then received, there was but one friend of

the administration who voted in favor of it. It was then denounced, under the auspices and in the name of the administration, as revolutionary, disorganizing, anti-republican, and tending to enlarge Executive power, and place in its hands the means of corruption. Believing now, as I did then, that such is the true character and tendency of the measure, I adhere to the ground taken by the republican party in 1834; and I will use every weapon which reason and argument can furnish in opposition to it. I, for one, will not be afraid to act with any individual, or any party, in resisting a scheme which, however it may be viewed by others, I firmly believe to be fraught with danger to the best interests of my country; and in doing so, so far from abandoning, I but maintain the more closely my republican faith.

Mr. CALHOUN said this attack of the Senator is very extraordinary. Yesterday, in the course of my argument, I endeavored to show that his proposition would inure to the benefit of the Pennsylvania Bank of the United States, and I stated my reasons. I believed he did not contemplate it in that light, but I did; and I said to the Senator, you hold out a powerful temptation to the banks. I stated that the strong banks, and they alone, would take the benefit of this measure, with the United States Bank at their head. Their predominating influence over every other bank was inevitable; and if they got it, they would hold it in *perpetuo*. They would make the necessary sacrifice in the resumption of specie payments, and this bill would serve as the motive; and, if Mr. Biddle tried, he would get it. And now, twenty-four hours afterwards, I am surprised at this storm of passion and personal attack, when I acquitted the gentleman of all improper intentions.

The gentleman says that in 1834 I was in favor of restoring the deposits. I was so; and I now, as then, think they were unnecessarily and illegally removed, and that it was one of the accelerating causes of the catastrophe which he so much laments. New zeal! A new convert! I never made stronger declarations in my life of the banking system than at that time. I said the whole system was hostile to liberty. I was then in favor of the Bank of the United States; but not so as to qualify my position relative to banking. I went farther, and told the Senator and others, your system will fail if you retain a connexion with the banks; there must be a Bank of the United States. With me the question of bank or no bank had reference to the whole banking system. Has he any foundation on which he can now call me a convert? No, sir, I have seen, not for four, but fourteen years, that the issue must be that the banks will be the Government, or the Government the banks; that, by the constant tendency to increase the issues of paper, the banks or the Government must be prostrated. I hardly expected to see that issue in my day; but come I knew and declared it would, sooner or later; and when the question should arise, it would be the greatest of modern times. I would lay a hundred to one, if the Senator's bill should pass, the United States Bank will monopolize its benefits. Of his remarks I will only say that they were unworthy of him, and of the State from which he comes.

On motion of Mr. CLAY, of Kentucky,
The Senate adjourned.

MONDAY, SEPTEMBER 25.

Mr. NILES submitted the following joint resolution:
Resolved by the Senate and House of Representatives of the United States of America in Congress assembled,
That the two Houses of Congress will adjourn, and close the present session on Monday, the 9th of October next.

Mr. HUBBARD introduced a resolution that the meeting of the Senate from an after its passage should be 10 o'clock.

SENATE.]

Sub-Treasury Bill.

[SEPT. 25, 1837]

SUB-TREASURY BILL.

The Senate then resumed the consideration of the bill imposing additional duties, as depositories of the public moneys, on certain officers of the General Government; together with Mr. CALHOUN's and Mr. BENTON's amendments.

Mr. CLAY rose and addressed the Senate upwards of three hours. We cannot undertake to report all that he said, exactly as it was said. We must content ourselves with exhibiting a view of his argument, employing generally the language in which it was expressed.

He commenced by observing that, feeling an anxious desire to see some effectual plan presented to correct the disorders in the currency, and to restore the prosperity of the country, he had avoided precipitating himself into the debate now in progress, that he might attentively examine every remedy that should be proposed, and impartially weigh every consideration urged in its support. No period had ever existed in this country, in which the future was covered by a darker, denser, or more impenetrable gloom. None, in which the duty was so imperative to discard all passion and prejudice, all party ties, and previous bias, and look exclusively to the good of our afflicted country. In one respect—and he thought it a fortunate one—our present difficulties are distinguishable from former domestic troubles, and that is their universality. They are felt, it is true, in different degrees, but they reach every section, every State, every interest, almost every man in the Union. All feel, see, hear, know their existence. As they do not array, like our former divisions, one portion of the confederacy against another, it is to be hoped that common sufferings may lead to common sympathies and common counsels, and that we shall, at no distant day, be able to see a clear way of deliverance. If the present state of the country were produced by the fault of the people; if it proceeded from their wasteful extravagance and their indulgence of a reckless spirit of ruinous speculation; if public measures had no agency whatever in bringing it about, it would nevertheless be the duty of Government to exert all its energies and to employ all its legitimate powers to devise an efficacious remedy. But if our present deplorable condition has sprung from our rulers; if it is to be clearly traced to their acts and operations, that duty becomes infinitely more obligatory; and Government would be faithless to the highest and most solemn of human trusts should it neglect to perform it. And is it not too true that the evils which surround us are to be ascribed to those who have had the conduct of our public affairs?

In glancing at the past, (continued Mr. C.) nothing can be further from my intention than to excite angry feelings, or to find grounds of reproach. It would be far more congenial to my wishes that, on this occasion, we should forget all former unhappy divisions and animosities. But, in order to discover how to get out of our difficulties, we must ascertain, if we can, how we got into them.

Prior to that series of unfortunate measures which had for its object the overthrow of the Bank of the United States, and the discontinuance of its fiscal agency for the Government, no people upon earth ever enjoyed a better currency, or had exchanges better regulated, than the people of the United States. Our monetary system appeared to have attained as great perfection as any thing human can possibly reach. The combination of United States and local banks presented a true image of our system of General and State Governments, and worked quite as well. Not only within the country had we a local and a general currency, perfectly sound, but in whatever quarter of the globe American commerce had penetrated, there also did the bills of the Bank of the United States command unbounded credit and confidence. Now we are in danger of having fixed upon us, indefinitely as to time, that medium—an irredeemable paper currency, which, by the universal con-

sent of the commercial world, is regarded as the worst. How has this reverse come upon us? Can it be doubted that it is the result of those measures to which I have adverted? When at the very moment of adopting them, the very consequences which have happened were foretold as inevitable, is it necessary to look elsewhere for their cause? Never was prediction more distinctly made; never was fulfillment more literal and exact.

Let us suppose that those measures had not been adopted; that the Bank of the United States had been rechartered; that the public deposits had remained undisturbed; and that the Treasury order had never issued: is there not every reason to believe that we should be now in the enjoyment of a sound currency; that the public deposits would be now safe and forthcoming; and that the suspension of specie payments in May last would not have happened?

The President's message asserts that the suspension has proceeded from overaction—over-trading—the indulgence of a spirit of speculation produced by bank and other facilities. I think this is a view of the case entirely too superficial. It would be quite as correct and just, in the instance of a homicide perpetrated by the discharge of a gun, to allege that the leaden ball, and not the man who levelled the piece, was responsible for the murder. The true inquiry is, how came that excessive over-trading and those extensive bank facilities which the message describes? Were they not the necessary and immediate consequences of the overthrow of the bank, and the removal from its custody of the public deposits? And is not this proven by the vast multiplication of banks, the increase of the line of their discounts and accommodations, prompted and stimulated by Secretary Taney, and the great augmentation of their circulation which ensued?

What occurred in the State of Kentucky, in consequence of the veto of the recharter of the Bank of the United States, illustrates its effects throughout the Union. That State had suffered greatly by banks. It was generally opposed to the re-establishment of them. It had found the notes of the Bank of the United States answering all the purposes of a sound currency at home and abroad, and it was perfectly contented with them. At the period of the veto, it had but a single bank, of limited capital and circulation. After it, the State, reluctant to engage in the banking system, and still cherishing hopes of the creation of a new Bank of the United States, encouraged by the supporters of the late President, hesitated about the incorporation of new banks. But, at length, despairing of the establishment of a Bank of the United States, and finding itself exposed to a currency in bank notes from adjacent States, it proceeded to establish banks of its own, and since the veto, since 1833, has incorporated for that single State bank capital to the amount of ten million of dollars—a sum equal to the capital of the first Bank of the United States created for the whole Union!

That the local banks, to which the deposits were transferred from the Bank of the United States, were urged and stimulated freely to discount upon them, we have record evidence from the Treasury Department.

The message, to reconcile us to our misfortunes, and to exonerate the measures of our own Government from all blame in producing the present state of things, refers to the condition of Europe, and especially to that of Great Britain. It alleges, that "in both countries we have witnessed the same redundancy of paper money, and other facilities of credit; the same spirit of speculation; the same partial successes; the same difficulties and reverses; and, at length, nearly the same overwhelming catastrophe."

The very clear and able argument of the Senator from Georgia [Mr. KING] relieves me from the necessity of saying much upon this part of the subject. It appears that during the period referred to by the message, of 1833-'4-'5,

SEPT. 25, 1837.]

Sub-Treasury Bill.

[SENATE.]

there was, in fact, no augmentation, or a very trifling augmentation, of the circulation of the country, and that the message has totally misconceived the actual state of things in Great Britain. According to the publications to which I have had access, the Bank of England in fact diminished its circulation, comparing the first with the last of that period, about two and half millions sterling, and although the joint-stock and private banks increased theirs, the amount of increase was neutralized by the amount of diminution.

If the state of things were really identical, or similar, in the two countries, it would be fair to trace it to similarity of causes. But is that the case? In Great Britain a sound currency was preserved by a recharter of the Bank of England about the same time that the recharter of the Bank of the United States was agitated here. In the United States we have not preserved a sound currency, in consequence of the veto. If Great Britain were near the same catastrophe (the suspension of specie payments) which occurred here, she nevertheless escaped it; and this difference in the condition of the two countries makes all the difference in the world. Great Britain has recovered from whatever mercantile distresses she experienced: we have not; and when shall we? All is bright and cheerful and encouraging in the prospects which lie before her; and the reverse is our unfortunate situation.

Great Britain has, in truth, experienced only those temporary embarrassments which are incident to commercial transactions, conducted upon the scale of vast magnitude on which hers are carried on. Prosperous and adverse times, action and re-action, are the lot of all commercial countries. But our distresses sink deeper; they reach the heart, which has ceased to perform its office of circulation in the great concerns of our body politic.

Whatever of embarrassment Europe has recently experienced may be satisfactorily explained by its trade and connexions with the United States. The degree of embarrassment has been marked, in the commercial countries there, by the degree of their connexion with the United States. All, or almost all, the great failures in Europe have been of houses engaged in the American trade. Great Britain, which, as the message justly observes, maintains the closest relations with us, has suffered most; France next, and so on, in the order of their greater or less commercial intercourse with us. Most truly was it said by the Senator from Georgia that the recent embarrassments of Europe were the embarrassments of a creditor, from whom payment was withheld by the debtor, and from whom the precious metals have been unnecessarily withdrawn by the policy of the same debtor.

Since the intensity of suffering, and the disastrous state of things in this country, have far transcended any thing that has occurred in Europe, we must look here for some peculiar and more potent causes than any which have been in operation there. They are to be found in that series of measures to which I have already adverted.

1st. The veto of the bank.

2d. The removal of the deposits, with the urgent injunction of Secretary Taney upon the banks to enlarge their accommodations.

3d. The gold bill, and the demand of gold for the foreign indemnities.

4th. The clumsy execution of the deposit law; and

5th. The Treasury order of July, 1836.

[Here Mr. CLAY went into an examination of these measures to show that the inflated condition of the country, the wild speculations, which had risen to their height when they began to be checked by the preparations of the local banks necessary to meet the deposit law of June, 1836, the final suspension of specie payments, and the consequent disorders in the currency, commerce, and general business of the country, were all to be traced to the influence of the measures enumerated. All these causes oper-

ated immediately, directly, and powerfully upon us, and their effects were indirectly felt in Europe.]

The message imputes to the deposit law an agency in producing the existing embarrassments. This is a charge frequently made by the friends of the administration against that law. It is true, that the banks having increased their accommodations, in conformity with the orders of Secretary Taney, it might not have been convenient to recall and pay them over for public use. It is true, also, that the manner in which the law was executed by the Treasury Department, transferring large sums from creditor to debtor portions of the country, without regard to the commerce or business of the country, might have aggravated the inconvenience. But what do those who object to the law think ought to have been done with the surpluses which had accumulated, and were daily augmenting to such an enormous amount in the hands of the deposit banks? Were they to be incorporated with their capitals, and remain there for the benefit of the stockholders? Was it not proper and just that they should be applied to the uses of the people from whom they were collected? And whenever and however taken from the deposit banks, would not inconvenience necessarily happen?

The message asserts that the Bank of the United States, chartered by Pennsylvania, has not been able to save itself or to check other institutions, notwithstanding "the still greater strength it has been said to possess under its present charter." That bank is now a mere State or local institution. Why is it referred to, more than the Bank of Virginia, or any other local institution? The exalted station which the President fills forbids the indulgence of the supposition that the allusion has been made to enable the administration to profit by the prejudices which have been excited against it. Was it the duty of that bank, more than any other State bank, to check the local institutions? Was it not even under less obligation to do so than the deposit banks, selected and fostered by the General Government?

But how could the message venture to assert that it has greater strength than the late Bank of the United States possessed? Whatever may be the liberality of the conditions of its charter, it is impossible that any single State could confer upon it faculties equal to those granted to the late Bank of the United States—first, in making it the sole depository of the revenue of the United States; and, secondly, in making its notes receivable in the payment of all public dues. If a Bank of the United States had existed, it would have had ample notice of the accumulation of public moneys in the local banks, and, by timely measures of precaution, it could have prevented the speculative uses to which they were applied. Such an institution would have been bound, by its relations to the Government to observe its appropriations, and financial arrangements and wants, and to hold itself always ready promptly to meet them. It would have drawn together gradually, but certainly, the public moneys, however disbursed. Responsibility would have been concentrated upon it alone, instead of being weakened or lost by diffusion among some eighty or ninety local banks, dispersed throughout the country, and acting without any effective concert.

A subordinate but not unimportant cause of the evils which at present encompass us has been the course of the late administration towards the compromise act. The great principle of that act, in respect to our domestic industry, was its stability. It was intended and hoped that, by withdrawing the tariff from those annual discussions in Congress, of which it had been the fruitful topic, our manufactures would have a certainty, for a long, period, as to the measure of protection, extended to them by its provisions, which would compensate any reduction in the amount contained in prior acts. For a year or two after it was adopted, the late administration manifested a disposition to

SENATE.]

Sub-Treasury Bill.

[SEPT. 25, 1837.]

respect it, as an arrangement which was to be inviolable. But, for, some time past, it has been constantly threatened from that quarter, and a settled purpose has been displayed to disregard its conditions. Those who had an agency in bringing it forward, and carrying it through Congress, have been held up to animadversion; it has been declared by members, high in the confidence of the administration in both Houses, to possess no obligatory force beyond any ordinary act of legislation, and new adjustments of the tariff have been proposed in both Houses, in direct contravention of the principles of the compromise; and, at the last session, one of them actually passed the Senate, against the most earnest entreaty and remonstrance. A portion of the South has not united in these attacks upon the compromise; and I take pleasure in saying that the two Senators from South Carolina, especially, have uniformly exhibited a resolution to adhere to it with perfect honor and fidelity.

The effect of these constant threats and attacks, coming from those high in power, has been most injurious. They have shown to the manufacturing interest that no certain reliance was to be placed upon the steadiness of the policy of the Government, no matter under what solemn circumstances it was adopted. That interest has taken alarm; new enterprises have been arrested, old ones curtailed; and at this moment it is the most prostrate of all the interests in country. One-half in amount, as I have been informed, of the manufacturers throughout the country have actually suspended operations; and those who have not, chiefly confine themselves to working up their stocks on hand. The consequence has been, that we have made too little at home, and purchased too much abroad. This has augmented that foreign debt, the existence of which so powerfully contributed to the suspension, and yet forms an obstacle to the resumption of specie payments.

The Senator from South Carolina [Mr. CALHOUN] attributed the creation of the surplus revenue to the tariff policy, and especially to the acts of 1824 and 1828. I do not perceive any advantage, on the present occasion, in reviving or alluding to the former dissensions which prevailed on the subject of that policy. They were all settled and quieted by the great healing measure, the compromise, to which I have referred. By that act I have been willing and ready to abide. And I have desired only that it should be observed and executed in a spirit of good faith and fidelity similar to that by which I have been ever actuated towards it.

The act of 1828 was no measure of the friends of the manufacturers. Its passage was forced by a coalition between their secret and open opponents. But the system of production of American industry did not cause the surplus. It proceeded from the extraordinary sales of the public lands. The receipts, from all sources other than that of the public lands, and expenditures of the years 1833-'45-'6, (during which the surplus was accumulating,) both amount to about eighty-seven millions of dollars, thus clearly showing that the customs only supplied the necessary means of public disbursement, and that it was the public domain that produced the surplus.

If the land bill had been allowed to go into operation, it would have distributed gradually and regularly among the several States the proceeds of the public lands, as they would have been received from time to time. They would have returned back in small streams similar to those by which they had been collected, animating, and improving, and fructifying the whole country. There would have been no vast surplus to embarrass the Government; no removal of deposits from the Bank of the United States to the deposit banks, to disturb the business of the country; no accumulations in the deposit banks of immense sums of public money, augmented by the circuit it was performing between the land offices and the banks, and the banks and the land offices; no occasion for the Secretary of

the Treasury to lash the deposit banks into the grant of inordinate accommodations; and possibly there would have been no suspension of specie payments. But that bill was suppressed by a most extraordinary and dangerous exercise of Executive power.

The cause of our present difficulties may be stated in another way. During the late administration we have been deprived of the practical benefit of a free Government; the forms, it is true, remained and were observed, but the essence did not exist. In a free, or self-government, the collected wisdom, the aggregate will of the whole, or at least of a majority, moulds and directs the course of public affairs. In a despotism, the will of a single individual governs. In a practically free Government the nation controls the Chief Magistrate; in an arbitrary Government, the Chief Magistrate controls the nation. And has not this been our situation in the period mentioned? Has not one man forced his own will on the nation? Have not all those disastrous measures—the veto of the bank; the removal of the deposits; the rejection of the land bill; and the Treasury order, which have led to our present unfortunate condition, been adopted, in spite of the wishes of the country, and in opposition, probably, to those of the dominant party itself?

Our misfortune has not been the want of wisdom, but of firmness. The party in power would not have governed the country very ill, if it had been allowed its own way. Its fatal error has been to lend its sanction, and to bestow its subsequent applause and support upon Executive acts which, in their origin, it previously deprecated or condemned. We have been shocked and grieved to see whole legislative bodies and communities approving and lauding the rejection of the very measures which previously they had unanimously recommended! To see whole States abandoning their long-cherished policy and best interests in subservency to Executive pleasure! And the numberless examples of individuals who have surrendered their independence, must inflict pain in every patriot bosom. A single case forces itself upon my recollection as an illustration, to which I do not advert from any unkind feelings towards the gentleman to whom I refer, between whom and myself civil and courteous relations have ever existed. The memorial of the late Bank of the United States praying for a recharter was placed in his hands, and he presented it to the Senate. He carried the recharter through the Senate. The veto came; and, in two or three weeks afterwards, we behold the same Senator, at the head of an assembly of the people in State House yard, in Philadelphia, applauding the veto, and condemning the bank—condemning his own act! Motives lie beyond the reach of the human eye, and it does not belong to me to say what they were which prompted this self-castigation, and this praise of the destruction of his own work; but it is impossible to overlook the fact that this same Senator, in due time, received from the author of the veto the gift of a splendid foreign mission!

The moral deducible from the past is, that our free institutions are superior to all others, and can be preserved in their purity and excellence only upon the stern condition that we shall forever hold the obligations of patriotism paramount to all the ties of party, or to individual dictation; and that we shall never openly approve what we secretly condemn.

In this rapid, and, I hope, not fatiguing review of the causes which I think have brought upon us existing embarrassments, I repeat that it has been for no purpose of reproaching or criminating those who have had the conduct of our public affairs; but to discover the means by which the present crisis has been produced, with a view to ascertain, if possible, what (which is by far much more important) should be done by Congress to avert its injurious effects. And this brings me to consider the remedy proposed by the administration.

SEPT. 25, 1837.]

Sub-Treasury Bill.

[SENATE.]

The great evil under which the country labors is the suspension of the banks to pay specie, the total derangement in all domestic exchanges, and the paralysis which has come over the whole business of the country. In regard to the currency, it is not that a given amount of bank notes will not now command as much as the same amount of specie would have done prior to the suspension; but it is the future, the danger of an inconvertible paper money being indefinitely or permanently fixed upon the people, that fills them with apprehensions. Our great object should be to re-establish a sound currency, and thereby to restore the exchanges and revive the business of the country.

The first impression which the measures brought forward by the administration make, is, that they consist of temporary expedients, looking to the supply of the necessities of the Treasury; for so far as any of them possess a permanent character, its tendency is rather to aggravate than alleviate the sufferings of the people. None of them purposes to rectify the disorders in the actual currency of the country; but the people, the States, and their banks are left to shift for themselves as they may or can. The administration, after having intervened between the States and their banks, and taken them into the federal service, without the consent of the States; after having puffed and praised them; after having brought them, or contributed to bring them, into their present situation, now suddenly turns its back upon them, leaving them to their fate! It is not content with that; it must absolutely discredit their issues. And the very people who were told by the administration that these banks would supply them with a better currency, are now left to struggle as they can with the very currency which the Government recommended to them, but which it now refuses itself to receive!

The professed object of the administration is to establish what it terms the currency of the constitution, which it proposes to accomplish by restricting the Federal Government, in all receipts and payments, to the exclusive use of specie, and by refusing all bank paper, whether convertible or not. It disclaims all purposes of crippling or putting down the banks of the States; but we shall better determine the design or the effect of the measures recommended by considering them together as one system.

1. The first is the sub-Treasuries, which are to be made the depositories of all the specie collected and paid out for the service of the General Government, discrediting and refusing all the notes of the States, although payable and paid in specie.

2. A bankrupt law for the United States, levelled at all the State banks, and authorizing the seizure of the effects of any of them that stop payment, and the administration of their effects under the federal authority exclusively.

3. A particular law for the District of Columbia, by which all the corporations and people of the District, under severe pains and penalties, are prohibited from circulating, sixty days after the passage of the law, any paper whatever not convertible into specie on demand, and are made liable to prosecution by indictment.

4. And lastly, the bill to suspend the payment of the fourth instalment to the States, by the provisions of which the deposit banks indebted to the Government are placed at the discretion of the Secretary of the Treasury.

It is impossible to consider this system without perceiving that it is aimed at, and, if carried out, must terminate in the total subversion of the State banks; and that they will be all placed at the mercy of the Federal Government. It is in vain to protest that there exists no design against them. The effect of these measures cannot be misunderstood.

And why this new experiment or untried expedient? The people of this country are tired of experiments. Ought not the administration itself to cease with them? Ought it not to take warning from the events of recent elections?

Above all, should not the Senate, constituted as it now is, be the last body to lend itself to further experiments upon the business and happiness of this great people? According to the latest expression of public opinion in the several States, the Senate is no longer a true exponent of the will of the States or of the people. If it were, there would be thirty-two or thirty-four whigs to eighteen or twenty friends of the administration.

Is it desirable to banish a convertible paper medium, and to substitute the precious metals as the sole currency to be used in all the vast extent of varied business of this entire country? I think not. The quantity of precious metals in the world, looking to our fair distributive share of them, is wholly insufficient. A convertible paper is a great time-saving and labor-saving instrument, independent of its superior advantages in transfers and remittances. A friend, no longer ago than yesterday, informed me of a single bank whose payments and receipts in one day amounted to two millions of dollars. What time would not have been necessary to count such a vast sum? The payments, in the circle of a year, in the city of New York, were estimated several years ago at fifteen hundred millions. How many men and how many days would be necessary to count such a sum? A young, growing, and enterprising people, like those of the United States, more than any other, need the use of those credits which are incident to a sound paper system. Credit is the friend of indigent merit. Of all nations, Great Britain has most freely used the credit system; and of all she is the most prosperous. We must cease to be a commercial people; we must separate, divorce ourselves from the commercial world, and throw ourselves back for centuries, if we restrict our business to the exclusive use of specie.

It is objected against a convertible paper system, that it is liable to expansions and contractions; and that the consequence is the rise and fall of prices, and sudden fortunes or sudden ruin. But it is the importation or exportation of specie which forms the basis of paper, that occasions these fluctuations. If specie alone were the medium of circulation, the same importation or exportation of it would make it plenty or scarce, and affect prices in the same manner. The nominal or apparent prices might vary in figures, but the sensation upon the community would be as great in the one case as in the other. These alternations do not result, therefore, from the nature of the medium, whether that be specie exclusively, or paper convertible into specie, but from the operations of commerce. It is commerce, at last, that is chargeable with expansions and contractions; and against commerce, and not its instrument, should opposition be directed.

I have heard it urged by the Senator from South Carolina [Mr. CALHOUN] with no little surprise, in the course of this debate, that a convertible paper would not answer for a currency, but that the true standard of value was to be found in a paper medium not convertible into the precious metals. If there be, in regard to currency, one truth which the united experience of the whole commercial world had established, I had supposed it to be that emissions of pure paper money constituted the very worst of all conceivable species of currency. The objections to it are: first, that it is impracticable to ascertain, *a priori*, what amount can be issued without depreciation; and, secondly, that there is no adequate security, and, in the nature of things, none can exist, against excessive issues. The paper money of North Carolina, to which the Senator referred, according to the information which I have received, did depreciate. It was called Proc., an abbreviation of the authority under which it was put forth, and it took one and a half and sometimes two dollars of proc. to purchase one in specie. But if any one desires to understand perfectly the operation of a purely paper currency, let him study the history of the Bank of the Commonwealth of Kentucky.

SENATE.]

Sub-Treasury Bill.

[SEPT. 25, 1837.]

It was established about 15 or 16 years ago, with the consent of a majority of the people of that State. It is winding up and closing its career, with the almost unanimous approbation of the whole people. It had an authority to issue, and did issue, notes to the amount of about two millions of dollars. These notes, upon their face, purported an obligation of the bank to pay the holder, on demand, the amount in specie; but it was well known that they would not be so paid. As a security for their ultimate payment, they were, 1st, the notes of individuals supposed to be well secured, every note put out by the bank being represented by an individual note discounted. 2d. The funds of the State in a prior State bank, amounting to about half a million of dollars. 3d. The proceeds of a large body of waste lands belonging to the State. And, 4th. The annual revenue of the State and public dues, all of which were payable in the notes of the Commonwealth Bank.

Notwithstanding this apparently solid provision for the redemption of the notes of the bank, they began to depreciate shortly after it commenced operation, and in the course of a few months they sunk as low as fifty per cent., two dollars for one specie dollar. They continued depreciated for a long time, until after large amounts of them were called in and burnt. They then rose in value, and now, when there is only some fifty or one hundred thousand dollars out, they have risen to about par. This is owing to the demand for them, created by the wants of the remaining debtors to the bank, and their receivability in payment of taxes. The result of the experiment is, that, although it is possible to sustain at about par a purely paper medium to some amount, if the legislative authority which creates it will also create a demand for it, it is impracticable to adjust the proportions of supply and demand so as to keep it at par; and that the tendency is always to an excess of issue. The result, with the people of Kentucky, has been a general conviction of the mischiefs of all issues of an irredeemable paper medium.

Is it practicable for the Federal Government to put down the State banks, and to introduce an exclusive metallic currency? In the operations of this Government, we should ever bear in mind that political power is distributed between it and the States, and that, whilst our duties are few and clearly defined, the great mass of legislative authority abides with the States. Their banks exist without us, independent of us, and in spite of us. We have no constitutional power or right to put them down. Why, then, seek their destruction, openly or secretly, directly or indirectly, by discrediting their issues, and by bankrupt laws, and bills of pains and penalties? What are these banks, now so decried and denounced? Intruders, aliens, enemies that have found their way into the bosom of our country against our will? Reduced to their elements, and the analysis shows that they consist: 1st, of stockholders; 2d. debtors; and 3d. bill-holders and other creditors. In some one of these three relations, a large majority of the people of the United States stand. In making war upon the banks, therefore, you wage war upon the people of the United States. It is not a mere abstraction that you would kick, and cuff, and bankrupt and destroy, but a sensitive, generous, confiding people, who are anxiously turning their eyes towards you, and imploring relief. Every blow that you inflict upon the banks reaches them. Press the banks, and you press them.

True wisdom, it seems to me, requires that we should not seek after, if we could discover, unattainable abstract perfection; but should look to what is practicable in human affairs, and accommodate our legislation to the irreversible condition of things. Since the States and the people have their banks and will have them, and since we have no constitutional authority to put them down, our duty is to come to their relief when in embarrassment, and to exert all our legitimate powers to sustain and enable them to perform, in

the most beneficial manner, the purposes of their institution. We should embark, not destroy, the fertilizing stream which sometimes threatens an inundation.

We are told that it is necessary to separate, divorce the Government from the banks. Let us not be deluded by sounds. Senators might as well talk of separating the Government from the States, or from the people, or from the country. We are all—people—States—Union—banks, bound up and interwoven together, united in fortune and destiny, and all, all entitled to the protecting care of a parental Government. You may as well attempt to make the Government breathe a different air, drink a different water, be lit and warmed by a different sun from the people! A hard-money Government and a paper-money people! A Government, an official corps—the servants of the people—glittering in gold, and the people themselves, their masters, buried in ruin, and surrounded with rags.

No prudent or practical Government will in its measures run counter to the long-settled habits and usages of the people. Religion, language, laws, the established currency and business of the whole country, cannot be easily or suddenly uprooted. After the denomination of our coin was changed to dollars and cents, many years elapsed before the old method of keeping accounts, in pounds, shillings, and pence, was abandoned. And, to this day, there are probably some men of the last century who adhere to it. If a fundamental change becomes necessary, it should not be sudden, but conducted by slow and cautious degrees. The people of the United States have always been a paper-money people. It was paper money that carried us through the Revolution, established our liberties, and made us a free and independent people. And, if the experience of the revolutionary war convinced our ancestors, as we are convinced, of the evils of an irredeemable paper medium, it was put aside only to give place to that convertible paper which has so powerfully contributed to our rapid advancement, prosperity, and greatness.

The proposed substitution of an exclusive metallic currency, to the mixed medium with which we have been so long familiar, is forbidden by the principles of eternal justice. Assuming the currency of the country to consist of two-thirds of paper and one of specie; and assuming also that the money of a country, whatever may be its component parts, regulates all values, and expresses the true amount which the debtor has to pay to his creditor, the effect of the change upon that relation, and upon the property of the country, would be most ruinous. All property would be reduced in value to one-third of its present nominal amount; and every debtor would, in effect, have to pay three times as much as he had contracted for. The pressure of our foreign debt would be three times as great as it is, whilst the six hundred millions, which is about the sum now probably due to the banks from the people, would be multiplied into eighteen hundred millions.

But there are some more specific objections to this project of sub-treasuries, which deserve to be noticed. The first is its insecurity. The sub-treasurer and his bondsmen constitute the only guaranty for the safety of the immense sums of public money which pass through his hands. Is this to be compared with that which is possessed through the agency of banks? The collector, who is to be the sub-treasurer, pays the money to the bank, and the bank to the disbursing officer. Here are three checks; you propose to destroy two of them, and that most important of all, the bank, with its machinery of president, directors, cashier, teller, and clerks, all of whom are so many sentinels. At the very moment when the Secretary of the Treasury tells us how well his sub-Treasury system works, he has communicated to Congress a circular, signed by himself, exhibiting his distrust in it; for he directs, in that circular, that the public moneys, when they amount to a large sum, shall be specially deposited with those very banks which

SEPT. 25, 1837.]

Sub-Treasury Bill.

[SENATE.]

he would repudiate. In the State of Kentucky, (other gentlemen can speak of their respective States,) although it has existed but about forty-five years, three treasurers, selected by the Legislature for their established characters of honor and probity, proved faithless. And the history of the delinquency of one is the history of all. It commenced in human weakness, yielding to earnest solicitations for temporary loans, with the most positive assurances of a punctual return. In no instance was there originally any intention to defraud the public. We should not expose poor weak human nature to such temptations. How easy will it be, as has been done, to indemnify the sureties out of the public money, and squander the residue?

2. Then there is the liability to favoritism. In the receipts, a political partisan or friend may be accommodated in the payment of duties, in the disbursement, in the purchase of bills, in drafts upon convenient and favorable offices, and in a thousand ways.

3. The fearful increase of Executive patronage. Hundreds and thousands of new officers are to be created; for this bill is a mere commencement of the system, and all are to be placed under the direct control of the President.

The Senator from South Carolina [MR. CALHOUN] thinks that the Executive is now weak, and that no danger is to be apprehended from its patronage. I wish to God I could see the subject in the same light that he does. I wish that I could feel free from that alarm at Executive encroachments by which he and I were so recently animated. When and how, let me ask, has that power, lately so fearful and formidable, suddenly become so weak and harmless? Where is that corps of one hundred thousand office holders and dependants whose organized strength, directed by the will of a single man, was lately held up in such vivid colors and powerful language by a report made by the Senator himself? When were they disbanded? What has become of proscription? Its victims may be exhausted, but the spirit and the power which sacrificed them remain unsubdued. What of the dismissing power? What of the veto? Of that practice of withholding bills, contrary to the constitution, still more reprehensible than the abuses of the veto? Of Treasury orders, put in force and maintained in defiance and contempt of the legislative authority? And, although last, not least, of that expunging power which degraded the Senate, and placed it at the feet of the Executive?

Which of all these enormous powers and pretensions has the present Chief Magistrate disavowed? So far from disclaiming any one of them, has he not announced his intention to follow in the very footsteps of his predecessor? And has he not done it? Was it against the person of Andrew Jackson that the Senator from South Carolina so ably co-operated with us? No, sir, no, sir, no. It was against his usurpations, as we believed them; against his arbitrary administration; above all, against that tremendous, and frightful augmentation of the power of the Executive branch of the Government, that we patriotically but vainly contended. The person of the Chief Magistrate is changed, but there stands the Executive power, perpetuated in all its vast magnitude, undiminished, reasserted, and overshadowing all the other departments of the Government. Every trophy which the late President won from them now decorates the Executive mansion. Every power which he tore from a bleeding constitution, is now in the Executive armory, ready, as time and occasion may prompt the existing incumbent, whoever he may be, to be thundered against the liberties of the people.

Whatever may have been the motives or the course of others, I owe it to myself and to truth to say, that, in deprecating the election of General Andrew Jackson to the office of Chief Magistrate, it was not from any private considerations, but because I considered it would be a great calamity to my country; and that, in whatever opposition I made to measures of his administration, which more than

realized my very worst apprehensions, I was guided solely by a sense of public duty. And I do now declare my solemn and unshaken conviction that, until the Executive power, as enlarged, extended, and consolidated by him, is reduced within its true constitutional limits, there is no permanent security for the liberties and happiness of this people.

4. Lastly, pass this bill, and whatever divorce its friends may profess to be its aim, that perilous union of the purse and the sword, so justly dreaded by our British and Revolutionary ancestors, becomes absolute and complete. And who can doubt it who knows that over the Secretary of the Treasury at Washington, and every sub-treasurer, the President claims the power to exercise uncontrolled sway? To exact implicit obedience to his will?

The message states that, in the process both of collection and disbursement of the public revenue, the officers who perform it act under the Executive commands; and it argues that, therefore, the custody also of the Treasury might as well be confided to the Executive care. I think the safer conclusion is directly opposite. The possession of so much power over the national treasure is just cause of regret, and furnishes a strong reason for diminishing it, if possible, but none for its increase, none for giving the whole power over the purse to the Chief Magistrate.

Hitherto I have considered this scheme of sub-treasuries as if it was only what its friends represent it—a system solely for the purpose of collecting, keeping, and disbursing the public money, in specie exclusively, without any bank agency whatever. But it is manifest that it is destined to become, if it be not designed to be, a vast and ramified connexion of Government banks, of which the principal will be at Washington, and every sub-treasurer will be a branch. The Secretary is authorized to draw on the several sub-treasurers in payment for all the disbursements of Government. No law restricts him as to the amount or form of his drafts or checks. He may throw them into amounts suited to the purposes of circulation, and give them all the appearance and facilities of bank notes. Of all the branches of this system, that at New York will be the most important, since about one-half of the duties is collected there. Drafts on New York are at par, or command a premium from every point of the Union. It is the great money centre of the country. Issued in convenient sums, they will circulate throughout the whole Union as bank notes, and, as long as confidence is reposed in them, will be preferred to the specie which their holders have a right to demand. They will supply a general currency, fill many of the channels of circulation, be a substitute for notes of the Bank of the United States, and supplant, to a great extent, the use of bank notes. The necessities of the people will constrain them to use them. In this way, they will remain a long time in circulation; and in a few years we shall see an immense portion of the whole specie of the country concentrated in the hands of the branch bank—that is, the sub-treasurer, at New York, and represented by an equal amount of Government paper dispersed throughout the country. The responsibility of the sub-treasurer will be consequently greatly increased, and the Government will remain bound to guaranty the redemption of all the drafts, checks, or notes (whatever may be their denomination) emitted upon the faith of the money in his custody, and, of course, will be subject to the hazard of the loss of the amount of specie in the hands of the sub-treasurer. If, in the commencement of this system, the holders of this Government paper shall be required to present it for payment in coin, within a specified time, it will be found inconvenient or impracticable to enforce the restriction, and it will be ultimately abandoned.

Is the Senate prepared to consent to place not only all the specie that may be collected for the revenue of the country, at the will of the President, or, which is the same

SENATE.]

Sub-Treasury Bill.

[SEPT. 25, 1837.]

thing, in the custody of persons acting in obedience to his will, but to put him at the head of the most powerful and influential system of Government banks that ever existed?

It is said in the message, that Government is not bound to supply the country with the exchanges which are necessary to the transaction of its business. But was that the language held during the progress of the contest with the late Bank of the United States? Was not the expectation held out to the people that they would be supplied with a better currency, and with better regulated exchange? And did not both the late President and the Secretary of the Treasury dwell, with particular satisfaction, in several messages and reports, upon the improvement of the currency, the greater amount in exchange, and the reduction of the rates, under the operation of the State-bank system, than existed under the Bank of the United States? Instead of fulfilling the promises then held out, the Government now wraps itself up in its dignity—tells the people that they expect too much of it; that it is not its business to furnish exchanges; and that they may look to Europe for the manner in which, through the agency of private bankers, the commerce and business of its countries are supplied with exchange. We are advised to give up our American mode of transacting business, through the instrumentality of banking corporations, in which the interests of the rich and the poor are happily blended, and to establish bankers similar to the Hopes, the Barings, the Rothschilds, the Hottinguers, of Europe; houses which require years or ages to form and put in successful operation, and whose vast overgrown capitals, possessed by the rich exclusively of the poor, control the destiny of nations and determine the fate of empires!

Having, I think, Mr. President, shown that the project of the administration is neither desirable, nor practicable, nor within the constitutional power of the General Government, nor just; and that it is contrary to the habits of the people of the United States, and is dangerous to their liberties, I might here close my remarks; but I conceive it to be the duty of a patriotic opposition not to confine itself merely to urging objections against measures to promote the general prosperity, brought forward by those in power. It has further and higher duties to perform. There may be circumstances in which the opposition is bound formally to prevent such measures as, in its judgment, are demanded by the exigency of the times; but if it has just reason to believe that they would be unacceptable to those who alone can adopt them, and give them effect, the opposition will discharge its duty by suggesting what it believes ought to be done for the public good.

I know, sir, that I have friends whose partiality has induced them to hope that I would be able to bring forward some healing measure for the disorders which unhappily prevail, that might prove acceptable. I wish to God that I could realize this hope; but I cannot. The disease is of such an alarming character as to require more skill than I possess; and I regret to be compelled to fear that there is no effectual remedy but that which is in the hands of the suffering patient himself.

Still, under a deep sense of the obligation to which I have referred, I declare that, after the most deliberate and anxious consideration of which I am capable, I can conceive of no adequate remedy which does not comprehend a national bank as an essential part. It appears to me that a national bank, with such modifications as experience has pointed out, and particularly such as would limit its profits, exclude foreign influence in the government of it, and give publicity to its transactions, is the only safe and certain remedy that can be adopted. The great want of the country is a general and uniform currency, and a point of union, a sentinel, a regulator of the issues of the local banks; and that would be supplied by such an institution.

I am not going now to discuss, as an original question, the constitutional power of Congress to establish a national bank. In human affairs there are some questions, and I think this is one, that ought to be held as terminated. From several decisions of Congress affirming the power, the concurrence of every other department of the Government, the approbation of the people, the concurrence of both the great parties into which the country has been divided, and forty years of prosperous experience with such a bank, appear to me to settle the controversy, if any controversy is ever to be settled. Twenty-two years ago Mr. Madison, whose opposition to the first Bank of the United States is well known, in a message to Congress, said:

“Waiving the question of the constitutional authority of the Legislature to establish an incorporated bank, as being precluded, in my judgment, by repeated recognitions, under varied circumstances, of the validity of such an institution, in acts of the legislative, executive, and judicial branches of the Government, accompanied by indications, in different modes, of a correspondence of the general will of the nation; the proposed bank does not appear to be calculated to answer the purposes of reviving the public credit, of providing a national medium of circulation, and of aiding the Treasury by facilitating the indispensable anticipations of revenue, and by affording to the public more durable loans.”

To all the considerations upon which he then relied, in treating it as a settled question, are now to be added two distinct and distant subsequent expressions of the deliberate opinion of a republican Congress, two solemn decisions of the Supreme Court of the United States, twenty years of successful experience, and disastrous consequences quickly following the discontinuance of the bank.

I have been present as a member of Congress, on the occasion of the termination of the charters of both the Banks of the United States; took part in the discussion to which they gave rise, and had an opportunity of extensively knowing the opinions of members; and I declare my deliberate conviction that, upon neither was there one-third of the members in either House who entertained the opinion that Congress did not possess the constitutional power to charter a bank.

But it is contended that, however indispensable a bank of the United States may be to the restoration of the prosperity of the country, the President's opinion against it opposes an insuperable obstacle to the establishment of such an institution. It will indeed be unfortunate if the only measure which can bring relief to the people should be prevented by the Magistrate, whose elevated station should render him the most anxious man in the nation to redress existing grievances.

The opinion of the President which is relied upon is that contained in his celebrated letter to the Hon. S. Williams, and that which is expressed in the message before us. I must say, with all proper deference, that no man, prior to or after his election to the Chief Magistracy, has a right to say, in advance, that he would not approve of a particular bill, if it were passed by Congress. An annunciation of such a purpose is premature, and contrary to the spirit, if not the express provision of the constitution. According to that instrument, the participation of the President in the legislative power—his right to pass upon a bill—is subsequent and not previous to the deliberations of Congress. The constitutional provision is that, when a bill shall have passed both Houses, it shall be presented to the President for his approval or rejection. His right to pass upon it results from the presentation of the bill, and is not acquired until it is presented. What would be thought of the judge who, before a cause is brought before the court, should announce his intention to decide in favor of a named party? Or of the Senate, which shares the appointing power, if it should, before a nomination of a particular individual is

SEPT. 25, 1837.]

Sub-Treasury Bill.

[SENATE.]

made for an office, pass a resolution that it would not approve the nomination of that individual?

It is clear that the President places his repugnance to a Bank of the United States mainly upon the ground that the popular will has been twice "solemnly and unequivocally expressed" against it. In this I think the President is mistaken. The two occasions to which he is understood to refer, are the election of General Andrew Jackson in 1832, and in his own election in 1836. Now, as to the first, there was not, before it took place, any unequivocal expression of the opinion of the late President against a national Bank. There was, in fact, a contrary expression. In the veto message, President Jackson admitted the public convenience of a bank; stated that he did not find in the renewed charter such modifications as could secure his approbation, and added that, if he had been applied to, he could have furnished the model of a bank that would answer the purpose of such an institution. In supporting his re-election, therefore, the people did not intend, by the exercise of their suffrage, to deprive themselves of a national bank. On the contrary, it is within my own knowledge, that many voted for him who believed in the necessity of a bank quite as much as I do. And I am perfectly persuaded that thousands and tens of thousands sustained his re-election under the full expectation that a national bank would be established during his second term.

Nor, sir, can I think that the election of the present Chief Magistrate ought to be taken as evidence that the people are against a bank. The most that fairly can be asserted is, that he was elected, the expression of his opinion in the letter to Mr. Williams notwithstanding. The question of the election of a Chief Magistrate is a complex question, and one of compensations and comparison. All his opinions, all his qualifications are taken into consideration, and compared with those of his competitors. And nothing more is decided by the people than that the person elected is preferred amongst the several candidates. They take him as a man takes his wife, for better for worse, with all the good and bad opinions and qualities which he possesses. You might as well argue that the election of a particular person to the office of Chief Magistrate implies that his figure, form, and appearance, exhibit the standard of human perfection, as to contend that it sanctions and approves every opinion which he may have publicly expressed on public affairs. It is somewhat ungrateful to the people to suppose that the particular opinion of Mr. Van Buren, in regard to a bank of the United States, constituted any, much less the chief recommendation of him to their suffrages. It would be more honorable to him and to them to suppose that it proceeded from his eminent abilities, and his distinguished services at home and abroad. If we are to look beyond them and beyond him, many believe that the most influential cause of his election was the endorsement of that illustrious predecessor, in whose footsteps he stands pledged to follow.

No, sir, no; the simple and naked question of a bank or no bank of the United States was not submitted to the people and "twice solemnly and unequivocally" decided against by them. I firmly believe that if such a question were now submitted to them, the response of a vast majority would be in the affirmative. I hope, however, that no bank will be established or proposed, unless there shall be a clear and undisputed majority of the people, and of the States in favor of such an institution. If there be one wanted, and an unequivocal manifestation be made of the popular will that it is desired, a bank will be established. The President's opposition to it is founded principally upon the presumed opposition of the people. Let them demonstrate that he is mistaken, and he will not separate himself from them. He is too good a democrat, and the tenor of his whole life shows that, whatever other divorces he may recommend, the last that he would desire would be one be-

tween him and the people. Should this not prove to be the case, and if a majority should not exist sufficiently large to pass a bank charter in spite of the veto, the ultimate remedy will remain to the people to change their rulers, if their rulers will not change their opinions.

But, during this debate, it has been contended that the establishment of a new bank of the United States would aggravate existing distresses; and that the specie necessary to put it in operation could not be obtained without prejudice to the local banks.

What is the relief for which all hearts are now so anxiously throbbing? It is to put the banks again in motion; to restore exchanges, and revive the drooping business of the country. And what are the obstacles? They are, first, the foreign debt; and, secondly, a want of confidence. If the banks were to reopen their vaults, it is apprehended that the specie would immediately be exported to Europe to discharge the foreign debt. Now, if a bank of the United States were established, with a suitable capital, the stock of that bank itself would form one of the best subjects of remittance; and an amount of it equal to what remains of the foreign debt would probably be remitted, retaining at home or drawing from abroad the equivalent in specie.

A great, if not the greatest, existing evil is the want of confidence, not merely in the Government, but in distant banks, and between the banks themselves. There is no tie or connexion binding them together, and they are often suspicious of each other. To this want of confidence among the banks themselves is to be ascribed that extraordinary derangement in the exchanges of the country. How otherwise can we account for the fact that the paper of the banks of Mississippi cannot now be exchanged against the paper of the banks of Louisiana without a discount in the former of 10 or 15 per cent.; nor that of the banks of Nashville, without a discount of 8 or 10 per cent. against the paper of the banks of the adjoining State of Kentucky? It is manifest that, whatever may be the medium of circulation, whether it be inconvertible paper, or convertible paper and specie, supposing confidence to exist, the rates of exchange in both cases ought to be nearly the same. But, in times like these, no bank will allow its funds to accumulate, by the operations of exchange, at points where no present use can be made of them.

Now, if a bank of the United States were established, with a proper capital, and it were made the sole depository of the public moneys, and its notes were receivable in all Government dues, it might commence operations forthwith, with a small amount of specie, perhaps not more than two millions. That sum would probably be drawn from the community, where it is now hoarded and dormant; or if it were taken even from the local banks, they would be more than compensated in the security which they would enjoy, by the remittance of the stock of the new bank to Europe, as a substitute for their specie.

Such a new bank, once commencing business, would form a rallying point; confidence would revive, exchanges be again regulated, and the business and prosperity of the country be speedily restored. And it is by no means certain that there would be any actual augmentation of the banking capital of the country, for it is highly probable that the aggregate amount of unsound banks, which can never resume specie payments, would be quite equal to that of the new bank.

An auxiliary resolution might be adopted with salutary effect, similar to that which was adopted in 1816, offering to the State banks, as a motive to resume specie payments, that their paper should be received for the public dues; or, as their number has since that period greatly increased, to make the motive more operative, the offer might be confined to one or two banks in each State known to be trustworthy. Let them and a bank of the United States commence specie payments, and all the other sound banks

SENATE.]

Sub-Treasury Bill.

[SEPT. 25, 1837.]

would be constrained, by the united force of public opinion and the law, to follow the example.

If, in contrasting the two periods of 1817 and 1837, some advantages for the resumption of specie payments existed at the former epoch, others which distinguish the present greatly preponderate. At the first there were none, except the existence of a public debt and a smaller number of banks. But then an exhausting war had wasted our means. Now we have infinitely greater wealth, our resources are vastly more developed and increased, our population nearly doubled, our knowledge of the disease much better, and, what is of the utmost importance, a remedy, if applied now, would be administered in a much earlier stage of the disorder.

A general currency of sound and uniform value is necessary to the well-being of all parts of the confederacy, but it is indispensable to the interior States. The seaboard States have each of them banks, whose paper freely circulates within their respective limits, and serves all the purposes of their business and commerce at their capitals, and throughout their whole extent. The variations, in the value of this paper, in passing through those States, from one commercial metropolis to another, are not ordinarily very great. But how are we of the interior to come to the Atlantic cities to purchase our supplies of foreign and domestic commodities without a general medium? The paper of our own banks will not be received but at a ruinous discount. We want a general currency, which will serve at home, and enable us to carry on our accustomed trade with our brethren of the Atlantic States. And such a currency we have a right to expect.

I do not arrogate to myself a right to speak for and in behalf of all the Western States; but as a Senator from one of them, I am entitled to be heard. This Union was formed to secure certain general, but highly important, objects, of which the common defence, commerce, and a uniform currency were leading ones. To the interior States none is of more importance than that of currency. Nowhere is the attachment to the Union more ardent than in those States; but if this Government should neglect to perform its duty, the value of the Union will become impaired, and its very existence in process of time may become endangered. I do believe that between a sound general currency, and the preservation of the Union itself, in full vigor and perfect safety, there is the most intimate connexion.

If, Mr. President, the remedies which I have suggested were successful at a former period of our history, there is every reason to hope that they would again prove efficacious; but let me suppose that they should not, and that some unknown cause, which could not then, should now, thwart their operation, we should have, in any event, the consolation of knowing that we had endeavored to profit by the lessons of experience, and, if they failed, we should stand acquitted in the judgment of the people. They are heartily tired of visionary schemes and wild experiments. They wish to get out of the woods, into which they have been conducted, back to the plain, beaten, wide road, which they had before trodden.

How and when, without such measures as I have suggested, are the State banks to resume specie payments? They never can resume without concert; and concert springs from confidence; and confidence from knowledge. But what knowledge can eight hundred banks, scattered over our vast territory, have of the actual condition of each other? It is in vain that statements of it be periodically published. It depends, at last, mainly upon the solvency of the debtors to the bank; and how, whenever their names are not known, can that be ascertained?

Instead of coming to the aid of these prostrate institutions, and assisting them by a mild and parental exercise of your power, in a mode sanctioned and approved by ex-

perience, you propose to abandon them and the country to their fate. You propose worse: to discredit their paper, to distrust them even as special depositories, and to denounce against them all the pains and penalties of bankruptcy.

How and when will they resume specie payments? Never, as far as my information extends, have exertions been greater than those which the banks have generally made to open again their vaults. It is wonderful that the community should have been able to bear, with so much compulsion and resignation, the prodigious curtailments which have been made. Confidence re-established, the foreign debt extinguished, and a national institution created, most of them could quickly resume specie payments. Some of them, urged by a high sense of probity, and smarting under severe reproaches, will no doubt make the experiment of resuming and continuing payment in specie. They may even go on a while; but without the co-operation of the State banks generally, and without the co-operation of a national bank, it is to be apprehended that they will be again seized with a paralysis. It is my deliberate conviction that the preservation of the existence of the State banks themselves depends upon the institution of a national bank. It is as necessary to them as the Union is to the welfare of the States in our political system. Without it, no human being can foresee when we shall emerge from the difficulties which surround us. It has been my fortune several times to see the country involved in great danger; but never before have I beheld it encompassed with any more menacing and portentous.

Entertaining the views which I have presented, it may be asked why I do not at once propose the establishment of a national bank. I have already adverted to the cause. Constituted as Congress now is, I know that such a proposition would be defeated; and that it would be therefore useless to make it. I do not desire to force upon the Senate, or upon the country against its will, if I could, my opinion, however sincerely and strongly entertained. If a national bank be established, its stability and its utility will depend upon the general conviction which is felt of its necessity. And until such a conviction is deeply impressed upon the people, and clearly manifested by them, it would, in my judgment, be unwise even to propose a bank.

Of the scheme of the Senator from Virginia [Mr. RIVES] I think now as I thought in 1834. I do not believe that any practicable connexion of State banks can supply a general currency, be a safe depository of the public moneys, or act efficiently as a fiscal agent of the General Government. I was not then opposed to the State banks in their proper sphere. I thought that they could not be relied upon to form exclusively a banking system for the country, although they were essential parts of a general system.

The amendment of the Senator, considered as a measure to bring about the resumption of specie payments, so much desired, I think must fail. The motive which it holds out of the receivability in all payments to the Government, of the paper of such banks as may resume by a given day, coupled with the conditions proposed, is wholly inadequate. It is an offer to eight hundred banks; and the revenue payment of which in their notes is held out as the inducement, amounts to some twenty, or twenty-five millions. To entitle them to the inconsiderable extension of their circulation, which would result from the credit given by Government to the paper of all of them, they are required to submit to a suppression of all notes below five dollars, and at no very distant period to all below twenty. The enlargement of their circulation, produced by making it receivable by Government, would be much less than the contraction which would arise from the suppression of the prohibited notes. Besides, if the quality proposed again to be attached to the notes of these local banks was insufficient

SEPT. 26, 1837.]

Adjournment of Congress—National Bank.

[SENATE.]

to prevent the suspension, how can it be efficacious enough to stimulate a resumption of specie payments?

I shall, nevertheless, if called upon to give a vote between the project of the administration and the amendment of the Senator from Virginia, vote for the latter, because it is harmless, if it effects no good, and looks to the preservation of the State banks; whilst the other is fraught with mischiefs, as I believe, and tends, if it be not designed, to the utter destruction of those institutions. But, preferring to either the postponement moved by the Senator from Georgia, I shall, in the first instance, vote for that.

Such, Mr. President, are the views which I entertain on the present state of our public affairs. It is with the deepest regret that I can perceive no remedy, but such as is in the hands of the people themselves. Whenever they shall impress upon Congress a conviction of that which they wish applied, they will obtain it, and not before. In the mean time, let us go home and mix with and consult our constituents. And do not, I entreat you, let us carry with us the burning reproach, that our measures here display a selfish solicitude for the Government itself, but a cold and heartless insensibility to the sufferings of a bleeding people.

When Mr. CLAY had concluded his remarks,

The question was taken on Mr. KING's motion to postpone the bill until December next, and decided in the negative, as follows:

YEAS—Messrs. Bayard, Black, Clay of Kentucky, Clayton, Crittenden, Kent, King of Georgia, Knight, McKean, Nicholas, Prentiss, Robbins, Ruggles, Smith of Indiana, Spence, Tipton, Webster, White, Williams—19.

NAYS—Messrs. Allen, Benton, Brown, Buchanan, Calhoun, Clay of Alabama, Fulton, Grundy, Hubbard, King of Alabama, Linn, Lyon, Morris, Niles, Norvell, Pierce, Preston, Rives, Roane, Robinson, Smith of Connecticut, Strange, Tallmadge, Walker, Wall, Wright Young—27.

On motion of Mr. WRIGHT, the action on the sub-Treasury bill was informally suspended till to-morrow, by unanimous consent, and the two following bills were successively taken up and ordered to be engrossed for a third reading, viz:

The bill to remit the duties on certain goods destroyed by the great fire in New York; and

The bill making further provision for the suppression of Indian hostilities for 1837.

Mr. WRIGHT further stated, that though he was anxious for the bill authorizing the deposit of merchandise in public stores to be acted on without delay, yet, as the Senator from South Carolina [Mr. CALHOUN] had expressed a wish for its further postponement, unless the Senate wished otherwise, he should pass it by at present, and call it up in a few days.

The Senate then, on motion of Mr. GRUNDY, went into the consideration of Executive business, and afterwards adjourned.

TUESDAY, SEPTEMBER 26.

ADJOURNMENT OF CONGRESS.

The joint resolution proposing to close the present session of Congress on the 9th of October, was taken up and agreed to.

It was also ordered that the daily meeting of the Senate shall hereafter be at 10 o'clock, till otherwise ordered.

A NATIONAL BANK.

The Senate, on motion of Mr. WRIGHT, proceeded to the consideration of the following resolution, reported by the Committee on Finance, on petitions from New Orleans, St. Louis, and other quarters, for a United States bank:

“Resolved, That the prayer of the petitioners ought not to be granted.

Mr. CLAY, of Kentucky, said he did not see much utility in acting on a negative resolution of this kind. He recollected but one example of a similar resolution, and that was during the session of Congress when the declaration of the late war was made against Great Britain. The resolution was offered by that most extraordinary man, now no more, Mr. Randolph, of Virginia. Learning that the message of Mr. Madison to Congress would recommend a declaration of war, he rose in his place, two or three days before it was presented, and offered a resolution similar to this, that it was inexpedient to declare war against Great Britain. It was, however, got rid of, in some way or other, without a vote upon it.

Mr. C. did not think, as he had declared yesterday, that it was expedient to express any opinion on this subject at this time; and he would submit it to gentlemen whether it were not better that it should lie on the table. He thought there would be no difference of opinion as the resolution now stood under present circumstances. Mr. C. thought they had better not now establish a bank of the United States, much as it appeared to be necessary to relieve the country. But, if it was not to be laid on the table, Mr. C. moved to amend it by the following substitute:

Resolved, That it will be expedient to establish a United States bank whenever it shall be manifested that a clear majority of the people of the United States are in favor of such an institution.

On this he called for the yeas and nays; which were ordered.

Mr. WRIGHT stated that the committee had proceeded in the customary mode with the memorials referred to them on this subject, and had reported the opinion of the majority in the usual manner, leaving their report to the judgment of the Senate.

Mr. CLAY said he did not mean to throw any reflection on the committee. But his objection was against making a decision, contrary to usage, on the proposition reported by the committee, and for no principal purpose except one, and that was, that by the character of the vote the people might see what little chance there was of getting a United States bank. It was contrary to usage to press such a question in the negative, unless it was intended to turn it into an affirmative, an intention which, at this time, did not exist. But, if this should be pressed, Mr. C. trusted he would get the sense of the Senate on a resolution which he should offer.

Mr. WEBSTER said, in some points of view, this might be considered as connected with other discussions; and he had no objection to its being disposed of without discussion. But that was not to be expected, and the discussion would interfere with other measures. He moved to postpone it till Monday next.

Mr. PRESTON said he should be glad if the Senator would extend his postponement to a later period than Monday next, as the action upon it would depend much on the proceedings of Congress on the propositions which had already been submitted. If Congress should continue in session, it might be inexpedient to foreclose themselves on this measure; or it might possibly occur that an administration majority of the Senate would yet prefer a United States bank. Two propositions had been made before, and a third was suggested by a gentleman who spoke yesterday; and it was now proposed to cut off one of the means of relief which had been suggested from an eminent quarter on that floor.

Mr. P. would not say that a United States bank was inexpedient till he knew what would be more expedient. In two weeks such developments might be made as would induce him to go for a United States bank; for whatever were his feelings towards such a bank, he was not disposed

SENATE.]

National Bank.

[SEPT. 26, 1837.]

to carry his hostility towards it so far as to destroy the country, and see it sacrificed on account of a bank. As he yet saw no positive in his course, he would have no negative. He would judge of all projects on their merits; and if he should now judge between the measure of the committee and a United States bank, he would find it difficult to make up his mind which to select. A United States bank might be dangerous; but he doubted whether it would be more dangerous than to divide the Government from the States and the people. But pressing either question at this time was premature. A bank of the United States was a forlorn hope; and it might be that they would be glad to shadow themselves under this impending mass, to escape a worse alternative. Mr. P. would suggest, therefore, that this subject should be deferred till they could see what would be the action of the two Houses on the measures already before them. Mr. P. desired light, that he might know where they were going, what they were doing, and at what they would arrive. He would cut off no hope in this dangerous navigation. It was known that many regarded a bank as the only remedy; it was so among Mr. P.'s own constituents; and he was not willing to cut them off from their favorite and only measure without discussion. Let this be put off for a time; and if Congress should adopt nothing proper for the emergency, this matter would come up, and would obtain a deliberate and dispassionate discussion.

Mr. WEBSTER said he did not wish to deprive the Senate of voting on this question. If it should now be postponed till Monday, and it then appeared expedient to postpone it further, it might then be done.

Mr. MORRIS called for the yeas and nays on the question of postponement; which were ordered, and the question of postponement till Monday next was decided in the negative, as follows:

YEAS—Messrs. Bayard, Black, Clay of Kentucky, Clayton, Crittenden, Davis, Kent, Knight, McKean, Prentiss, Preston, Robbins, Smith of Indiana, Swift, Webster—15.

NAYS—Messrs. Allen, Benton, Brown, Buchanan, Calhoun, Clay of Alabama, Fulton, Grundy, King of Georgia, Linn, Lyon, Morris, Nicholas, Niles, Norvell, Pierce, Rives, Roane, Robinson, Ruggles, Smith of Connecticut, Strange, Tallmadge, Tipton, Walker, Wall, White Williams, Wright, Young—30.

Mr. TALLMADGE moved a substitute to Mr. CLAY's substitute, as follows:

Resolved, That, in the opinion of this Senate, a clear majority of the people of the United States are opposed to the establishment of a national bank, and it is therefore inexpedient to grant the prayer of the petitioners.

On this Mr. BENTON called for the yeas and nays; which were ordered, and this substitute was carried, as follows:

YEAS—Messrs. Allen, Benton, Brown, Buchanan, Clay of Alabama, Fulton, Grundy, Hubbard, Linn, Lyon, McKean, Morris, Nicholas, Niles, Norvell, Pierce, Rives, Roane, Robinson, Ruggles, Smith of Connecticut, Strange, Tallmadge, Walker, Wall, White, Williams, Wright, Young—29.

NAYS—Messrs. Bayard, Clay of Kentucky, Clayton, Crittenden, Davis, Knight, Prentiss, Preston, Robbins, Smith of Indiana, Spence, Swift, Tipton, Webster—14.

To the original resolution, thus amended, Mr. CLAY offered the following substitute; substantially the same as the one he offered before:

Resolved, That whenever it is manifested that a clear majority of the people of the United States are in favor of a national bank, it ought to be established.

Mr. C. called for the yeas and nays on this substitute; which were ordered.

Mr. CALHOUN was understood to say that the com-

mittee had reported their resolution in the usual form, and had supposed that every Senator there would be prepared to vote upon it. Mr. C. was prepared to vote upon it at any time; but he would willingly, if unprepared, express what his opinions of a United States bank were. He was here to do his duty; and even if a majority of the people thought otherwise, he would act on his own convictions. He thought it due to the people of the United States that the sentiments of the Senate and House of Representatives should be known, and they would then know better how to make a selection.

Mr. PRESTON said he did not think proper to vote for either of the two substitutes. He did not know the views of the people on this subject; and if he was opposed to a bank, and two-thirds of the people were against him, he would not surrender his convictions of what was right. He was averse to this mode of proceeding. Here was a parliamentary trap, so situated that gentlemen's sentiments could not be expressed on the report. Mr. P. understood it. He was brought up in such a way that if he should vote against this resolution of the committee he would be declared to be in favor of a United States bank, a United States bank man, and to be treated accordingly. Such legislation he considered inconsistent with the gravity of the Senate. If any gentleman were not now in favor of a bank, in ten days he might not withstanding be for it, driven against it, as was the case in regard to the late bank, by the circumstances of the times. Mr. P. was not in favor of a United States bank; but should he, therefore, show the people that he took a United States bank to be worse than any thing that could be done? He could not do this; he could not consent that this measure should be strangled, without knowing what the administration would do. Cut off a bank now and they might be driven against it in two weeks thereafter. Mr. P. would cut off from nothing, and if this plank was floating about them, let it float; it might be wanted hereafter.

It had been said that every gentleman might be supposed to have made up his mind on this important matter already. But where there were alternative propositions, Mr. P. was not prepared to say gentlemen had made up their minds before they were discussed. And if gentlemen had made up their minds, why push any subject farther in debate; why discuss the sub-Treasury system, if every gentleman's mind was made up? Mr. P. did not wish for delay more than others; but when he, as well as others, felt most anxious for the country, were they not to be indulged in debate?

Mr. P. knew that the majority of the Senate would be in favor of the measures of the President's message; they would follow their monitor and record his edicts. This he would not do. If he could do no better, he would sustain his propositions; and if he should come to the conviction that the President had done well and wisely; that he had foreseen coming evils and devised a remedy; that in the chair in which he was seated he had been willing to use his own hands to strip himself of undue power, to cut down his too extensive patronage, to divest himself of the terrors of the dangerous means which he possessed, Mr. P. would then come forward and acknowledge that he had mistaken his character, and would say, you have done well and I am of you; I renounce my opposition, and will adhere to you. If these measures which he had suggested were the sense and would promote the benefit of the nation, no man deserved better of his country. He came into power with the party and strength of the most powerful President, surrounded by that party. But he had done the very opposite of cutting down his power. If he had done this, Mr. P. would have bowed with gratitude before him, told him to march on in the path which he had entered, and would have sustained him in it.

Mr. P. felt that, willing as he would be to support the

SEPT. 26, 1837.]

National Bank.

[SENATE.]

administration, if its measures tended to the good of the country; if the present President showed the desire and inclination to abandon the course of usurpation, he could not then be unwilling to support the administration; but until the administration came over to him, (doing that which was right and patriotic,) Mr. P. would not go over to the administration. As he was opposed to the administration of General Jackson, so (unless he abandoned his principles and his consistency) he must remain opposed to an administration which was pledged to follow in the former's footsteps. As to the immediate question before the Senate, Mr. P. was not willing to pass a resolution of this kind, prejudging the matter, giving, as it were, a certificate to the members of the administration, which they would carry in their hands before the people at the coming elections, and say, "See, Congress is against a national bank; Congress favors our course; it has pronounced its opinion." Thus Mr. P. looked upon the whole affair as a parliamentary trap to catch the Senate unadvisedly into the support of men and principles which he was persuaded the country could not and would not support. If it would be in order, Mr. P. wished to move that the committee be discharged from the further consideration of the prayer of the memorialists.

The CHAIR intimated that the motion was not in order. Mr. WRIGHT, in explanation, vindicated the course of the committee. He had not proposed the amendment which Mr. PRESTON called a trap.

Mr. W. submitted to the Chair whether the amendment of Mr. CLAY, of Kentucky, was not out of order, being only a reiteration of a former amendment.

The CHAIR [Mr. HUBBARD] decided the amendment of Mr. CLAY not to be inconsistent with any former amendment.

Mr. CLAY, of Kentucky, said that the only ground which the President assumed in his proclamation for his opposition against the bank, was the ground that the people were against a bank. There was no doubt the President would go for a bank if the wishes of the people were decidedly expressed in favor of a bank. Mr. C. thought this resolution ought not to have been brought forward in the manner it had been to obtain an opinion from the Senate. It was not the usual course.

Mr. WRIGHT explained the history of the resolution; it would have been brought forward before this day, but that the floor was occupied by some Senator. This was the only reason why it had been passed by until this morning.

Mr. CLAY said his amendment had been rendered absolutely necessary by the course pursued. If the resolution had been suffered to take the usual course, and been left to lie upon the table without inviting any action of the Senate upon it, no Senator would have brought forward any proposition. The resolution, with its amendments, said virtually to the people of the United States, "Whatever your wishes may be, whatever may be your wants, they shall be altogether disregarded." Mr. C. thought a decided majority would be found in favor of a national bank, and therefore his amendment was necessary.

Mr. SMITH, of Connecticut, said that, as he should have to vote on the question, and that his vote might appear to be inconsistent, he felt disposed to assign his reasons for the vote he should give. He was prepared to vote against the resolution of the honorable Senator from Kentucky in the shape in which he first presented it; but had he have done so, it might have been supposed that he was unwilling to be governed by the known voice of the people, and to vote in accordance with their wishes. In the first place, he was of opinion that a bank granted by the Government of the United States would be unconstitutional; and, until he should be understood upon that point, he could never consent to give his vote for a bank in any

shape, or under any circumstances. He had been waiting, and had expected, to hear the question of constitutionality of the bank discussed by some of the learned experienced gentlemen on this floor; and, until he was convinced of his error by some argument that he had never yet heard, it was unnecessary for him to take into consideration the subject, or to say any thing upon the question of the expediency of establishing a bank. The proposition of the Senator from Kentucky was, not that we should now act in obedience to the will, and in accordance with what we consider the wishes, of the people on this subject, but that the people should have another opportunity of expressing their sentiments, by leaving the question of bank or no bank untouched for the present, so that, by again agitating and investigating the subject, public sentiment might, at some future period, be moulded into and assume a different shape, and be more favorably inclined to a bank. But his opinion was that that period would never occur, and such an event would never happen, when a majority of the people would be in favor of a United States bank. To adopt the resolution would be, in effect, to undertake to express an opinion as to what this body would do at some future period in reference to a different state of things, instead of adapting our action to the wants of the people at this time. He maintained that it was difficult to act upon the subject as it now stood; that we should act for the present, and not for the future. He had determined to vote against the proposition of the Senator from Kentucky; and, as this might have the appearance of giving a vote against the voice of the people, he was desirous of accompanying his vote with his reasons for it. He had risen for the purpose of giving his opinion frankly; and he would now state that he was wholly and entirely, on constitutional grounds, opposed to a bank of the United States. It was his deliberate opinion, too, that the people did not want a bank. He would, therefore, vote against any proposition which stated that it now was, or would hereafter be, expedient to establish a bank of the United States.

Mr. ROANE said that the moment had most unexpectedly arrived when he found himself constrained to say a few words to the Senate. He was as yet but little acquainted with the rules of that honorable body, nor was he versed in parliamentary law. The subject, as now presented to the Senate, was wrapped in such parliamentary involutions, that perhaps, in the votes he might give, he would be made to assume, in appearance, a position which was not his own. He, therefore, wished to unfold, in the briefest possible manner, his full and entire opinion.

The amendment now before us requires us to declare that a majority of the people of the United States are in favor of a bank of the United States, and that, therefore, we ought to give them one. He, for one, declared that he knew not what were the opinions of the people of the United States on this subject. That body had not, in his opinion, that question, in any manner, before them; and, if they had, had not, as he conceived, the testimony to enable them to pass a solemn judgment on it. He did not himself believe that such is their opinion—very far from it. Whenever there was a large majority of the people of the United States demanding a national bank, he had no doubt but that they would have one, but not with his consent, given here or elsewhere; and this brings me, Mr. President, to declare that, as long as I occupy a seat on this floor, I shall never acknowledge but two criteria by which my votes are to be controlled. The one is the will—the known, ascertained will—of a majority of those who sent me here—my constituents. The other, the dictates of my own conscience. The opinion, then, of the majority—nay, of all the people of the United States, and of all the Senators on this floor—would not control him, as long as his constituents were opposed to a bank. In order that he might not, by possibility, be misunderstood by any of the votes he might give

SENATE.]

National Bank.

[SEPT. 26, 1837.]

on the amendments now offered—lest he may fall into some of the “traps” which had been spoken of, if indeed any have been set—he would take occasion to go further, and declare that if, instead of being a member of the Senate of the United States, administering and construing our present constitution, he was a member of a convention of the people of the United States to remodel their present, or form a new, constitution, he would, with manly firmness, resist a bank as composing one of its features. No, sir, never, with my consent, shall a power so potent, either for good or evil, constitute a feature in the republic under which I live.

Mr. President, if there are any parliamentary “traps” set, if there is any unfairness going on, I know nothing of it. What is the state of the case? At a very early period of the present session of Congress, petitions coming from large commercial cities, numerous signed, and from Chambers of Commerce, as they are termed, were presented to the Senate, praying the establishment by Congress of a United States bank. These petitions were referred to the Committee on Finance, who have reported to this their constituent body their opinion that “the prayer of the petitioners ought not to be granted.” He had some little experience in legislation, and he must declare that he could not conceive what less the committee could have done, such being their opinion; and that if there was any “trap set,” he could not see it in their report. He wished, himself, no amendment to that report; he knew of none that he would agree to, unless it was to insert in it the word “unconstitutional,” for he most candidly and emphatically declared it to be his wish to shove away—to put out of sight, and out of hope—that “plank”—that rotten “plank” as he thought it—which it was so much desired should be kept floating about in this chamber. He, for one, was ready and willing boldly to swim his course through the sea of troubles in which we are, and firmly to grasp the solid rock of the constitution.

Mr. CALHOUN thought it due to the people that there should be a distinct expression of the opinion of this body on this subject. The country was in an unsettled state, and to come to some decision was the best relief. He should vote for the original resolution.

Mr. C. then adverted to the remarks of Mr. PRESTON. He had understood his colleague to intimate, that whoever supported one act of the administration supported it in all its acts, and was therefore an administration man. His colleague's inference appeared to him very extraordinary.

Mr. PRESTON said that if he approved of the most prominent and most important measure of the administration, then, though he might differ on some few other points, he certainly should consider himself to be an administration man. If he made the *amende honorable* to Mr. Van Buren, he was not therefore necessarily supposed always to vote for all his measures; if in the main, if in general principles and policy, or in support of his great and primary scheme, he went with him, that was being an administration man. If, on the other hand, (though he might even vote for minor administration measures, when he thought them beneficial,) he was opposed to the great measures, to the general policy and leading principles of the administration, if he opposed his one great plan, that was being an opposition man. He (Mr. P.) was at this moment an opposition man. He was opposed, strongly opposed, to the wild schemes and new experiments of the administration; he was opposed to its great measure of divorcing the Government from the States and the people, and therefore (though, while so opposed, he would yet go with it for any measure of sound policy and real good to the country) he was an opposition man. Those who had placed themselves in the contrary position were unquestionably administration men.

Mr. CALHOUN said he was astonished that his col-

league should entertain such an opinion. Mr. C. differed with him on that point. I (said Mr. C.) am not an administration man, nor any other man's man, but I am my own man. I belong to the smallest party in the country. I am simply an honest nullifier. [A laugh.] I go (continued Mr. C.) for my own object, which is sometimes a good deal ahead. My object is to arrest usurpation, and first and chiefly Congressional usurpation against the States; after that, of the President against Congress. I know well (said Mr. C.) my latitude and my longitude: I keep a log-book and a good reckoning. I know the position of parties on all sides, and I am pursuing a course which nothing shall drive me from. I know where the administration party is; its reckoning has run out, and it has only one alternative, namely, to go back to the old republican principles of 1827: the principles of that day were those of the old State rights party of the country. Now (said Mr. C.) I see a great change on both sides; through the disturbing influences of that great man, though he thought him an erroneous man, (General Jackson,) the Jackson party was near destruction, and nothing was left to it but to fall back upon the old State rights ground of 1827. Executive usurpation was now at an end. As to what he had done to obtain a victory over Executive usurpation, he went for that. He had pursued that course to guard against what he foresaw would end in six or seven years. I am (said Mr. C.) against Congressional usurpation more than against Executive; and if so, where am I now situated but in the old republican rank of 1827? As far as they act with me, I go for them; if they do not act with me, I do not go for them. I am not a Van Buren man, nor an anti-Van Buren man, but a plain, honest nullifier.

Mr. PRESTON said he felt himself under the necessity of making a few remarks. As for himself, he was in opposition to the administration. He did not see that the administration was come over to him, and until they come over to me, or I am gone over to them, it is impossible for me to be an administration man. It would indeed give him (Mr. P. said) great pleasure if he could discover that the rulers who had governed, or rather he ought to say who had domineered over us so long, were now exhausted in their misrule, and from the necessity of their situation, had come back to good old principles. Nothing would give him more happiness than to find that the Jackson party, by the mere infusion of Van Burenism, had been cured at once of all that was wrong in it, and had come back to old principles. But, in spite of his disposition to wish for the best, he must confess that he could not see they had changed; he could not perceive a shadow of turning. So far from any return to good principles, to sound policy, to wise measures—so far from exhibiting any desire to heal the bleeding wounds of our bleeding country, they persevered, unchanged by experience, unmoved by the desolation around, in the prosecution of schemes fatal to the peace and prosperity of the country. They went onward in the experiments of their political alchymy, and, after bursting one set of vessels, they are now getting up another scheme, preparing to make another burst, pressing upon us other experiments, other expedients, equally wild. What! are they changed? Are they not now urging upon the country another experiment, which I profess before God I believe to be more frightful and alarming in the distress and ruin it will spread around, than if a foreign army were to march over the land, and lay waste all before it, from Maine to Louisiana! It is an experiment which it will cost all the property in the country to make! An experiment, which, if we judge by the past, by what has just happened, at the end of three or four years, when the country is down in complete and utter ruin, when the clamor of universal distress will call us together again as we have been called now, then they will again come for-

SEPT. 26, 1837.]

National Bank.

[SENATE.]

ward with the same *sang froid* as they do now, and will ask leave to make another experiment, denouncing at the same time in bitter terms the very experiment which a year before they had declared to be the only salvation! Not the high respect and veneration (said Mr. P.) which I entertain for my honorable colleague [Mr. CALHOUN] can induce me to say that I think the Van Buren party is changed—that it is now suddenly and in a moment, without any evidence to prove it—with much evidence to the contrary—that it is now exactly the reverse of what it was before! Are they now wise—by necessity? Are they now virtuous—by necessity? Are they now patriotic—by necessity? Are they not now any longer the spoils party? Are they not still the experimenting, the expunging, the patronage party? Has necessity produced any change in them? Do they relax their measures—do they return to sound experience—have they become wise, or moderate, or patriotic, by necessity?

When, sir, (said Mr. P.,) I think they have changed, then, but not till then, I will act cordially with them; I will unite with them if it be to bless, but not to curse the country. Then, sir, when I see a change, when facts exhibit it, I will make them the *amende honorable*. But, sir, (continued Mr. P.,) I fear, I greatly fear, (for I have, perhaps unfortunately, fallen into a habit of distrust,) I fear, sir, that the period, the end of Executive usurpation, is not arrived. In better times it began, and now, in times such as these, with such fearful evidences, such direful menaces, such alarming symptoms, such threatening propositions before us, I say, is it *now* we are to conclude it is suddenly ended? I see no change, no symptoms of change; they are *non alter, sed idem*. And as to the prospect of change, the suggestion of the administration for this divorce scheme is pregnant with the most frightful dangers of Executive power; it lays the foundation of an impregnable fortress of Executive patronage; it gives us the promise of a terrible hereafter. I do not think (said Mr. P.) the country is going to try it; but if it does, then God grant it may be prosperous!

Mr. P. then proceeded to comment upon the resolution before the Senate, proposing to declare that a bank of the United States is a measure repudiated by the Senate. He was not willing to vote for this proposition, because it would put him in a false attitude before the country. He did not think a bank of the United States expedient at this time, but he was not therefore going to pledge himself that he never would adopt one. On the contrary, of all measures proposed, he would support the best; and if none should be proposed so good as a national bank, then, rather than see the country continue to suffer, he would gladly adopt that as a dernier resort. But he was not going to pledge himself as the Senator from Virginia had done, that in no case, not even if it were the only means to rescue the nation from ruin, that even then he would not adopt it! The administration proposes its divorce scheme, and a hard-money currency; others propose the State banks. If neither of these is adopted, there remains no other remedy but a bank. Mr. P. was not inclined to go for a bank now, but he could not tell what might become of us! I think (said Mr. P.) if the hard-money and divorce plan is adopted, then, after passing through a course of unheard-of ruin, we shall be driven by the curses of our constituents from the career of fantastical experiments—we shall be driven to adopt a bank! Though a national bank were a thousand times blacker than its opponents have painted it, we shall feel at last that nothing can be blacker than what we have gone through; and the country will fly to escape from agitation and alarm, from attacks upon the property of the people—the country will fly, and it ought to fly, to a measure which will give it rest. The hard-money scheme will eventually bring forth the United States Bank, through a travail of unheard-of agony. I am not

now inclined to vote for the United States Bank, but I do confess I have an inclination that way on account of the envenomed war which has been carried on against it—carried on with the extreme of personal animosity. I think I know the spirit of my countrymen, and that they would be inclined to lift up the oppressed, and favor those who had been trampled under foot; that they would be more disposed to wage war against those who had carried on this bitter warfare, than continue to persecute the fallen, I might say, for righteousness' sake.

Mr. P. said he regarded the introduction of this question concerning the bank as a torch thrown into the discussion, the object of which was to turn off the Senate from the able discussion of the measures of the administration, to rouse the country by the use of a catch-word, and to present a false issue. He, however, wished to see the discussion of the subjects before the Senate proceed in a dispassionate manner; he did not wish the tocsin of bank war again to be sounded; he disavowed the issue now attempted to be raised. He would not pledge himself never to vote for a national bank under any circumstances. There might arise circumstances when no other alternative would be left, as was the case formerly with Mr. Madison, and with the whole republican party. He therefore wished the resolution to be treated with a negation which would have no influencing effect upon the people; whereas an affirmative declaration, such as it were now attempted to pass, was, as he thought, a Parliamentary trap for the Senate, intended to prejudice the case before the people. It was not usual (Mr. P. further remarked) to call up negative propositions, to be discarded, and, when they were positive negations, they were not necessary. This was not going to produce any effect with the people. If they could agree on any proposition, things would be in a better condition, for they would at least be in a course of experiment. But there would be difficulties in the way. If the hard-money and divorce scheme should be carried, the Secretary of the Treasury would carry it into effect. But if the State bank system should be laid at the door of the Executive, Mr. P. doubted the nurture which it would receive, and nursing it would need. Mr. P. saw a great many practical difficulties. Each party, he thought, would consent that his measure should not be adopted, if that of his adversary might fail first. In these dangerous times they could not be carried into effect; they would want that motherly feeling, which would help them to go before leaving them to themselves.

Mr. ALLEN said he did not rise for the purpose of participating in the discussion which had occurred most unexpectedly. He understood the question before the Senate was on the adoption or rejection of the amendment offered by the Senator from Kentucky. He would not interpose between the two Senators from South Carolina, or in any manner increase the conflict of their conflicting opinions. He should vote against the amendment, because, in his opinion, it involved a bare abstraction, and, as such, was not proper in its nature to be acted upon, nor did it deserve existence in that body. It was revolutionary of the constitution of the Government. It proposed that the Senate of the United States should declare that, in their opinion, without regard to the administration, a majority of the people of this Union were to pass laws for the Government. It was to annihilate that body itself, into which the States threw a majority, in distinction from the people. He would not vote for a resolution of a revolutionary character, to annul and annihilate the body that established it. What was the object of the constitution? It was to have the sovereign States represented by the Senate. And yet this body, created to defend the rights of the States as sovereigns, was, by the proposition of the Senator, to raise the hand of a suicide to its own throat.

But, again, what was the proposition as to matter of

SENATE.]

National Bank.

[SEPT. 26, 1837.]

fact? It was vague and indefinite. It was, that whenever a majority of the people of the United States should be in favor of a United States bank, it ought to be chartered by Congress. But what kind of a bank? One within this District, over which Congress had exclusive jurisdiction? Or, like the former bank, with power to create branches in the States? Which did the Senator mean? If the latter, with what propriety could he call on Mr. A., a Senator from Ohio, to say, regardless of the whole people of that State, that he was in favor of a bank, and ready to intrude it into that State, from which they had struggled so hard to expel it.

But what was the force of this resolution? It was a direct invitation to the bank to enter the political canvass for the next four years; to combine and confederate for the purpose of extorting a charter. The late bank, in defiance of the known will of the people of Ohio, and in contempt of her constitutional rights, maintained a branch in that State, and laughed at her sovereignty.

And was Mr. A. to go in favor of a bank, it might be such a bank as that; and was he to be called on to support it on that floor? To vote that it ought to be chartered, because a majority of the people of the Union were in favor of it, when perhaps every man in Ohio might be against it? He would not do it. The resolution was a nullification of the States of the Union, as organized by the constitution of the Government. There might be a large majority of the people of the Union in favor of a bank, while the majority of the States were opposed to it. If the people were to decide, and not the States, let Ohio have her relative strength. The effect of the resolution, and of offering it, was to bring the bank into the political field, for the purpose of restoring this defunct institution. And why? Because the people once expelled it, they would now call it up to regulate the revenue, and to show that Mr. Biddle's bank was unjustly expelled. If the people had erred in its expulsion, might they not err in its revival? In the opinion of some, the people always erred, because they acted against it; and now they had erred because they had once expelled it.

Mr. TALLMADGE said he had voted against postponing the subject, because he thought, if postponed, it would not be discussed. But after the vote on the resolution, that the sense of the majority of the people of this Union was opposed to a bank, ought it not to be granted to be a sufficient indication of the sense of the Senate? He therefore moved to lay the whole on the table.

On the call of Mr. KING of Alabama, the yeas and nays were ordered on this motion; and it was decided in the negative, as follows:

YEAS—Messrs. Bayard, of Kentucky, Clayton, Crittenden, Davis, Fulton, Kent, King of Georgia, Knight, McKean, Nicholas, Prentiss, Preston, Robbins, Ruggles, Smith of Indiana, Spence, Swift, Tallmadge, Webster—20.

NAYS—Messrs. Allen, Benton, Black, Brown, Buchanan, Calhoun, Clay of Alabama, Grundy, King of Alabama, Linn, Lyon, Morris, Niles, Norvell, Pierce, Rives, Roane, Robinson, Smith of Connecticut, Strange, Walker, Wall, White, Williams, Wright, Young—26.

Mr. RIVES said that if the amendment of the Senator from Kentucky should be rejected, then he would feel himself bound to vote against that of the Senator from New York, and for the reasons which had been so stated by the gentleman from Ohio. The terms of the amendment were objectionable, in his opinion, because they seem to overlook a fundamental principle in the organic law of the Union. The relation which the States bore in our system, had been so strongly and ably argued and shown, that he would not say one additional word on the subject. Even if the gentleman from Kentucky were disposed to modify his amendment, so as to read, "that whenever a clear majority of the people and the States should manifest a desire for the establishment of a bank of the United States, then

a bank of the United States shall be established," then he should be opposed to it as an abstract proposition. We came not here to speculate upon what would be proper to do as to the future, but we came to devise and to adopt such measures as might, in our judgment, meet the existing exigencies of the country. We were responsible for our acts, and we must not do any thing of an equivocal character. And, he would say further, that this proposition was not merely abstractory, but was nugatory. To say that whenever a majority of the people of the States deem it expedient a bank of the United States ought to be established, was wholly needless, because then, so far as the legislative department of the Government was concerned, it would be established. But, in our Senatorial capacity, we had nothing to do with the collective opinions of the people of the United States. Every member was to look to his particular constituents; he was not to look to the aggregate majority.

He maintained that gentlemen on the other side were bound to meet the issue of a bank of the United States. The memorials on the subject of a bank had been presented here, and we were bound to discharge our duty and answer them. He would say that it was proper that we should act upon them. It was incumbent upon us to dispose of them.

The honorable Senator from Kentucky had argued that a bank of the United States was the only remedy for the present distress which pervaded the community. That, he (Mr. R.) believed, was not the opinion entertained by a majority of the Senate, nor of the other branch of Congress, nor of the States, nor the people. Then how important it was, this being the state of things, that the sense of the Legislature should be expressed in regard to every remedy proposed? We should have a decision upon the sub-Treasury scheme, in acting upon the bill reported from the Committee upon Finance; and also upon the State bank deposite, in acting upon the bill introduced by himself.

Were we, he would ask, to act upon them, and not give any response as to the other remedy proposed, to wit: the establishment of a United States bank? In his opinion, we should neglect our duty if we pursued this course. For one, he was prepared to give his verdict on it, and he presumed that there was not a Senator on that floor who was not so prepared. If the object of gentlemen was to make an appeal to the nation by discussions on that floor, he would not unduly precipitate the discussion. But he would repeat that he was for meeting the question now. It was an issue in the cause upon which an answer ought to be returned. It was impossible, in the present state of the public mind, that the business of the community could proceed on any satisfactory footing till the legislative authority had spoken on every branch of the subject.

It was for these reasons that he should vote against the amendment of the Senator from Kentucky, and then against that of his friend from New York, which would bring us to a naked vote on the resolution reported by the Committee on Finance, which presented the question of the establishment of a national bank in the simplest and most unequivocal form.

Mr. BENTON expressed his gratification as a North Carolinian, at the auspicious commencement of his Senatorial career by the Senator from Ohio who had just taken his seat, [Mr. ALLEN.] He (Mr. A.) was born in the State of Nathaniel Macon, and delivered sentiments worthy of the school of that great patriot, and delivered it in a style to adorn his station. He had the elevated and constitutional view of the subject, and shown himself to be the defender of the compromises on which this Union was founded, and without which it cannot be maintained. The first of these compromises is found in the structure of this Senate, and its participation in the legislative power. Here

SEPT. 26, 1837.]

Sub-Treasury Bill.

[SENATE.]

the States are represented as sovereign States, and each is equal; and this is for the protection and preservation of the weaker States. Thus, no measure can become law, except by a double sanction—the sanction of the majority of numbers in the House of Representatives, and the sanction of the majority of the States on this floor. The proposition of the Senator from Kentucky, [Mr. CLAY,] to declare that a national bank ought to be established when a majority of numbers is for it, (which majority, by-the-by, cannot be ascertained by petitions, but by votes,) goes to knock off one leg from the constitution, and one without which it cannot stand. It goes to the annihilation of the Senate, of the small States, and of the constitution.

Mr. B. animadverted upon the extraordinary scene of the day—the Bank of the United States manoeuvring to avoid a judgment on this floor, and endeavoring to escape the condemnation she has brought upon herself. How does this question come before the Senate? Upon petitions for a national bank. Whence originated these petitions? From New York, where the blank forms were prepared, and despatched to all parts of the Union, with a letter of instructions, to employ active agents to get signatures, and forward them to Congress in September. Such ready-made petitions came to St. Louis—were printed over again—the blanks filled up—and put into the hands of the city collector to get names. This is the way it was done in St. Louis, and doubtless it was done so in other places. Many of the petitions which had come here, he knew to be copies of the New York form. Well, these petitions were referred to the Finance Committee; they report that the prayer of the petitioners ought not to be granted; that report decides nothing unless it is confirmed by the vote of the Senate, and that vote of the Senate is now what we ask, and what the friends of the bank are manoeuvring to avoid. The bank is defeated by the people in this attempt to storm a new charter out of Congress. The people have not moved in her behalf; few are the petitions, even thus stimulated from New York, which have come in. The bank is sinking faster than ever. Since May last, she has been plunging into the gulf of perdition. The paucity of the petitions prove it; the vote of this day will prove it; and seeing this fate, her friends are playing out all their skill, exerting all their tactics, to extricate her from the doom of condemnation! condemnation upon this floor, where a few years ago she had almost two to one. But she cannot escape; the mortifying doom is at hand. She will be condemned; for these petitions are for her—for the present misnamed Bank of the United States—though nominally for a bank. The whole proceeding, in Congress and out of Congress, is in reference to her; and this is proved by every thing that is said or done.

Mr. B. concurred with the Senator from Virginia, [Mr. RIVES] that the Senate ought to reject all amendments, and vote upon the report of the committee alone—even the amendment which had already been adopted—that of the Senator from New York, [Mr. TALLMADGE.] He had voted for that amendment, and should still maintain it to be true; but the parliamentary course was to vote upon the report of the committee, because that, and that alone, was a response to the petitions.

Mr. BLACK was understood to say that the petition which he had presented had not been got up by the agency of the Pennsylvania Bank of the United States, but originated with the people themselves. If he had had reason to believe that the petition had not, he, most certainly, would not have presented it.

Mr. BENTON replied, and said it was no doubt true that the Senator had not presented any memorials of the character which he (Mr. B.) had mentioned. But he (Mr. B.) had himself presented one from St. Louis, which was copied from the New York petitions, and others of the same description had also been presented here.

Mr. WALKER said he should vote against the amendment, because he was desirous of meeting directly the main question presented in the resolution of the Committee on Finance. He was elected to his present station as the avowed opponent of the creation by Congress of any bank of the United States. Since that period he had seen no occasion to change his views upon that subject. The creation of a national bank at this time, with a capital adequate to regulate all the State banks of the Union, would but increase the existing embarrassments, by the new demand it would create for more funds and more specie, to put it into operation. Mr. W. also believed that such a bank, with a capital and powers adequate for these purposes, would be dangerous to the liberties of the country. The issue of bank or no bank was made in the pending elections in Mississippi; and he (Mr. W.) both before his departure from the State, and since his arrival here, had been repeatedly threatened with legislative instructions to support such an institution. To such menaces he had ever given but one answer; that if instructed by the Legislature to support the establishment by Congress of such an institution, he would most cheerfully resign his station in the Senate, that the State he represented might choose a Senator who could vote for the creation of a national bank. Deeply, most deeply, as he valued the honor of representing in this body the people of Mississippi, it was an honor not to be purchased by a sacrifice of principles which he believed inseparably connected with the liberties of the American people. Those principles he had fully avowed at the period of his election, and he could not desert or abandon them.

The question was taken on Mr. CLAY's substitute, and negatived as follows:

YEAS—Messrs. Bayard, Black, Clay of Kentucky, Clayton, Crittenden, Davis, Kent, Knight, Prentiss, Robbins, Smith of Indiana, Spence, Swift, Webster—14.

NAYS—Messrs. Allen, Benton, Buchanan, Calhoun, Clay of Alabama, Fulton, Grundy, Hubbard, King of Alabama, King of Georgia, Morris, Nicholas, Niles, Norvell, Rives, Roane, Robinson, Smith of Connecticut, Stange, Tallmadge, Walker, Wall, White, Williams, Wright, Young—26.

The question was then taken on the substitute of Mr. TALLMADGE, (once adopted by a vote of 29 to 14,) and it was now rejected by the following vote.

YEAS—Messrs. Linn, Nicholas, Tallmadge—3

NAYS—Messrs. Allen, Bayard, Benton, Black, Brown, Buchanan, Calhoun, Clay of Alabama, Clay of Kentucky, Clayton, Crittenden, Davis, Fulton, Grundy, Hubbard, Kent, King of Alabama, King of Georgia, Knight, Lyon, McKean, Morris, Niles, Norvell, Pierce, Prentiss, Rives, Roane, Robbins, Robinson, Smith of Connecticut, Smith of Indiana, Spence, Strange, Swift, Tipton, Walker, Wall, Webster, White, Williams, Wright, Young—43.

The original resolution as reported by the committee, was then adopted as follows:

YEAS—Messrs. Allen, Benton, Brown, Buchanan, Calhoun, Clay of Alabama, Fulton, Grundy, Hubbard, King of Alabama, King of Georgia, Linn, Lyon, McKean, Morris, Nicholas, Niles, Norvell, Pierce, Rives, Roane, Robinson, Smith of Connecticut, Strange, Tallmadge, Walker, Wall, White, Williams, Wright, Young—31.

NAYS—Messrs. Bayard, Black, Clay of Kentucky, Clayton, Crittenden, Kent, Knight, Prentiss, Robbins, Smith of Indiana, Spence, Swift, Tipton, Webster—14.

SUB-TREASURY BILL.

The Senate then resumed the consideration of the sub-Treasury bill.

Mr. MORRIS moved to amend the bill as follows:

Strike out all after the enacting clause, and insert the following:

SENATE.]

Sub-Treasury Bill.

[SEPT. 27, 1837.]

"That no bank note of a less denomination than those authorized by existing laws to be paid out by the United States, nor of any bank that shall issue notes of a less denomination than five dollars, shall hereafter be received in payment to the United States for lands, duties, taxes, or other dues, or to the Post Office Department, for postage, fines, forfeitures, or on any other account; and the joint resolution entitled "a resolution relative to the more effectual collection of the public revenue, approved thirtieth of April, eighteen hundred and sixteen, shall be so suspended in its operations that bank notes shall cease to be receivable in payment as aforesaid, as follows: from and after the first day of January, eighteen hundred and thirty-eight, not more than three-fourths of any payment to be made to the United States for lands, duties, taxes, or other dues, shall be received in bank notes: after the first day of January, eighteen hundred and thirty-nine, not more than one-half shall be so received: from and after the first day of January, eighteen hundred and forty, not more than one-fourth shall be so received; and from and after the first day of January, eighteen hundred and forty-one, the aforesaid resolution shall be repealed, and all payments to the United States for lands, duties, taxes, or other dues, and all payments to the Post Office Department for postage, fines, forfeitures, or on any other account, shall be in gold and silver coin only, or in such notes, bills, or public securities, issued under the authority of the United States, as shall be directed to be received by law: and from and after the first day of January, eighteen hundred and forty-one, every officer or agent engaged in making payments or disbursements on account of the United States, or of the Post Office Department, shall make such payments or disbursements in gold and silver coin only, or in such notes, bills, or public securities, as shall be authorized by law to be so paid or disbursed; and every disbursing officer, or agent, who shall neglect, evade, elude, or violate the provisions of this section, shall be dismissed from the service, and shall also forfeit all compensation which shall then be due such officer or agent: *Provided, always,* That no bank note shall be received in pursuance of this or any other act of Congress, other than the notes of banks who discharge their liabilities and redeem their notes in specie on demand."

The amendment, after some conversation, was accepted by Mr. CALHOUN as a modification of his own amendment.

The modified amendment was then ordered to be printed; and,

On motion of Mr. LYNN, the Senate proceeded to the consideration of Executive business, and, on opening the doors, adjourned.

WEDNESDAY, SEPTEMBER 27.

SUB-TREASURY BILL.

The bill imposing additional duties on public officers, making them depositaries of the public revenue, together with Mr. CALHOUN's amendment thereto, being taken up,

Mr. WALKER rose and said: the Senator from Kentucky [Mr. CLAY] has just explained to the Senate the causes which, in his judgment, had produced the existing embarrassments. Among these causes, he enumerated the effort made last year in this body to reduce the tariff. This position appears to me most extraordinary. The manufacturing, as well as every other interest in the United States, had been greatly stimulated by the wonderful expansion of the bank paper system; and if it had been checked, as the Senator from Kentucky supposed, by that effort to reduce the tariff, the overaction of the manufacturing interest had been so far diminished, and the revulsion which followed must have proved less disastrous in its results. If, indeed, the artificial stimulus of an augmented tariff had been superadded to the expanding influence of the banking sys-

tem, the manufacturing interest would only have been lifted for the time to a greater height of seeming prosperity, to have received, from the revulsive shock which followed, a fall more fatal in all its consequences. If, then, the manufacturing interest, as is clearly shown, received no injury from the effort in this body in February last to reduce the tariff, still less could that failure have affected injuriously any other great interest. It was sufficient, in answer to this argument of the Senator from Kentucky, to say, that this effort to reduce the tariff was unsuccessful. But if it had succeeded, I cannot perceive how a reduction of the taxes of the people could have increased or brought on the present disasters. On the contrary, I shall endeavor to prove hereafter, in the course of this address, that the reduction of the revenue to the wants of the Government would have greatly alleviated, if not altogether prevented, the existing embarrassments. The money would have remained in the pockets of the people, and would not have gone into the deposit banks, to have augmented their funds, and increased that inundation of paper money, in the reflux of which we now find wrecked and stranded all the great interests of the country.

But the Senator from Kentucky, as the great and distinguished champion of the tariff policy, might well oppose the measure now under consideration. That measure was to continue, now and forever, the existing separation between the banks and the General Government. This fatal union of bank and State, it seemed to have been overlooked, was clearly calculated to produce a powerful alliance between the banking and tariff policy. So long as the banks are continued as depositories of the revenues of this Government, it is their interest to increase those revenues, and thus augment their deposits and dividends. By increasing the tariff, the banks then increase our revenues, and augment their deposits and profits. Hence, it is, that, with so few exceptions in this body, the friends of the tariff are found united in the effort to restore the former connexion between the Government and the banks as the depositories of the public revenue. The re-alliance between the tariff and the banking policy would be most formidable indeed, and should be resisted at every step of its progress by the great agricultural interest of the country. There was too much reason to fear that the great battle between the friends and opponents of free trade must be fought over again in 1842, when the tariff reached the lowest point in the scale of descending graduation. I look forward to that period as the most critical in the future history of the country. It would then, perhaps, be finally decided, whether the tariff should be permitted to remain at the revenue standard, or whether it should be augmented and enlarged, to advance one favored interest by spoliation committed upon another—by the collection of taxes beyond the wants of the Government. In looking forward to this period, and the final adjustment of this great question at that time, I can vote for no measure which would make it the interest of the banks to augment our tariff and revenues, with a view to the increase of their deposits and dividends. The banking interest of the country was already great and powerful. It consisted now of eight hundred and twenty-three banks, and what might be the number in 1842, if again stimulated by heavy deposits, no human foresight could predict or determine; but it, in the next five years, it augmented in the same geometrical ratio as the last, we should have in 1842 nearly sixteen hundred banks, with a capital approaching one thousand millions of dollars. Especially—judging of the future by the past—would this increase in the number of banks be greatly promoted by reuniting them with the Government as depositories of the revenue. And shall I, a Senator from a State raising now nearly one-fourth of the great staple of the South, and destined soon to stand at the head of the great exporting States in the Union—shall I aid, by my vote, in bringing either now or in 1842,

SEPT. 27, 1837.]

Sub-Treasury Bill.

[SENATE.]

this great banking interest of the country in aid of, and alliance with, the tariff policy?

But if the re-alliance between the banks and the Government would consummate the union between the banking and tariff interests, the discontinuance of the banks as depositories of the revenue, under the provisions of this bill and its amendments, will make it the interest of the banks to oppose the augmentation of the revenue. By this bill, the banks are at once and forever discontinued as depositories of the revenue; and by gradual and successive steps, commencing now, and going fully into operation in 1842, no bank paper after that period will be received in payment of the public dues; and consequently, after that date, these payments must be made chiefly in gold and silver. Now, the great argument of the friends of the bank deposit system is, that this bill will diminish the specie in the vaults of the banks, by substituting that specie for bank notes in revenue payments. So far as this effect may ultimately be produced partially by this bill, it will make it the interest of the banks to diminish the tariff and the revenue, so as to diminish the calls upon them for the redemption of their notes in specie, to be used in revenue payments. The smaller the amount of the revenue, the less will be the influence of this bill in diminishing the circulation and profits of the banks. Thus, if under this system the Government collected little or no revenue, the bill under consideration would have little or no effect upon the circulation of the banks; whereas, under such a tariff as that of 1828, the revenue from duties would amount now to nearly fifty millions of dollars, and produce a wonderful curtailment of the circulation and profits of the banks. The banks, then, now, as well as in 1842, under the system we propose, would be directly interested in diminishing the revenue and keeping down the tariff.

Nor is it less obvious that, upon the same principles, the adoption of this measure would make it the interest of the banks to diminish the revenue from public lands, by a reduction of their price, and by confining the sales to actual settlers; for otherwise, the prodigious sales of the public lands for speculation, at existing prices, which amounted, during the last two years, to near forty millions of dollars, would produce such a presentation of the notes of the banks for specie to pay for the lands, as greatly to curtail the circulation and profits of these institutions. But if we continue the late system of bank depositories, and of receiving bank paper for the public revenue, it becomes the interest of these institutions, as was clearly proved in 1835 and 1836, to augment their deposits by increasing, through loans, the sales of public lands. Indeed, under this system, nearly the whole of the public lands worth purchasing, would have passed, in a few years, into the hands of speculators—whole townships and counties being covered at an entry, by quires of bank paper, to be redeposited in a few days in the banks which had loaned the money. As, then, this bill is calculated to keep and bring down the tariff and the price of the public lands, and limit the sales to actual settlers, upon what principle can I refuse to sustain it? From the first moment of entering this body, I have invariably opposed the surplus distribution policy, in all its forms and under every aspect; and as invariably advocated the reduction of the revenue to the wants of the Government, by reducing the tariff, reducing the price of the public lands, and confining the sales to actual settlers or cultivators; and shall I now oppose a bill which must prove so powerful an auxiliary of these great measures?

Nor is it less obvious that the re-establishment of a great bank of the United States as the fiscal agent of the Government, would be a still more powerful ally of the tariff policy. It would be equally its interest to increase the tariff, and thus augment its deposits and dividends. And if, as we are informed by its friends, it could become the regulator of the State institutions, existing, as Mr. Biddle

has told us, by its forbearance, it could, at its pleasure, wheel into column this army of dependent corporations, as auxiliaries of the great bank power in augmenting the tariff.

But the Senator from Kentucky, among other causes which he enumerated as producing the present disasters, was the veto of his land bill in 1832, by ex-President Jackson. Now, by the provisions of that bill, the nett proceeds of the sales of the public lands for the years 1833, 1834, 1835, 1836, and 1837, were to be distributed among the States. By a reference to the public documents, it appears that these sales amounted to about sixty millions of dollars. This sum was to be irrevocably distributed among the States, and was to be lost forever by the General Government. Now we have already distributed twenty-seven millions of dollars among the States, and are compelled to make a temporary loan of ten millions of dollars, as authorized by the bill which has already passed this body, rendered necessary by a deficit in the public revenue. Now this bill of the Senator from Kentucky would have increased this deficit to forty-three millions of dollars, as proved incontestably by the facts and documents now before us. This bill, then, would have reduced us to a most disgraceful bankruptcy. It would have involved us in a new national debt, and rendered an increase of the tariff inevitable. By this operation, the State of Mississippi, where it received one dollar, would have been compelled to pay back three, by the operation of the tariff, reducing the price of her staple, and depressing the great agricultural interest of the whole country. Such would have been the glorious effects of this measure—such the relief it would have extended to the community. Its relief would have been an immense national debt and oppressive taxes. In the session of 1835, 1836, the Senator from Kentucky again advocated the passage of this bill, when I thought it my duty to oppose the measure, and point out the evil consequences which the result has shown would have flowed from its adoption. At the last session, the Senator from Kentucky again introduced a similar measure, grasping for distribution these sales of the public lands, for the past as well as for the future, and terminating only on the last of December, 1841. This measure would have reduced the Government to still more irretrievable bankruptcy. But the worst of its effects are yet to be told. This bankruptcy, and its associated national debt, would have occurred or accumulated at the commencement of the year 1842—the very year for the final adjustment of the tariff under what is called the compromise act, when this accumulated debt would have rendered it impossible to prevent an augmentation of the tariff.

Such would have been the effects of the various land bills of the Senator from Kentucky. But, if that Senator could have united with me in the support of the land bill introduced by me the session before the last, reducing the price of the public lands in favor of settlers and cultivators, confining the sales to them, the present disasters, in all probability, would not have overwhelmed us. We should have had little or no surplus. The enormous sales of public lands to speculators, amounting, in two years, to about forty millions of dollars, produced this surplus. These sales would have been prevented by the passage of that bill. This surplus, as I took occasion then to predict, has been the potent cause of the present disasters; and the deposit, the fatal deposit distribution bill, with its no less fatal equalizing supplement, so strenuously opposed by me, precipitated the great catastrophe. This forty millions of surplus deposited with the banks has been regarded by them as capital, and upon it they have extended their issues to an extent unprecedented. This inflation of the currency caused overaction in all the departments of trade and business. The banks not only swelled their issues, but, as a necessary consequence, paper credit of every description increased to an alarming extent. Prices rose incredibly, and

SENATE.]

Sub-Treasury Bill.

[SEPT. 27, 1837.]

every thing found a purchaser, upon credit, at almost any price. Mercantile acceptances, founded not on money or produce, but on credit only, were augmented to an extent heretofore unknown. New York and New Orleans, being the greatest theatres of these operations, were the first to feel the shock—the first link in the chain of paper credit breaking at New Orleans, and the next in New York. These calamities, though no one could tell the precise moment when the catastrophe would come, were clearly designated in the report in favor of the land bill, presented by me two sessions ago. The means, also, of guarding against these calamities, were fully pointed out in that report. These means were, to pass the land bill at once, and prevent the accumulation of that surplus which afterwards rose to forty millions, and swept before it the banks, the Government, and the people. I will only trouble the Senate with one short extract from that report:

"It is, then, the interest of the whole Union that those monopolies of the public lands should be arrested, and that capital should continually flow in the various channels of productive industry. If, among other causes, the existing embarrassments are now greatly attributable to the speculating investment of millions, during the past year, in wild lands, what will be the result if the system is permitted to continue for a series of years unabated? It is easy to foresee that the necessary consequence will be increasing distress and embarrassment, or at least a diminution of the national prosperity."

At that session this land bill could scarcely obtain a hearing, and the predictions of the report portraying the disasters that would occur from the refusal to prevent the accumulation of the surplus, were treated as wild and visionary. We were careering onward upon the tide of an unreal prosperity, and no one could be induced to look forward to that shore where the mighty vessel of the Government itself was destined so soon to be wrecked and stranded. But, at the next session, when, as the report had predicted, whole States had been covered by speculative entries of public lands, with bales of bank paper obtained by loans of this accumulated surplus, then, at last, when perhaps even then it was too late, this land bill obtained a hearing. It passed the Senate, but was, most unfortunately, defeated in the House, as also was the bill reducing the tariff; then, for the first time, we set seriously to work to reduce the revenue to the wants of the Government, and the new deposit distribution project of the last session was defeated, on my motion, by the casting vote of Vice President Van Buren. And shall we not all learn from the catastrophe which followed the surplus, the fatal tendency of that policy, and that the only path of safety for us is to reduce the revenue to the wants of the Government.

The next great question presented in the address of the Senator from Kentucky, was the creation by Congress of a national bank, as the only measure, in his opinion, calculated to relieve the distresses of the country. Why then has he not favored us with his project of a charter, that it might be examined by Congress, and by the nation? This the Senator had not done, and his failure to present his plan would be regarded in no other light than as an acknowledgment of the great and intrinsic difficulty involved in such a question. Surely that Senator could not ask the Senate to vote against the measures now under consideration, unless he proposed some substitute. None, he presumed, was so entirely confiding, as to take upon trust any and every charter of a bank which that gentleman might think proper for the present contingency. Let us see the bill with all its specific provisions, that Congress and the country may compare it with the measures now under consideration, and decide between them with full light and knowledge upon the whole subject. However great the confidence which any portion of the American people might repose in Senators opposed to the administration, he hardly

thought the nation would be carried away by any vague or indefinite proposition; any clamor, however loud, for a national bank—a national bank, when the charter was withheld from their consideration. I now call upon the Senators opposed to the administration for their specific plan of relief; for a view of their proposed bank charter; and if this were refused, it must either be conceded that they can present no practical project, or the charge of non-committalism, which had been so industriously circulated, but without the shadow of foundation, against the President of the United States, must recoil on those who made it.

But although the Senator from Kentucky had not favored the Senate or the country with the provisions of his proposed bank charter, yet he has designated the means by which at least a portion of the specie necessary to constitute a part of the capital of the bank, may, in his opinion, be obtained. He tells us that fifteen or twenty millions may be obtained from abroad; and that if we object to the supposed influence which the foreign stockholders would have in the institution, to prevent such stockholders voting in the election of directors. We have tried this heretofore, and it did not prevent this influence. The fact is, the ownership of so vast a portion of the stock of the bank by British lords and bankers, would necessarily give them a powerful influence over the institution, and enable them, by an alliance formed between the American and British banks, to control the moneyed transactions of both countries, and to elevate or depress the price of property at their pleasure. The Senator from Massachusetts [Mr. WENSTEN] had, a few days since, derived this power of creating a national bank from the authority given to Congress to regulate commerce; but, were this position correct, which was not conceded, are we prepared to surrender this power of regulating commerce to any great irresponsible moneyed corporation, much less to such a corporation, composed in part of any portion of the British aristocracy—the hostility of so many of whom to our republican institutions was so well known and clearly defined? To trust in whole, or in part in their keeping the moneyed and commercial relations of this great republic never would be permitted by the people of the United States. Besides, were we willing thus to procure this amount of specie from England for these purposes—if the argument of the friends of a national bank in this body be true, that, what they have been pleased to call the forced importations of specie into this country, produced by the policy of the late administration, has caused a comparative scarcity in Europe of the precious metals, and partly occasioned their and our existing embarrassments, and the fall of cotton and of prices generally—what, we may ask, would, upon these principles, be the effect of this sudden and immediate demand upon England, at this period, for fifteen or twenty millions of specie? It is in vain to suppose that we could, at this period, put a national bank in operation, by borrowing in England fifteen or twenty millions in specie. No, we would have to look among ourselves for the stockholders, for the nation would permit no others; and the specie to put such a bank in operation must also be looked for among ourselves.

A national bank, capable, according to the theory of its friends, of regulating the existing State banks, including the regulation of their late alleged regulator, the Bank of the United States, rechartered by Pennsylvania, must possess an actual capital, as I shall prove hereafter, of at least seventy millions of dollars, and, so far as paid in, consisting of gold and silver. No one would propose a bank, whose capital was not paid up; for the bubble business of creating banks on the stock notes or credit of the stockholders, could have no advocates in this chamber. Such a bank must commence its career on capital, not credit. Now, how is this capital to be obtained? Not as formerly by Government stock; for we have no debt to represent that stock, as

SEPT. 27, 1837.]

Sub-Treasury Bill.

[SENATE.]

we had in 1791 and 1816, when the first and second banks of the United States were created, and no one would presume to ask that the Government should be involved in a new national debt, (inviting a renewal of the tariff,) for the purpose of creating a national bank. In 1791, three-fourths of the capital of the national bank then created, consisted in the securities or funded debt of the United States, bearing a fixed interest, and redeemable from the public revenue at specified periods. A large portion of the capital of the second bank, consisted in five per cent. stock of the Government, representing a portion of the national debt, and redeemable at fixed periods. Of the thirty-five millions of capital of this bank, when all paid in, twenty-one millions consisted of this public debt. We have now no funded or other debt to assume the shape of public securities, and constitute any portion of the capital of a national bank. How, then, is the capital of a new bank to be paid in? It can only be paid in stock notes of the subscribers, or State bank notes, or gold and silver. No one would propose the first method, and, if proposed, it would give no real capital to the bank, but begin and end in bankruptcy. The second method of payments, none would propose, for the depreciated paper of broken banks would constitute no capital upon which the new bank could issue a paper convertible into gold and silver. The precious metals, then, could alone constitute the sole capital of the bank. Now, let us suppose the bank chartered, and with a capital of seventy millions. Where, at the present period, is this enormous amount of gold and silver, or any large portion of it, to be obtained? Not from Europe, as we have seen; and if attempted now in this country, even to the extent of fifteen or twenty millions, it would prevent, by this new demand for the precious metals, the possibility of the resumption of specie payments by the banks, or cause them immediately to suspend again, if they should resume specie payment. The passage, then, of a national bank charter at this time, with an adequate capital, would greatly injure, if not entirely overthrow, the banks of the States, and render still more intense the existing distresses. But were all these difficulties removed, and were such a bank put in operation, by depriving the State banks of the means of obtaining the gold and silver necessary to resume specie payment, the emission of the notes of the new bank would still further depreciate the paper of the suspended institutions, and involve most of them, and large masses of the people in one common bankruptcy. It is time, then, that those who look to the establishment at this period of a national bank, should awake to the reality, that such an event would, at this crisis, prevent the resumption of specie payments by the State banks, depreciate their paper, so as almost to drive it out of circulation, or at least render it not receivable in payment of debts, unless at a ruinous discount, and increase and prolong the existing embarrassments. Nor should it be forgotten that, even if the attempt were now made to procure from England the necessary specie to put a national bank in operation, at the very time when so many of the State banks are endeavoring to obtain it from the same source, both could not succeed; and the suspended banks, being the weaker power, would be broken down in the conflict.

But suppose the bank chartered and put in operation, with, for the sake of argument, the power claimed by the friends of the late Bank of the United States to regulate and control the State institutions. The capital of a new national bank, adequate at this period for these purposes, must consist, as heretofore stated, of at least seventy millions of dollars. The number of the State banks, when the late Bank of the United States was created, was usually estimated at two hundred, and their capital one hundred millions of dollars. The number of these institution at this period is eight hundred and twenty-three, and their capital about three hundred millions of dollars. If, then,

the augmentation of the controlling power is to bear any proportion to the increase of the number and capital of the institutions sought to be controlled, the capital of the new regulator must be at least double that of the old one, which would make it seventy millions of dollars. But we must also consider that the new bank must not only have adequate powers to control the eight hundred and twenty-three State banks, but also to control the very power which is claimed to have regulated them, continued in existence by the State of Pennsylvania, under a charter which its very able president (Mr. Biddle) tells us renders that bank stronger and more powerful than it was under its former charter. The new bank, then, must be able to control the regulator and the regulated; and as the former must have been more powerful than the latter, the capital of the new bank must be at least double that of the old one. Indeed it must be much greater, in the precise proportion in which the power of the old bank as a regulator exceeded that of the institutions over which it exercised a control. Seventy millions, then, is the least capital, upon which the new bank can be asked to be created, with adequate powers to regulate the State banks, and control the currency. Under the old system, the late Bank of the United States was regarded by its friends as the sun of the moneyed system, and the State banks as stars revolving round the central power. This sun and those stars are still in existence, though all have been madly shooting from their spheres, and the new bank orb must have power enough to control and regulate the whole system, and to recall the greater and lesser lights from the eccentric orbits in which they are now revolving. And are we prepared to create a power of such great, such terrific magnitude—a power wholly irresponsible to us, or to the people, and greater than the Government itself? Is it not clearly seen, that an institution of such overshadowing power, with a capital of seventy millions, and regulating a State bank capital of three hundred millions, would not merely regulate the banks, and currency, and exchanges, but would also regulate and control agriculture, commerce, manufactures, and the price of all property and of all products throughout the whole Union. The prosperity of the whole country, and of the whole people, would be subject to its controlling power, and he who would be willing to create such a power, in the hope that it would be its interest and desire to promote the public welfare, must be prepared for a despotic Government, in hopes that the identity of interest between the monarch and his subjects would make him a kind and forbearing master. But, unfortunately, it is not always the interest of the mighty head of the banking system to promote the public welfare. On the contrary, when, from its anxiety to accumulate heavy dividends, it has expanded to the utmost point the bank circulation, and when the revulsion comes, as come it must, this mighty power must either fall itself, or in its efforts to sustain its credit by the recall of its issues, and the curtailment of its loans, spread ruin and dismay throughout the country. If any doubt the truth of this position, let them look back to the panic of 1834, when the late Bank of the United States curtailed its issues so many millions, within so short a period, and so nearly produced the catastrophe which now overwhelms us. Or, if any suppose that these curtailments were the necessary result of the conflict between the Government of the people and the government of the bank, let them look back to the period of 1818-'19, when the relations of the bank and of the Government were of the most friendly character. Mr. Cheves, in 1819, president of the Bank of the United States, in his official expose, then published, tells us that the curtailments of the bank were "within the period of eight months, eight millions of dollars and upwards;" and yet it was brought to the brink of ruin. In the same official document, Mr. Cheves says: "On the 12th of April, 1819, the bank had in its vaults

SENATE.]

Sub-Treasury Bill.

[SEPT. 27, 1837.]

but \$71,522 47, and owed to the city banks a balance of \$196,418 47; and its circulation was still "six millions." He concedes that the suspension of specie payment by the bank was considered nearly inevitable. Such was the condition of the great regulator in 1819, with one dollar in specie for every hundred of its circulation, and expecting every moment to be compelled to suspend specie payments. So far from being enabled to regulate the State banks, which almost universally failed then, as now, this great regulator was brought to the brink of ruin. It was saved, and barely saved, by its successive curtailments; but the State banks were destroyed by the operation, and the country ruined. Speaking of that gloomy period, Mr. Niles in his Register of that date says: "From all parts of our country we hear of a severe pressure on men in business, a general stagnation of trade, a large reduction in the price of staple articles—real property is rapidly depreciating. Many highly respectable traders have become bankrupts; three per cent. per month is offered for the discount of promissory notes, which a little while ago were considered as good as old gold. There are 20,000 persons daily seeking work in Philadelphia; in New York 10,000 able bodied men are said to be wandering about the streets looking for it; and, when we add to them the women who desire something to do, the amount cannot be less than 20,000." Such is a picture of that gloomy period, as it will be found portrayed in all the public journals of that date. The whole country presented one boundless expanse of ruin and desolation. And how produced? By the enormous expansions, and as sudden contractions, of this great regulator, the Bank of the United States. The present Bank of the United States, proclaimed by President Biddle to be stronger under its present than its former charter, has failed to regulate the currency even in the State of Pennsylvania; but this very bank, although conducted by one of the most remarkable financiers of this or of any other country, as well as the rest, has suspended specie payments. This same institution, under its late charter from Congress, failed to regulate the currency in 1819, when the local banks broke almost universally; and the old bank of the Union did not succeed as a regulator when, in 1808-'9, during the existence and full operation of that bank, there was a general failure of the banks of New England, then being about one-third in number of all the banks of the Union. The attempt, then, to regulate the currency by a Bank of the United States, ever has been a splendid failure. The experiment failed in 1808-'9, under the regulation of the old bank of the United States. It failed under the dominion of the late Bank of the United States in 1818-'19, and it failed again under the continued existence of the Pennsylvania Bank of the United States; substituting, as it did, agencies for branches in the various States, and stronger (as the distinguished banker at its head has told us) under the new than the old charter. At last, the mighty regulator has stopped itself; and, so far from aiding, opposes the efforts of the State banks of New York to fix an early day for the resumption of specie payments. But even in its prostrate condition, this mighty institution, under its new charter, is entering upon a new field of power and speculation. Heretofore it only professed to regulate the State banks, and exchanges, and currency; now it is regulating the price of cotton, and of all commodities affected by it. It has turned cotton broker, and recently purchased an amount of our great staple, usually estimated at three millions of dollars—purchased at a period of the greatest depression, produced, in part, by the panic appeals and gloomy pictures of its organs and advocates—and will soon sell out at an advance, only afterwards to depress the market again, and make new purchases and new speculations. Nor is this all: in addition to its agencies in the States, procured by the wholesale purchase of several of the State banks, and the employment of other dependent institutions, it has estab-

lished one of its own officers as a permanent agent in England, with an immense salary, there to overshadow our minister by the affiliated power of its British stockholders and British bankers, to control forever the price of all our exports, and in fact our whole commerce. Thus may this formidable alliance, by periodical contractions of the paper system, and the panics which ensue, bring down the price of our great staple, and purchase the crop when it is low, only by succeeding expansions and a consequent increase of the price, to sell when it is high, and renew from time to time these ruinous expansions and contractions whenever it, or its British bank allies, now openly proclaimed and fully organized, think proper to renew the speculation. By this means, if this mighty bank power does not regulate that slavery of the South, so much denounced by so many of its organs and advocates upon both sides of the Atlantic, it controls the value of slave labor and the price of all its products. Cotton rises or falls, as the bank desires to sell or to purchase, and so does every other commodity affected by the price of our great staple. And shall I, an advocate of free trade, an opponent of tariff or bank monopolies, be asked to place my constituents and their property beneath the control of this powerful institution, by giving it a new charter from this Government, or by making it a depository of the national revenue? And, if not, shall I be asked to create a still more powerful institution, to regulate more than eight hundred State banks—to regulate this very Bank of the United States—and control the price of all property and all products? Who does not see, that before a year, the president of the present Bank of the United States, with his great American and British allies and stockholders, would be at the head of the new institution, with increased and increasing power, and the old bank, and the dependent State institutions, all regulated by the new bank potentate, would be but the subjects, existing by the forbearance of the mighty paper monarch. And shall I aid in creating this enormous, this irresistible central power? Shall I give it this triumph over the people and over the States? subjecting the price of all their property, and all their products, to its expansions and contractions, and following, to some distant capital, the seat of the new moneyed power, with my constituents as captives, suppliant captives, in the triumphal procession of this more than Roman conqueror. No one acquainted with political economy can deny that the power which creates and regulates the issues of paper money, and augments or diminishes it at its pleasure, and thus makes money plenty or scarce, does control the price of all property and all products, and the wages of labor and industry. This is the very regulating power claimed for the bank and its advocates. The tariff controlled the pursuits and business of men—giving temporary and artificial success to one branch of industry, and one section of the country, by the entire overthrow of other branches of industry, and other sections of the Union. But this is worse than the tariff; for that at least was regulated by the Representatives of the people and of the States, whilst this is a great irresponsible power, placed by its charter, for a series of years, above and beyond the people; its managers not chosen by the people, or subject to their instructions or recall, but electing its own officers, responsible only to the power of the bank itself, and deciding in secret conclave upon the destinies of the nation, and the price of all the products and all the property of every citizen.

And who will ask, not merely the re-establishment of a similar power and similar institution, but the creation of a new and infinitely greater power—a mighty institution, capable of controlling the former regulator, and all its dependent corporations? Who does not see that such a bank, with such regulating and controlling powers, would be stronger than the Government itself, and would control all its operations, either as its ally or conqueror? If it came

SEPT. 27, 1837.]

Sub-Treasury Bill.

[SENATE.]

as an ally—as it must be—of the administration which created it, it would unite here the powers of the bank and the Government, and terminate in a sordid central despotism. Talk not of the President or Congress of the people, when such an institution shall have been created. Our real President would be the president of the bank—our real legislators the directors of that institution; and the States—the States, subdued by the same influence—would gradually sink as undiscoverable spots upon the orb of a resistless central power. An ambitious President, aided and sustained by such a terrific and corrupting influence, could indeed strip us in a few years of all but the forms of constitutional freedom; and the Government would be merged in the bank, or the bank be merged in the Government. This merger took place in France, in 1718, between the bank and the Government, and it has nearly taken place in Great Britain. Here the union would be inevitable, whenever the bank places a President in power, and succeeded, through him, in obtaining a charter.

Yes, the creation of this great bank power, to become the ally of the British bank and bankers, is indeed a question not only affecting the forms of our Government here, but a question whether these States shall be re-colonized—whether the English bank, and its American allies, shall regulate all our commerce, and the price of all our products. It is now boldly asked that England should have a vast circulation of gold and silver, but that we should have very little silver, and no gold, and substitute bank paper, controlled by the power which retains the metals. That money should be debased in value here, to enable England to control our business and circulation—that England may sell her imports here at our paper prices, whilst she gives for our exports the diminished price arising from a metallic or chiefly metallic currency. No nation could long stand the operation of such a system; but the exporting States, the price of whose staple depends chiefly upon the English market, and not the amount of American paper money, would soon be reduced to absolute bankruptcy. With the expansion of the paper money here, every article the planter desires to purchase would be enhanced in price, whilst his cotton, regulated by the English market and currency, would remain nearly stationary; till soon the expense of raising cotton would be so greatly increased, whilst the price of the article remained nearly the same, that little or no profit would be derived from the culture. It is not the nominal paper prices of property here that gives real prosperity to the planter, but the nett profit upon the staple he raises, in calculating which the expenses of raising the article, arising from the expansion of American paper money, is precisely so far a diminution of his profits. Upon the exporting States, then, is thrown nearly the whole burden of this system. They participate in all the evils of an explosion, and during the expanding process, whilst they give more for every article connected with conducting a plantation, their great staple experiences no correspondent rise, being governed by the less inflated European money market. To illustrate this position, suppose, from the absence of bank paper, the expense in Egypt, the East Indies, or Brazil, of raising cotton, including the interest on capital, was one cent per pound, whilst here, from the paper expansion, it was six cents per pound; how long could we withstand the competition—the cotton of all other countries bringing in Europe the same price as our own? Is it not evident that a few years more of expansion of the American paper system would reduce the exporting States to absolute bankruptcy, and the whole country to the most abject dependence on the money power of England—selling high her imports here by the false standard of our paper money, and purchasing low all our exports at the price regulated by her less inflated currency? In

this way, England would vastly retard our actual increase of national wealth, by selling her imports to us at our paper prices, for a vast amount, and giving us a less price for our exports, estimated by her nearer approach to a metallic currency. Is it not seen, in this exchange of imports for exports, we get, for the same money, fewer imports, and England more exports, by the precise ratio in which imports are raised in price here by our paper money, and exports depressed by being measured by a currency more nearly metallic, and thus the whole nation sustains a great loss?

It would be most curious and instructive to compare tables from 1800 to the present period, representing the prices current of cotton, of domestic produce consumed wholly in the United States, and the amount of paper circulation. These tables I have neither had the time nor the opportunity to prepare; but this much must be known to every Senator, that as the paper money, before an explosion, rose in amount, domestic produce rose also, whilst cotton at the same period repeatedly fell—being regulated by the European money market. One fact alone will be conclusive evidence of the principle, that whilst from 1815 to 1825, the prices of our cotton, including Sea island, averaged eighteen cents per pound, from the latter period to 1835, inclusive, the average price was less than twelve cents per pound; whilst from 1815 to 1835, our paper circulation has nearly doubled. The price of our cotton, then, instead of augmenting with the increase of our paper money, has actually greatly fallen under the operation. The expanded paper money system operates as a perpetual tax upon the planter; and nothing is more clearly demonstrable than that, if every expense attending the conducting of a cotton plantation, including the property itself, rose in the same proportion, for the next, as it had done for the last three years, whilst cotton remained stationary, we should be compelled to abandon the business as altogether unprofitable.

Nor will a national bank prevent these expansions in this or any other country. The Bank of France in 1718, so prosperous in the commencement of its career, was soon over-extended, and burst with a fearful explosion, leaving upon the hands of the people four hundred millions of worthless paper, spreading in every direction ruin and dismay, and convulsing the very foundations of the Government. Paper money was nearly abandoned in France, for more than half a century; and when it rose again out of the horrors of the French Revolution, again it exploded, with consequences, if possible, more terrific than before; and now no bank note under one hundred dollars is issued in France; and more than three-fourths of her circulation is gold and silver. In this country, we see now the great Bank of the United States, proclaimed by its president more powerful under the new than the old charter, prostrate and suspended; we see the same institution in 1819 reduced to the verge of bankruptcy, with one dollar in specie for every hundred dollars of its notes in circulation; and at the same period, as well as in 1808 and 1809, we have seen the State banks failing under the regulations of the Bank of the United States. The defect is in the system; for it is alike the interest of a national as of State banks, to expand their issues, with the view of augmenting their profits. Expansion is the vice of the entire system; contraction must soon follow, and suspension terminates the scene; and when a national bank suspends, associated as it must be with the Government, and connected with all the pursuits and interests of the people, the catastrophe must be great and overwhelming. The Government which created such a bank, might be held responsible by the people for the dreadful calamity; and amid their agony and despair, they might seek relief in revolution. Let us be most thankful that we were saved, as it were, almost by a miracle, from the failure of the national bank in 1819; and

SENATE.]

Sub-Treasury Bill.

[SEPT. 27, 1837.]

let no friend of this Union ever desire to subject it to a similar hazard.

But we are told that the State banks, or nearly all, bear evidence to the regulating powers of the United States Bank, and desire its recharter. It is interest that prompts this action on the part of the banks, because, by the creation of a national bank, they are enabled to conduct their business with less specie; and, consequently, with more profit. Let us illustrate this by a few examples. Without a great overpowering national bank, substituting its paper for specie, the banks of New Orleans and Natchez must keep in their vaults a larger specie basis, to supply the demand of the up-country traders and producers, who, upon their return to their respective States, take home these balances in gold and silver. To meet this demand, these banks must, in the absence of a national bank, issue less paper, or keep on hand a larger supply of specie. If, then, we look to the period when the Bank of the United States was in successful operation in the Southwest, their banks are found to possess very little specie, and much less specie, as shown by their returns, in proportion to their circulation, than at the present period. And why is this? The circulation of the paper of the Bank of the United States, in addition to the amount in the possession of the State banks, constitutes their basis of operations, and is substituted for the specie in their vaults. In the mean time, the paper of the national bank is substituted for specie in the general circulation. It expels the specie from the country, or prevents its importation, by preventing the use of and demand for it to settle balances due in the different States. Never, then, can we hope to have, under such circumstances, as all experience has proved, any great amount of gold and silver in the country; for the national paper, which is the cheaper currency, expels the specie, which is the more valuable. In pursuance of this universal law of the monetary system, we have seen that, at the period of the veto of the United States Bank, there was but about twenty millions of dollars of specie in the country, and now there is eighty millions; which, in the absence of a national bank, must and will go on augmenting. But, it may be asked, why should the State banks desire the creation of a national bank, by the augmentation of its circulation to usurp the channels of circulation that might otherwise be occupied by the State banks? Because the paper of the national bank, whilst it diminishes the specie that must be kept on hand by the State banks, enables them to make more money on a less actual specie capital. But this is not all: with the issues of paper by the national bank, added to the State bank issues, there is, till the explosion comes, a temporary rise of property; thus requiring more money in circulation to meet the augmented price of property. I have called it an augmentation of the nominal price of property, but it is in fact no increase of its real value, but a sinking, a debasement, of the value of money, arising from the augmented circulation, requiring larger national amounts of bank paper to make purchases and conduct all transactions. No addition is made to the real wealth and real capital of the nation; the only addition is to the dangerous amount of bank paper circulation and the increase of bank dividends. Hence it is that the State banks desire a national bank, not as a regulator to contract their issues, but in order to issue more paper on a smaller specie basis, and thus enlarge their profits. Hence it is, also, that with the enlargement or contraction of the issues of the national bank, the State banks generally enlarge or contract also, the national bank paper being substituted in place of a specie basis. Hence it is, that, were a national bank created as our fiscal agent and depository, it would be the interest of all the State banks to augment its deposits by increasing the tariff, and thereby augment its own circulation, so as to diminish the demand upon them for specie to redeem their paper. It is

interest, then, and not a desire to be controlled or regulated by a national bank, that urges the State banks to desire the establishment of a national institution. And had it been established, and continued to this day, we should have had in the country but twenty millions of specie only, and with a paper circulation greatly expanded, and based, not upon specie, but upon national bank paper circulation, and when the convulsion came—as come it must—the State banks could not have existed for a moment, having little or no specie.

With the general crash and universal extinction of confidence, the United States Bank must have fallen, (as its successor has lately done,) and the suffering would have been more intense, and of longer duration. If any doubt this latter statement, let them look to the period of 1818, 1819; when, on account chiefly of the enormous over-issues by the national bank first, and State banks afterwards, the crash came; the United States Bank, reduced to one dollar in specie for every one hundred in circulation, was barely saved from suspension; but, in saving it, the State banks and the people were ruined, and the most intense suffering and prostration of business prevailed during a period of three years. Now, even since the message was published, confidence is already reviving, depreciated bank paper has risen—stocks have risen, and business is recommenced. Why this difference between the pressure of 1818-19, and of 1837? The eighty millions of specie, around which public confidence can rally, creates the difference, as constituting the great basis for the resumption of specie payments; whereas, had a great national bank been in existence, and substituted its paper, as it would, by expelling the precious metals, when the explosion came, the very existence of this national paper currency would, as it did in 1818 and 1819, but increase the catastrophe, by the effort, which the great national bank did then, and must ever make in such a convulsion, to save itself by calling in its issues, by curtailing and necessarily fortifying itself with specie drained from the State banks, which fall immediately beneath the pressure. This whole pretence of regulation of the State banks by the United States Bank is founded on the following by-law:

ARTICLE 25. "The offices of discount and deposit shall at least once every week settle with the State banks for their notes received in payment of the revenue, or for the engagements of individuals to the bank, so as to prevent the balance due to the office from swelling to an inconvenient amount."

Now this regulating article could have none or at least a very trifling effect upon the distant banks, whose paper does not reach the office of discount of the Bank of the United States. And even as regards the banks affected by this article, are they by its terms or directions to settle these balances in specie? No, there is no such payment required, and, in point of fact, it is rarely if ever made, and therefore does not compel the State banks to enlarge their specie, and check their operations; on the contrary, these balances are settled by drafts on other banks, and redrafts from them, often mere bank kites, founded on mere credit arrangements between them; or by exchange often composed of mere accommodation mercantile acceptances, endorsed by the State banks; and thus, or by other credit accommodations, these balances are settled, but not a dollar of gold or silver is seen in the whole transaction. And why is it that these State banks (which Mr. Biddle tells us existed only by the forbearance of the Bank of the United States) are not pressed to pay these balances in gold and silver? The great regulator dare not do it. It would break some two or three State banks; confidence would vanish; runs would be made on many other State banks, which, having little or no specie, pay out till they break; the notes of the United States Bank are then poured in upon it for specie, and it must break all the banks, and ruin the country by pressure and

SEPT. 27, 1837.]

Sub-Treasury Bill.

[SENATE.]

curtailments, or suspend also. The whole system is founded, not on a specie basis—for it is not there, in any of the banks, State or national—but upon confidence that all these notes are convertible into specie upon demand; and whenever a convulsion comes this confidence in all bank paper is shaken; it is presented for redemption in specie; it cannot be redeemed; the delusion vanishes, and ruin ensues. This state of things will be constantly recurring under the dominion of a national bank as well as without it. But if, when after the veto, and when this eighty millions of specie was coming into the country, the paternal recommendation of President Jackson, to abolish all bank note circulation under twenty dollars had been heeded, and this policy adopted by the States, we should now be prosperous and happy, with at least forty millions more of gold and silver, and greatly less bank paper; and, until this and other necessary reforms of banking abuses are established by the States, a resumption of specie payments will be but the signal for new and successive explosions, approaching nearer and nearer in time, and augmenting in extent and intensity of suffering. Silver will never circulate to any extent where notes under five dollars are permitted; and gold will never circulate to any extent where notes under twenty dollars are issued. This is taught us, not only by the soundest philosophy, amounting to absolute moral demonstration, but also by the experience of every nation of Europe and of the world. This, then, should be the commencement of the great reform, to be carried onwards and upwards by the States, by every constitutional means, as rapidly as can be done by wise, cautious, gradual, and successive movements, uninfluenced by passion or prejudice, up to the point of absolute security. Great will be the resistance of the banks and banking power, but greater still should be the efforts of a disinterested people. The continuance of such a system renders all the toil, and labor, and products of industry perfectly useless; for, when the balance returns in our favor from abroad, even in gold and silver, it is only to find its way into the vaults of the banks, that these our paper masters may make these metals the foundation of new emissions—new over-issue, and new explosions. If any can doubt this last result, let them reflect upon this, which is a fixed law of the monetary system, that when great expansion of bank issues, whether in the paper of national or State banks, takes place here, prices of all products or articles consumed here rise also; exports remaining unaffected in price by this event. And what follows? Why the value of money being less here, and prices higher than in foreign countries, where no expansion of the currency has taken place, the course of exchanges rises against us in nearly the ratio in which specie, the universal standard, will buy more in the foreign country than in our own; specie comes not here, for it is sunk here to the level of our yet convertible bank paper. But prices of almost every article being much higher here than abroad, vast importations, beyond the power of the country long to consume, necessarily ensue; our bank paper is forced upon the banks for redemption in specie, to be shipped abroad, where it is more valuable than here; and explosion soon follows. So certain and unerring is this rule that, instead of there being written on the face of all our bank notes a promise to pay in specie on demand, the promise should be, if truth were consulted, not to pay on demand in specie in the contingency above described, and shown to be inevitable.

A national bank, we have seen, can neither regulate nor control the system. It can only banish specie from this country, and make the banks weaker when the explosion comes, and in such a crisis will ever be found endeavoring to sustain itself by crushing the State banks and the people.

It was with no ordinary pleasure that I hailed the vote of yesterday in this body rejecting, by more than two to one, the proposition to create any bank of the United States. With equal pleasure I have seen the vote of the

House, virtually rejecting, by a majority of thirty-three, the same proposition. I congratulate the country upon this great and glorious result. It is the triumph, we trust, the final triumph, of liberty over bank panics and bank power, and is worthy to be proclaimed from this chamber. It is the great, the real relief measure of this session; and now, when the battle by the friends of a bank is fought and lost, if they, on their return to their constituents, will tell them, and tell them truly, that there is not, under any circumstances, the slightest hope of procuring the establishment of a national bank; that no panics or pressures can produce this result; that the continued agitation of this question can only prove injurious to all classes, and especially to that great interest by which chiefly this measure has been so strongly pressed upon us—they will give repose to the country, and the light of returning prosperity will soon dawn upon us.

There was one remark made yesterday by the Senator from Kentucky, which I heard with peculiar pain and mortification. He told us that the question that bank or no bank of the United States was a question of union or disunion. And has it come to this, that the bank power, having failed by panics and pressures to extort a charter from an oppressed community, now openly threatens, in this chamber, the union of the States! Are we to be told that a bank is necessary to the existence of this Union; and that, unless a bank is chartered, the Union will be overthrown? And is it indeed a fact, that the conflict must come between the friends of a bank on one side and the friends of the Union without a bank on the other? Let that contest come when and where it may, I shall be found in the ranks against the bank, and in favor of the Union, supporting the flag of my country, and preferring rather to perish among its friends, than survive and conquer among its enemies. The bank power has now assumed a new and imposing attitude—the attitude of menace and defiance; proclaiming in this Senate chamber, through its able and distinguished champion, that a bank must be established, or the Union will be dissolved. No, sir, no. This Union fans the vital spark of liberty itself; it is the very breath in the nostrils of this republic; and no bank power can shake or destroy this great confederacy; and, if it could, the argument against the creation of such a power, which could hold in its grasp the existence of the Union, would become more potent and irresistible. If the bank power be indeed equal to the power of the Union, then to create such an institution, is confessedly to transfer to its keeping the existence of the Government itself. And here I cannot withhold the expression of my astonishment that the Senator from Kentucky, who, whatever political errors in my humble judgment he may have committed, has always, and especially upon two critical occasions, signalized his patriotism and devotion to the Union, should now menace that Union with overthrow, if we do not take to our embrace the banking power.

[Mr. CLAY here arose and said, that the respectful manner in which his name had been introduced by the Senator from Mississippi induced him to explain to that Senator that he had not proposed the re-establishment of the present Bank of the United States, much less had he uttered any menaces against the Union; that he had only expressed the opinion that the failure to establish a national bank, which alone could supply a sound and uniform currency, might endanger the Union.]

Mr. WALKER said: I did not state that the Senator from Kentucky had proposed the recharter of the Bank of the United States, for he had proposed generally the creation of a new national bank; nor did I intend to say, or wish to be understood as stating or believing, that the Senator from Kentucky desired a dissolution of the Union; far otherwise; but that Senator had declared that the question of establishing a national bank and a sound currency was a question of union or disunion. This was his very language; for I

SENATE.]

Sub-Treasury Bill.

[SEPT. 27, 1837.]

was startled and astounded by the declaration, and could view it in no other light than as an open declaration by the great national banking power that it was necessary to the existence of the Union, and, consequently, could uphold or destroy it at its pleasure.

The Senator from Kentucky had informed the country that, during the period of the late administration, every thing but the mere forms of free government had been sacrificed to the Executive will. He told us that the Jackson party in Congress would not have governed the country so badly, had they not yielded their own views to Executive dictation. Among the evidences enumerated by him in proof of this position he was pleased to allude to the case of Mr. Dallas. This gentleman, we were told, had, in 1832, introduced and sustained here the bill rechartering the Bank of the United States, and, after the veto, went home to Philadelphia, and addressed the people in favor of the veto and against the bank, and now held the appointment of minister to Russia. I know Mr. Dallas, and every Senator knows that in his own native Pennsylvania, his name is a passport for all that is honorable in principle, exalted in talent, estimable in benevolence and virtue, and elevated in moral purity of character; and I cannot but regard the assault now made upon him in his absence, as the representative of our country at a far distant court, as most unjust and ungenerous. Mr. Dallas is the distinguished democratic son of an equally distinguished democratic sire, and neither of whom ever bent the knee to Executive or any other power than that of the God that made them. In his statement, the Senator from Kentucky omitted to mention that when Mr. Dallas introduced here the bill rechartering the Bank of the United States, he stated his opposition to any movement upon the subject at that time, and referred to the instructions of the Legislature of his State in favor of the bank, as constituting the ground of his action. True it is that Mr. Dallas had been at one period favorable to the recharter of the bank, with what he deemed proper restrictions and limitations, and so was his State then, as indicated by unanimous instructions; but, when the bank, after the veto, openly came into the field with a candidate, or as a candidate for the Presidency; when it entered the arena of politics as a champion, and sought, by its enormous powers, a conquest over the Government and people of the Union, Mr. Dallas abandoned it to its fate, and did address the people in opposition to its recharter; and if Mr. Dallas changed his views with regard to the bank, it was after the bank changed its position and assumed a new and hostile attitude to the Government and to the people; and Mr. Dallas was followed in this change by the great mass of the people of Pennsylvania and of the Union. Why, then, had the Senator from Kentucky referred to Mr. Dallas's course on this subject, and his subsequent acceptance of the office he now holds from his personal and political friend, President Van Buren? Did not the Senate, at the time, hail this appointment with instantaneous and unanimous approbation? And, in abandoning a most lucrative practice for this station, no sordid or sinister motives could have influenced his choice. The Senator from Kentucky should have seen, in all this, nothing which rendered Mr. Dallas's conduct a just subject for commentary or reproach upon this occasion; and permit me to say that the Senator from Kentucky is the last man in this house, or in this country, who should allude to any change of opinion by Mr. Dallas in regard to the Bank of the United States; for, had not the Senator from Kentucky changed his own views upon this subject, and once denounced the bank in his well-known and eloquent address in this body as most inexpedient, most dangerous to liberty, and grossly unconstitutional. And let me further add, that, if the Senator from Kentucky thinks it a matter of reproach that any individual should have changed his views in regard to the bank, or a bank of the United States, he will embrace in this censure nearly

every eminent statesman in America, including the Senator from Kentucky himself, and nearly every member of this body. To have supported at one time the recharter, with adequate limitations, of the Bank of the United States, ere it had entered the arena of politics, and to have abandoned that support when the bank let fall the curtain which concealed its dangerous powers and alarming tendencies, is certainly not one of those extraordinary cases which could justify the Senator from Kentucky in bringing into this debate the name of Mr. Dallas. That gentleman has sustained, at all times, from his youth upwards, the democratic party of his State and of the Union; and there is nothing at all remarkable in his going with that party, in 1832, in support of the bank veto of ex-President Jackson.

But the Senator from Kentucky has also told us, that, after anxious consideration, he believes that the great measure of relief would be a change of rulers; and he seems especially opposed to the re-election to the Presidency of a certain incumbent, whom he describes as five feet eight. No doubt, if another gentleman of six feet one, a gentleman of captivating eloquence, and many excellent social qualities and fine genius, was substituted in place of our present Chief Magistrate, it would be a certain relief to the numerous friends of that gentleman, and a great consolation to himself.

The Senator from Kentucky strongly objects that the President has pledged the veto in certain cases. These cases are the vetoes upon abolition and a Bank of the United States. These two promised vetoes are the great ramparts of the constitution and of the Union. Yes, abolition and the bank are to share the same fate from the President's veto. He has so declared it, and those who heretofore most unjustly represented him to the public as concealing or withholding his opinions, now charge that he expresses his views in advance. Well, sir, the charge of non-committalism, so often and so unjustly urged against Mr. Van Buren, is thus openly abandoned—there is no non-committalism in the message, but all is clear, bold, manly, and direct.

And now, having discussed the question of a national bank, its dangerous tendencies, and its inapplicability as a measure of relief at present—that measure having, at all events, been voted down by a majority of more than two to one in this body—no bank charter being presented by its friends for our consideration, and no one asserting, not even the Senator from Kentucky, that we ought to degrade this Government, by placing it in the attitude of a supplicant for the aid and patronage of the Bank of the United States—the question recurs, what must be done? That something must be done as regards the receipts, safe keeping, and disbursement of the public moneys, all concede; for since the repeal of the deposit bank system, by the failure of the banks to redeem their notes in specie, and pay the Government demands, a contingency upon which the express provisions of the law require that the system should cease, the whole public moneys are left to the unregulated control of the Secretary of the Treasury. That this state of things can be permitted to continue, is denied by all. What, then, is the remedy, other than the system proposed in the bill and amendment now before us? But one other alternative is offered, and that is the currency bill, proposed as a substitute by the able, patriotic, and distinguished Senator from Virginia, [Mr. RIVES.] But here permit me to remind that gentleman that his bill does not meet the case; it makes no provision for the present; it makes no provision for any definite period; it leaves a blank for some day in the year 1838, when the bill is to go into effect; and not certainly, but upon the doubtful contingency of the resumption of specie payments by the banks. Then his system is to apply to the banks resuming specie payments by some unknown day in the year 1838. To my mind the objection to the bill is decisive, that the event contemplated by the bill may never take place, and that, in the mean

SEPT. 27, 1837.]

Sub-Treasury Bill.

[SENATE.]

time, it leaves the Treasury Department and the public moneys unregulated by law, and necessarily in hopeless confusion. We must make present, substantive, certain regulations; and if it be ever proper to support the bill of the Senator from Virginia, it will be at some future period, when the banks shall have resumed and the measure can go into operation. But I have higher and still stronger objections. I am opposed to reuniting the banks and the Government; and here I shall recur to the facts on this subject. The currency bill now introduced by the Senator from Virginia, (with the exception of one very material modification as to the banks to be included or excluded by the operation of his proviso,) is substantially the same bill which received the sanction of the great mass of the friends of the administration in this body at the last session. The bill was regarded by me, and so declared by me at the time, as supplemental in its operation to the fifth section of the deposit act of June, 1836. That section prescribed that no note of any bank issuing notes under five dollars should be received in revenue payments. The currency bill extended the exclusion to "all banks issuing bills or notes of a less denomination than twenty dollars." No one then proposed the abandonment of the banks as depositories; and I conceived that the currency bill, so long as the deposit bank system was adopted, would, if carried into operation, have the wholesome effect of excluding all bank paper of all banks issuing notes under twenty dollars from revenue payments, with the hope of enlarging greatly the specie, and diminishing the paper circulation. Indeed, I voted for an amendment to the fifth section of the deposit law of 1836, having a similar object in view, when that bill was passed, as appears by the Senate journal, as follows: "June 13, 1836.—The deposit bill being under consideration: On motion of Mr. Benton to amend the reported amendment, by inserting, at the end of the fifth section, the following: 'and, in selecting and continuing banks as depositories of public money, a preference shall be given to the banks of good credit which shall relinquish the circulation of all paper currency under twenty dollars, and which shall enter into arrangements to promote the circulation of gold.'" My vote is recorded upon the journal in favor of the amendment; but, unfortunately, it did not prevail. The currency bill I considered as aiming at the same object, and, in that view, it received my support.

The deposit banks were then proceeding in full and successful operation, were highly recommended in the President's message, and no one proposed their abandonment at that time as depositories. But does the Senator from Virginia fail to observe that this union then existing between the deposit banks and the Government has been dissolved, and that they have all most lamentably failed, and reduced themselves and the Government to bankruptcy? It is the banks that have changed their course as fiscal agents of the Government, and not those who now oppose the re-union. And here let me ask the opponents of the administration, who so long and loudly denounced the deposit bank system, when it was successful, why have they now changed, and when the system has failed, now yield it their support and countenance? Let me also ask them another question. The national bank project has been voted down in this body by more than two to one, and the question now is between the divorce bill, and the re-adoption of the deposit bank system without a national bank. Now these gentlemen have repeatedly told us that, without the regulation of a national bank, State banks must fail, and fail incessantly. I ask them, then, as patriots, are they prepared to surrender the destinies of their country, and all its resources, to the safe-keeping of banks which they themselves admit must and will fail, and, of course, reduce the Government again to bankruptcy? And is any Senator prepared to readopt this system? What assurances can he give that before another year we may not again

be called here by the same causes which have now assembled us, viz: the failure of the banks and bankruptcy of the Government? Sir, if we renew this system, instead of our issuing commissions of bankruptcy against the banks, the banks can issue a commission of bankruptcy against this Government at their pleasure, or even against their consent, by a forced suspension. But, what is infinitely worse, our national honor may be tarnished, and our Federal Government disgraced, whenever the Bank of England, by successive expansions of American credit to American houses, produces overtrading and overbanking here, and then, by a sudden withdrawal of that credit, causes first mercantile, and then bank failures, and thus arrests the operations of the Government.

The history of one bank panic proves this important fact. When the currency has been inflated by the banks here, and our credit pushed into England, and importations made to an extent heretofore unknown, the Bank of England interposes—it suddenly withdraws the accustomed facilities from the great American houses. The English private and joint stock banks, and the money lenders, follow in the wake, and the American stocks can no longer be sold, as formerly in the English market, or American bills discounted. The Bank of England goes on curtailing; there is a terrific fall in the price of cotton, and a pressure for money ensues in England. The letters of credit given by the English to American merchants are withdrawn, and the latter is thus deprived of the expected facilities of meeting his acceptances at maturity; one of his bills is at length protested, and the failure here of some great mercantile firm is announced to the world; another, and yet another follows; confidence vanishes; a panic ensues; credit is destroyed; the distrust becomes general; the most solvent merchants cannot negotiate even the best securities; more bills are protested; the panic goes on augmenting; there is a general fall of the prices of all property and all products; the mercantile failures become almost universal, the failure of a few firms bringing down many others, and all the endorsers for them. The banks which had discounted so many fictitious mercantile acceptances, can no longer procure payment. The suspicion extends to them; there is a run upon them for specie; it continues and increases; some one of the banks suspends specie payments; there is a run upon all, and finally all join in the general suspension. Specie rises in price, and bank notes depreciate; capital retires during the general panic; specie is hoarded, and no one will lend money to any one, except a few brokers and shavers at exorbitant and ruinous discount, and property and products can scarcely be sold at any price for cash. And now hundreds who so lately in their paper credit balloons had been traversing both continents, the wonder and envy of the world, are seen thus suddenly to fall from the heavens, without even a parachute to bear to the earth these most unfortunate aeronauts. This is the history of a real bank panic, and it continues till labor and its products come to the rescue, and gradually repair the injury which over-trading and over-banking had done. The banks now call in their issues, and, by the ruin of thousands, are at length enabled to resume specie payment; the solvent banks and individuals are separated from the bankrupt; confidence is gradually restored; the banks begin to reissue their paper; prices rise slowly at first, but at length more rapidly; the banks, eager to increase their profits, over-issue again; over-trading ensues, till a reaction takes place as before, and the same disasters follow. Such is, and will be, the history of successive bank panics. And is the security of the people's Government to depend upon the fluctuations of such a system as this? Must the Treasury become bankrupt and Congress be convened whenever the banks think proper to suspend specie payments, and withhold the Government deposits? Is the credit of this Government to rise or fall with that of the banks, and the Treasury be re

SENATE.]

Sub-Treasury Bill.

[SEPT. 27, 1837.]

duced to bankruptcy, whenever the banks so determine, or rather, when the Bank of England so determines? for we have seen that this bank, by stimulating at one time the credit of the English houses and bankers connected with the American trade, and then suddenly withholding that credit, can produce extensive failures here, and the suspension of specie payments by the State institutions. And can any patriot be willing that this Government should owe its revenue, its very existence, to the Bank of England, or even to our own banks? Let commercial credit rise or fall as it may; let the banks lose or maintain their credit, this Federal Government, the only bond of our Union, should never be permitted to fail, whenever bank panics or pressures assail us. Nor should it be forgotten that the danger increases at every step of our progress—that every epileptic fit renders the banks weaker and weaker, and public confidence more tremulous, and must necessarily render these bank failures more and more frequent and extensive, until soon, under the continuance of the existing system, Government and bank failures will become as frequent as mercantile failures, and our credit will be no better than theirs. And if the danger is great in peace, how infinitely greater in war? Who can reflect with complacency, that but a year or two past we might have been engaged in a terrible conflict with one of the greatest Powers of Europe, and at the same time the failure of deposit banks might have deprived this Government of the means of raising and equipping our forces, either by land or sea, till our coast was ravaged, and our cities and capital reduced to ashes. In peace we should always be prepared for war; and we cannot thus be always ready, if our money is placed beyond our control, loaned out by banks that cannot refund when the Government most requires it.

But we are asked to try this experiment again, by endeavoring to confine the deposit banks, and all others whose notes shall be received in revenue payment, to the issue of no notes under twenty dollars. By striking out twenty, and inserting five dollar notes, this would be but trying again the same experiment which has already failed. The fifth section of the deposit bank law confined the issue of the notes to five dollars. It failed. And now, when we cannot, by the mere incidental effect of our Treasury regulations, succeed in enforcing and maintaining the five-dollar principle, how could we hope for such influence over the banks as to induce them to abandon the circulation of all notes under twenty dollars? To their masters and creators, the States, we must look for a reform of the system.

But the Senator from Kentucky tells us that the bill under consideration would increase Executive patronage. Now, the bill creates no additional officers; it gives to the President no additional control over the existing officers; it merely imposes additional duties upon existing officers, requiring them not only to receive, but to keep safely, without use or loan, till the period of disbursement, the public moneys. I can see here no increase of Executive patronage. But this question must be examined by comparison with the proposed substitute, namely, a re-adoption of the deposit bank system. Now, no argument has heretofore been more strongly urged by the opponents of the administration, than the vast and increasing patronage the deposit bank system would confer upon the President of the United States. These banks were denominated pet banks—the President's banks—and again and again was it said that the late President desired to retain the surplus in these banks, (these miserable deposit banks, as they were then expressly called by the Senator from Kentucky,) with a view to influence the approaching election. Nor was this argument confined to this chamber; but in the House of Representatives, at the last session, a committee was raised by the opposition to prove, among other things, the corrupt and corrupting influence of the deposit bank system,

as connected with the agent of that system, and the Treasury Department. It would be really amusing to read some of the speeches of the opposition members at that period, denouncing the corrupting influences of the deposit bank system, and the vast patronage it conferred upon the Secretary of the Treasury. I have not time to read these speeches to the Senate; but, from the documents presented by this committee, I will refer to two letters by them published. The first is from the cashier of the deposit Bank of Burlington, Vermont, under date of January 25, 1836. The cashier says: "Being located in the same place where a branch of the United States Bank was established, and as we are a deposit bank, when the branch here discontinued its operations, the public seemed to expect that we could at once afford the same facilities and accommodations that they enjoyed when the branch was doing business. There has been, on the part of our directors, a desire to meet this expectation; and the consequences has been that a very sensible change has taken place, politically, in favor of the Government: and, as it is our desire to strengthen that sentiment, we feel that it is important to afford our farmers and merchants, the coming spring, a pretty extensive accommodation, in anticipation of the wool clip."

Here the sensible political change in favor of the Government, produced by this bank depository, is clearly stated, and the importance of augmenting it, by enabling the bank to discount more freely on the Government deposits, is strongly urged by the cashier of the bank. I might detain the Senate for weeks by quotations from similar letters; but only make one other reference. It is to the letter of the president, directors, and cashier of the Seventh Ward Bank of New York to the Secretary of the Treasury, dated December 16, 1833, and is as follows:

"We, the subscribers, officers and directors in the Seventh Ward Bank, in the city of New York, friends of the administration, and of the revered chief at the head of the Government, do solicit a portion of the fiscal patronage of the United States Treasury for the Seventh Ward Bank; the terms as those most favorable to the Government."

Can any man peruse this letter without feelings of loathing and disgust!—yet it is from fourteen of the most respectable bankers of our great commercial metropolis. Does it not demonstrate the dangerous tendencies and influences of this deposit bank system? An entire bank, through all its officers and directors, soliciting "a portion of the fiscal patronage of the United States Treasury," on the grounds that they were "friends of the administration!" This report, published in March last, containing these documents, I never perused till after the close of the last session of Congress. The deposit bank system, it is well known, in Mississippi was, in its origin, no favorite measure of mine; in fact, it was the first measure of our patriotic President to which I had ever expressed any dissent; and I only afterwards gave it my reluctant assent as an alternative to what the developments of the spring of 1834 demonstrated to be a greater evil, and still more dangerous measure, the establishment of any bank of the United States. But who can peruse these letters, and deny, in the face of the American people, that this deposit bank system did enormously increase the power and fiscal patronage of the Government, and that in the hands of a corrupt Secretary, and aspiring President, it might be made a political engine of the most dangerous and alarming character? That it was not so used, or attempted to be used, by our venerable President, or incorruptible Secretary, is proved by the documents accompanying the reports to which I have referred; but that it was susceptible of such abuse is also as clearly demonstrated. And what is the extent of this "fiscal patronage?" Why, by the last return of the Secretary of the Treasury we see, under the last law, the number of deposit banks increased to eighty-nine, with upwards of eighty millions of capital, and discounts of notes

SEPT. 27, 1837.]

Sub-Treasury Bill.

[SENATE.]

and bills of exchange amounting to one hundred and thirty millions of dollars; and this immense moneyed power was subjected to the influence and control of the Secretary of the Treasury: for the whole bank correspondence will clearly demonstrate that many of these banks, from time to time, owed their very existence to the forbearance of the Secretary of the Treasury, and that often a Treasury draft or transfer warrant would have reduced them to a state of bankruptcy. True it is, that all of the deposit banks could not thus have been destroyed by the Secretary; yet the profits of all would be greatly influenced by the amount of revenue he deposited with, or withdrew from them. What, then, was this power? It was a power over eighty-nine of the strongest confederated banks in the Union, with this enormous amount of loans and capital, and with stockholders, debtors, and customers, at least one hundred thousand in number, all affected by the movements of the Secretary of the Treasury in the distribution or withdrawal of the deposits. In May last, the Secretary of the Treasury had necessarily distributed among these institutions more than thirty millions of public deposits. What a tremendous extent of power and patronage! Why, sir, it was almost the lever of Archimides; and, if this system had gone on progressing and augmenting, soon, very soon, the banks, by their power, must have controlled the Government, or the Government controlled the banks. And now, when the President proposes to surrender all this money, and power, and patronage, to dissolve this dangerous connexion between the banks and the Government, shall he be opposed in this measure by those who so lately denounced the whole deposit bank system as the very climax of political corruption? And what do we see now? Why, this career of illimitable discounts by banks on Government deposits is closed for the present, and the still more dangerous attitude is exhibited, in which it is but too probable that very many of the banks may soon be sued by the Government to recover the public moneys, or rather the States that own in whole or in part so many of these banks, and the debtors that owe them; for, as the banks can only collect their moneys by suits against their debtors, to sue the banks at present is to sue the people. It was in view of this state of facts that I succeeded, a few days since, in prolonging the time given to the deposit banks to make payment to the Government from two, five, and eight, to four, six, and nine months, being the longest extension I could obtain for them; and, upon payment of the first instalment, the two last ought to be, and I hope will be, still further prolonged at the next session. But I could not but feel humiliated by the reflection that so many of my most worthy constituents—including two of our largest State institutions, and the State itself the principal proprietor of one of them—should be placed in a position in which a suit against any of them could in any event be resorted to—a position arising out of this most unholy connexion between the banks and the Treasury—a connexion of un-mixed evils, disastrous to the banks, the States, the people, and the Government.

Well, then, may the Senator from South Carolina, [Mr. CALHOUN,] who has on this floor so repeatedly opposed the augmentation of Executive power—well may he support the bill now under consideration; because it not only adds nothing to Executive patronage, but takes from it that alarming patronage and power that it could have acquired through the deposit bank system. Sir, the Senator from South Carolina is right; and I hail him back with pleasure, on this question, to the ranks of the democracy, of which he was so long the pride and ornament, when in March, 1824, I assisted in the great democratic convention of my native State in nominating him upon the Jackson ticket for the second office in the gift of the people. Sir, if he can go no further with us, let him at least aid us in breaking down this overshadowing Executive power, this

dangerous and corrupting fiscal patronage, growing out of this unhalloved confederacy of bank and State, throwing aside all other considerations, and sacrificing his personal prejudices on the altar of his country's good. Sir, I have heard much about Executive patronage as lurking in some of the features of this bill; but if it be so, it must be deeply concealed indeed, for no one has pointed out how it is accomplished. Vague and general denunciation we have indeed had, but how one iota of power or patronage will be conferred on the President by this bill, in addition to that which he already possesses, has not been designated; but were it so, the bank patronage, of which this bill deprives him, would be infinitely greater. The receivers, who are made depositories for safe-keeping only until disbursement, were already depositories until the transfer of the public moneys to the banks; and this bill only dispenses with one class of this double set of depositories—the banks. The machinery was thus made more complex and dangerous. The money collected by the Government from the people was not loaned out to the people who paid it, but deposited with banks, to be loaned out by them to bank favorites, and to increase the dividends of a few incorporated stockholders. The people were taxed for revenue, to be converted into bank capital, stimulating their over-issues, and rendering their condition more fluctuating and precarious. The fluctuation of banking business is bad enough under any circumstances. Why, then, should we augment their natural tendency to over-issue by Government deposits? Will not the banks issue enough of paper without this artificial stimulus? Why, then, should the Government inflate their issues, and drive them on more rapidly to explosion? Why not let them bank upon their own capital and their own credit, without depending upon the Government for both—for capital in Government deposits, and for credit in Government endorsement for all their notes, as receivable in revenue payments? Is it not seen that the most insolvent bank in the Union might thus be puffed by the Government into great and extensive temporary importance, and then, when the Government patronage was withdrawn, their depreciated paper fall dead and worthless in the hands of an unsuspecting community?

The President's message is against the extension of Executive patronage. Its cardinal doctrine is this: "A limitation of the expenses of the Government to its actual wants, and of the revenue to those expenses." This, then, is the President's doctrine, openly avowed in his message—reduce your expenses, reduce your revenues. This was the flag under which I have fought ever since entering this chamber; it is the flag under which I opposed your extravagant bills for local and sectional improvements; it is the principle I espoused at the first session of my service, contained in my resolution to reduce the revenue from the tariff and public lands to the wants of the Government. It is the great principle contained in the land bill proposed by me, reducing to settlers the price of the public lands, and confining the sales to them; it is the great principle upon which I relied for the reduction of the tariff, and especially the abolishing of the duty upon salt, that most odious duty upon light and heat, in forming salt from solar evaporation; and, lastly, it is the great principle upon which, at the first as well as the last session, I opposed, in every form, the surplus distribution policy, that mother of tariffs, banks, and of the very catastrophe which now overwhelms us. Reduction of the expenses and of the revenue, economy in all public expenditures, and no "interference with the pursuits of the citizen." "No special favors to individuals or any classes of them, to create systems of agriculture, manufactures or trade." These are the doctrines of the message; and do they enlarge Executive patronage? How is Executive patronage enlarged? It is chiefly by extending the powers of this Government, and augmenting its revenues; for every increase of the

SENATE.]

Sub-Treasury Bill.

[SEPT. 27, 1837.]

powers and revenue of the Government, is an augmentation of the power of the Executive functionary. This the message avoids; but what measures would the Senator from Kentucky give us to reduce Executive patronage? His policy would give us a quadruple alliance between the surplus, the bank, the tariff, and internal improvements, all certainly tending to, and terminating in, a national debt, to create a new tariff. The tariff to regulate the whole industry of the whole people of the Union, and build up vast manufacturing establishments by the extension and perversion of the taxing power of this Government. A great national bank, to grow rich upon the revenue deposited from the proceeds of the tariff, deriving its profits from Government moneys, and, of course, the ally of the administration which feeds and created it. The internal improvement policy, growing and extending with the increase of the tariff, and making roads and canals in some favored States, by taxes collected from the whole people; and, lastly, to give universality to the principle, the surplus—the annual surplus for distribution, from sales, by townships and counties at an entry, to speculators in the public lands—a system calculated to debauch and corrupt the States; to break down every feeling of State independence; to feed them annually, from the public Treasury, mere stipendiaries upon our bounty; supporting even their State Governments and State officers from the revenues of this Government. And at the head of this mighty system, this consolidation of all powers in this Government, would stand the Executive of those powers—the President of the United States, a monarch in every thing but a name. And, sir, this league of State banks, confederated by the Government, and fed by the tariff, increasing its deposits and profits, would be the next most potent ally of these systems. It would station some hundred bank fortresses throughout the States, armed and equipped by Government deposits, and extending Executive power and influence. All this President Van Buren would avoid. No, sir, no; it is not the principle or policy of this administration—Give us patronage and we will make ourselves popular.

But it has been said that this bill establishes, in fact, a Treasury bank. And why? Because, although these depositories can neither use nor loan the public moneys, where disbursements are to be made at distant points, to avoid the expense and patronage arising from a new army of officers, constantly engaged in transporting the specie, drafts in payment of its dues may be drawn by the Government on these distant depositories—drafts drawn on actual deposits of gold and silver; and this is called a Treasury bank, and that too, by the advocates of the deposit bank system, by which Treasury drafts, checks, and warrants upon and by the banks may be drawn upon and by the deposit banks in the transactions of the Government. It is true, these drafts will constitute the best exchange in the world, and thus far operate incidentally for the great convenience and benefit of the people; but this is no objection to the system, for the Government neither loans nor discounts, but simply pays the public creditor in gold and silver, or an order upon a depository, on which he receives the specie.

But it is said this bill, separating the Government from the banks, will divorce the Government from the people. Are the banks the people? No, sir; this bill will elevate the people, and the Government of the people, and of the States, above the banks, and prevent them from arresting the Government, as they now do, by withholding the public revenue. It will have a still greater tendency to elevate the people above the banks, by diminishing, by its incidental operation, the amount of bank paper, and increasing the circulation of gold and silver—for the payment of it into the Treasury will be as constantly flowing out, enriching and fertilizing the whole country.

But the Senator from Virginia [Mr. RIVES] says this bill will furnish one currency for the Government, and another

for the people. Is it contended that the Government should take and pay out the broken bank notes and local shillings, because the people take them? No: the Senator from Virginia does not propose this, but only that we should receive the notes of banks that resume specie payments under the existing law. Now, what is that law? I find it embraced in the Senate journal under date of the 6th of April, 1836, as follows:

“The Senate resumed the consideration of the bill entitled ‘An act making appropriations for the payment of the revolutionary and other pensioners of the United States, for the year 1836.’

The following amendment, proposed by Mr. BENTON, being under consideration:

SEC.—*And be it further enacted*, That no bank note of less denomination than twenty dollars shall hereafter be offered in payment in any case whatsoever in which money is to be paid by the United States or the Post Office Department; nor shall any bank note, of any denomination, be so offered, unless the same shall be payable, and paid, on demand, in gold and silver coin, at the place where issued, and which shall not be equivalent to specie at the place where offered, and convertible into gold or silver upon the spot, at the will of the holder, and without delay or loss to him.”

This provision was adopted, and is the law: the vote in the Senate being yeas 22, nays 13, my own vote being recorded in its favor. Now this is the law, and the Senator from Virginia does not propose to change it. Now, are these bank notes that the Senator from Virginia would permit the Government to pay out and receive, actually “equivalent to specie, and convertible into gold or silver on the spot at the will of the holder, and without delay or loss to him?” Then the result of the law, as that Senator would have it remain, is the same in its operation in this respect as the bill now before us: gold and silver, or its full equivalent, being the effect of either system. But if this be not so, and these bank notes be in fact a baser currency than gold or silver, what right or power has this Government to force this baser currency upon the people by public disbursements, when this Government can make nothing but gold or silver a legal tender in the payment of debts? No, sir: the operation of this bill will be to improve the currency of the whole people by its incidental effects in diminishing bank paper issues, and enlarging, at least to that extent, the general circulation of gold and silver. But the deposit bank system will, indeed, force a doubtful and uncertain bank paper circulation upon the people, convertible into specie one day, and inconvertible and depreciated tomorrow.

We have have been told that the terms divorce of Bank and State, as reminding the people of the divorce of church and State, are popular catchwords. I have not used these terms, although I firmly believe that the union of bank and State would as soon prove as fatal to liberty as the union of church and State; but, let me ask, are not the terms used upon the other side—one currency for the people, and another for the Government, and the terms separating the Government from the people, mere popular catchwords, which will not bear, as we have seen, the slightest examination. It is said this bill will destroy credit, by impairing confidence in banks. Have not we had too much confidence in banks, and have they not proved the greatest and universal destroyers of all credit and all confidence? Yes, these very banks, by their expansions, contractions, and failures, destroyed all confidence and all credit, not only in themselves, but also between man and man, and almost between nation and nation. It is the banks that render prices, confidence, and credit, fluctuating and uncertain; and, before their existence, the page of history tells that confidence and credit, between man and man, were infinitely more universal, and that protest of bills of ex-

SEPT. 27, 1837.]

Sub-Treasury Bill.

[SENATE.]

change and mercantile failures were then almost wholly unknown. Specie was not hoarded, nor credit withheld from honest industry, but universally extended, unchecked by that overthrow of all confidence and all credit, arising from expansions, contractions, and explosions of the bank paper system. We are told that confidence, confidence, is the magic word, and the Government has only to breathe into these banks the breath of confidence, and all will be well. Sir, if these banks, limited and restrained by the State Legislatures, ought to be continued, I would rather, by the ultimate incidental operation of this bill, push a little more of their paper out of circulation, and much more specie into the vaults, than all the false and delusive confidence that could be excited by the Government endorsement of eight hundred and twenty-three suspended State banks.

This Government's endorsement, with its mighty surplus deposited in State banks, has been the fruitful cause of nearly all our disasters, and I shall never attempt to renew them by re-adopting the system from which these evils flowed. The danger is not of our having too few banks, and too little paper, but precisely the reverse. To repress this evil tendency, should be the ultimate aim of every patriot statesman. It is too many banks, and too much paper, that has involved us in too much debt, and more banks and more bank paper would only aggravate the evils.

The State banks, so far as regards their mere discountance immediately as Government depositories, will be precisely where they were before the removal of the deposits. And as to the exclusion of bank paper from revenue payments, it takes effect only in full on the 1st of January, 1842. The bill proceeds, as regards its operation on bank paper, by wise, salutary, cautious, and progressive steps, keeping in view the existing difficulties, and the necessity of abating from any measure calculated to injure or embarrass the people. The operation of this measure upon the banks is much less than is generally supposed. It is much less than the regulating and checking power claimed for the United State Bank; for that, if faithfully executed, would demand weekly balances in gold and silver, or its equivalent, from all the State banks, not only for "their notes received in revenue payments," but also for "their notes received for the engagements to the bank," creating thus a double check upon their issues.

I have shown that this article never was or would be faithfully executed; but the precise ultimate effect upon State banks of this measure would be this: Supposing the annual public revenues to be twenty millions of dollars, of which six millions would be the average amount in Treasury depositories received for public dues, the banks would be required to check their issues so as always to be ready to furnish six millions of specie annually for revenue payments. Now, the entire moneyed transactions of this country in a year are estimated at twelve thousand millions of dollars, so that if the demand of the Government upon the banks for six millions be the criterion, it will be equal only to less than one per cent. of the moneyed transactions of the whole country; or if twenty millions, to less than two per cent. of these transactions, leaving all this vast field of trade and business open for the action of the banks. They lose the Government deposits and Government credit, and are left to bank, as they ought, on their own capital and their own credit. But what is most important in separating the banks and the Government, is the separation of money, business, and politics, the fatal union of which must always be the fruitful source of panics and pressures.

Whilst, then, this measure, I sincerely believe, will have a most beneficial effect upon the whole country, it is to me an inexpressible gratification, that to the sunny South it will prove a fountain of wealth and prosperity. The war of over-expanded credit upon labor and its products, aided by a great national bank at some distant capital, or by the

concentration at or near the same point of the great northern banking capital, sustained by the Government deposits and endorsements, must cease, and paper credit and the products of labor left a fair field, without artificial aid, will find labor and its products rising in the scale of importance and influence, and leaving the great staple States a fair opportunity of carrying out their own exports, and introducing their own imports, and the balances in gold and silver, the real, solid, substantial business of their banks being more safely augmented than all the ruinous aid they can ever receive from Government patronage. And now, sir, if the distinguished Senators opposed to the administration on this floor will go home to their constituents, and explain the full and precise effects of this measure, they can, in aiding the establishment of a sound credit on sound principles—aiding in inspiring a just confidence in the relief this great measure will ultimately extend to all the great interests of the country—they can have almost a moneyed millenium dawn upon the country at once. I appeal to them, then, as patriots, with hearts overflowing with sympathy for the distress of the country, as we have so repeatedly heard on this floor, to unite with us in producing this great, this glorious result; and the thanks of millions of grateful freemen will give them more real happiness, more genuine consolation, and more true and durable applause than all the party triumphs that could adorn the proudest political conquerors. Let them imitate the noble example of the distinguished Senator and statesman from South Carolina, in laying down, in support of this bill, his personal and political prejudices, as a burnt offering upon the patriot's altar of his country's good, and for them, also, the swelling heart of a mighty nation will throb with love and gratitude. But should they esteem it their duty to determine otherwise—should their inspiring eloquence and great intellectual power be exerted in appeals to the people against this measure—should it be represented as a tropical tornado, about to sweep in its destructive career over all the great and cherished institutions of our common country, panics and pressures may follow for a time; but soon, yes, very soon, the great principles involved in this bill must and will triumph, and it will then go forth with healing on its wings, hailed by the approving voice of the people. The measure itself will be justly viewed as a third declaration of American independence, and the day of its passage be celebrated in all time to come as a great and glorious national jubilee.

When Mr. W. had concluded,

Mr. HUBBARD proposed, as an amendment, that the words "1st January" in the bill, wherever occurring, be stricken out, and the "31st day of December" be substituted. This amendment was adopted.

[The effect will be to postpone the operation of the bill one year.]

Mr. BENTON offered as a separate amendment, to insert the following: "That it be the duty of the Secretary of the Treasury to cause regulations to be made for the speedy presentation of drafts, wherever payable, and that if any delay should take place in the payment of the same, they may be presented in any other place within the United States."

The amendment was laid upon the table, and ordered to be printed.

Mr. CRITTENDEN then rose and addressed the Senate about an hour in opposition to the bill.

Mr. RIVES inquired of the Chair when his amendment would come up, which went to strike out all after the enacting clause, and to insert as a substitute his bill.

The CHAIR stated that the question would first be taken on the amendment offered by Mr. CALHOUN, after which, whatever might be the fate of that amendment, whether adopted or rejected, the question would be in order on Mr. RIVES's amendment.

On motion of Mr. WEBSTER, the Senate adjourned.

SENATE.]

Sub-Treasury Bill.

[SEPT. 28, 1837.]

THURSDAY, SEPTEMBER 28.

THE SUB-TREASURY BILL.

After the presentation of one or two private petitions, the Senate proceeded to the orders of the day, and resumed the consideration of the bill providing for the collection and custody of the public revenue, together with Mr. CALHOUN's amendment thereto.

Mr. WEBSTER rose and addressed the Chair as follows:

Mr. President: I am opposed to the doctrines of the message, to the bill, and to the amendment of the member from South Carolina, [Mr. CALHOUN.] In all these, I see nothing for the relief of the country; but I do see, as I think, a question involved, the importance of which transcends all the interest of the present occasion.

It is my purpose to state that question; to present it, as well to the country as to the Senate; to show the length and breadth of it, as a question of practical politics, and in its bearing on the powers of the Government; to exhibit its importance, and to express my own opinions in regard to it.

A short recital of events and occurrences will show how this question has arisen.

The Government of the United States completed the forty-eighth year of its existence, under the present constitution, on the third day of March last. During this whole period, it has felt itself bound to take proper care of the currency of the country; and no administration has admitted this obligation, more clearly or more frequently, than the last. For the fulfilment of this acknowledged duty, as well as to accomplish other useful purposes, a national bank has been maintained for forty, out of these forty-eight years. Two institutions of this kind have been created by law: one commencing in 1791, and limited to twenty years, and expiring, therefore, in 1811; the other commencing in 1816, with a like term of duration, and ending, therefore, in 1836. Both these institutions, each in its time, accomplished their purposes, so far as currency was concerned, to the general satisfaction of the country. But before the last bank expired, it had the misfortune to become obnoxious to the late administration. I need not, at present, speak of the causes of this hostility. My purpose only requires a statement of that fact, as an important one in the chain of occurrences. The late President's dissatisfaction of the bank was intimated in his first annual message, that is to say, in 1829. But the bank stood very well with the country, the President's known and growing hostility notwithstanding; and in 1832, four years before its charter was to expire, both Houses of Congress passed a bill for its continuance; there being in its favor a large majority of the Senate, and a larger majority of the House of Representatives. The bill, however, was negatived by the President. In 1833, by an order of the President, the public moneys were removed from the custody of the bank, and were deposited with certain selected State banks. This removal was accompanied with the most confident declarations and assurances, put forth in every form, by the President and the Secretary of the Treasury, that these State banks would not only prove safe depositories of the public money, but that they would also furnish the country with as good a currency as it ever had enjoyed, and probably a better; and would also accomplish all that could be wished, in regard to domestic exchanges. The substitution of State banks for a national institution, for the discharge of these duties, was that operation, which has become known, and is likely to be long remembered, as the "experiment."

For some years all was said to go on extremely well, although it seemed plain enough to a great part of the community that the system was radically vicious; that its operations were all inconvenient, clumsy, and wholly inade-

quate to the proposed ends; and that, sooner or later, there must be an explosion. The administration, however, adhered to its experiment. The more it was complained of the louder it was praised. Its commendation was one of the standing topics of all official communications; and in his last message, in December, 1836, the late President was more than usually emphatic upon the great success of his attempts to improve the currency, and the happy results of the experiment upon the important business of exchange. But a reverse was at hand. The ripening glories of the experiment were soon to meet a dreadful blighting. In the early part of May last, these banks all stopped payment. This event, of course, produced great distress in the country, and it produced also singular embarrassment to the administration.

The present administration was then only two months old; but it had already become formally pledged to maintain the policy of that which had gone before it. The President had avowed his purpose of treading in the footsteps of his predecessor. Here, then, was difficulty. Here was a political knot, to be either untied or cut. The experiment had failed, and failed, as it was thought, so utterly and hopelessly, that it could not be tried again.

What, then, was to be done? Committed against a bank of the United States in the strongest manner, and the substitute, from which so much was expected, having disappointed all hopes, what was the administration to do? Two distinct classes of duties had been performed in times past by the Bank of the United States; one more immediately to the Government, the other to the community. The first was the safe-keeping and the transfer, when required, of the public moneys; the other the supplying of a sound and convenient paper currency, of equal credit all over the country, and every where equivalent to specie, and the giving of most important facilities to the operations of exchange. These objects were highly important, and their most perfect accomplishment by the experiment had been promised from the first. The State banks, it was declared, could perform all these duties, and should perform them. But the "experiment" came to a dishonored end in the early part of May. The deposit banks, with the others, stopped payment. They could not render back the deposits; and so far from being able to furnish a general currency, or to assist exchanges, (purposes, indeed, which they never had fulfilled with any success,) their paper became immediately depreciated, even in its local circulation. What course, then, was the administration now to adopt? Why, sir, it is plain that it had but one alternative. It must either return to the former practice of the Government, take the currency into its own hands, and maintain it, as well as provide for the safe-keeping of the public money by some institution of its own; or else, adopting some new mode of merely keeping the public money, it must abandon all further care over currency and exchange. One of these courses became inevitable. The administration had no other choice. The State banks could be tried no more, with the opinion which the administration now entertained of them; and how else could any thing be done to maintain the currency? In no way but by the establishment of a national institution.

There was no escape from this dilemma. One course was, to go back to that which the party had so much condemned; the other, to give up the whole duty, and leave the currency to its fate. Between these two, the administration found itself absolutely obliged to decide; and it has decided, and decided boldly. It was decided to surrender the duty, and abandon the constitution. That decision is before us, in the message, and in the measures now under consideration. The choice has been made; and that choice, in my opinion, raises a question of the utmost importance to the people of this country, both for the present and all future time. That question is, whether Con-

SEPT. 28, 1837.]

Sub-Treasury Bill.

[SENATE.]

gress has, or ought to have, any duty to perform in relation to the currency of the country, beyond the mere regulation of the gold and silver coin.

Mr. President, the honorable member from South Carolina remarked, the other day, with great frankness and good humor, that, in the political classifications of the times, he desired to be considered as nothing but an honest nullifier. That, he said, was his character. I believe, sir, the country will readily concede that character to the honorable gentleman. For one, certainly, I am willing to say, that I believe him a very honest and a very sincere nullifier, using the term in the same sense in which he used it himself, and in which he meant to apply it to himself. And I am very much afraid, sir, that (whatever he may think of it himself) it has been under the influence of those sentiments, which belong to his character as a nullifier, that he has so readily and so zealously embraced the doctrines of the President's message. In my opinion, the message, the bill before us, and the honorable member's amendment, form, together, a system, a code of practical politics, the direct tendency of which is to nullify and expunge, or, perhaps, more correctly speaking, by a united and mixed process of nullification and expunging, to abolish a highly important and useful power of the Government. It strikes down the principle upon which the Government has been administered, in regard to the subject of the currency, through its whole history; and it seeks to obliterate, or to draw black lines around, that part of the constitution on which this principle of administration has rested. The system proposed, in my opinion, is not only anti-commercial, but anti-constitutional also, and anti-union in a high degree.

You will say, sir, that this is a strong way of stating an opinion. It is so. I mean to state the opinion in the strongest manner. I do not wish, indeed, at every turn, to say, of measures which I oppose, that they either violate or surrender the constitution. But when, in all soberness and candor, I do so think, in all soberness and candor I must so speak; and whether the opinion which I have now expressed be true let the sequel decide.

Now, sir, Congress has been called together in a moment of great difficulty. The characteristic of the crisis is commercial distress. We are not suffering from war, or pestilence or famine; and it is alleged by the President and Secretary, that there is no want of revenue. Our means, it is averred, are abundant. And yet the Government is in distress, and the country is in distress; and Congress is assembled, by a call of the President to provide relief. The immediate and direct cause of all is, derangement of the currency and the exchanges; commercial credit is gone, and property no longer answers the common ends and purposes of property. Government cannot use its own means, and individuals are alike unable to command their own resources. The operations, both of Government and people, are obstructed; and they are obstructed because the money of the country, the great instrument of commerce and exchange, has become disordered and useless. The Government has funds; that is to say, it has credits in the banks, but it cannot turn these credits into cash; and individual citizens are as bad off as Government. The Government is a great creditor and a great debtor. It collects and it disburses large sums. In the loss, therefore, of a proper medium of payment and receipt, Government is a sufferer. But the people are sufferers from the same causes; and inasmuch as the whole amount of payments and receipts by the people, in their individual transactions, is many times greater than the amount of payments and receipts by Government, the aggregate of evil suffered by the people is also many times greater than that suffered by Government. Individuals have means as ample, in proportion to their wants, as Government; but they share with Government the common calamity arising from the overthrow of the currency. The honorable member from Mississippi [Mr.

WALKER] has stated, or has quoted the statement from others, that while the payments and receipts of Government are twenty millions a year, the payments and receipts of individuals are two or three hundred millions. He has, I think, underrated the amount of individual payments and receipts. But even if he has not, the statement shows how little a part of the whole evil falls on Government. The great mass of suffering is on the people.

Now, sir, when we look at the message, the bill, and the proposed amendment, their single, exclusive, and undivided object is found to be, relief to the Government. Not one single provision is adopted or recommended with direct reference to the relief of the people. They all speak of revenue, of finance, of duties and customs, of taxes and collections; and the evils which the people suffer, by the derangement of the currency and the exchanges, and the breaking up of commercial credit, instead of being put forth as prominent and leading objects of regard, are dismissed with a slight intimation, here and there, that, in providing for the superior and paramount interests of Government, some incidental or collateral benefits may, perhaps, accrue to the community. But is Government, I ask, to care for nothing but itself? Is self-preservation the great end of Government? Has it no trust powers? Does it owe no duties but to itself? If it keeps itself in being, does it fulfil all the objects of its creation? I think not. I think Government exists, not for its own ends, but for the public utility. It is an agency, established to promote the common good, by common counsels; its chief duties are to the people; and it seems to me strange and preposterous, in a moment of great and general distress, that Government should confine all its deliberations to the single object of its own revenues, its own convenience, its own undisturbed administration.

I cannot say, sir, that I was surprised to see this general character impressed on the face of the message. I confess it appeared to me, when the banks stopped payment, that the administration had come to a pass, in which it was unavoidable that it should take some such course. But that necessity was imposed, not by the nature of the crisis, but by its own commitment to the line of politics which its predecessor had adopted, and which it had pledged itself to pursue.

It withdraws its care from the currency, because it has left itself no means of performing its own duties, connected with that subject. It has voluntarily and on calculation, discarded and renounced the policy which has been approved for half a century, because it could not return to that policy, without admitting its own inconsistency and violating its party pledges. This is the the truth of the whole matter.

Now, sir, my present purpose chiefly is to maintain two propositions:

1. That it is the constitutional duty of this Government to see that a proper currency, suitable to the circumstances of the times, and to the wants of trade and business, as well as to the payment of debts due to Government, be maintained and preserved; a currency of general credit, and capable of aiding the operations of exchange, so far as those operations may be conducted by means of the circulating medium; and that there are duties, therefore, devolving on Congress, in relation to currency, beyond the mere regulation of the gold and silver coins.

2. That the message, the bill, and the proposed amendment, all, in effect, deny any such duty, disclaim all such power, and confine the constitutional obligation of Government to the mere regulation of the coins, and the care of its own revenues.

I have well weighed, Mr. President, and fully considered, the first of these propositions, to wit: that which respects the duty of this Government, in regard to the currency. I mean to stand by it. It expresses, in my judgment, a principle, fully sustained by the constitution, and

SENATE.]

Sub-Treasury Bill.

[SEPT. 28, 1837.]

by the usage of the Government, and which is of the highest practical importance. With this proposition, or this principle, I am willing to stand connected, and to share in the judgment which the community shall ultimately pronounce upon it. If the country shall sustain it, and be ready, in due time, to carry it into effect, by such means and instruments as the general opinion shall think best to adopt, I shall co-operate, cheerfully, in any such undertaking; and shall look again, with confidence, to prosperity in this branch of our national concerns. On the other hand, if the country shall reject this proposition, and act on that rejection; if it shall decide that Congress has no power, nor is under any duty, in relation to the currency, beyond the mere regulation of the coins; then, upon that construction of the powers and duties of Congress, I am willing to acknowledge, that I do not feel myself competent to render any substantial service to the public councils, on these great interests. I admit, at once, that if the currency is not to be preserved by the Government of the United States, I know not how it is to be guarded against constantly occurring disorders and arrangements.

Before entering into the discussion of the grounds of this proposition, however, allow me, sir, a few words by way of preliminary explanation. In the first place, I wish it to be observed, that I am now contending only for the general principle, and not insisting either on the constitutionality, or expediency, of any particular means or any particular agent. I am not saying by what instrument or agent Congress ought to perform this duty; I only say it is a duty, which, in some mode, and by some means, Congress is bound to perform. In the next place, let be remembered, that I carry the absolute duty of Government, in regard to exchange, no farther than the operations of exchange may be performed by currency. No doubt, sir, a proper institution, established by Government, might, as heretofore, give other facilities to exchange, of great importance, and to a very great extent. But I intend, on this occasion, to keep clearly within the constitution, and to assign no duty to Congress, not plainly enjoined by the provisions of that instrument, as fairly interpreted, and as heretofore understood.

The President says, it is not the province of Government to aid individuals in the transfer of their funds, otherwise than by the use of the post office; and that it might as justly be called on to provide for the transportation of their merchandise.

Now, I beg leave to say, sir, with all respect and deference, that funds are transferred from individual to individual, usually for the direct purpose of the payment and receipt of debts; that payment and receipt are duties of currency; that, in my opinion, currency is a thing which Government is bound to provide for and superintend; that the case, therefore, has not the slightest resemblance to the transportation of merchandise, because the transportation of merchandise is carried on by ships and boats, by carts and wagons, and not by the use of currency, or of any thing else which the Government has usually exclusive control. These things individuals can provide for themselves. But the transfer of funds is done by credit, and must be so done; and some proper medium for this transfer it is the duty of Government to provide, because it belongs to currency, to money, and is therefore beyond the power of individuals.

The nature of exchange, sir, is well understood by persons engaged in commerce; but as its operations are a little out of the sight of other classes of the community, although they have all a deep and permanent interest in the subject, I may be pardoned for a word or two of general explanation. I speak of domestic exchanges only. We mean, then, by exchange, this same transfer of funds. We mean the making of payment in a distant place, or the receiving of payment from a distant place, by some

mode of paper credits. If done by draft, order, or bill of exchange, that is one form; if done by the transmission of bank notes, through the post office, or otherwise, that is another form. In each, credit is used; in the first, the credit of the parties whose names are on the bill or draft; in the last, the credit of the bank. Every man, sir, who looks over this vast country, and contemplates the commercial connexion of its various parts, must see the great importance that this exchange should be cheap and easy. To the producer and to the consumer, to the manufacturer and the planter, to the merchant, to all, in all classes, this becomes matter of moment. We may see an instance in the common articles of manufacture produced in the North, and sent to the South and West for sale and consumption. Hats, shoes, furniture, carriages, domestic hardware, and various other articles, the produce of those manufacturing, and of those employments which are carried on without the aid of large capital, constitute a large part of this trade, as well as the fabrics of cotton and wool. Now, a state of exchange, which shall enable the producers to receive payment regularly, and without loss, is indispensable to any useful prosecution of this intercourse. Derangement of currency and exchange is ruinous. The notes of local banks will not answer the purpose of remittance; and if bills of exchange cannot be had, or can be had only at a high rate, how is payment to be received, or to be received without great loss? This evil was severely felt, even before the suspension of specie payment by the banks; and it will always be felt more or less, till there is a currency of general credit and circulation through the country. But when the banks suspended, it became overwhelming. All gentlemen having Northern acquaintance, must know the existence of this evil. I have heard it said, that the hitherto prosperous and flourishing town of Newark has already lost a considerable part of its population by the breaking up of its business, in consequence of these commercial embarrassments. And in cases in which business is not wholly broken up, if five or six per cent., or more, is to be paid for exchange, it by so much enhances the cost to the consumer, or takes away his profit from the producer. I have mentioned these articles of common product of Northern labor; but the same evil exists in all the sales of imported goods; and it must exist, also, in the South, in the operations connected with its great staples. All the South must have, and has, constant occasion for remittance by exchange; and no part of the country is likely to suffer more severely by its derangement. In short, there can be no satisfactory state of internal trade, when there is neither cheapness, nor promptness, nor regularity, nor security, in the domestic exchanges.

I say again, sir, that I do not hold Government bound to provide bills of exchange for purchase and sale. Nobody thinks of such a thing. If any institution established by Government can do this, as might be the case, and has been the case, so much the better. But the positive obligation of Government, I am content to limit to currency, and, so far as exchange is concerned, to the aid which may be afforded to exchange by currency. I have been informed that, a few years ago, before the charter of the late bank expired, at those seasons of the year when Southern and Western merchants usually visit the Northern cities to make purchases, or make payment for existing liabilities, that bank redeemed its notes to the amount of fifty or even a hundred thousand dollars a day. These notes, having been issued in the West, were brought over the mountains, as funds to be used in the Eastern cities. This was exchange; and it was exchange through the medium of currency; it was perfectly safe, and it cost nothing. This fact illustrates the importance of a currency of universal credit, to the business of exchange.

Having made these remarks, for the purpose of explain-

SEPT. 28, 1837.]

Sub-Treasury Bill.

[SENATE.]

ing exchange, and showing its connexion with currency, I proceed to discuss the general propositions.

Is it the duty, then, of this Government, to see that a currency be maintained, suited to the circumstances of the times, and to the uses of trade and commerce?

I need not, sir, on this occasion, enter historically into the well known causes which led to the adoption of the present constitution. Those causes are familiar to all public men; and among them, certainly, was this very matter of giving credit and uniformity to the money system of the country. The States possessed no system of money and circulation; and that was among the causes of the stagnation of commerce. Indeed, all commercial affairs were in a disjointed, deranged, and miserable state. The restoration of commerce, the object of giving it uniformity, credit, and national character, were among the first incentives to a more perfect union of the States. We all know that the meeting at Annapolis, in 1786, sprang from a desire to attempt something which should give uniformity to the commercial operations of the several States; and that in and with this meeting, arose the proposition for a general convention, to consider of a new constitution of government. Every where, State currencies were depreciated, and continental money was depreciated also. Debts could not be paid, and there was no value to property. From the close of the war, to the time of the adoption of this constitution, as I verily believe, the people suffered as much, except in the loss of life, from the disordered state of the currency and the prostration of commerce and business, as they suffered during the war. All our history shows the disasters and afflictions which sprang from these sources; and it would be waste of time to go into a detailed recital of them. For the remedy of these evils, as one of its great objects, and as great as any one, the constitution was formed and adopted.

Now, sir, by this constitution, Congress is authorized to "coin money, to regulate the value thereof, and of foreign coins;" and all the States are prohibited from coining money, and from making any thing but gold and silver coins a tender in payment of debts. Suppose the constitution had stopped here, it would still have established the all-important point of a uniform money system. By this provision Congress is to furnish coin, or regulate coin, for all the States. There is to be but one money standard for the country. And the standard of value to be established by Congress, is to be a currency, and not bullion merely; because we find it is to be coin; that is, it is to be one or the other of the precious metals, bearing an authentic stamp of value, and passing therefore by tale. That is to be the standard of value. A standard of value, therefore, and a money for circulation, were thus expressly provided for. And if nothing else had been done, would it not have been a reasonable and necessary inference from this power, that Congress had authority to regulate, and must regulate and control, any and all paper, which either States or individuals might desire to put into circulation, purporting to represent this coin, and to take its place in the uses of trade and commerce? It is very evident that the constitution intended something more than to provide a medium for the payment of debts to Government. The object was a uniform currency for the use of the whole people, in all the transactions of life; and it was manifestly the intent of the constitution, that the power to maintain such a currency should be given to Congress. But it would make the system incongruous and incomplete, it would be denying to Congress the means necessary to accomplish ends which were manifestly intended, it would render the whole provision in a great measure nugatory, if, when Congress had established a coin for currency and circulation, it should have no power to maintain it as an actual circulation, nor to regulate or control paper emissions designed to occupy its place, and perform the same functions that

it would on the coinage power alone; and on a fair, and just, and reasonable inference from it, therefore, I should be of opinion that Congress was authorized, and was bound, to protect the community against all evils which might threaten from a deluge of currency of another kind, filling up, in point of fact, all the channels of circulation. And this opinion is not new. It has often been expressed before, and was cogently urged by Mr. Dallas, the Secretary of the Treasury, in his report in 1816. He says, "whenver the emergency occurs, that demands a change of system, it seems necessarily to follow, that the authority, which was alone competent to establish the national coin, is alone competent to create a national substitute."

But the constitution does not stop with this grant of the coinage power to Congress. It expressly prohibits the States from issuing bills of credit. What a bill of credit is, there can be no difficulty in understanding, by any one acquainted with the history of the country. They had been issued, at different times, and in various forms, by the State Governments. The object of them was to create a paper circulation; and any paper, issued on the credit of the State, and intended for circulation from hand to hand, is a bill of credit, whether made a tender for debts or not, or whether carrying interest or not. Is it issued with intent that it shall circulate from hand to hand, as money, and with intent that it shall so circulate on the credit of the State? If it is, it is a bill of credit. The States, therefore, are prohibited from issuing paper for circulation, on their own credit; and this provision furnishes additional and strong proof, that all circulation, whether of coin or paper, was intended to be subject to the regulation and control of Congress. Indeed, the very object of establishing one commerce for all the States, and one money for all the States, would otherwise be liable to be completely defeated. It has been supposed, nevertheless, that this prohibition on the States has not restrained them from granting to individuals, or to private corporations, the power of issuing notes for circulation, on their own credit. This power has long been exercised, and is admitted to exist. But could it be reasonably maintained, looking only to these two provisions, (that is to say, to the coinage power, which is vested exclusively in Congress, and to the prohibition on the States against issuing their own paper for circulation,) that Congress could not protect its own power, and secure to the people the full benefits intended by and for them against evils and mischiefs, if they should arise, or threaten to arise, not from paper issued by States, but from paper issued by individuals or private corporations? If this be so, then the coinage power evidently fails of a great part of its intended effect; and the evils, intended to be prevented by the prohibitions on the States, may all arise, and become irresistible and overwhelming in another form.

But the message intimates a doubt whether this power over the coin was given to Congress to preserve the people from the evils of paper money, or only given to protect the Government itself. I cannot but think this very remarkable and very strange. The language of the President is, "there can be no doubt that those who framed and adopted the constitution, having in immediate view the depreciated paper of the confederacy, of which five hundred dollars in paper were at times equal to only one dollar in coin, intended to prevent the recurrence of similar evils, so far at least as related to the transactions of the new Government." Where is the foundation for the qualification here expressed? On what clause, or construction of any clause, is it founded? Will any gentleman tell me what there is in the constitution which led the President, or which could lead any man, to doubt whether it was the purpose of that instrument to protect the people, as well as the Government, against the overwhelming evils of paper money? Is there a word or particle in the coinage power, or any other power, which countenances the notion that the constitution intend-

SENATE.]

Sub-Treasury Bill.

[SEPT. 28, 1837.]

ed that there should be one money for the Government, and another for the people; that Government should have the means of protecting its own revenues against depreciated paper, but should be still at liberty to suffer all the evils of such paper to fall with full weight upon the people! This is altogether a new doubt. It intimates an opinion, which, so far as it shall find those who are ready to adopt and follow it, will sap and undermine one of the most indispensable powers of the Government. The coinage power is given to Congress in general terms; it is altogether denied to the States; and the States are prohibited from issuing bills of credit for any purpose whatever, or of any character whatever. Can any man hesitate one moment to say that these provisions are all intended for the general good of the people? I am, therefore, surprised at the language of the message in this particular, and utterly at a loss to know what should have led to it, except the apparent and forgone conclusion and purpose, of attempting to justify Congress in the course which was about to be recommended to it, of abstaining altogether from every endeavor to improve or maintain the currency, except so far as the receipts and payments of the Government itself were concerned. I repeat, sir, that I should be obliged to any friend of the administration, who would suggest to me on what ground this doubt, never expressed before, and now so solemnly and gravely intimated, is supposed to stand. Is it, indeed, uncertain, is it matter of grave and solemn doubt, whether the coinage power itself, so fully granted to Congress, and so carefully guarded by restraints upon the States, had any further object than to enable Congress to furnish a medium in which taxes might be collected?

But this power over the coinage is not the strongest, nor the broadest, ground on which to place the duty of Congress. There is another power granted to Congress, which seems to me to apply to this case, directly and irresistibly, and that is the commercial power. The constitution declares that Congress shall have power to regulate commerce, not only with foreign nations, but between the States. This is a full and complete grant, and must include authority over every thing which is part of commerce, or essential to commerce. And is not money essential to commerce? No man, in his senses, can deny that; and it is equally clear, that whatever paper is put forth, with intent to circulate as currency, or to be used as money, immediately affects commerce. Bank notes, in a strict and technical sense, are not, indeed, money; but, in a general sense, and often in a legal sense, they are money. They are substantially money, because they perform the functions of money. They are not, like bills of exchange or common promissory notes, mere proofs or evidences of debt, but are treated as money, in the general transactions of society. If receipts be given for them, they are given as for money. They pass under a legacy, or other form of gift, as money. And this character of bank notes was as well known and understood at the time of the adoption of the constitution as it is now. The law, both of England and America, regarded them as money, in the sense above expressed. If Congress, then, has power to regulate commerce, it must have a control over that money, whatever it may be, by which commerce is actually carried on. Whether that money be coin or paper, or however it has acquired the character of money or currency, if, in fact, it has become an actual agent or instrument in the performance of commercial transactions, it necessarily thereby becomes subject to the regulation and control of Congress. The regulation of money is not so much an inference from the commercial power conferred on Congress, as it is a part of it. Money is one of the things, without which, in modern times, we can form no practical idea of commerce. It is embraced, therefore, necessarily, in the terms of the constitution.

But, sir, as will be seen by the proposition which I have stated, I go further; I insist that the duty of Congress is

commensurate with its power; that it has authority not only to regulate and control that which others may put forth as money and currency, but that it has the power, and is bound to perform the duty, of seeing that there is established and maintained, at all times, a currency of general credit, equivalent in value to specie, adapted to the wants of commerce and the business of the people, and suited to the existing circumstances of the country. Such a currency is an instrument of the first necessity to commerce, according to the commercial system of the present age; and commerce cannot be conducted, with full advantage, without it. It is in the power of Congress to furnish it, and it is in the power of nobody else. The States cannot supply it. That resource has often been tried, and has always failed. I am no enemy to the State banks; they may be very useful in their spheres; but you can no more cause them to perform the duties of a national institution, than you can turn a satellite into a primary orb. They cannot maintain a currency of equal credit all over the country. It might be tried, sir, in your State of Kentucky, or our State of Massachusetts. We may erect banks on all the securities which the wit of man can devise; we may have capital, we may have funds, we may have bonds and mortgages, we may add the faith of the State, we may pile Pelion upon Ossa; they will be State institutions after all, and will not be able to support a national circulation. This is inherent in the nature of things, and in the sentiments of men. It is in vain to argue that it ought not to be so, or to contend that one bank may be as safe as another. Experience proves that it is so, and we may be assured it will remain so.

Sir, mine is not the ruthless hand that shall strike at the State banks, nor mine the tongue that shall causelessly upbraid them with treachery or perfidy. I admit their lawful existence; I admit their utility in the circle to which they properly belong. I only say they cannot perform a national part in the operations of commerce. A general and universal accredited currency, therefore, is an instrument of commerce, which is necessary to the enjoyment of its just advantages, or, in other words, which is essential to its beneficial regulation. Congress has power to establish it, and no other power can establish it; and therefore Congress is bound to exercise its own power. It is an absurdity, on the very face of the proposition, to allege that Congress shall regulate commerce, but shall, nevertheless, abandon to others the duty of maintaining and regulating its essential means and instruments. We have in actual use a mixed currency: the coin circulating under the authority of Congress, the paper under the authority of the States. But this paper, though it fills so great a portion of all the channels of circulation, is not of general and universal credit; it is made up of various local currencies, none of which has the same credit, or the same value, in all parts of the country; and therefore these local currencies answer, but very loosely and deficiently, the purposes of general currency, and of remittance. Now, is it to be contended that there is no remedy for this? Are we to agree, that the constitution, with all its care, circumspection, and wisdom, has, nevertheless, left this great interest unprotected for? Is our commercial system so lame and impotent? Are our constitutional provisions and our political institutions so radically defective? I think not sir. They do not deserve this reproach; and I think it may now be easily shown that, under all administrations, from General Washington's time down to the 3d of March last, the Government has felt and acknowledged its obligations, in regard to the currency, to the full extent in which I have stated it, and has constantly endeavored to fulfil that obligation. Allow me to go back to the beginning, and trace this matter down to our times a little in detail.

In his first speech to Congress, in 1789, having just then assumed his new office, General Washington recom-

SEPT. 28, 1837.]

Sub-Treasury Bill.

[SENATE.]

mended no particular subjects to the consideration of Congress; but in his speech, at the opening of the second session, he suggested the importance of a uniform currency, without distinguishing coinage from paper; and this body, in its answer, assured him it was a subject which should receive its attention. Recollect, sir, at that time, that there were State banks having notes in circulation, though they were very few. The first Bank of the United States was established at the third session of the Congress in 1791. The bill for its creation originated in the Senate; the debates in which were at that time not public. We have, however, the debates in the House, we have the reports of the Secretaries, and we have the law itself. Let us endeavor to learn, from these sources for what objects this institution was created, and whether a national currency was one of those objects.

Certainly, sir, it must be admitted that currency was not the only object in incorporating the bank of 1791. The Government was new, its fiscal affairs were not well arranged, it was greatly in debt, and the political state of things at the time rendered it highly probable that sudden occasions for making loans would arise. That it might assist the operations of the Treasury, therefore, and that it might make those loans to Government, if pressing occasions should arise, were two of the purposes, had in view in establishing the bank. But it is equally clear that there was a third purpose, and that respected commerce and currency. To furnish a currency for general circulation, and to aid exchange, was, demonstrably, a clear, distinct, and avowed object, in the creation of the first bank.

On the 13th of December, 1790, the Secretary of the Treasury made a report to the House of Representatives, recommending a national bank. In this report, he set forth the advantages, of such an institution. One of these advantages, he says, consists "in increasing the quantity of circulating medium, and quickening the circulation." And he then proceeds to observe: "This last may require some illustration. When payments are to be made between different places, having an intercourse of business with each other, if there happen to be no private bills at market, and there are no bank notes which have a currency in both, the consequence is, that coin must be remitted. This is attended with trouble, delay, expense, and risk. If, on the contrary, there are bank notes current in both places, the transmission of these, by the post, or any other speedy or convenient conveyance, answers the purpose; and these again, in the alternations of demand, are frequently returned, very soon after, to the place whence they were first sent; whence the transportation and re-transportation of the metals are obviated, and a more convenient and a more expeditious medium of payment is substituted."

Is not this clear proof, that one object, in establishing the bank, in the opinion of the Secretary, was the creation of a currency which should have general credit throughout the country, and, by means of such credit, should become a convenient and expeditious medium of exchange? Currency, sir, currency and exchange were then, beyond all doubt, important objects, in the opinion of the proposer of the measure, to be accomplished by the institution. The debates which took place in the House of Representatives, confirm the same idea. Mr. Madison, who objected to the bill on constitutional grounds, admitted, nevertheless, that one of the advantages of a bank consists "in facilitating occasional remittances, from different places where notes happen to circulate;" and Mr. Ames, who was one of the most distinguished friends of the measure, and who represented a commercial district, enlarged on the great benefit of the proposed institution to commerce. He insisted that the intercourse between the States could never be on a good footing, without an institution whose paper would circulate more extensively than that of any State bank; and

what he saw, in the future, we have seen in the past, and feel in the present. Other gentlemen, also, contended that some such institution was necessary, in order to enable Congress to regulate the commerce of the country, and, for that reason, that it would be constitutional, as being proper means for a lawful end.

When the bill had passed the two Houses, the President, as we all know, asked the opinion of his cabinet upon its constitutionality. The Secretary of State and the Attorney General were against it; the Secretary of the Treasury was in favor of it; and among the grounds on which he placed the right of Congress to pass the law, was its adaptation to the exercise of the commercial power, conferred by the constitution on Congress. His language is: "The institution of a bank has, also, a natural relation to the regulation of trade between the States, in so far as it is conducive to the creation of a convenient medium of exchange between them, and to the keeping up a full circulation, by preventing the frequent displacement of the metals in reciprocal remittances. Money is the very hinge on which commerce turns. And this does not mean merely gold and silver; many other things have served the purpose with different degrees of utility. Paper has been extensively employed. It cannot, therefore, be admitted, with the Attorney General, that the regulation of trade between the States, as it concerns the medium of circulation and exchange, ought to be considered as confined to coin." "And it is," he adds, "in reference to these general relations of commerce, that an establishment which furnishes facilities to circulation, and a convenient medium of exchange and alienation, is to be regarded as a regulation of trade."

Nothing can be plainer, sir, than this language; and, therefore, nothing is more certain than that those who recommended and supported the first bank regarded it as a fit and necessary measure, in order to enable Congress to exercise its important duty of regulating commerce, and to fulfil, especially, that part of the duty which enjoined upon it the provision of a proper and suitable currency for circulation and exchange.

But it is not necessary to rely on these opinions of individual friends of the measure. Let the act speak for itself. Let us look into it, and search its reasons on its own face. What are the grounds and objects of the law, as set forth in the law itself? The preamble tells us. It declares:

"That the establishing of a bank will be very conducive to the successful conducting of the national finances; and will tend to give facility to the obtaining of loans, for the use of Government, in sudden emergencies; and will be productive of considerable advantage to trade and industry in general."

Trade and industry in general, therefore, constituted one distinct and definite object of the incorporation, if the law truly expounds its own purposes. It was not revenue alone, it was not the facility of making loans merely, it was not mere utility to Government; but, in addition to these, it was commerce, it was the interest of the people, it was trade and business in general, which, among other considerations, formed an important part of the objects of the incorporation. And indeed, sir, events proved that it was vastly the most important part of all. What else did the first bank do, for the Government or the country, at all to be compared, in the amount of benefit, to its influence on the currency and the exchanges?

It is as clear as demonstration, therefore, that the Government, in General Washington's time, did feel itself authorized by the constitution, and bound in duty, to provide a safe currency, of general credit, for circulation and for exchange. It did provide such a currency. It is remarkable enough, so comparatively small was the mere object of keeping the public money, that no provision for that purpose was inserted in the charter; nor was there any law on the subject, so far as I remember, till the year 1800.

SENATE.]

Sub-Treasury Bill.

[SEPT. 28, 1837.]

The bank went into operation, and its success was great and instantaneous; and, during the whole period of its existence, there was no complaint of the state of the currency or the exchanges.

And now, sir, let me ask, what was it that gave this success to the new institution? Its capital was small, and Government had no participation in its direction; it was committed entirely to individual management and control.

Its notes, it is true, were made receivable in payments to Government: that was one advantage. It had a solid capital, and its paper was at all times convertible into gold and silver, at the will and pleasure of the holder: that was another and a most important ground of its prosperity. But, sir, there was something more than all this. There was something which touched men's sentiments, as well as their understandings. There was a cause which carried the credit of the new-born bank, as on the wings of the wind, to every quarter and every extremity of the country. There was a charm which created trust, and faith, and reliance, not only in the great marts of commerce, but in every corner into which money, in any form, could penetrate. That cause was its nationality of character. It had the broad seal of the Union to its charter. It was the institution of the nation, established by that new Government which the people already loved; and it was known to be designed to revive and foster that commerce which had so long been prostrate and lifeless.

Mr. President, let it be borne in mind that I am not now arguing the constitutionality, or present expediency, of a bank of the United States. My sentiments are already well known on that subject; and, if they were not, the subject is not now before us.

But I have adverted to the history of the first bank, and examined the grounds on which, and the purposes for which, it was established, in order to show the fact, that this Government, from the first, has acknowledged the important duty and obligation of providing for currency and exchange as part of the necessary regulation of commerce. I do not mean, at present, to say that a bank is the only, or the indispensable, means by which this duty can and must be performed; although I certainly think it the best. Yet I will not set limits to the wisdom and sagacity of gentlemen in the invention and adaptation of means. If they do not like a bank, let them try whatever they do like. If they know a better instrument, or agent, let them use it. But I maintain that the performance of the duty, by some means, or some instrument, or some agent, is indispensable; and that so long as it shall be neglected, so long the commerce and business of the country must suffer.

The history of the late Bank of the United States manifests, as clearly as that of the first, that the Government, in creating it, was acting, avowedly, in execution of its duty in regard to the currency. Fiscal aid, except so far as the furnishing of a currency was concerned, was hardly thought of. Its bills were made receivable for revenue, indeed; but that provision, as far as it went, was obviously a provision for currency. Currency for the revenue, however, was not the leading object. The leading object was currency for the country.

The condition of things, at that time, was very much like that which now exists. The revenue of the Government was entirely adequate to all its wants; but its operations were all obstructed by the derangement of the currency, and the people were as bad off as the Government. The banks, or most of them, had suspended payments. Their paper was depreciated in various degrees; the exchanges were all disordered; and the commerce of the country thrown into confusion. Government and people were all rich; but, with all their riches, they had no money. Both might apply to themselves what Mr. Addison, being a much readier writer than speaker, said of himself, when

he observed that, although he could draw for a thousand pounds, he had not a guinea in his pocket.

Mr. Madison, at that time, was President of the United States. He had been one of the opposers of the first bank on constitutional grounds; but he had yielded his own opinions to the general sentiment of the country, and to the consideration that the power had been established and exercised. He was not a man who carried his respect for himself, and his own opinions, so far as to overcome his respect for all other men's judgments. Wise men, sir, are sometimes wise enough to surrender their own opinions, or at least to see that there is a time when questions must be considered as settled. Mr. Madison was one of these. In his annual message, in December, 1815, he says:

"The arrangements of the finances, with a view to the receipts and expenditures of a permanent peace establishment, will necessarily enter into the deliberations of Congress during the present session. It is true that the improved condition of the public revenue will not only afford the means of maintaining the faith of the Government with its creditors inviolate, and of prosecuting successfully the measures of the most liberal policy, but will also justify an immediate alleviation of the burdens imposed by the necessities of the war. It is, however, essential to every modification of the finances that the benefits of a uniform national currency should be restored to the community. The absence of the precious metals will, it is believed, be a temporary evil; but, until they can again be rendered the general medium of exchange, it devolves on the wisdom of Congress to provide a substitute, which shall equally engage the confidence and accommodate the wants of the citizens throughout the Union. If the operation of State banks cannot produce this result, the probable operation of a national bank will merit consideration; and, if neither of these expedients be deemed effectual, it may become necessary to ascertain the terms upon which the notes of the Government (no longer required as an instrument of credit) shall be issued, upon motives of general policy, as a common medium of circulation."

Here, sir, is the express recommendation to Congress to provide a "national currency," a paper currency, a uniform currency, for the uses of the community, as a substitute for the precious metals, and as a medium of exchange. It devolves on Congress, says Mr. Madison, to provide such a substitute as shall engage the confidence and accommodate the wants of the citizens throughout the Union; and if the State banks cannot produce this result, a national bank will merit consideration. Can language be more explicit? Currency, national currency, currency for exchange, currency which shall accommodate all the people, is the great and leading, and, I may add, the sole and single object of the recommendation.

Contrast now, sir, this language, and these sentiments, with those of the message before us. Did Mr. Madison confine his recommendation to such measures of relief as might be useful to Government merely? Did he look exclusively to the Treasury? Did he content himself with suggesting a proper medium for the receipt of revenue, or a proper depository for its safe-keeping? Far otherwise. His view was general, statesmanlike, and fitted to the exigency of the times. The existing evil was one which afflicted the whole country; and the remedy proposed by him was, as it should have been, commensurate with the whole evil. And, sir, what a shock it would have produced at that time, if Mr. Madison, seeing the prostrate state of commerce and business all around him, had recommended to Congress to do nothing in the world but to take care that the taxes were collected, and those in the employment of Government well paid.

Well, sir, what was done with this message? Why, sir, the House of Representatives resolved, "That so much of the President's message as related to a uniform national

SEPT. 28, 1837.]

Sub-Treasury Bill.

[SENATE.]

currency, should be referred to a select committee." Such a committee was raised, and the honorable member from South Carolina was placed at its head, as he well deserved to be, from his standing in the House, and his well known opinions on this subject. The honorable member was thus at the head of a committee, appointed, not on the subject of a revenue currency, or a currency for Government, but a uniform national currency; and, to effect the great object of this appointment, he brought in a bill for the establishment of a bank of the United States.

As has been the case formerly, so on this occasion, the Secretary of the Treasury made a report on the subject. And now hear, sir, what he says of the duty of Congress to provide a national currency, and of the objects which he proposes by the establishment of a national bank.

"The constitutional and legal foundation of the monetary system of the United States is thus distinctly seen; and the power of the Federal Government to institute and regulate it, whether the circulating medium consist of coin or of bills of credit, must, in its general policy, as well as in the terms of its investment, be deemed an exclusive power. It is true, that a system depending upon the agency of the precious metals, will be affected by the various circumstances which diminish their quantity, or deteriorate their quality. The coin of a State sometimes vanishes under the influence of political alarms; sometimes in consequence of the explosion of mercantile speculations; and sometimes by the drain of an unfavorable course of trade. But, whenever the emergency occurs that demands a change of system, it seems necessarily to follow, that the authority which was alone competent to establish the national coin, is alone competent to create a national substitute. It has happened, however, that the coin of the United States has ceased to be the circulating medium of exchange, and that no substitute has hitherto been provided by the national authority. During the last year, the principal banks established south and west of New England resolved that they would no longer issue coin in payment of their notes, or of the drafts of their customers for money received upon deposit. In this act the Government of the United States had no participation; and yet the immediate effect of the act was to supersede the only legal currency of the nation. By this act, although no State can constitutionally emit bills of credit, corporations elected by the several States, have been enabled to circulate a paper medium, subject to many of the practical inconveniences of the prohibited bills of credit."

"Of the services rendered to the Government by some of the State banks, during the late war, and of the liberality by which some of them are actuated in their intercourse with the Treasury, justice requires an explicit acknowledgment. It is a fact, however, incontrovertibly proved, that those institutions cannot, at this time be successfully employed to furnish a uniform national currency. The failure of one attempt to associate them, with that view, has already been stated. Another attempt, by their agency in circulating Treasury notes, to overcome the inequalities of the exchanges, has only been partially successful. And a plan recently proposed, with the design to curtail the issues of bank notes, to fix the public confidence in the administration of the affairs of the banks, and to give to each bank a legitimate share in the circulation, is not likely to receive the general sanction of the banks. The truth is, that the charter restrictions of some of the banks, the mutual relation and dependence of the banks of the same State, and even of the banks of the different States, and the duty which the directors of each bank conceive they owe to their immediate constituents, upon points of security or emolument, interpose an insuperable obstacle to any voluntary arrangement, upon national considerations alone, for the establishment of a national medium through the agency of the State banks."

"The establishment of a national bank is regarded as

the best, and perhaps the only adequate resource, to relieve the country and the Government from the present embarrassment. Authorized to issue notes, which will be received in all payments to the United States, the circulation of its issues will be coextensive with the Union; and there will exist a constant demand, bearing a just proportion to the annual amount of the duties and taxes to be collected, independent of the general circulation for commercial and social purposes. A national bank will, therefore, possess the means and the opportunity of supplying a circulating medium, of equal use and value in every State, and in every district of every State.

"The power of the Government to supply and maintain a paper medium of exchange, will not be questioned; but, for the introduction of that medium, there must be an adequate motive."

"Upon the whole, the State of the national currency, and other important considerations connected with the operations of the Treasury, render it a duty respectfully to propose—

"That a national bank be established."

This language, it must be admitted, is explicit enough, both in regard to the power and the duty; and the whole report bears very little resemblance, most certainly, to the official paper from the Treasury Department now before us.

When the bill was called up, the honorable member from South Carolina explained its objects in an able speech. He showed the absolute necessity of a national currency; the power of Congress over such currency, whether metallic or paper; and the propriety and expediency of establishing a bank, as the best means of exercising these powers and fulfilling these duties. I agreed then, and I agree now, to the general sentiment expressed in that speech, heartily and entirely. I would refer to it, on this occasion, both as an able argument and a high authority; and beg to adopt it, as setting forth, in a strong light, the sentiments which I am now endeavoring to enforce.

[Mr. CALHOUN here rose to make an explanation. He said that he never saw the reporter's notes of his speech on that occasion, and, therefore, what he did say, may not have been what he would have said. There were points of omission in that speech which occupied a column and a half of the National Intelligencer. Mr. C. said, that he took care then, as now, to fortify himself, and leave a road open to oppose, at any coming time, a national bank. He then said that he was opposed to a bank, but that he submitted to the necessity of the case. There was then a connexion between the Government and the banks; and, if the Government had a right to regulate the currency, there was no means of doing it but by a national bank. He had, both then, and since then, contended that Government had no right to have any connexion with any banks. In his opinion, the United States Bank (which he then advocated, and assisted to establish) was not established according to the constitution. Congress had no right to establish such a bank. He acted contrary to his own impressions of right. Many people may do things which they do not believe to be lawful, from necessity. He acted from necessity.]

Mr. WEBSTER, resuming his remarks, said, he thought the gentleman had said, formerly, that in consequence of the decision of the question, he felt thenceforward precluded from opposing the bank as being unconstitutional.

[Mr. CALHOUN again explained: He (Mr. C.) thought the connexion between Government and banks was now broken, and that set him at liberty; so that now he could oppose what he had then, and since, earnestly advocated.]

It is not my desire, sir, to hold the gentleman to a report of his speech, which he may choose, even now to disclaim. I have never heard of his disclaiming it before; and even now, sir, I do not understand him as being desirous of retracting or denying any thing contained in the printed report of his speech, respecting the importance of a uniform

SENATE.]

Sub-Treasury Bill.

[SEPT. 28, 1837.]

national currency. That topic makes up the sum and substance of his whole speech. It was the topic of the occasion; it was the express purpose for which his committee had been raised, and for the accomplishment of which the whole proceeding was gone into. It was all currency, currency, currency; and, whether the gentleman now thinks the law constitutional or unconstitutional, he cannot deny that his own object, and the object of Congress, was to furnish a circulating medium for the country. And here, again, so unimportant, relatively, was the mere custody, or deposit of the public moneys in the bank, that the bill, as originally introduced, contained no provision for that object. A section was afterwards introduced, in Committee of the Whole, on my motion, providing for the deposit of the public moneys with the bank, unless the Secretary of the Treasury should, at any time, otherwise order and direct; a reservation of power to the Secretary, which, as I think, and always have thought, was greatly abused, by the removal of the deposits, in 1833.

By reference to the debates, sir, it will be found that other friends of the measure followed up the general ideas of the honorable gentleman from South Carolina, and supported the bank, as a necessary agent or instrument for establishing, anew, a national currency, for the uses of commerce and exchange.

The operation of the joint resolution of April, 1816, aided, no doubt, in a proper degree, by the institution of the bank, and the currency which it furnished, accomplished the great end of the resumption of specie payments; and, for a long period, we had no further trouble with the currency.

And I now proceed to say, sir, that the late President of the United States has acknowledged this duty as often, and as fully and clearly, as any of his predecessors. His various admissions, or recognitions, of this obligation are too recent and too fresh in every one's recollection, to require, or to justify, particular citation. All the evils we now feel, indeed, we have encountered in the search after a better currency. It has been in the avowed attempt to discharge the duty of Government, connected with the circulation, that the late administration has led us to where we now are. The very first charge that the late President ever brought against the bank was, that it had not maintained a sound and uniform currency. Most persons, probably, will think the charge quite unfounded; yet this was the charge. Its dereliction of duty, or its want of ability to perform what had been expected from it—its failure, in some way, to maintain a good currency, was the original professed cause of dissatisfaction. And when the bill for rechartering the bank was negatived, it was not on the ground that Government had nothing to do with the national currency, but that a better provision for it might be made than we had in the bank. The duty was not to be disclaimed, or thrown off, or neglected; new agents, only, were to be employed, that it might be better performed. The State banks would do better than the national bank had done; the President was confident of this, and therefore he rejected the national bank as an agent, and adopted the State banks. And what he so constantly promised us would happen, he as resolutely maintained afterwards had happened. Down to his last message, down to the last hour of his administration, he insisted upon it that the State banks had fulfilled all his expectations, and all their own duties; and had enabled the Government to accomplish, in the very best manner, the great and important objects of currency and exchange. We have the same head of the Treasury, sir, who has repeated and echoed all these statements, whether of prophecy or fulfilment, in successive reports, some of them not less tersely and intelligibly written than that now before us; and we have heads of other departments, who concurred, I presume, from time to time, in the original statements, and in the faithful echoes of them, from the Treasury. All these functionaries have been

laboring with the utmost zeal, as they professed, to perform their constitutional obligation of furnishing the country with a good currency, with a better currency, with the best currency; and they have dragged Congress, dragged the country, and dragged themselves into difficulty, perplexity, and distress, in this long and hot pursuit. And now, behold, they draw up all at once, and declare that the object of all this toil and struggle is one with which they have nothing at all to do!

But, as the last message of the late President was loud and warm in its praises of the State banks, for the good services which they rendered to currency and exchange, so, no doubt, would the first message of the present President have commended, with equal earnestness, the success with which Government had been able, by means of the State banks, to discharge this important part of its duties, if the events of May last had not left that subject no longer a topic of felicitation. By the suspension of specie payments all was changed. The duty of Government was changed, and the constitution was changed also. Government was now to give up, and abandon forever, that very thing which had been the professed object of its most assiduous care, and most earnest pursuit, for eight long and arduous years!

Mr. President, when I heard of the suspension of the banks, I was by the side of the Ohio, on a journey, in the course of which I had occasion, frequently, to express my opinion on this new state of things; and those who may have heard me, or noticed my remarks, will bear witness that I constantly expressed the opinion that a new era had commenced; that a question of principle, and a question of the highest importance, had arisen, or would immediately arise; that, hereafter, the dispute would not be so much about means as ends; that the extent of the constitutional obligation of the Government would be controverted; in short, that the question, whether it was the duty of Congress to concern itself with the national currency, must, inevitably, become the leading topic of the times. So I thought, whenever I had the pleasure of addressing my fellow-citizens, and so I feel and think now. I said often, on these occasions, and I say now, that it is a question which the people, by the regular exercise of their elective franchise, must decide. The subject is one of so much permanent importance, and public men have become so committed, on the one side or the other, that the decision must, as I think, be made by the country. We see an entirely new state of things. We behold new and untried principles of administration advanced and adopted. We witness an avowed and bold rejection of the policy hitherto always prevailing. The Government has come, not to a pause, but to a revulsion. It not only stops, but it starts back; it abandons the course which it has been pursuing for near fifty years, and it reproaches itself with having been acting all that time, beyond the limits of its constitutional power.

It was my second proposition, sir, that the message, the bill, and the amendment, taken together, deny, in substance, that this Government has any power or duty connected with the currency, or the exchanges, beyond the mere regulation of the coins.

And, sir, is this not true? We are to judge of the message by what it omits, as well as by what it proposes. Congress is called together in a great commercial crisis. The whole business of the country is arrested by a sudden disorder of the currency. And what is proposed? Any thing to restore this currency? Any thing with a direct view of producing the resumption of payment by the banks? Is a single measure offered, or suggested, the main purpose of which is general relief to the country? Not one. No, sir, not one. The administration confines its measures to the Government itself. It proposes a loan, by the means of Treasury notes, to make good the deficiency in the rev-

SEPT. 28, 1837.]

Sub-Treasury Bill.

[SENATE.]

enue; and it proposes secure vaults, and strong boxes, for the safe-keeping of the public moneys; and here its paternal care ends. Does the message propose to grapple, in any way, with the main evil of the times? Seeing that that evil is one affecting the currency, does the message, like that of Mr. Madison, in 1815, address itself directly to that point, and recommend measures of adequate relief? No such thing. It abstains from all general relief. It looks out for the interest of the Government, as a Government; and it looks no further. Sir, let me turn to the message itself, to show that all its recommendations, and, indeed, all the objects in calling Congress together, are confined to the narrow and exclusive purpose of relieving the wants of Government.

The President says, that the regulations established by Congress, for the deposit and safe-keeping of the public moneys, having become inoperative by the suspension of payment by the banks; and apprehending that the same cause would so diminish the revenue, that the receipts into the Treasury would not be sufficient to defray the expenses of Government; and as questions were also expected to arise respecting the October instalment of the deposit to the States, and doubting whether Government would be able to pay its creditors in specie, or its equivalent, according to law, he felt it to be his duty to call Congress together. These are the reasons for calling Congress. They are all the reasons; and they all have exclusive regard to the Government itself.

In the next place, let us see what measures the message recommends to Congress. In its own language, the objects demanding attention are:

"To regulate, by law, the safe-keeping, transfer, and disbursement of the public moneys; to designate the funds to be received and paid by the Government; to enable the Treasury to meet promptly every demand upon it; to prescribe the terms of indulgence, and the mode of settlement to be adopted, as well in collecting from individuals the revenue that has accrued, as in withdrawing it from former depositories."

Those are all the objects recommended particularly to the care of Congress; and the enumeration of them is followed by a general suggestion, that Congress will adopt such further measures as may promote the prosperity of the country. This whole enumeration, it is obvious, is confined to the wants and convenience of the Government itself.

And now, sir, let us see on what grounds it is that the message refrains from recommending measures of general relief. The President says:

"It was not designed by the constitution that the Government should assume the management of domestic or foreign exchange. It is, indeed, authorized to regulate, by law, the commerce between the States, and to provide a general standard of value or medium of exchange in gold and silver; but it is not its province to aid individuals in the transfer of their funds, otherwise than through the facilities afforded by the Post Office Department. As justly might it be called on to provide for the transportation of their merchandise."

And again:

"If, therefore, I refrain from suggesting to Congress any specific plan for regulating the exchanges of the country, relieving mercantile embarrassments, or interfering with the ordinary operations of foreign or domestic commerce, it is from a conviction that such measures are not within the constitutional province of the General Government, and that their adoption would not promote the real and permanent welfare of those they might be designed to aid."

The President, then, sir, declines to recommend any measure for the relief of commerce, for the restoration of the currency, or for the benefit of exchanges, on the avowed ground that, in his opinion, such measures are not with-

in the constitutional power of Congress. He is distinct and explicit, and so far entitled to credit. He denies, broadly and flatly, that there is any authority in this Government to regulate the currency, and the exchanges, beyond its care of the coin. The question, then, is fairly stated. It cannot be misunderstood; and we are now to see how Congress, and, what is much more important, how the country will settle it.

Mr. President, if, in May last, when specie payments were suspended, the President of one of the banks had called his council of directors together, informed them that their affairs were threatened with danger, that they could not collect their debts in specie, and might not be able to pay their creditors in specie, and recommended such measures as he thought their interest required; his policy, in all this, would have been no more exclusively confined to the interests of his corporation, than the policy of the message is confined to the interests of this great corporation of Government. Both in practice, therefore, and on principle, in reality, and avowedly, the administration abandons the currency to its fate. It surrenders all care over it, declines all concern about it, and denies that it has any duty connected with it.

Sir, the question, then, comes to be this: Shall one of the great powers of the constitution, a power essential to it, on any just plan or theory of government, a power which has been exercised from the beginning, a power absolutely necessary and indispensable to the proper regulation of the commerce of the country, be now surrendered and abandoned forever? To this point we have come, sir, after pursuing the "experiment" of the late administration for five years. And from this point, I am persuaded, the country will move, and move strongly, in one direction or another. We shall either go over to the gentleman from Missouri, and suffer him to embrace us in his gold and silver arms, and hug us to his hard-money breast; or we shall return to the long tried, well-approved, and constitutional practice of the Government.

As to the employment of the State banks, for the purpose of maintaining the currency, and carrying on the operations of exchange, I certainly never had any confidence in that system, and have none now.

I think the State banks can never furnish a medium for circulation, which shall have universal credit, and be of equal value everywhere.

I think they have no powers, or faculties, which can enable them to restrain excessive issues of paper.

I think their respective spheres of action are so limited, and their currencies so local, that they can never accomplish what is desired in relation to exchanges.

Still, I prefer the employment of State banks to the project before us; because it is less of a project; because it is less dangerous; and, chiefly, because it does not surrender, effectually, and, in terms, a great power of the constitution.

In every respect this project is objectionable. It is but another "experiment; and those who recommend it so zealously, were the authors of the last, and were equally full of confidence and assurance in regard to that.

Who invite us to try this experiment? What voices do we hear raised in its recommendation? Are they not the well-known voices which we heard so often when the late "experiment" was begun? We know of but one accession. The voice of the honorable member from South Carolina is heard, it is true, now mingling with the general strain; and that is all. Where, then is the ground for confidence in this experiment, more than there was for it in the last?

This scheme, too, is against all our usages, and all our habits. It locks up the revenue, under bolts and bars, from the time of collection to the time of disbursement. Our practice has been otherwise, and it has been a useful

SENATE.]

Sub-Treasury Bill.

[SEPT. 28, 1837.]

practice. In 1833, the Secretary of the Treasury admonished the deposite banks, since they had obtained the custody of the public funds, to accommodate the public, to loan freely, especially to importing merchants. And now, a system is proposed to us, according to which, any use of the public funds, by way of loan or accommodation to the public, is made a criminal offence, and to be prosecuted by indictment! Admirable, admirable consistency!

But the great objection to the measure, that which so much diminishes the importance of all other objections, is its abandonment of the duty of Government. The character of this project is, severance of the Government from the people. This, like the mark of Cain, is branded on its forehead. Government separates itself, not from the banks merely, but from the community. It withdraws its care, it denies its protection, it renounces its own high duties. I am against the project, therefore, in principle and in detail; I am for no new experiments; but I am for a sound currency for the country. And I mean by this, a convertible currency, so far as it consists of paper. I differ, altogether, in this respect from the gentleman from South Carolina. Mere Government paper, not payable otherwise than by being received for taxes, has no pretence to be called a currency. After all that can be said about it, such paper is mere paper money. It is nothing but bills of credit. It always has been, and always will be, depreciated. Sir, we want specie, and we want paper, of universal credit, and which is convertible into specie at the will of the holder. That system of currency, the experience of the world, and our own experience, have both fully approved.

I maintain, sir, that the people of this country are entitled, at the hand of this Government, to a sound, safe, and uniform currency. If they agree with me, they will themselves say so. They will say, "it is our right; we have enjoyed it forty years; it is practicable, it is necessary to our prosperity, it is the duty of Government to furnish it; we ought to have it, we can have it, and we will have it."

The language of the administration, on the other hand, is, "good masters, you are mistaken. You have no such right. You are entitled to no such thing from us. The constitution has been misunderstood. We have suddenly found out its true meaning. A new light has flashed upon us. It is no business of ours to furnish a national currency. You cannot have it, and you will not get it."

Mr. President, I have thus stated what I think to be the real question now before the country. I trust myself, cheerfully to the result. I am willing to abide the test of time, and the ultimate judgment of the people; for it is a sentiment deeply infused into me, it is a conviction which pervades every faculty I possess, that there can be no settled and permanent prosperity to the commerce and business of the country, until the constitutional duty of Government, in regard to the currency, be honestly and faithfully fulfilled.

When Mr. WEBSTER had concluded,

Mr. HUBBARD rose and addressed the Senate as follows:

Mr. President: Having voted for the act "to regulate the depositories of the public money;" having also voted at the last session for the bill introduced by the Senator from Virginia, "designating and limiting the funds receivable for the revenues of the United States;" and having, at the present session, as a member of the Committee of Finance, agreed to report the bill now under consideration—a bill essentially conflicting with the two bills referred to, I have felt it to be a matter of duty to myself, as well as to those whom I represent, to explain the grounds of my action, and, also, the views which I entertain with reference to the measure now proposed as a substitute for the deposite act of June, 1836. And I will now proceed to submit what I have to offer, if it be the pleasure of the Senate

that I should proceed. I can not be insensible, however, that in rising to address the Senate at this time, after their attention has been riveted for three hours to the able argument of the learned gentleman from Massachusetts, upon the constitutional power of Congress upon the subject of currency and exchange, that I come forward under peculiar disadvantages, but that is wholly a personal affair; and to that I am free to submit. It is not my purpose to reply to that part of the argument of the Senator touching the constitutional powers of Congress. I have risen for no such object; I shall leave that matter to abler minds. The Senator from Massachusetts remarked, "he would raise no ruthless hand to destroy the local institutions of the country." I subscribe most freely and fully to the sentiment. I should be the last man in this body who would wage war with the moneyed institutions of the respective States. The little property which I possess is principally invested in some of the banks in New England. And I should commit a violence upon my own feelings and upon truth, did I fail to bear testimony to the correctness and integrity which has usually marked the conduct of those who have had the direction of those institutions. They may have committed some errors; but, in the main, the course and conduct of the New England banks has been above imputation. In their connexions with the Government, they have never failed to discharge their duty, until they became involved in this universal catastrophe, and since this desolation came upon them, they have never refused to answer the drafts of the Government, and to pay them in that currency approved and acceptable in their own sections. Thus much is due to the banks, and I would not, if I could, undertake to interfere with institutions created by State authority. If State banks are an evil not to be endured, the remedial power is with the States themselves, and beyond the jurisdiction of Congress. To the care of the States, I would commit these local institutions, and as far as practicable to separate the patronage and the influence of the General Government from any connexion with or participation in their concerns. It is an ill-advised, embarrassing, and disadvantageous connexion to both parties—to the Government and to the banks. The Senator from Massachusetts remarked, that on the third of March last, the Government completed the forty-eighth year of its existence, and for forty out of the forty-eight, we had enjoyed a currency approved by public opinion; that Congress had passed two acts at different periods of its history, establishing a bank of the United States; the first in 1791, which expired by its own limitation in 1811; the other, established in 1816, expired in 1836; and that both Houses of Congress, in 1832, renewed the charter of the last bank, which bill was vetoed by the President. All this is true; and it is no less true that the action of Congress, and the action of the President, in relation to this subject, were referred to the American people; and their verdict has been returned, and their judgment has been here so distinctly expressed, as to leave no room for doubt as to the present state of popular opinion with respect to the constitutionality or expediency of such an institution.

The Senator remarked, that the present position of things presents this question: That the administration must return either to a United States bank, or take some new ground; that the total failure of the State bank system presented this issue now to be settled—"a national bank or a metallic currency."

[Mr. WEBSTER here denied that he had referred to the establishment of a United States bank, or had presented any such issue, as had been stated.]

I may not, Mr. President, have used the precise language of the Senator from Massachusetts, but he certainly did say that the administration were bound to return to a uniform and approved currency, or to a metallic currency; and as the Senator did not see fit to name, in terms, in

SEPT. 28, 1837.]

Sub-Treasury Bill.

[SENATE.]

what the approved currency consisted, and as he had said that for forty years of our national existence we had a currency uniform and approved, and during all that period we had a bank of the United States, I thought myself justified in inferring that the approved currency to which the Senator referred was the currency established by a bank of the United States.

But in one position the Senator and myself perfectly agree; that it will not answer under existing circumstances to constitute again State banks as the depositories of the public funds. In this matter I am constrained, notwithstanding my strong predilections in favor of the State banks, to go with the Senator in opposing the amendment proposed by the gentleman from Virginia, [Mr. RIVES.] That system has been tried; it has been faithfully tried; and it has failed, wholly altogether failed, to answer the purposes of the Government, and to meet the just expectations of the community.

We have assembled, Mr. President, under circumstances of a most extraordinary and appalling character. We are here amidst a general subversion of the business and currency of our country. Confidence is destroyed; a general distrust pervades the community; commerce and manufactures, the great sources of active and profitable operations, if not entirely prostrated, are crippled and embarrassed to a degree most unexampled in the history of our republic. At a time of universal peace, when prosperity attended the efforts of our citizens; when wealth seemed to be the portion of every individual—at a time most unexpected and most sudden—pecuniary distress pervades the land, and a general dismay fills the hearts of our people.

The depositories of the public money, with all the banking institutions of the country, have been compelled, as it were, in the twinkling of an eye, to acknowledge themselves bankrupt, and to suspend the payment of the just demands of their creditors.

These awful realities are calculated to break down the courage, and to overwhelm the efforts of the patriot. But if there ever was a time when our country stood in need of aid, when she called most imperiously upon the intelligence and patriotism of her sons to come to her relief, this is that time. We are called upon to lay aside those animosities and bickerings which party feeling never fails to engender, and with one heart and with one mind, to exert our best energies to wipe away the blot which effaces our national character, and to devise, and perseveringly to prosecute, measures which will bring relief to the Government and to the people. This should be our aim and end—and this I trust will be the great business of our session. In view, then, Mr. President, of this whole subject, I propose briefly to examine into the causes which have produced the evils with which we have been visited, and to see if an adequate, a sufficient, a substantial remedy is not within our power. A remedy which, although it may not bring instantaneous relief to the suffering community, yet will afford a safe, sure, and permanent relief to the Government and to the people. A remedy which, under existing circumstances, seems to be demanded at our hands; and which, as faithful and patriotic public servants, in the exigency of our public affairs, we cannot, we ought not, to withhold.

Such is the unexampled and extraordinary embarrassment and distress that exists in our country, that I have found great difficulty in tracing these effects to a sufficient and adequate cause. In my judgment, however, it is the gross abuse of the credit system which has brought upon us the existing evils. It cannot be denied, that a little anterior to this general prostration of business and of currency, "that our manufactures and commerce had been greatly extended, and had been mainly conducted on credit." Commerce had brought into our country in 1835, and in the spring of 1836, a most unexampled amount of the products of Europe. The supply greatly exceeded the de-

mand; and, at this moment, much of the importations of 1835 and 1836 are upon the hands of the importer, yielding to him no profit, but producing loss, embarrassment, sacrifice, and ruin. An immense foreign debt of more than one hundred millions of dollars had been contracted by the American merchants. Its final adjustment and discharge is a tax upon the productive industry and labor of the country. In addition to all this, a spirit of extravagant speculation pervaded every class of our community. The history of the times shows that there has been a most unprecedented over-trading; that the zeal and all the active energies of the adventurer have been put in requisition. The influence of this fell spirit has been felt in almost every village of our country, and by almost every class of our community. Speculations have been made, not in the public lands only, but in railroads, in canals, in lots, in every description of property that the wit of man could devise; and these speculations have been conducted mainly on individual credit—a credit obtained at the local banks of the country. It was, then, the extraordinary amount of credit at home which produced such a redundancy of paper circulation. It was the extraordinary amount of credit abroad which co-operated in producing the subversion of the business and currency of the country. It was the increasing and enormous amount of unappropriated funds in the Treasury, the great accumulation, from time to time, of the public money in the deposit banks, which induced speculation and over-trading.

On the 1st of January, 1834, the balance in the Treasury was only eight millions five hundred and ninety-eight thousand dollars. The national debt was soon extinguished; the compromise act led to the belief that the tariff would remain undisturbed; local banks greatly multiplied; credit was readily obtained, and the receipts from the customs, and from the sale of the public lands, brought into the Treasury by the 1st day of January, 1835, a balance beyond the public expenditures of nearly twenty-seven millions of dollars; and the operation of the same causes brought into the Treasury, beyond the expenditures, on the 1st day of January, 1836, over forty-four millions of dollars; and to this may be added at least twenty-five millions for the excess of receipts over expenditures from January 1, 1836, to the 23d of June, 1836, the date of the deposit act. These enormous amounts, which filled the public Treasury, were the fruits of speculation in land and in merchandise. They had been carried on by the means of individual credit obtained through local banks. From the facts already stated, it follows that, at the passage of the deposit act in June, 1836, there could not have been less than sixty millions of dollars of public property actually held by the then fiscal agents of the Government, and that whole amount consisted in bank credits in institutions created by, and responsible to, State authority, and beyond the reach and control of the legislation of Congress. In addition to all the other means of these State banks, the balances in the public depositories were actually put out on loan on individual credit. There can be no doubt of the fact; and hence the extraordinary amount of paper in circulation in the season of 1836, exceeding one hundred and fifty millions of dollars, according to the best estimates of those acquainted with this subject.

The deposit banks, from the amount of public money, were enabled greatly to extend their line of discounts; and realizing the fact that the public funds in deposit were, day following day, and week following week, constantly increasing in amount, (for we find that between January, 1835, and January, 1836, the balance had been increased more than fifty per cent.,) those who had the direction of these selected banks felt a confidence and a security in extending their credits. It was done to their utmost limit. The uncontrolled and uncontrollable spirit of speculation abroad in the country furnished an ample demand, and the

SENATE.]

Sub-Treasury Bill.

[SEPT. 28, 1837.]

banks readily granted a full supply. The country, consequently, was flooded with paper. The desire to make large profits had prompted and governed the action of the deposit banks; while the other local institutions of the States were influenced by the same considerations to extend their business to the greatest possible extent. Such was the state of credit, of business, and of the currency, at the passage of the deposit act in June, 1836. It was not the provisions of that act which induced the action of the banks. The cause of present embarrassments, of existing evils, may well be traced to transactions occurring before its passage. It was the alarming and dangerous amount of paper circulation founded on individual credit anterior to the deposit act of 1836, that has led to the present pecuniary distress, to the general subversion of the business and currency of the country. There can be no reasonable doubt of the correctness of this position. The history of banking operations clearly shows it. From the passage of that act to the very day of suspending specie payments, the paper circulation has constantly been diminishing. In May last it did not exceed a hundred millions; and it was the act of June, 1836, and the subsequent promulgation of the specie circular, which first imposed these checks upon bank issues. So far from being the cause of a redundant circulation, they operated as checks to such a circulation. I have stated, and I believe most truly stated, that anterior to June, 1836, the deposit banks had put out on loan every dollar of the public money. They had also, in connexion with the other banking institutions of the country, extended their accommodations to the utmost limit of their respective charters.

In order to show the true condition of banks, and of the public funds in deposit at the time of the passage of the act of June 23, 1836, I would refer to some of the provisions of that act, and the subsequent but necessary action of the Department to carry those provisions into effect; from which it will appear that the deposit banks were unprepared for the crisis.

By the first section of that act, the Secretary of the Treasury is required, as soon as may be practicable, to select and employ, as the depositories of the public money of the United States, certain local institutions—one at least in each State and Territory—"and that he shall not suffer to remain in any deposit bank an amount of the public money more than equal to three-fourths of the amount of its capital stock actually paid in, for a longer time than may be necessary to enable him to make the transfers required by the act." And it will very distinctly appear, by a report communicated from the Secretary of the Treasury to the Senate in December last, in answer to a resolution offered by the Senator from Massachusetts, that he commenced immediately making the necessary transfers from those banks where there was too great an accumulation of the public money to the new selected depositories; and from an examination of this document, it will appear that all the transfers were not promptly answered; but, in repeated instances, the banks on whom the transfer drafts were made, asked indulgences of thirty, sixty, and ninety days, and the request was granted, whenever it could safely be done without disregarding the requirements of the law. The banks were not then prepared for the crisis; the funds of the Government had been disposed of; they were beyond the control of the banks themselves; and until collections could be made—until means could be drawn from the individual debtors of those institutions—they could not, with convenience, answer the claims of the Government. I infer, then, Mr. President, from these facts, that the money of the Government which had been deposited with the local institutions, had been loaned prior to the passage of the deposit act; and that the distress which now pervades our country, cannot justly be attributed to any action of the Government. The prostra-

tion of the business, the disappointment of the hopes of our community has been the effect of causes which they controlled, and with which the Government had no concern. The deposit act and the specie circular has had no other effect but to hold the banks in check. That circular bears date, July 11, 1836, and it was directed not only to the receivers of the public money, but also to all the deposit banks; and its avowed object and purpose was to discourage the ruinous extension of bank issues and bank credits, by which means speculations and monopolies in the purchase of the public lands were going forward in an alarming extent. The late President, in his annual message, shows that, "from the returns made by the various registers and receivers, it was perceived that the sales of the public lands were increasing to an unprecedented amount." "In effect, however, the receipts from these sales amounted to nothing more than credits in bank. Those credits were rapidly increasing, and on some of the books of the Western banks were greatly beyond their means of payment;" and in consequence of this state of things, to save the public domain, and to preserve in security the public funds, the President directed, that after the 15th day of August, 1836, gold and silver and Virginia land scrip only should be received for the public lands; and the effect must have been to have checked the sale of the public lands, and to have curtailed the paper circulation. It very distinctly appears, that in June, 1836, the sales of the public lands amounted to three millions three hundred and seventy thousand dollars, and that the aggregate amount of sales for three months preceding the time when the specie circular was to take effect, was more than eight millions and six hundred thousand dollars; while the aggregate amount of the sales for the next following three months was about four and a half millions—a reduction of one-half in amount; and the average reduction was still greater for the next following five months, and up to the time of the suspension by the banks of specie payment. Nor could the effect of the circular be to withdraw or to abstract from the banks, such an amount of their specie basis as to embarrass their operations. On referring to a document upon this subject, communicated by the Secretary of the Treasury to the Senate, on the 29th of December, 1836, it will appear, that the whole amount of gold received at the land offices in August, September, October, and November, 1836, was three-hundred and sixty thousand and sixty-nine dollars; and that the whole amount of silver received at said offices in the same period of time, was one million four hundred and forty-two thousand and eight hundred and seventy dollars—making a total, in gold and silver, of \$1,802,939. And from the same document it also appears, that, from the 21st of July to the 24th of October, 1836, the certificates granted by the Treasurer of the United States for specie received at the Department, amounted to \$235,200—making, in the whole, a little more than two millions of dollars, which was abstracted from the specie capital for the purchase of public lands, for a period of at least four months; while the whole amount of the sales of the public lands for four months, including the whole of August and November, 1836, amounted to seven millions of dollars. The difference between the two millions paid in specie and the amount of sales must have been provided for, either in Virginia land scrip, or in some other acceptable currency. It is, to my mind, idle to pretend that the employment of two millions of dollars in the purchase of public lands for this period of time—the withdrawal of this amount from the eighty millions of specie in the country—could have embarrassed the banks (if no other cause of embarrassment previously existed) in their business operations, or could have tended to have brought upon us the evils under which we are at this time suffering.

If, as it has been contended, that one million of specie purchased three millions of land, it furnishes an additional

SEPT. 28, 1837.]

Sub-Treasury Bill.

[SENATE.]

fact, tending to show the dangerous use of bank credits. In the whole history of our Government, from its foundation, there has never before occurred such a universal wreck of banks and of business as now prevails. In New England no such catastrophe has ever before overwhelmed their local institutions. In the darkest and most discouraging periods of our history, the banks of New England have stood unmoved and undisturbed, secure in their own resources. They never lost the support of public confidence, until this one sad event has happened to them all; and the conviction to which the mind must inevitably come is, that this event has resulted from their connexion with the finances of the Government.

It is true, that in New York, and in other sections of the Union, there was a suspension by the banks of specie payment during the war; but that was the effect of a combination of most extraordinary circumstances; and the very fact of that temporary suspension went to sustain the credit of the Government, and bring the war to a favorable termination. But at a time of general peace, of universal prosperity, that this calamity should come upon us, is matter of wonder and astonishment. But its true cause is to be found in the extraordinary issue of bank paper, founded on individual responsibility. In other words, it is nothing more and nothing less than the gross abuse of individual credit. It was not the deposit act, nor was it the specie circular which brought upon us this calamity. The moving cause was beyond the conception of those measures. But, Mr. President, before I leave this part of the subject, I must undertake once more to say a word or two in defence of the Secretary of the Treasury, who, on this occasion, seems not to find favor with all his political friends, and who is doomed to incur the severe animadversion of all his old political enemies. I could not have supposed that the Senator from Virginia would have undertaken to have cast any imputation upon the Secretary of the Treasury, for the manner of his executing the deposit act of 1836. That was matter of grave charge against him at the last session, by one of the Senators then representing the State of Ohio, but no longer a member of that body. But, strange as it may seem, the pecuniary distress which now exists in our commercial cities, has been here and elsewhere charged upon the Secretary as the direct effect of the awkward manner of his executing that act. I undertook at the last session to answer the allegations of the Senator from Ohio, and since the report of that distinguished officer was made to the Senate in answer to the call of the Senator from Massachusetts in relation to this subject, I had not heard a word of complaint made against the Secretary of the Treasury, for the manner of his carrying into effect the provisions of the deposit act, until the Senator from Virginia renewed the charge. Mr. President, the Secretary could not have done less, he might have done more.

In the report already referred to, the Secretary remarks, that "on the passage of the deposit law, and in execution of the first section of it, prohibiting any amount over three-fourths of the capital of any bank to be left in it longer than was necessary to select new banks, and to complete the transfers for removing the excess, it became indispensable to transfer, for that purpose alone, about \$18,300,000. New transfers for this whole amount became necessary. The Department, therefore, took immediate steps, even before the adjournment of Congress, to comply with this direction of the law. By a reference to the act itself, it will be found that the Secretary had no course to pursue, but the one expressly marked out by the act. It was clearly his duty to select as soon as was practicable, and to employ as the depositories of the money of the United States, such new banks as may be located adjacent or convenient to the points or places at which the revenue may be collected or disbursed. And the act ex-

pressly requires that the Secretary shall not suffer to remain in any deposit bank an amount of the public money more than three-fourths of the capital stock actually paid, for a longer time than may be necessary to make the transfers for the purpose of equalization. He could not then have permitted the public money to remain in those deposit banks, where an amount had accumulated beyond three-fourths of their capital stock. He was bound to select new depositories, and to make immediate transfers. He was required to do this for the purposes of equalization. This duty he attempted to execute, and it was performed with as little embarrassment to the banks, and to the commercial community, as possible. If the Secretary had, regardless of the conditions of those institutions, rigidly enforced the provisions of the first sections of the act, the deposit banks could not have sustained themselves. The Secretary made no transfers unless absolutely required by the express terms of the act itself. He was compelled at once to remove about eighteen and a half millions of dollars from one set of deposit banks, which then held of the public money more than three-fourths of their capital stock, to new depositories, selected in the different States; and for this duty he is charged with having been unnecessarily instrumental in bringing upon the country the existing prostration of the banks. No man could be less obnoxious to such a charge. The known fidelity, uprightness, and industry, of the Secretary of the Treasury in the performance of every official duty, ought at least to protect him from any such imputations.

Statement showing the amounts of public money on deposit in the banks of each State on the 20th of June and the 19th of December, 1836, as well as the proportion these amounts bore at each period to the sum to be deposited with such State under the 13th section of the deposit law, including Michigan, and taking the sum to be deposited with the States at \$37,000,000.

States.	Proportion of each State of \$37,000,000.	Amount on deposit June 20, 1836.	Amount on deposit Dec. 19, 1836.
Maine -	-	\$1,258,503	\$231,829

Michigan -	-	377,551	1,895,175

From the above official statement, which accompanies the Secretary's report, it very distinctly appears that the amount of deposits had not been withdrawn from the com-

SENATE.]

Sub-Treasury Bill.

[SEPT. 28, 1837.]

mercial States so as to leave with them a less sum in deposit at the date of the report, than the same State possessed on the 20th of June, 1836; and the same statement will show the amount transferred, for the purpose of equalization, to States, under the first section of the deposit bill, which had none of the public money in deposit at the date of said act.

Thus it appears that the State of New York had in deposit \$12,108,322 at the passage of the act—a sum which could not be there retained without an entire disregard to the provisions of the act; and hence \$534,000 was transferred from New York to New Jersey. It will appear that New York, on the day the report was made to the Senate, had about half a million less in deposit than it had at the passage of the act, while New Jersey held in deposit the difference. The statement is a full commentary on the manner of executing the act by the Secretary, and shows most conclusively that the course pursued by that officer was most favorable to the banks as well as to the commercial community; and it is evidence of the truth of the assertion that the Secretary could not have done less without a violation of law—that he could have done more with perfect impunity—and that his forbearance alone saved the banks and the debtors of the banks.

I have now stated the causes which, in my judgment, have produced the existing evils, and there can be no doubt that something must now be done to sustain the Government and the country.

There seems to be an imperious necessity for further legislation. The acts of Congress establishing local banks as the depositories of the public funds, cannot be executed. The present condition of those institutions, their acknowledged inability to perform the duties imposed upon them, as the fiscal agents of the Government, call upon Congress to provide for the present exigency.

The bill reported by the Committee on Finance, if carried into full effect, cannot fail to relieve the Government from present financial embarrassment. I am fully aware that it is the purpose of the chairman of the committee to present his own views in relation to the measure; it will be his province to give a very detailed statement of the character and effect of that bill—its benefits to the Government, to the banking institution of the country, and to the people themselves. It cannot but have occurred, however, to every individual, that if this bill should now be adopted, it would in effect be but the same measure, so far as it relates to the collection and the disbursement of the public money, which has existed almost from 1789, until the joint resolution of April, 1816. This bill, if carried into effect, would give to the Government the certain and absolute control of its own funds. So did the act of 1789. This bill if adopted, would sever the Government from any connexion with the pecuniary concerns of the local banks of the country. So did the act of 1789; and, notwithstanding the existence of the Bank of the United States from 1791 to 1811, there was no legal provision which created that institution, or any other bank, the receiver and disbursor of the public revenue. If this bill should be adopted, the fiscal agents of the Government will collect, hold, and disburse the public revenues upon their own responsibility. So did the collectors under the act of July, 1789. If this bill be passed, the fiscal agents will be immediately accountable to the Government. So were the collectors of the revenue from the foundation of the Government to the recharter of the United States Bank, in 1816. The advantages the Government will derive from the operation of this measure will be the certain control of its own funds, the direct responsibility and accountability to the Government of its own fiscal agents; and another benefit which will result from the adoption of this measure, will be the unchangeable character of its own means, and the fixed value of its own revenues—not liable to depreciation by the casualties and

misfortunes to which the moneyed institutions of the country are more or less liable. The utter failure of this, or the severe losses of that bank, can, in nowise, deteriorate the value of the Government funds. So it was for the first quarter of a century after the adoption of our constitution. Independent of all banks, we would manage our finances in our own way, and with perfect security to the Government. So it was under the act of 1789. The revenues then were collected and disbursed independent of the Bank of the United States. These are some of the benefits which would result to the Government by the adoption of this bill; and, acting independent of local banks in the collection and disbursement of the public revenue, it would also, in its operation, be beneficial to the banks themselves. If this measure be carried into effect, no longer will the money of the Government be used by the State banks in their banking operations; no longer will the money of the Government be employed in increasing the paper issues of the banks, by increasing their discounts, and their credits; and certain it is that this deposit with the local banks cannot be required for the transactions of the necessary business of a business community. The pecuniary aid of the Government is not needed for the legitimate operation of the local banks. There is not, Mr. President, any want of bank capital in the country; if there was, there is no want of a disposition to create bank capital. The complaint is, and has been, that banks have multiplied too rapidly and beyond the necessities and wants of a commercial and trading community. The complaint is well founded. Certain the facts is, that there is not at this time, within the limits of New England, any want of bank capital. If this be so, what occasion can there be, where is the necessity, of requiring the deposit of the public money to carry on the proper operations of these local banks? There can be no necessity; and the sound, stable, substantial institutions will be essentially benefited by giving up this trading upon the money of the Government, and by returning to the good old safe practice of managing their own business upon their own capital. There is too much uncertainty attending the use of the public money to justify any bank doing business upon the strength of Government deposits. It is true that a half of a million may be placed with a public depository to day for safe-keeping: and may it not be so, that a public appropriation for some unexpected and unlooked for event may render it indispensably necessary to withdraw at once the whole amount of such a deposit; and if the bank had previously put this deposit out on loan—as it certainly would do, under the deposit act, to indemnify it against the claim of the Government to interest—might it not be embarrassing to the banks to answer such a call from the Treasury Department.

The great uncertainty, then, both as to amount and to time, which must attend the deposits of the public money, cannot fail to be regarded by sound and well-regulated banks as a great objection to the reception of the Government deposits. If the banks which have been selected under the deposit act of June 23, 1836, should be called upon to answer the inquiry whether the Government money received by them in deposit has been a benefit to their respective institutions, the answer of the solvent and stable deposit banks would be—no; they have been an injury, rather than a benefit. Trace the history of the deposits which have been made with the banks in New England, and it must result, from the great uncertainty and instability which has attended the moneyed operations of the Government, that the deposits have served but to augment their pecuniary embarrassments. Better, then, would it be for them and for the Government to dissolve the connexion. And, Mr. President, the people themselves, for whose interest there has been much feeling manifested pending the debate upon this bill, would also participate in the benefits which would result from the adoption of this measure. Men

SEPT. 28, 1837.]

Sub-Treasury Bill.

[SENATE.]

would become steady and settled in their operations; there would no longer be given to property an inflated and factitious value; business would resume its accustomed channels; and the excitement, always temporary and always dangerous, (the fruit of any extraordinary expansion of paper currency,) would be done away; the spirit of speculation and overtrading would be checked; a sound discretion and a guarded prudence would mark the conduct of business men, and give character to all their operations. There would not, and there could not be, that constant change and revolution in the value of property, necessarily involving in its consequences the fortune and the fate of thousands. Let the Government, through its own agents, collect and hold its revenues exclusively for public purposes; let the Government withhold from the local institutions the use of the public funds, and that wild, extravagant, and adventurous spirit which has pervaded our country for the last two years, will be controlled by the power of sober judgment; and if such would be the consequences resulting from the adoption of this measure, surely the people would greatly participate in the benefits of the system. In my belief, the Government, the banks, and the people, would derive essential advantages from the adoption of this measure. I shall, therefore, Mr. President, give to it my best support. As a member of the Committee on Finance, I agreed to report the bill. The discussion which has taken place since the bill has been before the Senate—to all of which I have given my constant attention—has served to satisfy my own mind of the necessity, policy, and justice, of the measure. I deeply regret that a different view has been taken of this matter by other gentlemen, for whose opinions I have ever entertained a profound respect; but it is, I trust, but an honest difference of opinion on a leading measure of public policy. I have no belief that any change of sentiment can be accomplished; but, sir, I must be excused for noticing some of the objections which have been made on this floor to the bill now under consideration.

First. It is objected that the bill provides that the revenues of the Government should be collected and disbursed in gold and silver; and from the consequence given to this objection to the measure pending the debate, the inference must be that, in this particular, a great innovation upon the practice of the Government is contemplated, and that a new principle is to be introduced into our legislation; but, so far from that being the fact, this same principle—this special provision—has been coexistent with the Government itself. By the act to regulate the collection of duties, &c., approved July 21, 1789, it is provided "that the duties and fees to be collected by virtue of said act, shall be received in gold and silver coin only." And by the tenth section of the act of February, 1791, creating the Bank of the United States, it is provided "that the bills or notes of the said corporation, originally made payable, or which shall have become payable on demand, in gold and silver coin, shall be received in all payments to the United States." The corporation was not, by the terms of its charter, made the fiscal agent of the Government; nor was the bank made the depository of the public revenues. The responsibility of the collectors, created by the act of 1789, was not transferred to the Bank of the United States. They, and they alone, were directly accountable to the Government. Their duties were prescribed by the act, and were not, by the charter of the bank, changed. This feature of the bill, should the amendment of the Senator from South Carolina be adopted, would contain no new principle, nor introduce any new practice. From 1789 to 1816, such was the usage of the Government, and such was the law of the land. And I would confidently appeal to the experience of the people, whether the material change in the collection and disbursement of the public revenues which took place on the recharter of the United States Bank in 1816, and the subsequent changes which have taken place, have ad-

vanced their peace, prosperity, and happiness. Under the system which was established in 1789, and practised on by the Government, the revenues were collected and disbursed in a currency not subject to change or deterioration, by its own fiscal agents, directly responsible to the Government. By the act of 1816, rechartering the United States Bank, that corporation was made the responsible fiscal agent of the Government. All the bills or notes of the corporation, without any discrimination, were made receivable in all payments to the United States. And the act provides further, "that the deposits of the money of the United States, in places in which the said bank and branches thereof may be established, shall be made in said bank or branches;" and "that during the continuance of the act, and whenever required by the Secretary of the Treasury, the said corporation shall give the necessary facilities for transferring the public funds from place to place, within the United States, and for distributing the same in payment of the public creditors, without charge," &c. These provisions were introduced, by way of amendments to the bill, after it had been reported by the committee, and were, I believe, proposed by the Senator from Massachusetts, thereby materially, and as it has operated, injuriously, changing the whole practice of the Government in relation to the collection and disbursement of the public funds.

Had the bank been vested with no other powers by the act of 1816, than was conferred by the act of 1791, the evils which have since been experienced would have probably been avoided. It was its intimate connexion with the finances of the country—it was the control it possessed over the public funds—it was the political influence it was supposed to exercise—that awakened the jealousy of the American people, and excited feelings and established opinions hostile to the continuance of such an institution.

A second objection made to the bill is, that it in effect repeals the act depositing the money of the Government with the local banks, and thereby producing great injury to those institutions. I have already expressed my own views as to the effect this measure would have upon State banks. And all I wish to add is, that, until local banks were selected as public depositories, for the first forty years of the existence of this Government, the local banking institutions of the country did not count upon any such aid from the Government as essential to their prosperity, or necessary to their success.

A third objection to the bill is, that it creates one currency for the Government and another for the people.

Was there any complaint of this sort made under the act of 1789? Was there then one currency for the Government and another for the people? If the amendment of the Senator from South Carolina be adopted, after 1841, the revenues will be received in gold and silver only. And what would be the effect of such a proceeding? Would the gold and silver received for the public revenues be abstracted from the general currency? Would it be locked up from circulation? Would it be salted down in the vaults of the sub-Treasury officer? No, sir: the revenues and the public dues would come from the people, and they would be disbursed to the people. If paid in a metallic currency to our fiscal agents, the same currency would, by the same agents, be disbursed to the public creditors. The history of the Government shows, that at the commencement of each fiscal year, there is not on an average in the public Treasury, subject to draft, a sum exceeding six millions of dollars. If, in the course of the year, twenty more millions have been received, a like amount has been disbursed. A sum not exceeding six millions of specie, then, would ordinarily be the balance of the account of receipts and expenditures at the commencement of the fiscal year; and can the abstraction of six from more than eighty millions now in the country, so alarm the fears of gentlemen as to lead them to the conclusion that the consequence

SENATE.]

Sub-Treasury Bill.

[SEPT. 28, 1837.]

of this measure will be the establishment of one currency for the Government, and a different currency for the people? And are not all of the people? Are men holding office a distinct race from the people? And can it be seriously contended that the revenues received and paid out to public creditors are withdrawn from circulation, and from the care of the people? No, sir, it cannot. Debtors and creditors to the Government are parts of the same community. They are of the people; and their relation to the Government is constantly changing. To-day one may be a creditor—to-morrow he may be a debtor; and I cannot conceive in what way or manner the adoption of this bill would create one currency for the Government and another for the people—would establish those high or low in office—all who have claims upon the Government—as an order of men possessing peculiar and exclusive privileges. It cannot so be. The objection has no foundation in truth.

A fourth objection is made, that the bill divorces the Government from the banks. The bill separates the Government from the banks in no other way than it says, that no longer shall the banks have the public deposits for the purpose of expanding and enlarging their paper currency. This is the divorce about which Senators complain. The propriety of such a separation I have already discussed.

Another objection made to this measure is, that it in effect destroys the credit system, under which the country has enjoyed so much prosperity.

There can be no doubt that credit, as contradistinguished from cash payment, has been, and may be, attended with consequences most beneficial to the prosperity of a community; that it stimulates enterprise, and, when properly restrained, cannot fail to advance private interest; but such a credit system needs not the protecting care of the Government. It is the excess of credit that brings danger, distress, and dismay. It is that uncontrolled and uncontrollable spirit of adventure which leads to disaster, embarrassment, and ruin. It is that bold and daring passion for speculation, sustained for a time on credit, which puts in jeopardy the fortunes of individuals, prostrates the best efforts of enterprise, and scatters firebrands and death among an active business community. Whence this general desolation which now pervades our land? Whence this general, this universal embarrassment, which now prevails through the country? It is to be traced to a most injudicious and unwarrantable expansion of the credit system. This has been the efficient and producing cause of the pecuniary distress which now extends from Maine to Florida. A judicious, a well-regulated system of credit, has its advantages in every community, and among every class of our citizens; but I submit whether, from the woful experience we have had, we ought to wish to return to the local banks the public deposits, if thereby an enlargement of individual credit could be attained, and a corresponding increase of a paper medium? I cannot doubt what would be the response.

Another objection to the bill is, that its tendency is to increase Executive patronage. That objection has been so ably answered by the Senator from Mississippi, that I would not weaken the force of his argument by submitting any additional considerations of my own.

Another objection is urged, that the bill, if adopted, cannot, with convenience, or with a proper regard to the security of the public funds, be executed. My answer to that objection is, that no difficulties were experienced under the act of 1789. The principles of this bill were then carried into effect with convenience to the Government and to the public creditor, and with safety to the public funds; and they may again be so carried into effect.

Another objection is, that this is an experiment, and that experiments with reference to the public finances are not only odious, but dangerous to the security of the public funds.

My answer to this is, what would the gentleman from Massachusetts call upon us to do in the present exigency? Try some other plan? adopt some other expedient? Would any project which the Senator might recommend be any the less an "experiment?" But a further answer to this objection is, that the measure now recommended by the committee is no "untried experiment." It has been practised upon here and elsewhere, and has received the approbation of the people.

The amendment proposed by the Senator from Virginia is to strike out the bill reported by the Committee on Finance, and to insert "a bill designating and limiting the funds receivable for the revenues of the United States." This amendment, if adopted, will continue the local banks as the depositories of the public money, and will justify the Treasury Department in the receipt of the bills of specie paying banks of certain denominations, and at fixed periods. The Senator from Virginia urges the adoption of his amendment, first, to save the local banks; to induce them to resume specie payments, and also to establish and preserve one uniform currency throughout the country; to continue the practice of the Government which has existed since the joint resolution of April, 1816, so far as it relates to the kind of money to be received for the public revenues; that, by its adoption, not only the banks, but the people themselves, would obtain a sensible relief from existing embarrassments.

The substitute of the Senator's bill for the bill reported by the committee would have no tendency to save the local banks. I have already said that those institutions which are sound and solvent need not this kind of assistance from the Government for their own protection; that there is an abundance of bank capital for the business of the country; if not, there is no want of disposition to create or to hold bank capital; and that so great must necessarily be hereafter the uncertainty as to the amount and duration of these Government deposits in local banks, that to continue them, under the deposit act of 1836, would serve only to embarrass those institutions. Nor is there much force in the reason urged for the amendment—that its adoption would serve to establish and preserve a uniform currency throughout the country. The eighty deposit banks selected by the Government, in the different sections of the Union, amount only to about one-tenth of all the banking institutions now existing by virtue of State legislation, and comprising about one-third of the whole banking capital of the country. The selected banks, scattered, as they are, over the whole Union, acting, as they must do under their own local charters, and accountable to their own State authorities, with no common interest, but simply performing the conditions and the terms of their respective contracts with the Government, independent of each other, can do but little to regulate the general currency. The bills of specie paying banks in Louisiana, although issued by those institutions selected as depositories of the public revenue, cannot pass and be passed as a currency in New England. The character and capital of these State institutions clearly evince that their circulation to any great extent cannot pass current beyond the boundaries of their own States. The banking system now existing in New England is well arranged for the convenience and the security of that community. It is one of the blessed effects of that system that the paper of our local banks mainly circulates in its own immediate vicinity. The moment the paper of any particular bank is doubted, that moment it ceases to form, to any considerable extent, a part of the circulating medium. It is collected at the commercial capital of New England, and sent home for payment. The paper, therefore, of any local bank, not current at the great market of New England, will no longer be received by any portions of our community. The consequence of the system is, that the bank paper best known and highest appreciated by the commu-

SEPT. 28, 1837.]

Sub-Treasury Bill.

[SENATE.]

nity constitutes almost exclusively the paper circulation among that community. The amendment could have no effect in regulating the general currency of the country. Even if there were a perfect league among all the selected banks, no such effect could be produced. They comprise too small a number and too small a portion of the capital of the local banks, to bring about any such consequence, should they continue to receive and to disburse the public revenues.

There can be no occasion for the amendment, for the purpose of continuing in practice the provisions of the joint resolution of 1816. The bill reported by the committee, left that resolution undisturbed. It also left the act of 1789 in full force. And notwithstanding the speculations of different gentlemen in relation to this matter, there can be no doubt that our collectors and receivers under this bill, if it passes, as under the act of 1789, will act like rational, discreet, accommodating, and prudent officers. Suppose an importer in the city of Boston should have occasion to pay to the collectors, for duties on imports, one hundred thousand dollars, what would be the course? He would at once make an arrangement at the bank where he transacted his business to answer his draft for that sum. The collector, well knowing the character of the merchant, and the condition of the bank, receives the draft, and it is carried as a special deposit to the credit of the collector. Suppose that within two days he receives from the Secretary of the Treasury a warrant to pay a public creditor the same sum, he draws on this deposit, and the bank then satisfies the draft by paying the specie, or by paying out their own paper, at the election of the payee. This would be an every day business—a common transaction; no embarrassment, no delay would attend the operation. But suppose that the collector was authorized or required to receive and disburse in the bills of specie-paying banks; and when the creditor demands payment, he offers him the bills of specie-paying banks, but so remote from the place of the transaction, that before he can present them for redemption the banks themselves suspend payment, and a creditor of the Government thereby loses a portion of his claim, and this occasioned too by the act of his Government. This is a consequence I would avoid. But suppose that the receivers are required to receive or disburse no bills except of certain fixed denomination, and on banks where they can be converted at the time and place into specie. No practical convenience would result from any such arrangement. It would then be left to the creditor to take specie, or to take paper convertible into specie; and without any legal provisions, nineteen times out of twenty, such would, in effect, be the course of the receiver as would secure to the creditor that election. The Senator from Virginia has sustained his proposed amendment with his usual ability, and has called upon us to go with him *now* in the support of that measure, for the reason that, at the last session of Congress, we came in aid of the proposition. This is all true, sir; and if the Senator can, with propriety, urge the same considerations for the adoption of this measure, as were at that time urged upon the Senate, there can be no good reason why we should, at this time, withhold our support. It occurs to my mind that the amendment now offered by the Senator from Virginia, is presented under circumstances entirely different from those which existed at the time it was brought forward at our last session. Certain local banks had been selected as the depositories of the public money as early as 1833, and had been established as the fiscal agents of the Government. The deposit act of June 23, 1836, recognised them as such, and went on to increase the number of public depositories, imposing on all new obligations, and subjecting all to new liabilities. They were, to all intents and purposes, as much the receiving and disbursing agents of the Government as the Bank of the United States was under its charter, in 1816. The act,

therefore, of the Senate, on the 10th of February, 1837, was not only proper in itself, with reference to the State institutions, but was in perfect accordance with what had been the action of Congress upon the same subject with reference to the Bank of the United States. It was extending to them no greater favor than was extended to the United States Bank in 1791, when that institution was not under the obligation to perform the duties required of the State banks by the deposit act of 1836; and it was granting to them the same favors, so far as it respected the selected banks, as was granted to the United States Bank in 1816, when similar duties were imposed upon that institution. It seemed to me, therefore, when the proposition was presented at the last session of Congress, to be but an act of common and equal justice to the State banks to adopt the measure. And for these considerations I did at that time give it my support. But how stands the matter now? Under what circumstances does the Senator now press his proposition? These local banks, these fiscal agents, have entirely failed to perform the duties required of them by the act of June 23d, 1836. Their part of the contract has been disregarded; and shall it be said that the obligation still rests on us to extend to these institutions the same favor? Was not the contract between the Government and the banks, and the obligations growing out of the contract, mutual and reciprocal—binding on both parties, or binding on neither party? The neglect or the failure on the one part, was a virtual discharge and release of the other.

What was required of these banks under the act of June, 1836?

"They were to credit as specie all sums deposited therein to the credit of the Treasurer of the United States, and to pay all checks, warrants, or drafts on such deposites, in specie, if required by the holder thereof."

"To give, whenever required by the Secretary of the Treasury, the necessary facilities for transferring the public funds from place to place, within the United States and the Territories thereof, and for distributing the same in payment of the public creditors, without charging commissions or claiming allowance on account of difference in exchange."

And the act further provides: "that no bank which shall be selected or employed as the place of deposit of the public money, shall be discontinued as such depository, or the public money withdrawn therefrom, except for the causes herein after mentioned." "If, at any time, any one of said banks shall fail or refuse to perform any of said duties as prescribed by this act, and stipulated to be performed by its contracts; or if any of said banks shall, at any time, refuse to pay its own notes in specie, if demanded, etc. in any such case it shall be the duty of the Secretary of the Treasury to discontinue any such bank as a depository." etc.

The obligations imposed upon the deposit banks by the provisions of this act were explicit, and the duty of the Secretary on their non performance was equally plain.

But the amendment offered by the Senator from Virginia seeks to renew the connexion which has existed between the Government and the banks, on their resuming specie payments; and, notwithstanding their course and their conduct: notwithstanding the Government has performed to the letter its part of the contract; and notwithstanding the banks, for the last four months, have entirely failed, and still neglect, to fulfil the stipulations required by the act and by their contract, yet the Senator asks us to renew our relations with these institutions; to take the lead in this matter; to induce them to resume specie payment by promising to give to them again the public deposites, and to receive for the public dues the bills of those banks which may resume specie payments. And a strong appeal has been made by the Senator from Virginia and the Senator from New York, [Mr. TALLMAGE,] to their friends, to give to this proposition their support, as they did in February last.

SENATE.]

Sub-Treasury Bill.

[SEPT. 28, 1837.]

Circumstances alter cases. The condition of our monetary affairs and the present condition of the local banks, seems to my mind to furnish a good and sufficient reason for opposing at this time this same measure, to which at the last session I gave my feeble support; and I think, by taking this course, I am by no means obnoxious to the charge of inconsistency. I then voted as I believed for the best; and I shall now vote, as I think, for the best; but should I now vote for this amendment, I could not reconcile it to my sense of public duty.

I would respectfully ask the Senator from Virginia if, for six months previous to the passage of the act creating local banks as public depositories, there had been a general suspension of specie payments among all the local banks of the country; that for that period of time they had utterly dishonored their own paper, and disregarded their obligations to the public—would they have been selected as public depositories? Certainly not. Would the Senator have supported a bill legalizing the receipt of their notes, when they might resume specie payments? Certainly not. Suppose that for six months prior to the passage of the act of June, 1836, they had refused to pay specie for their bills, would that act have been passed? Certainly not.

Suppose the same state of things had existed for six months prior to the 10th of February, 1837, would the Senate have agreed to any such bill as that now proposed by the Senator from Virginia? Such would be the state of public feeling, and of public sentiment, towards these institutions, under such circumstances, that no such measure would find favor. It would be a proceeding on the part of Congress directly countenancing such a departure from public duty.

I would ask the Senator, in case he had at any time seen fit to employ an agent to manage his own affairs, under his supervision; had made known to him his duties and his obligations, and had placed with that agent his pecuniary means; and the agent had used those means for his own benefit; that, when required to perform the duties of his agency, he was wholly unable to discharge, the obligations imposed upon him—would the Senator very readily consent to a re-employment of the same agent, and again furnish to that agent his pecuniary means, under the same obligations? I think too highly of the discretion and prudence of the Senator to suppose that such would be his course of conduct. There is a moral sense, a moral feeling, which, under such circumstances, would control the action of the Senator?

I am free to admit, as the Senator from Massachusetts has stated, that the late President of the United States, in his last annual message, and that the accompanying report of the Secretary of the Treasury, gave to those local banks a high character, and detailed, with much particularity, their valuable and extensive services. Their state and condition, their perfect ability to meet all their liabilities, were distinctly communicated to Congress. In admitting thus much, I by no means agree that those public officers withheld from Congress any fact in relation to these institutions, important or necessary to be communicated. The then state and responsibility of the banks were truly and faithfully made known to Congress. And while the President, in his message, remarked that "experience continues to realize the expectations entertained as to the capacity of the State banks to perform the duties of fiscal agents for the Government," he, in the same message, (speaking of the danger of excessive issues of bank paper,) observed that "it is to be hoped that nothing will now deter the Federal and State authorities from the firm and vigorous performance of their duties to themselves and to the people in this respect."

Whatever may have been the condition of the banks at the commencement of the last session of Congress, whatever may have been the condition of the banks at the time

the Senator from Virginia first presented his proposition, there can be no mistake as to their inability now to meet their engagements. Their acts for the last four months speak a language which cannot be misunderstood; acts which may have been inevitable, but cannot fail to weaken the public confidence in those institutions.

If the amendment of the Senator should be adopted, what would be the effect? The Secretary of the Treasury has necessarily discontinued the local banks as the fiscal agents of the Government. Not until these old agents shall resume specie payments can they be employed; and what does the Senator propose to have done with the public funds in the interim? Certainly the Senator would not wish to have them deposited with the local banks in their present acknowledged state of delinquency; and if that should be the purpose of the Senator, his amendment does not go far enough; for without some express legal provision to that effect, the Secretary of the Treasury could not, as the law now stands, employ these local banks as fiscal agents. What, then, does the Senator purpose to do with the public money until the banks shall resume specie payment? It is supposed that so long as specie shall bear a premium in the market—so long as any portion of our foreign debt shall remain unsatisfied—this state of things must continue.

I cannot, Mr. President, from any view which I can take of the proposition of the Senator from Virginia, give to it my support.

The Senator from South Carolina has proposed an amendment to the bill, which I shall, with some reluctance, support. I should have much preferred the bill as it came from the hands of the committee. The principle involved in the Senator's amendment was matter of much discussion before the committee, and it was their conclusion, that a regard to the public interests required nothing more of them than to report the bill as it was reported, leaving the law of 1789 and the resolution of 1816 as obligatory as they had ever been. The committee believed that no inconvenience or embarrassment whatever would arise either to the Government, to the receivers, or to the public creditors, by leaving the law of 1789 and the resolution of 1816 as they now stand; and, in my judgment, the bill will not be improved by adopting the amendment proposed by the Senator from South Carolina. It, in effect, re-enacts the law of 1789 after the year 1841; and, to a certain extent, it, in effect, re-enacts the joint resolution of 1816 until 1841. Without the resolution of 1816, and without the amendment of the Senator from South Carolina, the practice of the Government would go on as it did anterior to 1816, with a proper regard to individual convenience and to public security.

Mr. President, I voted for the deposit act of June, 1836; and, with the Senator from New York, [Mr. TALLMADGE,] I have seen no cause to regret it. That vote was the deliberate act of my best judgment. It was given, not as has been avowed elsewhere, to make a gratuity to the States, or to make a systematic distribution of the common fund among the several States of this confederacy. No, sir, I voted for the deposit act with no such view, and for no such purpose. I voted for it, as it was upon its face, and as it was intended to be—a mere deposit bill. It cannot fail to be recollected, that great amounts of the public treasure had accumulated at particular points; that so great had been the accumulation at the places of deposit in the State of New York, as well as in some other States of the Union, that it was alleged on this floor that the public funds were thus put in jeopardy; and again and again was it reiterated, that it was the policy of the then administration so to control the public treasure as to influence public politics. This was matter of charge; and to do away so groundless an imputation, and to provide further for a transfer of portions of the public money then in deposit in

SEPT. 28, 1837.]

Sub-Treasury Bill.

[SENATE.]

local banks, to the treasuries of the respective States, I supported the deposit act of June, 1836. Not a sentiment did I then utter, not a vote did I then give, which can be made to conflict with the views I now entertain of that measure. It was a deposit bill throughout.

The Committee on Finance, in relation to this subject, at the present session, have reported a bill providing for the postponement of the fourth instalment with the States, under the deposit act of June, 1836. That bill found favor with me in the committee. I was in favor of reporting it to the Senate. I gave it my vote on its passage; but, sir, were these proceedings irreconcilable with my support of the deposit act of 1836? No, sir, no. I have stated the circumstances which elicited my support of that bill. It was to provide additional and safe depositories for the keeping of portions of the public money. At that time we had in the various depositories more than forty millions of dollars; and on the 1st of January, 1837, we had in deposit thirty-seven millions, upon which the act was intended to operate. But, sir, notwithstanding the peculiar phraseology of that act, it was never intended by its friends that the Government of the United States should part with its control over that portion of the public funds which had been, previous to the 1st January, 1837, in deposit with the banks, and was then in deposit with the States. It was the property of the Government, and subject to its control, in accordance with the provisions of the deposit act itself. But it was only that portion of the public money actually deposited with the States, which could be controlled by the terms of that act.

That part of the thirty-seven millions which had not, in point of fact, reached the treasuries of the respective States, could not be controlled by the act of June, 1836. It was subject to public appropriation. It had not been deposited with the States; and the States could not assert any claim to hold the public money under the deposit act, which had not actually been deposited with them. The Secretary of the Treasury had the same control, the same power, over the nine millions then in the local banks, as he had over any other portion of the public funds. It was subject to be controlled by the legislation of Congress: it was nothing more nor less than a portion of the public money; and, like any other portion, was alike liable to be absorbed by public appropriations.

The Government, then, could rightfully use this portion of the public funds; and, consequently, on the first of October, 1836, there would be no surplus which could be deposited with the States. The necessary and unavoidable demands of the Government had taken up the whole amount in the Treasury, and hence there could be no surplus; and for one, sir, I could not lend my aid in favor of any measure to borrow money for the purpose of depositing the same money with the States. I therefore voted for the bill to postpone the fourth instalment; and I voted against the amendment offered to that bill by the Senator from Pennsylvania, because I could not give my aid to any proposition which should treat this deposit with the States as a donation to the States, or which should give to the Secretary of the Treasury any less control of that portion of the public funds than he had over any other.

It has been often said during this debate, that the recommendations contained in the message of the President, and that the measures reported by the Committee on Finance, are not calculated to relieve the people from their present embarrassments; that they look exclusively to the accommodation of the Government. The Senator from Kentucky contended that the postponement of the deposit of the fourth instalment with the States, was calculated to increase the pecuniary pressure, and that the bill providing for the issue of Treasury notes was but the creation of a public debt. That it was prepared to withhold nine millions justly due to the States under the deposit act of

June, 1836, and at the same time to impose a direct tax of ten millions upon their industry, for the redemption of the debt to be created by the issue of Treasury notes. Is this a fair and just exposition of the matter? If I am not wholly mistaken in the view which I have taken of this subject, the bill proposing to postpone the deposit with the States of the fourth instalment, is a relief measure not only to the depositories of the public money, but to the people themselves. It has been said here and elsewhere, that the amount required to be deposited with the States on the first of October next, was within the control of the Treasury Department; that there were available means in the Treasury sufficient for the purpose. If the fact be so, Mr. President, the course of the Secretary is plain; his duty is explicit, and that duty will be faithfully performed. If there is no want of means, there is no occasion for the action of Congress; the law is in full force, and the duty of the Secretary of the Treasury is fully set forth.

But the fact is not so; and it is the deficiency of means that has called for the interposition of Congress. If the Treasury was well supplied with available funds, how has it happened that, with so great unanimity, the Senate has, at this session, authorized the loan of ten millions of dollars? If the operations of the Government could be carried forward unaided, why has the Executive been authorized, by the act of the Senate, to issue ten millions of dollars in Treasury notes? There can be no mistake upon this point; it is too plain for argument; and the fact is incontrovertible that, if the fourth instalment shall be required to be deposited with the States on the first of October next, Congress must provide the means. They must authorize a loan to some amount for that express object, to enable the Treasury Department to execute the act.

Whether this has resulted from the inability of the deposite banks to fulfil their engagements to the Government, or whether it has happened in consequence of the failure of the merchants to pay their duty bonds, or whether from both causes, it is the same to the Treasury Department. Available means are not there, and will not and cannot be in the Treasury on the first of October, sufficient for the object; and hence the necessity of action on the part of Congress, either to provide the means, or to postpone the instalment.

Entertaining this opinion, Mr. President, I must differ with the Senator from Kentucky. I cannot but regard the postponement of the deposit of the fourth instalment with the States, at a time like this, as a relief measure—a relief to the local banks, to the depositories of the public money, and, of consequence, a relief to their debtors, to the people themselves.

If nine millions of dollars are to be deposited with the States, that amount must be drawn from the debtors to the Government, from the deposite banks and the importing merchants. If a requisition shall be made on the banks and upon the merchants, they would be compelled to enforce collections from their debtors, and there is scarcely an individual in the community, however obscure, but would feel this postponement as a relief and accommodation to himself. The banks and the merchants are the great creditors to the community, and any and every measure which shall relieve them, is in practice and in effect a relief to the people.

The postponement bill is a relief measure. The Treasury note bill is a relief measure; it is a mere temporary expedient; an authority to pledge the credit of the Government, until the debtors to the Government can pay their dues. The postponement of the payment of the merchants' bonds is a relief measure—directly to the merchants, but indirectly and in effect to the people.

The accommodation proposed to be extended to the deposite banks is a relief measure, giving time to those institutions, and enabling those institutions to give time to their

SENATE.]

Merchants' Bonds—Sub-Treasury Bill.

[SEPT. 29, 1837.]

debtors. The warehouse bill is a great relief measure, requiring cash payment for importations which shall enter into the consumption of the country, and relieving the people and the Government from the very evils under which we are now laboring—the abuse of the credit system.

Each and all these measures look directly to the relief of the Government and the people; and notwithstanding the speculations of gentlemen here and elsewhere, with respect to the true character of these measures, let them but be adopted—the banks, the merchants, the people, will all unite in expressing to their authors their deep sense of gratitude.

When Mr. HERRARD had concluded his remarks,
On motion of Mr. BUCHANAN,
The Senate adjourned.

FRIDAY, SEPTEMBER 29.

MERCHANTS' BONDS.

Mr. WEBSTER submitted the following resolution;

Resolved, That the Committee on the Judiciary report to the Senate what fees are due, by law, on the renewal of merchants' bonds, and whether any further legal provision on that subject be required.

Mr. WEBSTER said he had received several letters from New York on this subject, full of deep and loud complaints of the exorbitant amount of official fees charged on the renewal of merchants' bonds under the acts of Congress. In one case, said Mr. W., I learn that on renewing bonds to the amount of five or six thousand dollars, the fees amounted to 12 per cent. on the whole sum. I hope that there is some mistake in this, although my information is from a highly creditable source. I shall, of course, forbear comment on such a charge, until the fact be established. I do not know under what law this is supposed to be justified. There may be some Treasury regulation authorized by some act of Congress, or supposed to be so authorized. It is a matter which calls for immediate attention; and if the Senate adopt the resolution, I shall at once put the chairman of the committee in possession of the sources of my information.

Mr. KING, of Alabama, observed, that he had himself received similar information from some very respectable quarters in New York, and he was induced to believe that there ought to be some prompt action on the subject by Congress to relieve from such oppression.

Mr. GRUNDY suggested whether it would not be preferable to refer the subject to the Committee on Finance, of which committee Mr. WEBSTER was a member.

Mr. WEBSTER. I believe, sir, that the member from Tennessee was not in his seat when I introduced the resolution. I say, again, therefore, that I have received some letters from New York, complaining very loudly of the fees charged on the renewal of merchants' bonds. In one case, it is said, on bonds amounting to six thousand dollars, the fees were equal to 12 per cent. on the sum. I repeat, sir, I do not desire to comment on such cases till the facts be established. That there is reasonable ground to believe that great abuses exist, I have no doubt. If they are as rank as represented, it is to be feared that the merchants will be fleeced to such an extent by these official fees, that the acts of Congress, intended for their relief, will be of very little benefit.

As the subject respects official fees, charged by a law officer, it belongs properly, no doubt, to the Committee on the Judiciary.

The Senate then resumed the consideration of the

SUB-TREASURY BILL.

Mr. BUCHANAN rose and addressed the Senate as follows:

Mr. President: It cannot be denied that the commercial and manufacturing classes of our people throughout the Union are now suffering severely under one of those periodical pressures which have so often afflicted the country. Neither has the agricultural and other interests escaped without injury, although they have not suffered to the same extent. The exhaustion of the human system does not succeed a high degree of unnatural excitement with more unerring certainty than that a depression in the business of the country must follow excessive speculation. The one is a law of nature, the other a scarcely less uniform law of trade. The degree of this depression will always bear an exact proportion to the degree of overaction. As many degrees as the system has been elevated above the point of healthy action, so many degrees must it sink below, after the effects of the stimulus have passed away.

What has been the history of the country in this respect? One of constant vibration. I can speak positively on this subject in regard to the period of time since I came into public life. What has been will be again. The same causes will produce the same effects. We can cherish no reasonable hope of a change unless the State Legislatures should take a firm and decided stand. The history of the past will become that of the future. This year we have sunk to the extreme point of depression. The country is now glutted with foreign merchandise. There will, therefore, be but few importations. All our efforts are now directed towards the payment of our foreign debt. The next year the patient will begin to recruit his exhausted energies. Domestic manufactures will flourish in proportion as foreign goods become scarce. The third year, a fair business will be done. The country will present a flourishing appearance. Property of all descriptions will command a fair price, and we shall glide along smoothly and prosperously. The fourth or the fifth year the era of extravagant speculation will return, again to be succeeded by another depression. At successive periods the best and most enterprising men of the country are crushed. They fall victims at the shrine of the insatiate and insatiable Moloch of extravagant banking. It is an everlasting cycle. The wise man says there is no new thing under the sun; and we are destined, I fear, again and again to pass through the same vicissitudes. The aspect is perpetually changing, but is never new.

Senators have plumed themselves, and their admirers throughout the country have applauded them, as being wonderfully sagacious in their predictions. Their respective partisans are ready to exclaim—

"The spirit of deep prophecy he hath,
Exceeding the nine Sybils of old Rome;
What's past and what's to come he can descry."

But no deep penetration into futurity was required to make these prophecies. Until existing causes shall be removed, the future must be the counterpart of the past.

Whence this eternal vicissitude in the business of the country? What is the secret spring of all these calamities? I answer, the spirit of enterprise, so natural to American citizens, excited into furious action by the stimulus of excessive banking. It operates as does the inhaling of oxygen gas upon the human mind, urging it on to every extravagance and to every folly.

I do not deny that several subordinate circumstances have operated in unison with this grand cause to make the present catastrophe more severe than it otherwise might have been. Still it is the root of all the evil. It is the chief and almost the only source from which the existing distress has flowed.

I was not a member of this body when the discussion took place on the veto of the bank charter, or the removal of the deposits. Although both these measures received my cordial approbation, yet I refrain purposely from replying, at this late period, to the remarks which have been

SEPT. 29, 1837.]

Sub-Treasury Bill.

[SENATE.]

made on these subjects. They have already passed into history, and been sanctioned by the public approbation.

Amongst these subsidiary causes of the existing distress may be enumerated the destruction of capital by the great fire at New York, in December, 1835. The wild speculations in public lands, and in splendid towns and cities, upon paper throughout the Western States, which withdrew capital from the commercial cities, where it was most wanted; to portions of the country where it was not required; and the specie circular, if you please, which, however wise it may have been in its origin, ought not, in my opinion, to have been continued in force after it had performed its office and had checked the wild speculations in public lands. I voted in favor of the bill at the last session which repealed this circular; and, under the same circumstances, I would again act in the same manner. But permit me to say that its effects have been greatly exaggerated. It did not carry to the West any thing approaching the amount of gold and silver which Senators have estimated. According to the report of the Secretary of the Treasury, all the specie in all the Western deposite banks, including Michigan, but little exceeded four millions of dollars at the date of the suspension of specie payments; and in the south-western deposite banks it did not amount to one million two hundred thousand dollars. I shall not stop to inquire how much less gold and silver there would have been in these depositories had the specie circular never existed. Certain it is that the comparatively small amount of specie which came into these banks in consequence of this circular, could have produced but an inconsiderable effect on the business of our commercial cities, and still less upon the suspension of specie payments.

These causes may have made the revulsion a little more severe; but, had they never existed, still it must have come with desolating force.

Senators have attributed some portion of the existing distress to the act of 1834, regulating the standard of our gold coins. They have not told us, and they cannot tell us, how this act could have produced such an effect. It was no party measure, and, upon its passage, there were but few, I believe seven, votes against it in the Senate. It was a measure of absolute necessity, if we desired that our own gold coins should ever circulate in this country. Before its passage, a half eagle, as an article of merchandise, was intrinsically worth about five dollars and thirty-three cents in silver, whilst its standard value, as currency under our laws, was only five dollars. It is manifest, therefore, that eagles and half eagles never could have entered into general circulation had it not been for the passage of this act, which is now condemned. It was a mere adjustment of the relative value of gold to silver, according to the standard of other nations; and, if I am not greatly mistaken in my memory, conformed exactly in this particular with the laws of Spain and Portugal.

I have been utterly at a loss to conceive the cause of the hostility of Senators to this necessary measure, unless it be from a feeling similar to that which, it is said, made a distinguished gentleman desire to kill every sheep which came in his way. He could feel no personal hostility to these innocent and harmless animals; but, was such a violent anti-tariff man, that the sight of them always reminded him of our woollen manufactures. Certainly no gentleman can entertain any objection to the eagles and half eagles themselves; but they may remind Senators of the efficient and untiring exertions of the Senator from Missouri [Mr. Benton] to introduce a gold currency into circulation. As gold, they may like these coins; but, as Bentonian mint-drops, they are detestable.

Senators have also contended that the present depressed condition of the country has been produced, in some degree, by the large importations of specie which were encouraged by the administration of General Jackson. I shall not be

diverted from my main purpose by answering this objection in detail. Even if their position were correct, which I by no means admit, that more gold and silver had been forced into the country than our necessities demanded, or the fixed laws of trade would have justified, still the effect would have been transient and trifling. It would have immediately flowed back through the channels of commerce to the places from whence it came, until the par of exchange had been restored. This is one of the fixed and invariable laws of trade, from the obligation of which we can never be released.

The Senator from Kentucky, [Mr. CLAY,] in the course of his remarks upon this subject, involved himself in a strange contradiction. At the commencement of his speech he deprecated, with his usual eloquence and ability, the policy of the past administration in forcing specie into this country, contrary to the laws of trade. Towards the conclusion, when his fancy became excited by the contemplation of the splendid Bank of the United States which it was his purpose to establish, he seemed entirely to have changed his opinion. In order to obtain the necessary amount of specie capital, he proposed that some twenty or twenty-five millions of this bank stock should be transmitted to Europe and sold to foreigners in exchange for gold and silver. It was a violation of the laws of trade, which must recoil upon us, to force a greater amount of specie into the country than our just proportion, for the purpose of putting it into circulation among the people; but, when the purpose is to furnish a specie capital of twenty or twenty-five millions for a new bank of the United States, then all difficulties vanish from the mind of the gentleman.

No, sir, said Mr. B., without the agency of any of these secondary causes, the present distress must have come. It was inevitable as fate. No law of nature is more fixed, than that our over-banking and our over-trading must have produced the disastrous results under which we are now suffering.

Is there now, in any of our large commercial cities, such an individual as a regular importing or commission merchant? I mean a merchant who is content to grow rich, as our fathers did, by the successive and regular profits of many years of industry in his own peculiar pursuit. If there be such persons, they are rare. No, sir, all desire to grow rich rapidly. Each takes his chance in the lottery of speculation. Although there may be a hundred chances to one against him, each, eagerly intent upon the golden prize, overlooks the intervening rocks and quicksands between him and it, and, when he fondly thinks he is about to clutch it, he sinks into bankruptcy and ruin. Such has been the fate of thousands of our most enterprising citizens. It is enough to make one's heart bleed to contemplate the blighted hopes and ruined prospects of those who have fallen victims to the demon of speculation. Many of them have been the most promising, and, but for this fatal error, would have become the most useful citizens of our country. Under the influence of this feeling, they not only risk their own all, but often the all of others which has been confided to them; not, as I firmly believe, with any deliberate purpose of being dishonest, but in the confident but delusive hope that fortune may smile upon their efforts and enable them to meet all their responsibilities.

Far be it from me to utter one word against the profession of the merchant. By their ability and enterprise our merchants have cast lustre upon the character of our country throughout the world. They are amongst our most useful citizens. They are agents for exchanging our productions with distant nations and among ourselves. Commerce is the handmaid of agriculture and manufactures; and Heaven forbid that I should be the instrument of exciting hostility between them. Again: I am the last man in the country who would crush that spirit of enterprise and of untiring effort which belongs to the American character. It has produced miracles. It has covered every sea with our flag. With a rapidity unexampled in the history of the world, it

SENATE.]

Sub-Treasury Bill.

[SEPT. 29, 1837.]

has converted the wilderness into fruitful fields and flourishing towns and cities. It has erected splendid improvements of every kind. It has covered and is covering the face of our vast country with railroads and canals, and has enabled a nation, centuries behind in the start, to surpass all her rivals in the career of internal improvement. If I had the power, I would regulate this spirit; I would limit it within proper bounds; God forbid that I should destroy it.

It is impossible that manufactures and commerce can flourish to any great degree in this country without the aid of extensive credit. I would not, therefore, abolish banks if I could. A return to a pure metallic currency is impossible. To make such an attempt would be ruinous as well as absurd. It would at once diminish the nominal value of all property more than fifty per cent.; and would, in effect, double the amount of every man's debts. It would enrich creditors at the expense of their debtors, and thus make the rich richer, and the poor poorer. It would paralyze industry and enterprise. I would give enterprise wholesome food to feed upon; but would not drive it into mad speculation by administering unnatural stimulants.

What power does this Government possess to regulate the banking system of the country? None, comparatively none. It belongs to the States. We shall soon see whether they will exert this power in a wise and beneficial manner. Every obstacle has been removed from their course by the general suspension of specie payments. But the banks are all powerful. Their presidents, their directors, their cashiers, their stockholders, and their agents, pervade our whole society. They are spread over the land. A common interest will unite them in a solid phalanx for the purpose of making a common effort. They will invade our halls of legislation, and exert all the influence which they may possess with every department of our State Governments, for the purpose of preserving their exorbitant privileges. The people may now establish these institutions upon a stable and useful foundation. The conflict will be tremendous, and I confess I tremble for the result. The weal or the woe of this country, for many years to come, depends upon the issue.

In this crisis, all which the General Government can effect is, in the first place, to withhold its deposits from the banks, and thus refrain from contributing their funds to swell the torrent of wild speculation; and, in the second place, to restrain the extravagance of their credits and issues, in some small degree, by collecting and disbursing our revenue exclusively in specie, or in the notes of banks which will pay the balances due from them in specie, at short intervals. To accomplish these two purposes, as well as to render the public revenue more secure, are the objects of the bill and amendment now before the Senate.

The evils of a redundant paper circulation are now manifest to every eye. It alternately raises and sinks the value of every man's property. It makes a beggar of the man tomorrow who is indulging in dreams of wealth to-day. It converts the business of society into a mere lottery; whilst those who distribute the prizes are wholly irresponsible to the people. When the collapse comes, as come it must, it casts laborers out of employment, crushes manufacturers and merchants, and ruins thousands of honest and industrious citizens. Shall we, then, by our policy, any longer contribute to such fatal results? That is the question.

The system of extravagant banking benefits no person except the shrewd speculator, who knows how to take advantage of the perpetual fluctuation in prices which a redundant paper currency never fails to produce. He sees, in the general causes which operate upon the commercial world, when money is about to be scarce, and when it will become plenty. He studies the run as a gambler does that of the cards. He knows when to buy and when to sell, and thus often realizes a large estate in a few happy ventures. Those who have been initiated into the mysteries

of the paper money market, can thus accumulate rapid fortunes at the expense of their less skilful neighbors.

The question before the Senate is not, whether we shall divorce the Government from the banks. The banks themselves have done that already. The alliance is already dissolved. The question now is, shall we, with all the experience of the past, restore this ill-fated union. No propitious divinities would grace the new nuptials; but the fatal sisters would be there ready again to cut the cord at the first approach of difficulty and danger.

The Senator from Virginia [Mr. RIVES] has appealed to us in the name of consistency to support his amendment. But circumstances have entirely changed since we voted for it at the last session. Then the union existed between the banks and the Treasury, and his bill prescribed the relative duties of the contracting parties. Now the contract is at an end. The banks have violated its fundamental obligations, and the Government is free. The preliminary question now is, shall we enter into a new alliance. We must first determine that we shall, before any question of consistency can arise. Should we again connect ourselves with the banks, then, and not till then, can we be called upon to adopt rules regulating the union. The amendment of the Senator from Virginia proceeds upon the assumption that our former relations are to be restored. I oppose the amendment mainly because I am hostile to this reunion. If Congress should first determine to restore the old relations between the parties, then, and not till then, might there be some force in an appeal to our consistency.

We are left at this moment entirely free to decide what is best to be done with the public money. To use the language of the Senator from South Carolina, [Mr. CALHOUN,] we have reached a point from whence we are about to take a new departure. But three courses have been, or in the nature of things can be, presented for our selection. We must either deposit the public money in a bank of the United States, to be created for that purpose; or restore it to the State banks; or provide for its safe custody in the hands of our own officers, without the agency of any bank, State or national.

And, first, in regard to the creation of another bank of the United States. It was not my purpose, at this time, to offer my objections in detail to such an institution. Even if I had intended to present my views fully upon this subject, the overwhelming vote of the Senate on Tuesday last, against the establishment of such a bank, would warn me to forbear. It would be labor lost and time expended in vain. I shall content myself, therefore, with a few general observations upon this branch of the subject, and a short reply to some of the remarks which have been made by the advocates of a new bank.

In my opinion, the most alarming dangers which would result from such an institution, have never yet been presented in bold relief before the people. This has arisen from the unnatural position of that institution towards the Government. We have seen it struggling against Executive power; and its efforts have been tremendous. They would have been irresistible against any other President than Andrew Jackson. As it was, the conflict was of the most portentous character, and shook the Union to its centre. But we have witnessed the exception, not the rule. It is the natural ally, not the enemy of power. Wealth and power necessarily attract each other, and are always ready to rush to each other's embrace. In the language once used by a distinguished orator, now no more, (Mr. Randolph,) "male and female created he them." Suppose General Jackson and the bank had been in alliance, and not in opposition. What then might have been the consequences, had he been an enemy to the liberties of his country. Armed with all the power and all the patronage which belong to the President of the United States, enjoying unbounded popularity, and wielding the combined wealth of

Sub-Treasury Bill.

[SENATE.]

the country through the agency of this all-powerful bank and its branches, planted in every portion of the Union; can any man say that our liberties would not have been in danger? All the forms of the constitution might have remained; the people might still have been flattered with the idea of electing their own officers; but the animating spirit of our free institutions would have departed forever. A secret, an all-pervading influence, would have sapped the foundations of liberty and made it an empty name. Under such circumstances, a President might always select his successor. But, thank heaven, the danger has passed away, and I trust forever.

If any of my friends on this side of the House, who advocate the establishment of a national bank, should be elected President—and if their political principles are to prevail with a majority of the people of this country that majority could not make a better selection—in what situation shall we be placed? One of the first measures of the administration would be to establish a magnificent bank of the United States, with a capital of at least fifty millions of dollars, and with branches throughout the different States. A feeling of gratitude towards their creator would render them subservient to his will. It would be their pride and their pleasure to promote his influence and extend his power. We should have no more wars between the bank and the Government. They would move on harmoniously together. In other days, the time might arrive when the bank would be used by some bad and aspiring President as a powerful instrument to subvert the liberties of his country.

Even if such a bank could better regulate the currency and the domestic exchanges of the country than any other instrument, still it would be infinitely better to bear the ills we have than to endanger the existence or the purity of our free institutions.

But would such a bank control and regulate the issues of the State banks? I answer, no. It would not if it could; it could not if it would. In the affairs of human life, if you expect one agent to restrain and control another, you ought to render either their interests or their inclinations different and counteracting. To accomplish this purpose, they must be “antagonistical” to each other. When such agents are corporations, this is emphatically true. Peculiarly governed by self-interest, they feel no enthusiasm unless it be to make large dividends for their stockholders. Now, a bank of the United States would have precisely the same interest with the State banks in making extravagant loans and issues. Whenever, in their estimation, they could extend their accommodations, without endangering their own security, they would pursue that course. This is the powerful instinct of self-interest. You cannot change the fixed laws which govern human nature, by making men directors and stockholders in a bank of the United States. It is absurd to suppose that a large moneyed corporation, having in view solely its own interests, will voluntarily become the regulator of the paper currency of a great nation, and prevent those ruinous contractions and expansions under which both England and this country have periodically suffered. It would be easy for me to prove, at least to my own satisfaction, that, in point of fact, neither the first nor the last Bank of the United States ever did exercise a regular and efficient control over the issues of the State banks. On the contrary, whenever their interest impelled them to extend their own issues, they have pursued this course, and thus, instead of checking, they have given loose reins to the State banks. Both the one and the others have thus rushed together, and have together ministered to that spirit of over-trading and extravagant speculation which has so often desolated our country. To pursue such a course of illustration would, however, be to revive the old controversy; to tread the ground which has been so often trodden, and to divert me from that which more essentially belongs to the present question.

The mistake committed in regard to the deposit banks, was the belief that they would be able and willing to restrain the issues of the other State banks. Fortified with the public deposits, and numerous as they were, they might possibly have done something towards the accomplishment of such a purpose. But, bank like—human nature like—instead of aiming at any such result, the Government deposits became the instrument in their hands of still more extravagant credits and circulation. Their objects seemed to be not to restrain, but to give loose reins to the other banks and to themselves, and thereby increase their own profits.

But could a bank of the United States, even it would, regulate and control the issues of the State banks? I have a striking fact to present to the Senate which bears directly upon this point. The Bank of England has recently been placed in such a peculiar situation that it became its interest to use its power for the purpose of contracting the circulation of the local banks throughout the kingdom. It was compelled to make the attempt by an overruling regard, not only for its own security, but for its very existence. The effort proved wholly unavailing.

The Bank of England was rechartered for ten years in August, 1833. Previous to its recharter its capital was £14,553,000 sterling. This whole sum was loaned to the Government. According to the provisions of the last charter, one-fourth part of the debt due from the public to the bank was to be repaid. This was done by the assignment of that amount of three per cent. stock to the bank by the commissioners for the reduction of the national debt. But as no division has been made of this amount among the proprietors, the bank capital, for every practical purpose, may still be estimated at £14,553,000, or £70,000,000. This bank has branches at ten of the most important commercial and manufacturing points in the kingdom. Now, if such a bank be incapable of regulating and restraining the issues of the country banks, then no similar institution of which we can conceive could efficiently exert this power.

On the 28th December, 1833, the bank had in its vaults £10,200,000 sterling in bullion, or nearly one third of the amount of its circulation and deposits combined. On the 15th November, 1836, this amount of bullion had decreased to £4,933,000, or less than one sixth of its deposits and circulation.

After long experience, it is admitted by all sound practical men in England, “that the true principle upon which bank issues should be governed is, that the circulation should at all times be kept full, but without any redundancy; and the simple means by which this state of things may be determined and regulated, are (except on very extraordinary emergencies) offered by the state of the foreign exchanges.” When these become against England so much that bullion is exported, then the issues of bank paper ought to be contracted to such an extent as to restore the equilibrium. The reason is obvious. When the paper currency becomes redundant, prices rise in the same proportion; and then it is more profitable to remit specie abroad, than to export any other article.

The state of the foreign exchange was against England. The specie of the bank was, therefore, gradually drawn from its vaults for exportation. It became necessary that it should make a vigorous effort to diminish the amount of the circulating paper medium, and thereby restore the equilibrium of the foreign exchanges. For this purpose it contracted its issues in the vain hope that the joint stock and private banks would be compelled to follow the example. What was the consequence? I will not repeat the facts which have already been stated, though for another purpose, by the Senator from Georgia, [Mr. KING.] It is sufficient to say that, as it contracted, the other banks of the kingdom expanded their issues; and that, too, in a greater proportion than its issues were diminished. Prices

SENATE.]

Sub-Treasury Bill.

[SEPT. 29, 1837.]

still continued to rise, and bullion still continued to be drawn out of the bank for exportation. The utter impotency of this grand regulator of the currency to keep the paper circulation of the kingdom within such limits as to prevent the exportation of gold and silver, has thus been so clearly demonstrated, that several of the ablest men in England despair of accomplishing the object in any other manner than by restricting the issues of paper money to a single bank, and regulating their amount by the Government. Here, then, is an important fact, incontestably established. If this be true, and there can be no question of it, I would ask Senators how a national bank, even with a capital of fifty millions of dollars, could regulate and restrain, within proper limits, the issues of eight hundred State banks, scattered over the whole extent of this vast country. The thing is impossible. It cannot be done by such a bank. I call upon Senators who entertain a different opinion to furnish any explanation of this conclusive fact. Unless they can do so, then they must abandon one of their strongest arguments in favor of the creation of a bank of the United States.

By the same fixed and universal law of commerce which I have just stated, whenever the paper currency of the United States becomes so inflated that prices rise beyond their proper standard, then it becomes profitable to import every foreign production into our country, and for the same reason our exports are diminished. Specie must then go abroad to pay the balances against us. In order to supply it, the banks must be exhausted of their store. They must contract their issues, and their debtors must suffer distress. Such has been the history of our country at several successive periods, and such it must continue to be, unless bank issues should be regulated by the State Legislatures.

The Senator from Kentucky [Mr. CLAY] has contended that the constitutionality of a bank of the United States ought no longer to be considered an open question. That it ought to be regarded as settled by the past action of Congress, and by the decision of the Supreme Court of the United States. From this opinion I beg leave to dissent. From my early education, and my pursuits in life, I have been taught to entertain a high degree of reverence for judicial decisions. I feel disposed in all cases to yield to them their proper influence. If Congress should create a new bank of the United States, and the judiciary should decide it to be constitutional, I would bow with submission to their authority. The good order and peace of society require that such should be the conduct of our citizens, whatever may be their private opinions. But after the charter has expired by its own limitation, and when Congress are again called to *act de novo* upon the subject, I should feel myself at perfect liberty to exercise my own judgment. In forming my opinion, I should treat with great deference and respect the former acts of Congress, and the opinion of the Supreme Court; but, after all, if they should fail to convince me, I would consider myself guilty of moral perjury before Heaven if I voted for such a bill. I have sworn to support the constitution of the United States; and my own judgment must be convinced that a law is constitutional before, acting in a legislative capacity, I can give it my sanction. I cannot cast the responsibility of such a vote upon others. It is exclusively an affair between me and my own conscience. If men, acting in a legislative character, should, in all cases, consider themselves bound by judicial decisions, what would be the consequence? The judges who, in all ages and in all countries, have had a leaning in favor of the prerogatives of Government, would be the arbiters of popular rights and popular liberty in the last resort. There could be no appeal from their decision upon great questions of constitutional liberty; even when they arose before the Legislature in cases where the personal or private rights of the citizen could not be affected. Their decisions would be-

come as irreversible as the laws of the Medes and Persians. They would be sacred as the constitution itself.

Congress passed the seditious law in 1793 in express violation of that provision of the constitution which declares that "Congress shall make no laws abridging the freedom of speech or of the press." This act was more equitable in its provisions than the common law, because it permitted the defendant to give the truth in evidence. The popular odium which attended it was not excited by its particular provisions, but by the fact that any law upon the subject was a violation of the constitution.

It is now admitted by ninety-nine persons out of a hundred that Congress, in passing this act, transcended their powers; and yet this law was declared to be constitutional by the Judiciary, doubtless with honest intentions. American citizens were indicted, and tried, and convicted, and sentenced and suffered fine and imprisonment under its provisions. If it were again proposed to pass a similar law, I ask the Senator from Kentucky whether he would feel himself bound by these decisions to believe and to vote that such a law was constitutional. I feel assured that he would not. Upon the same principles the infamous decisions of a Jefferies or a Scroggs against the rights and liberties of the people of England ought to have been held sacred, and the glorious revolution of 1688 was an act of usurpation. The decisions of judges, except on the particular case before them, may, like all other human things, be corrected by the experience of time, and the lights of knowledge.

The Constitution of the United States confers upon Congress the power "to lay and collect taxes, duties, imposts, and excises," &c.; and, after enumerating other powers, authorizes us "to make all laws which shall be necessary and proper for carrying into execution the foregoing powers." The advocates of a national bank have derived the power to create such an institution from these two clauses. They have contended that a national bank is a necessary and proper instrument to collect, to keep securely, to transfer, and to disburse the national revenue; and therefore that it is constitutional. Such seems to have been the opinion of the Supreme Court, as delivered by Chief Justice Marshall in the case of *McCulloch* against the State of Maryland. But that very decision is based upon the principle, that if Congress have determined such a bank to be an appropriate means to carry into execution this taxing power, the Judiciary could not interfere and declare that it was not. The degree and the urgency of this necessity must at last be left to the Legislature, unless in extreme cases. Upon an application for a new charter, the question appears thus to be referred by the Judiciary itself to the Legislative authority. Every member, should the case arise, must ask himself whether a bank of the United States be a necessary and proper instrument to carry into execution the taxing power of the Government. If he decides in the negative, he cannot vote in favor of establishing such a bank without personally violating the constitution.

And here I should have concluded the observations which I had intended to make on the subject of a bank of the United States, had it not been for the remarks made yesterday by the Senator from Massachusetts, [Mr. WEBSTER.] He came out strongly in favor of a bank—no, I ask his pardon, he did not—because he solemnly disclaimed any such imputation when it was made upon him by the Senator from New Hampshire, [Mr. HUBBARD.] I confess, if it had not been for this disclaimer, I should have fallen into the same error; because he insisted upon it, that, during forty years of the period which had elapsed since the adoption of the constitution, the first and the last Bank of the United States had furnished the country a perfect currency, and had regulated our domestic exchanges to admiration. The gentleman had urged these topics strongly, and had pointed out no other specific mode of

SEPT. 29, 1837.]

Sub-Treasury Bill.

[SENATE.]

regulating the currency and exchanges but through the agency of a bank; hence, it was natural to infer that he intended to advocate such an institution.

What, then, was the Senator's main position? In this I think I cannot be mistaken. I wish to state it distinctly and fairly. He contended that Congress not only possess the power under the constitution, but that it is their imperative duty to create and furnish for the people of this country a paper currency which shall be at par in all portions of the Union, and everywhere serve as the medium of domestic exchanges. In what particular mode, or by what means, this paper currency was to be called into existence, the Senator did not explain. On this point he was quite mysterious. He infers the existence of this power from two clauses in the constitution: the first, that which confers on Congress the power "to regulate commerce with foreign nations, and among the several States, and with the Indian tribes;" and the second, "to coin money, regulate the value thereof, and of foreign coin, and fix the standard of weights and measures."

[Here Mr. WEBSTER also referred Mr. B. to that clause of the constitution which prohibits the States from coining money or emitting bills of credit.]

What, in my opinion, constitutes the chief excellence of the Senator from Massachusetts, as a public speaker, is the clearness with which he states his propositions, and his power of condensation in maintaining them. When he happens to be in the wrong, these high qualities operate against himself, and render his errors more conspicuous. Such was my conviction yesterday, when he undertook the Herculean task of deducing the power to create a paper currency, without any limit but the discretion of Congress, from the simple powers of regulating commerce, and coining hard money.

By the state of the question before the Senate, the gentleman has been driven into a narrow place, and has chosen a position which his great powers will not enable him to maintain. The bill upon your table proposes to keep on deposit, and to transfer the public revenue, where it may be required, without the agency of any bank. If these duties can be successfully performed by the officers of the Government, then there can be no pretence for claiming the power to incorporate a national bank from that clause in the constitution giving Congress the power "to lay and collect taxes, duties, impost and excises, and to pay the debts of the United States." The present bill provides for all these purposes, independently of all banks. There can, then, be no necessity to create one as a fiscal agent of the Government; and, of consequence, the ancient argument in favor of its constitutionality falls to the ground. This was its origin: this was the foundation on which it has formerly rested. The power to issue notes, and that to regulate the exchanges of the country, have heretofore been considered as merely incidental to the bank itself, after it had been called into existence as a necessary fiscal agent of the Treasury. These have never been considered as powers inherent in the Government, but as mere consequences of the regular action of a national banking institution. Under existing circumstances, the Senator is driven even from these comparatively narrow limits. He disclaims the idea of advocating, at present, the establishment of a national bank. Hence he has never once, throughout the whole course of his argument, called to his aid the power "to levy and collect taxes." He has not even mentioned it. He casts this power into the back ground; whilst he claims for Congress, from the other clauses of the constitution which I have read, the transcendent power of creating a paper currency without limits.

Let us for a few moments examine his argument. The framers of the constitution were sturdy patriots, who, with a bold but cautious hand, conferred upon the General Government certain enumerated powers. Dreading lest this Gov-

ernment might attempt to usurp other powers which had not been granted, they have expressly declared that "the powers not delegated to the United States by the constitution, nor prohibited by it to the States, are reserved to the States, respectively, or to the people." This caution was absolutely necessary to prevent astute and subtle lawyers from extending, by forced and ingenious constructions, the clear and explicit grant of powers which was traced by the hand of our fathers. Does the constitution, then, anywhere expressly confer upon Congress the power of creating a national paper currency? This is not pretended. But the Senator from Massachusetts has found it lurking under the power "to regulate commerce with foreign nations, and among the several States, and with the Indian tribes." What is the signification of the word "regulate?" Does it mean to create? No, sir. Such a signification would be to confound the meaning of two of the plainest words in the English language. You create something new; you regulate the action of that which has already been called into existence. The meaning of the word "regulate," as used by the framers of the constitution themselves, clearly appears in a subsequent clause in the instrument: "Congress shall have power to coin money, regulate the value thereof, and of foreign coin, and fix the standard of weights and measures." To coin money, is the creation of the subject; after it has been coined, and thus brought into existence, you regulate the value of it and of foreign coin. There are no two words in the English language which have more distinct and precise meanings than to "create" and to "regulate." The word "regulate" necessarily presupposes the previous existence of something to be regulated. Such is its plain, clear signification in the constitution. Commerce had long existed "with foreign nations, and among the several States, and with the Indian tribes," previous to the date of the constitution. Its framers took the subject up as they found it, and, acting upon the existing state of things, they authorized Congress to regulate, or to prescribe rules for conducting this commerce in all future times. To infer, therefore, from this simple power of regulating commerce, that of creating and issuing a supply of paper money for the country, strikes me as one of the most extraordinary propositions which has ever been presented to the Senate.

The limited signification of this word "regulate," will appear conclusively from the history of this provision of the constitution. Under the confederation, each State acted independently of the others in framing commercial regulations. The consequence was, that whilst some States imposed high duties on the importation of foreign merchandise, others admitted it into their ports at low rates, or free of duty altogether. No commercial treaty upon principles of reciprocity could be carried into execution with foreign nations, because, whilst the several States exercised this prerogative, there could be no uniformity of duties. Again: those States which admitted foreign productions either without duties or at low rates, endeavored to force them into the consumption of the neighboring States where the duties were higher. They could, of course, undersell the merchants who had been compelled to pay these higher duties of their own State. Thus the revenue laws of one State were counteracted by those another; and a war of commercial restrictions arose among themselves. These were not only the reasons for adopting the clause in the constitution authorizing Congress to regulate commerce, but they were the immediate cause for assembling the convention which framed the constitution itself. This may be seen from the proceedings which led to the adoption of that instrument, contained in the first volume of the Laws of the United States.

The States were jealous in the extreme upon this subject. They were reluctant to yield to Congress the power of regulating commerce. Some of them proposed to sur-

SENATE.]

Sub-Treasury Bill.

[SEPT. 29, 1837.]

render it for a term of years, whilst others refused to do any thing. On the 13th July, 1785, a committee of Congress, of which Mr. Monroe was chairman, recommended an amendment to the articles of confederation, containing, among other things, a provision that the United States, in Congress, should have the exclusive power "of regulating the trade of the States, as well with foreign nations as with each other, and of laying such impost and duties upon imports and exports as may be necessary for the purpose." This provision was subject to several conditions and limitations which I need not repeat. The meeting at Annapolis, in September, 1786, was held for similar purposes, but commissioners from five States only were present, who declined to act upon the subject, and recommended the assembling of the convention which formed the present constitution of the United States.

From this brief review you may judge, Mr. President, what would have been the astonishment of those jealous patriots, who, with a reluctant hand, conferred this power upon Congress to regulate commerce, if they had been informed that it contained within itself the vast, the undefined and undefinable power of creating a paper currency, without limit and without restriction. In some of the State conventions which were assembled for the purpose of ratifying the Federal constitution, extreme inferences were drawn, according to the spirit of the times, as to the powers which might be assumed by Congress from the language of the instrument. But no man in America, however haunted he might have been with the wildest apprehensions of Federal power, ever imagined that there was lurking under the simple power to regulate commerce that of establishing a national paper currency. The Senator from Massachusetts has first detected this slumbering power. The word "regulate," says Crabbe, in his *Synonymes*, "is applicable to things of minor moment where the force of authority is not so requisite." It is inferior in potency to the words "rule," "govern," or "direct." In the hands of the Senator from Massachusetts, however, it becomes all-powerful. He can conjure with it, and raise up the phantom of an all-pervading and unlimited paper currency.

The Senator from Massachusetts has commented upon the propositions laid down by the President in his message, that "it was not designed by the constitution that the Government should assume the management of domestic and foreign exchanges," and "that as justly might it be called upon to provide for the transportation of the merchandise of individuals." Now, sir, might not the gentleman as fairly deduce this power from that of regulating commerce, as the power of issuing paper money? Nay, might it not be done more directly? The first implication would naturally be, Congress possesses the power to regulate commerce, therefore, you may infer the power of transporting merchandises without which commerce cannot exist. But commerce is the exchange of commodities; and where they are not of equal value, some medium is necessary to pay the difference; therefore Congress possesses the power of creating a paper currency for this purpose. The power to transport merchandise is one step nearer to the fountain head than that of issuing paper. If you adopt such constructions of the constitution, you are at sea without chart or compass; and that instrument may be made to mean any thing or nothing. The plain and obvious intention of its framers is sacrificed to the spirit of metaphysical subtlety, and to the desire of extending the powers of the Federal Government.

The Senator asks it is possible that the constitution has given to Congress the power over commerce, and yet has provided no currency by which it may be conducted? I answer that the framers of that instrument were guilty of no such absurdity. They have provided a medium of exchange the best in the world. They have empowered Con-

gress to coin money, and to regulate the value thereof and of foreign coin. They were hard-money men. To use a forcible expression of the Senator himself, they make gold and silver currency the law of the land at home, as it was the law of the world abroad. This is the medium and the only medium of exchange which they have provided.

And yet, sir, from this clear and precise power "to coin money, and regulate the value thereof and of foreign coin," the Senator from Massachusetts also deduces the power of issuing paper money; and he has seriously insisted upon this argument. I confess I feel myself utterly at a loss to answer it. To contend that because Congress have derived from the constitution the express power, and that only, of coining gold and silver money; that, therefore, it is their right and their duty to create paper money, appears to me, with all due deference, to be a monstrous proposition. It cannot be maintained for a moment. The framers of the constitution have evinced their intention as clearly as human language can manifest it, that our currency should be gold and silver alone; and they have prohibited the States from making any thing else a legal tender. And yet the Senator contends that, from these very provisions, a power results to Congress of creating a paper circulation for the country. The framers of the constitution knew nothing of any paper currency, except that of the Revolution. This they would not touch; they did not name it. It was an example forever to be shunned, and never to be followed. And yet they have done their work with so little skill, that they have authorized Congress to create a paper currency for the whole Union, which shall serve as the medium of our domestic and foreign exchanges! The constitution has established gold and silver as the currency of the country, and therefore it is contended they have authorized the emission of a vast paper circulation.

Now I most sincerely believe, that if any such constructions can prevail, then all the boundaries of Federal power are at once prostrated, and we are rapidly on the march towards consolidation. It was in vain that our ancestors granted powers to this Government with a jealous hand, and studiously sought to preserve the rights reserved to the States. It was in vain that they made a specific enumeration of the powers of Congress, and withheld from us all incidental powers, except such as might be necessary and proper for carrying those which were expressly granted into effect. All limitations are at once prostrated, and our written constitution secures us nothing. It has become clay in the hands of the potter, ready to assume any shape and receive any impression which the passions or the prejudices of the hour may dictate.

Two political schools have existed in this country from the time the constitution was adopted. The one favored a strict, the other a liberal, construction of the instrument. The one has been jealous of State rights, the other the advocates of Federal power. The Senator from Massachusetts, if we may judge from his argument upon the present occasion, is far in advance of those who have hitherto gone the farthest in support of Federal power. He has made large strides towards consolidation or centralism. I use these terms with no offensive meaning.

I have now reached the question whether the public deposits ought to be restored to the State banks. I contend that they ought not; first, because these banks are not and never have been safe depositories of the public money. In other words, the experiment has entirely failed.

What is the great and peculiar privilege conferred upon a bank of deposit, discount, and issue? A bill or promissory note is presented, with one or two good endorsers, and between six or seven per cent. per annum is discounted from its face. What does the bank give in return? Either a credit entered on its books, or bank notes payable on demand; and in either case without interest. Their offer to their customers is: I will give you my notes without inter-

SEPT. 29, 1837.]

Sub-Treasury Bill.

[SENATE.]

est in exchange for your notes, from which the interest shall be deducted in advance. In consideration of enjoying this profitable privilege, banks are bound by the duty which they owe the public, always to preserve themselves in such a condition as to be able to answer all the demands made upon them in the regular course of business, in bad as well as in good times. It is not sufficient that they should be able to navigate a smooth sea when the gales are prosperous. They ought to be strong enough to endure the storm. If they fail when the community most requires their support, then they are worse than useless. They have not answered the purposes of their existence.

It is a common remark that the public will not eventually suffer from their failure, provided their debtors be at last good for the amount which they owe. The same observation might be made with equal justice in regard to a man not worth a dollar, if he had been able to issue his own notes without interest, to the amount of one hundred thousand dollars, in exchange for a like amount of the notes of solvent individuals bearing an interest. If his debtors should be able to pay him, he will eventually be able to redeem his notes. But this is not banking: it is speculating upon mere credit, without any solid capital to sustain it.

According to the testimony given before the secret committee of the House of Commons, by the directors of the Bank of England, previous to its recharter, it appears that the principle upon which they had proceeded in regulating their issues, was to have as much coin and bullion in their coffers as amounted to a third part of the liabilities of the bank, including sums deposited, as well as notes in circulation. This rule of one for three may, or may not, be a correct standard. I shall not pretend to determine this point. That bank has since been compelled to depart from it by causes similar to those which have crushed our own banking institutions. This I will say, however, that if one dollar in specie, for three of circulation and deposits, be no more than a safe standard for the Bank of England, then our banks ought to have a larger proportion of the precious metals to render them secure. The circulation of each one of our eight hundred banks is limited within a narrow sphere. Their paper does not travel far from home. When a panic arises, from any cause whatever, nearly their whole circulation may be poured in upon them in the course of a very few days, and thus they may be compelled to suspend specie payments. Not so the Bank of England: its circulation is co-extensive with the kingdom, and its notes are everywhere a legal tender, except at its own counter. The joint stock and private banks pay their own notes with notes of the Bank of England. It follows, as a necessary consequence, that it would require much time to make an extensive run upon this institution; and any panic which might arise would have ample opportunity to subside before their specie could be exhausted.

When the deposit bill was before the Senate at the last session, the Senator from South Carolina offered an amendment prohibiting the Secretary of the Treasury from employing any bank as a depository of the public money, unless it had one dollar in specie for five of its circulation and deposits, public as well as private. This proposition, at that time, received my hearty support. The whole subject was afterwards referred to a select committee, of which I had the honor of being a member; and they reported a provision in substance requiring each depository to have one dollar in specie for five of its circulation and private deposits. You will observe, sir, that the public deposits were entirely excluded from this provision. They were not taken into the estimate. No proportion of specie was required to secure them. One would suppose that, in all conscience this provision was sufficiently liberal towards the banks. When the bill afterwards came to be discussed before the Senate, it was found that even this limitation would deprive many of these banks of the public deposits;

and according to my recollection, in which I think I cannot be mistaken, if we had made it one for ten, several of them would have been excluded. For this reason the Senate determined, against my feeble efforts, not to require the banks to hold any fixed proportion of specie compared with their circulation and deposits. Every provision on the subject was stricken out of the bill, and the amount of specie which the banks were to hold was left entirely to the discretion of the Secretary of the Treasury. On that occasion I turned prophet myself, as several of my friends on this floor can testify. I anticipated an explosion of several of the deposit banks, but it came sooner than I had expected.

Under these impressions, you may judge of my astonishment when I saw it stated by the Secretary of the Treasury in his late report, speaking of the deposit banks in the aggregate, that "their immediate means, compared with their immediate liabilities, were somewhat stronger in November than May, but were at both periods nearly one to two and a half, or greater than the usual ratio, in the best times, of most banks which have a large amount of deposits in possession." To sustain this assertion, he refers to table Q in the appendix of his report. Upon examining this table the difficulty at once vanished. I found that the Secretary, instead of deducting the amount due by these banks to other banks, from an aggregate composed of the amount due from other banks to them, and the notes of these other banks in their possession, and setting down the balance as an item of the immediate means of deposit banks, had placed the sums due to other banks on one side of his statement, and the notes of other banks, and the sums due from them, on the other. The inaccuracy of this course of proceeding will appear clearly from a brief example which I shall present. Suppose a bank to possess \$100,000 in specie, and its circulation and deposits to amount to \$400,000. It would then stand as one to four. But suppose it owed a balance to other banks of \$200,000, and other banks owed it precisely the same amount; by adding these sums of \$200,000 to the one and to the other side of the statement, you would change the apparent condition of the bank, and make its immediate means the one-half, instead of the one-fourth, of its immediate responsibilities. In this very manner, as all can perceive who will examine the Secretary's statement, has he brought the average condition of the deposit banks up to the standard of one for almost two and a half.

These accounts between the banks are often adjusted. Balances are suffered to remain with each other, because they can at all times be readily commanded for immediate use. If one bank has money in the vaults of another in its immediate vicinity, it is the same thing as if it were in its own vaults. Upon the least pressure it would be withdrawn. Therefore, the balance due to one bank from another upon settlement, and not the full amount, can only be estimated among its immediate means.

According to this method of calculation, which is clearly the only just mode which can be adopted, the deposit banks, in the aggregate, have not quite one dollar of immediate means to meet four dollars forty cents of their immediate responsibilities; and that they have even this proportion, proceeds upon the supposition that they can command the balances due to them from other banks in specie. If they cannot, the specie in their possession would not equal one dollar for seven dollars and fifty cents of their circulation and deposits.

Now this is the average condition of all the banks. Many individual banks among them are in a better condition, whilst many others are in a much worse.

The Secretary of the Treasury, in the same table, (Q,) has presented the "condition of deposit banks on or about June 15, 1837, in different sections of the country." In this table he classifies these banks under six different

SENATE.]

Sub-Treasury Bill.

[SEPT. 29, 1837.]

heads, according to the different portions of the Union within which they are situated. One of these classes is Alabama, Mississippi, Louisiana, and Tennessee; and it appears that the deposit banks in these States have not one dollar of immediate means for twenty dollars of their immediate responsibilities! The whole amount of specie in their vaults is \$1,168,022, whilst the balance due by them to other banks is \$2,516,773. All the specie which they possess would thus be less by \$1,348,751 than sufficient to pay this balance. Independently of it, there would then be left \$21,480,819 of circulation and public and private deposits, without one dollar of specie to meet it; and in these banks a large proportion of the public revenue is now deposited.

The deposit banks in New Jersey, Pennsylvania, Delaware, Maryland, and the District of Columbia, are classified together. Their specie, and the balance due to them from other banks, amounted, on the 15th June last, to the sum of \$1,732,478; whilst their circulation and public and private deposits were \$9,357,947. Thus it appears that these banks had not one dollar of immediate means for five dollars and forty cents of their immediate responsibilities. If the balance due to them from other banks, which amounted to \$987,921, is not to be considered as immediate means, then their specie, to wit, \$744,557, is not equal to one dollar for twelve dollars and fifty cents of their immediate responsibilities.

The deposit banks of Virginia, North Carolina, South Carolina, and Georgia, which are classed together, had in specie, and the balance due to them from other banks, \$2,245,423, whilst their circulation, and public and private deposits, amounted to \$13,423,627. Thus these banks had not one dollar of immediate means for five dollars and ninety-five cents of their immediate responsibilities. If the balance due to them upon a settlement with other banks, amounting to \$176,469, be excluded from the estimate, then their specie, to wit, \$2,068,954, is not equal to one dollar for six dollars and forty-five cents of their immediate responsibilities.

The deposit banks in each of the other three classes, composed of the New England States, New York, and the Western States, including Michigan, were not in so bad a condition. Their immediate responsibilities were so much greater than one dollar for four dollars and forty cents of their immediate responsibilities, as to bring the general average of all the deposit banks throughout the Union nearly down to that standard.

I have not examined each of these banks in detail. No doubt many of them are in a sound condition. My object is to show that the system, as a whole, cannot be relied upon by the General Government. I am one of the last men in the Senate who would attack the credit of individual banks. I, therefore, purposely avoid going into particulars. I shall proceed no further than the course of my argument renders indispensable, and therefore justifies.

The suspension of specie payments throughout the country has, in one respect, been a most fortunate occurrence for the deposit banks along the Atlantic seaboard. It has enabled them to pay nearly the whole amount of the public deposits in their possession in their own depreciated paper. The public creditors were compelled to accept drafts upon them, because the Secretary of the Treasury had nothing better to give; and thus their debt to the Government has been nearly extinguished. The balance still remaining due to us is chiefly deposited in banks beyond the mountains.

The Senator from Kentucky [Mr. CLAY] has used some strong expressions in regard to the power which the bill authorizing the Secretary of the Treasury to settle with the deposit banks has conferred upon that officer. He said it was greater than ever ought to be confided to any man under a free Government, and would operate severely

upon the banks. And what is this power? These institutions had agreed to receive our funds on deposit, and to credit them as cash to our account. They are liable, by the terms of their own contracts, to be drawn upon, at any moment, for the whole amount in their possession. We know that they are unable to pay, and therefore interpose for their relief. We authorize the Secretary to give them time, and to accept the balance due from them in three instalments, payable at the end of four, six, and nine months; charging them no more than two per cent. interest. If they fail to comply with these reasonable terms, then we direct suit to be brought. And yet this has been denounced as confiding a dangerous discretion to the Secretary, and as a great hardship upon the banks—with what justice, I leave the Senate to decide.

And this is the experiment, which, according to the Senator from Virginia, [Mr. RIVES,] has not failed. This is the experiment to which we ought to give another trial. I tremble for my country when I reflect what may be its condition hereafter, should its treasures be again entrusted to such depositories. No nation can expect perpetual peace. Dark and portentous clouds are now gathering in the North. The Maine boundary question is assuming a threatening aspect. In the South, we have serious disputes with Mexico. If war should come, and find us with our treasures locked up in such depositories as we have had, the embarrassments of the country will be of the most formidable character. Many of these banks could not exist for a moment, if it were not for the boundless, extravagant, and foolish confidence of the public. The inflated bubble when touched by the spear of Ithuriel, must explode and dissolve into thin air. The whole fabric is built upon the sand, and “when the rain descended, and the floods came, and the winds blew, and beat upon that house, it fell; and great was the fall of it.” Nay, sir, a puff of air was sufficient to overturn it.

Apprehensions have been expressed, and no doubt felt in the course of this debate, lest a perpetuation of the divorce which now exists between the Treasury and the banks, might lead to the establishment of a bank of the United States. This event would, in my opinion, be much more probable should the late system be restored. It is, therefore, natural that the friends of such a bank should be in favor of this restoration. In such an event, let war come when it may, you will then not only be deprived of your own treasures, but specie payments will be suspended, the currency of the whole country will be degraded, and you will not be able to collect taxes from the people, unless it be in depreciated paper. At such a crisis, a bank of the United States becomes inevitable. Let us then keep our money under our own control. Let us always have it ready for use when it is required. Let us depend upon no banks, whether State or national, for this purpose.

It may be said that although the banks have suspended specie payments, yet the deposits which we have made with them will eventually be paid. This may, or it may not be. I doubt extremely on that point. If the event were certain, however, this is no answer to the objections against employing such depositories. In the day of danger they cease to be banks. Your money, which is the sinew of war, is withheld from you at the hour of your utmost need. Your resources are dried up, and your energies paralyzed, at the very moment when the utmost energetic energies are demanded. It would be but a poor consolation, either to the Government or people of this country, that, after having suffered all the evils and calamities of such a catastrophe, the commissioners of insolvency should finally pay them twenty shillings in the pound.

In the second place, I am opposed to returning to the system of deposit banks, because I feel no confidence that, upon a second trial, it would prove better than it did on the first.

SEPT. 29, 1837.]

Sub-Treasury Bill.

[SENATE.]

From the very nature and present organization of our State banking institutions, they must go from bad to worse. Their tendency is downward, and unless arrested by the vigorous action of the State Governments, the whole system must rush to inevitable ruin. I defy the art of man to devise a worse banking system than that which prevails throughout this country. The model of it upon paper was the Bank of England; but the whole capital of this bank is vested in loans to this Government, and is therefore as secure as the Government itself. Such is not the condition of any of our institutions. The public have no security that the whole amount of their capital stock may not be squandered; and the fact is, according to the statement of Mr. Gallatin, that one hundred and sixty-five of our banks broke between 1811 and 1830.

These banks, or all of them with which I am acquainted, enjoy, under their charters, a privilege which exempts their stockholders, in their individual capacity, from the payment of any of the notes or debts due by the corporation, in case it should become insolvent. There is, I believe, no restriction any where upon the amount of their profits or dividends, unless it be a trifling tax. And they are nowhere required to have any fixed proportion of specie in their vaults, compared with the amount of their circulation and deposits; certainly they are not in the State which I have the honor in part to represent.

If the Senator from Massachusetts and myself enter into a partnership to prosecute any business, and the partnership should fail, the private fortunes of each of us would be responsible for the debts of the concern. The partners and shareholders in the private or joint-stock banks of England are placed in the same situation. No holder of such bank notes in that country, none of their depositors can lose one dollar, until after the private fortunes of all the stockholders shall have been exhausted. This is a great security to the public. Not so the bankers in this country. They are a privileged class. That business which is more profitable than any other is conducted without any such risk. Cupidity is unrestrained by any such apprehension. It has a fair field to display itself. Each man puts into the concern the amount of his stock. When that is paid, the bank proceeds to make money as fast as it can, without the fear of future responsibility. How great is the temptation to excess! These banks create money as if by magic, in the form of bank notes or bank credits. These they exchange with individuals for their own notes or bills of exchange, discounting a high rate of interest from their face. Their extravagant issues and credits gave a stimulus to extravagant speculations; and our past history proves that the more they loan, the greater is the demand for new loans. The supply never equals the demand. The last few years has been the golden age for banks. I have no means of ascertaining their profits in different portions of the Union. I am sorry that the deposit law did not require the deposit banks to return to the Secretary of the Treasury the amount of their dividends. From all the information which I have received, they have been enormous. The Senator from Georgia [Mr. KING] has informed us that the banks in the city where he resides (Augusta) have divided, during the last year, at the rate of fifty per cent. per annum.

These extravagant profits have tempted the avarice of our citizens. Each one desires to reap his portion of the golden harvest. Our legislative halls have been beset by borers for new banks, genteely denominated lobby members. Rich rewards and splendid gifts have been made to those of them who proved successful. The State Legislatures have too often yielded to their importunities. Then comes the struggle among competitors to obtain the stock. The scenes which have occurred upon such occasions, in some of our large cities, I shall not attempt to describe. It rises instantly above par; and those who have been fortunate

in the struggle, may sell out at an advance. This stock, in many instances, is not paid for in money, but in what are called stock notes. The new bank starts, often without any large proportion of solid capital, to run the same career, which seems to be prescribed to it by the law of its nature.

Bank capital, bank notes, and bank loans, have increased with alarming rapidity for the last few years. The President, in his message, states that between the commencement of the year 1834, and the first of January, 1836, the bank capital of the country had increased from \$200,000,000 to \$251,000,000; the notes in circulation from \$95,000,000, to \$141,000,000; and their loans and discounts from \$324,000,000 to \$457,000,000. We know that since the first of January, 1836, the increase has still been proceeding at a rapid rate, and many new banks have been created; but after that period, we have received no accurate information of their capital, or of the amount of their issues and loans.

Upon any sudden revulsion of trade, these banks either sink under the weight they have heaped upon themselves, as they have recently done; or, if they survive the shock, they greatly injure, or wholly ruin, those members of the community around them who have unfortunately become their debtors. In struggling for existence themselves, necessity compels them to press their debtors with an iron hand.

When a bank fails, what classes of society are most likely to suffer from the explosion? Who do you suppose, Mr. President, held the notes of the hundred and sixty-five banks that proved insolvent between 1811 and 1830? Not the shrewd man of business, not the keen speculator; because they snuff the danger from afar. It was the honest and industrious classes of society, who are without suspicion, and whose pursuits in life do not render them familiar with the secret history of banking.

We are now just experiencing another great evil which has resulted from the extravagant loans and issues, and consequent suspension of specie payments by the banks. The country is now deluged with small notes, vulgarly called shin plasters. They are of every form and every denomination between five cents and five dollars; and they are issued by every individual and every corporation who think proper. It is impossible for the poor man to say he will not take them; for there is scarcely any silver change in circulation any where. He must receive them for his labor or starve.

The paper on which these small notes are printed is of ten so bad, and they are so inartificially got up, that it is almost impossible to distinguish between the counterfeit and the genuine. To counterfeit them has become a regular business, and it has been carried to a great extent.

Our currency below five dollars now consists of this combined mass of genuine and counterfeit shin plasters; and many of the counterfeits are intrinsically of equal value with the genuine. Some are payable in one medium and some in another. Some on demand, and others have years to run before they reach maturity. The very moment the banks resume specie payments, this mass of illegal and worthless currency will be rendered entirely useless. It will fall dead in the hands of its holders, and these will be chiefly the very men who are least able to bear the loss. A scene of confusion and distress will then be presented which I need not describe. Such is one of the effects of extravagant banking.

There is a class of society for whom I have ever felt a deep interest, whose attention I should gladly awaken to the evils of an excessive issue of paper currency—I mean our domestic manufacturers. Do they not perceive that all the protection which our laws afford them is rendered almost entirely useless by the extravagant amount of bank notes now in circulation?

SENATE.]

Sub-Treasury Bill.

[SEPT. 29, 1837.]

It has been stated, in general terms, by those who best understand the subject of political economy, that if you double the amount of the circulating medium of a country, you thereby double the nominal price of every article. "If, when the circulating medium is fifty millions, an article should cost one dollar, it would cost two, if, without any increase of the uses of a circulating medium, the quantity should be increased to a hundred millions." Although we cannot apply strict arithmetical rules to this subject, yet all will admit that the proposition is substantially correct. Let us then suppose that our currency has reached such a point of depreciation, when compared with that of our rivals in foreign countries, that an article which could be manufactured abroad for one dollar, would cost one dollar and fifty cents at home; and what is the consequence? A premium of fifty per cent. is thus, in effect, given to foreign manufactures over those of domestic origin. For example: A piece of broadcloth costs one hundred dollars to the French manufacturer; he brings it here for sale; and, on account of the depreciation in our currency, he receives for it one hundred and fifty dollars; what advantage does he thus obtain? Being the citizen of a foreign country, he will not accept our bank notes in payment. He will take nothing home except gold and silver, or a bill of exchange which is equivalent. He does not expend this money here, where he would be compelled to support his family, and to purchase his labor and materials, at the same rate of prices which the domestic manufacturer is compelled to pay. The depreciation in our currency below the standard of that of France or England is, therefore, equivalent to a proportionate direct protection to the foreign over the domestic manufacturer. The conclusion is inevitable. It cannot be denied. It is impossible that our manufacturers should long be able to sustain such an unequal competition. They, above all men, ought to exert their great influence for the purpose of confining the paper currency of our country within some reasonable limits. The fate of the great interest in which they have embarked depends upon it.

Our farmers in the grain growing States are placed in a similar situation. The amount of our currency must be diminished, or foreign wheat will continue to be imported for domestic consumption. The farmer in the north of Germany will be able to undersell us in our own markets.

The banks, by their refusal to pay specie, have now placed themselves in the power of the State Governments. They have forfeited their charters, and it now remains for the different Legislatures to decide upon what terms they shall be restored. Amidst the general misfortunes of the country, it is one source of consolation that the banks have placed themselves within the power of the people. Had they not done this by their own conduct, we know that a numerous and powerful party exists in this country who consider a charter of incorporation so sacred that no State Legislature, by any future law, could ever restrict their own banks from issuing notes under ten dollars, if their charter authorized them to issue notes of a less denomination. According to the doctrines of this party, all power over the paper circulation of the country, which is one of the highest attributes of sovereignty belonging to the States, has, by them, been irrevocably transferred to eight hundred banks. Thank Heaven! every difficulty on that subject is now removed; and it will depend upon the wisdom and firmness of these Legislatures, whether we shall have a sound paper currency in time to come, proportioned in amount to the wants of the people, and placing the banks themselves in a secure condition; or whether we shall again be overwhelmed with a deluge of paper money and all its attendant evils. If they will but secure a specie basis for our paper circulation, by prohibiting the issue of bank notes, at first under ten dollars, and afterwards under twenty; if they will render the stockholders of banks per-

sonally responsible, at least for the amount of notes which they may issue; if they will limit the dividends of the banks to a reasonable profit on the investment of the stockholders; if they will require the banks to keep a just proportion of specie in their vaults compared with their circulation and deposits; and, above all, if they will adjust the whole amount of bank notes to be issued to the wants of the people, upon principles which have been sanctioned by experience, so as to prevent ruinous fluctuations in the amount of our currency—then, indeed, the evils which we have suffered will be compensated by the benefits we are destined to enjoy. But I confess I dread the result. We are a strange people. The lessons of experience make but a feeble impression on our minds. We rise with so much buoyancy from our misfortunes, that when they have passed away they are instantly forgotten. Should the banks resume specie payments before or shortly after the next meeting of our State Legislatures, and the current begin to run smoothly again, I fear that no such changes will be made in the existing bank charters, and that we must await the event of another crisis, which would then be inevitable.

Until these or some such restrictions shall have been imposed by the States on their banks, they never can, they never will, become secure depositories for the revenues of the Government.

In the third place, the Union which is now dissolved between the banks and the Treasury ought not to be restored; because the public deposits would again become the fruitful source of over-issues and extravagant speculation. We have no power to regulate the State banks; but we can withhold from them our revenue, and thus prevent them from using our means for the purpose of deranging the business of society. If we cannot eradicate, we are not bound to aggravate the radical sin of their constitution. If we cannot prevent, we need not become accomplices in their misconduct. But I have already incidentally said so much in the course of my remarks on this branch of the subject, that I need not trouble the Senate with any further observations.

In the fourth place the divorce now subsisting between the Treasury and the banks ought to be rendered perpetual, because of their supposed or actual subservieny to the Government, and the dangerous influence which might be exerted over them by the Executive.

I am not one of those who believe that, hitherto, any attempt has been made to exert such an influence; yet every effort has been used by a portion of the press to produce such an impression. These institutions have been denounced as "the pet banks" of the Government, and they have been charged with granting peculiar favors to the minions of Executive power. True or false, this charge has produced some effect on the public mind. Besides, all the transactions of the Secretary of the Treasury with these banks, rendered necessary by existing laws, have been denounced as tampering with the currency. And thus the administration is always blamed for every disaster which occurs in the money market. A connexion with these banks is thus made to assume a political character, and is mixed up with all the party strife of the day. The public mind is inflamed upon the subject, and the public suspicion is excited. This is an evil which can only be avoided by a permanent divorce between bank and State.

But again: If a Secretary of the Treasury were disposed to exert an improper influence over these banks, with what prodigious effect might they not be used to accomplish his purposes. At the time of the suspension of specie payments there were eighty-six deposit banks planted throughout our country. The letters which were read the other day by the Senator from Mississippi [Mr. WALKER] prove how low some of the State banks were willing to cringe in order to obtain the deposits. Their language is unworthy of the proud bearing which ought to characterize

SEPT. 29, 1837.]

Sub-Treasury Bill.

[SENATE.]

American freemen. It proves at least, that some of them are not very scrupulous, when "thrift will follow fawning." Such was the anxiety to obtain a portion of this boon, that two of the most respectable banks of the city of Philadelphia procured resolutions to be passed in the House of Representatives of Pennsylvania, recommending them to the Secretary of the Treasury as depositories of the public money; and these resolutions were sent to my colleague and myself, with a request that we might exert our influence to accomplish this purpose. Eighty-six affiliated banks, scattered over every State, and intent upon a common object, could exert an immense political power. An ambitious and able Secretary of the Treasury might use them with prodigious effect in order to make himself President. And this could be done with the greater effect because it would escape detection. The agent of the banks at Washington city might be used as the instrument, and all the necessary measures might be adopted in the secret parlors of the bank directors throughout the country. A concerted movement might thus be made in every portion of the Union at the same moment, which would almost be irresistible.

I do not know but that such a league of associated banks might be rendered more dangerous than even a bank of the United States. This bank would have its rights and its duties defined by law. It could claim the Government deposits, and that its notes should be received in payment of the Government dues, under the provisions of its charter. But the selection of these depositories, the amount of the public money which they shall receive, how long they shall retain it in what manner they shall conduct their banks, all, all is left to Executive discretion. What a boundless field for Executive patronage! And yet the administration which anxiously desires to surrender this fruitful source of political power, has been charged with designs of extending Executive patronage! And for what reason? Simply because it proposes that the existing officers of the Government, without adding one to their number, should be substituted as the depositories of the public money instead of these banks. Even if it should become necessary to appoint some ten or twenty additional officers at the most important points to perform this duty, I would not compare this increase of Executive patronage with that which the Executive Government is now voluntarily willing to abandon. It would be but as a drop compared with the ocean. Talk not, then, to me of the increase of patronage which the bill upon your table would confer on the Executive. They form a very unjust estimate of the intelligence of our citizens who would attempt to make them believe that a few Executive officers, known to be such to all the surrounding community, can exercise an influence over the people at all to be compared with that of a league of eighty-six banking institutions.

This now brings me to the bill upon your table. This bill is the only remaining plan to which we can resort. It recommends itself to public approbation by the simplicity of its provisions. The existing officers of Government already collect and disburse our revenues. It merely superadds to these duties, that of safely keeping and transferring the public money, according to the exigencies of the Government, during the time which must necessarily intervene between its receipt and disbursement. This is the whole bill. If it be justly liable to any criticism, it is that the security of the public money might require the appointment of a very few additional officers in our large commercial cities. It has, perhaps, been framed more exclusively with a view to economy, than is consistent with the public interest. The object is a great and important one, and no moderate additional expense ought to be spared which may be necessary for its accomplishment. Such is the bill.

The Senator from South Carolina [MR. CALHOUN] has proposed an amendment to this bill, prescribing the funds

which shall be received in payment of the public dues. And here permit me to observe, that, in discussing that amendment, I shall not inquire whether the Senator has come over to us, or we have gone over to the Senator. This is a question of but small moment, so that we are now together. The first extended effort which I ever made in Congress was in defence of the conduct of that Senator, when I thought he had been unjustly assailed as Secretary of War. We stood together shoulder to shoulder in 1827, and throughout the trying conflict which resulted in the election of General Jackson. I rejoice that he is now found sustaining the leading recommendation of the message at this important crisis, and I trust that on future occasions we may receive his able and efficient support.

With all these feelings of distinguished respect for the Senator, I am still sorry that he has offered his amendment. I should have been glad if the vote of the Senate could have been taken upon the simple proposition to divorce bank and State. On this single question we should have, I think, presented a more united front than when it shall be connected with the Senator's amendment. It would have been better first to have established the divorce, and afterwards to have determined, by a separate bill the nature of the funds which our depositories shall receive.

For my own part, as to the funds receivable, I feel strongly inclined to support the recommendation of the Secretary of the Treasury. In page 23 of his report, when speaking on this subject, he says:

"This could be effected by directing what alone appears safe, and what is understood to be the practice in both England and France. It is, that the bills of no local banks be taken, which shall not, from the near location of the bank, be equivalent to specie; be able to be converted into specie at very short periods by the receivers and collectors, so as to pay the public creditors legally, if demanding specie; and be thus accounted for at par, and without expense to the Government. Another advantage from this course would be its salutary check on over-issues by the neighboring banks."

If the depositories were authorized to receive and disburse the notes of such banks, calling upon them at short intervals to settle the balances in specie, it might, I think, have promoted the convenience of the public, as well as afforded a salutary check upon the issues of the surrounding banking institutions. I understand such was the course pursued by the late Bank of the United States. I was willing to proceed cautiously, and not, at the first, go the length of demanding exclusive specie payments.

But the Senator from South Carolina has thought differently, and I shall be compelled to vote for or against his amendment. Giving every consideration its proper weight, I have, since he has agreed to modify it, determined to yield it my support. As it now stands, the notes of specie-paying banks will be receivable in the payment of all the public dues up till the last day of the year 1838; during the year 1839, one-fourth will be required in specie; during the year 1840, one-half; during the year 1841, three-fourths; and not until the year 1842 shall we reach the point of exclusive specie payments. Its operation will be slow and gradual; and if, in the mean time, we should discover, at any stage of its progress, that it is too severe, we can easily change the law.

What objections have been urged against the entire system presented by the bill and the amendment?

The first is, that it will increase Executive patronage. To this I flatter myself I have already given a conclusive answer.

The second is, that it will operate with such severity upon the banks, and through them upon the country, as to produce wide-spread disaster and ruin. Gentlemen have taxed their imaginations to present the scene of suffering and desolation which it will produce.

SENATE.]

Sub-Treasury Bill.

[SEPT. 29, 1837.]

Now, sir, I cannot realize any of these horrors. The cause is too impotent to produce any such effects. On the contrary, I fear that it will go but a small way indeed towards checking the extravagant issues of the banks, and that its influence will scarcely be felt. With the public revenue reduced to the standard of the public expenses, which it now is, and probably will be for many years to come, the specie will flow out of the Treasury almost as rapidly as it flows in. It will be kept in constant circulation. The accumulation must be comparatively trifling. According to the estimate of the President, ten millions of dollars in gold and silver will be sufficient for the purpose of paying and disbursing our annual revenue. I think his estimate extravagant, because one dollar will make many payments in the course of the same year. The operation of the system will be very gradual, and the necessary quantity of specie will gradually be brought into circulation without producing any injurious results to the banks. It may, and I trust will, in some degree curtail their extravagant issues, and thus benefit the community, and render their own condition more sound. After the year 1838, there probably may, and I trust will, be a somewhat greater demand upon them for specie than there has been; but this specie will go into the general circulation of the country, and thus gold and silver will be made, to a greater extent, the basis of our paper circulation. Will any Senator object to such a change?

Why, sir, when last in New York, I was informed that the money transactions in Wall street often amounted to \$5,000,000 per day. The trade and business of our country is vast, almost beyond conception. The receipts and disbursements of the Government bear but a very trifling proportion to the receipts and payments of individuals. How, then, can it be apprehended, for a moment, that ten millions of dollars in specie, flowing into the depositories in little rills, from every portion of the Union, and constantly flowing back again to the places from whence it came, can produce any injurious effects upon the business either of well conducted banks, or of the country? Away with such idle fears. Upon trial they will be found to be the mere creations of fancy.

The banks might be injuriously affected, were it not for the amendment which was proposed by the Senator from Missouri, [Mr. BENTON,] and which I trust may be adopted. This will oblige the holders of Treasury drafts on depositories to present them for payment within a short period. Without such a provision, these drafts would inevitably go into the general circulation of the country. Representing the amount of silver and gold which appears upon their face, and having the eventual responsibility of the Government to sustain them, if, in case of accident, they should not be paid by the depository, they would be more valuable than specie itself, for every purpose of remission. They would, therefore, remain in circulation, whilst gold and silver would accumulate in the Treasury. Specie would thus continue to be drawn from the banks to pay the dues of the Government, and a great part of it would not return into circulation. The interest of the banks requires that this amendment should be adopted; although these Treasury drafts would constitute, to a limited extent, the soundest and best medium of exchange which the world ever saw.

A third objection to the proposed system is, that it will furnish one kind of currency for the people, and another for the Government; or, in the language of the Senator from Massachusetts, it will set the officers down to the first table, and the people to the second. Directly the reverse will be the effect. It is our object, by these measures, to elevate the people to the first table, from which they have been excluded by the bankers, and brokers, and speculators of the country. We wish to spread before the American people a rich repast, and place them all upon the same

level. It is our purpose, so far as the influence of this Government can extend, to furnish them all with a currency of gold and silver, or of paper at all times convertible into gold and silver. The only means we possess of restraining these banks from making extravagant over-issues, and thus always preserving them in a condition to redeem their notes in gold and silver, is to withhold from them our revenue, and require the payment of our debts in specie. It would be a great blessing to the country if this could be accomplished. Has any Senator proposed that we shall receive depreciated bank paper in payment of the public dues? Not one. If we were to adopt such a measure, it is true we might all sit down to the same table, but it would be a table covered with irredeemable and depreciated bank paper, without hope for years to come of enjoying any better fare. The Government must stand firm at this crisis, in order to secure a sound currency for all the people.

A fourth objection urged against this system has been its want of security, and that the public money will not be safe in the hands of our depositories. This objection comes with a bad grace from those who desire again to entrust it to the keeping of deposit banks. I might say, if I thought proper, that it will be at least as safe in the hands of our officers as it has been in the deposit banks. They at least will not lock it up and keep it altogether, unless you will receive their own depreciated notes in payment. The one experiment has failed, and we have not yet tried the other.

But, sir, the proposed mode of collecting, and keeping, and disbursing the public revenue, has existed throughout the continent of Europe from the days of the Roman empire. It is, therefore, not an untried experiment. Is there any reason why, under proper guards and restrictions, the officers of Government should not safely keep what they receive until it is necessary for them to pay it out again? Have we not as honest and capable men in this country as in any other? No plan which you can adopt will altogether secure you against speculation whilst human nature remains as it is; but this plan, securing as it does the direct supervision of the Secretary of the Treasury, and the immediate responsibility to the Government of all the agents employed, furnishes as great security as any which can be devised. The truth is, that we have been so accustomed to lean exclusively upon banks in this country, that we fear to stand erect and walk alone, and rely upon our own native strength.

It has been suggested in a distinguished Southern paper (the Richmond Enquirer) whose opinions are entitled to great respect, that the friends of the administration might all unite in making a few banks, at the principal points, the special depositories of our money. My objection to adopt this proposition arises from a conviction that it would bestow exclusive privileges and advantages upon these selected banks, to the injury of all other similar institutions, and that it would, therefore, greatly extend Executive patronage. What would be its operation? The agent of the Government collects all its dues in gold and silver. These are placed in a strong box in the vaults of one of these banks. A draft is presented at its counter, whether drawn by the Secretary of the Treasury or the depositor, payable in specie. In most instances the holder of the draft would prefer receiving the notes of the bank especially if they were in extensive credit. The cashier would pay him in bank paper, whilst an equal amount in specie would be taken from the strong box of the Treasury and transferred to the vaults of the bank. This would be the inevitable process. The officers of Government would thus be made collectors of specie for these favored banks, to the injury of all the surrounding institutions; and an extensive circulation would be secured to their notes by a knowledge of this very fact. No, sir, your true policy is to detach the Government from all banks. Let them all stand upon the same

SEPT. 29, 1837.]

Sub-Treasury Bill.

[SENATE.]

footing and receive the same measure of justice from Congress.

If any thing could reconcile me to vote for the amendment of the Senator from Virginia, [Mr. RIVES,] it would be the hope—if I could cherish any such—that, through the agency of the deposit banks, we might procure a more extended specie basis for our paper currency. But, even if we could prevail upon them, which I very much doubt, considering the small amount of our present deposits, to forego the advantage of issuing five, ten, or twenty dollar notes, and of receiving the notes of other banks who might refuse to enter into the same arrangement, what would be the consequence? Why, sir, the vacuum in the circulation thus created would be immediately filled by the notes of other banks, of the denomination of five and ten dollars. This you have no power to prevent. There would be precisely the same amount of circulation in these smaller notes. The only difference which could exist, would be, that they might be furnished by other banks of a less sound character. The Senator calculates much upon the moral influence which his amendment might exert. What, sir! a moral influence over a banking corporation in opposition to its interest! I venture to say, that no such agency as this can prove effectual. It is power alone which can produce this result. And where does this power exist? Nowhere, but in the State Legislatures. It is doubtful, however, extremely doubtful, whether they can ever be induced to exert it. It is most difficult to unite twenty-six independent sovereignties, having different and ever-varying feelings and interests, in any such uniform system of policy; and especially against the opposition of the local banks. During the last session, I had prepared an amendment to the constitution, (and had it in my desk for a long time,) conferring upon Congress the power of prohibiting the circulation of bank notes under twenty dollars; but declined offering it, because I then deemed it a hopeless attempt. Circumstances have now very much changed; and since the Senator from Kentucky [Mr. CRITTENDEN] has so strongly advocated such an amendment, I feel some confidence that it would meet with a favorable reception from the States. Should I conclude to offer it at the next session, I shall count largely on his able and efficient support; or, if he should prefer to take the lead himself, I shall render him all the assistance in my power.

The Senators from Kentucky and Massachusetts [Messrs. CLAY and WEBSTER] have both loudly complained that we have proposed every thing for the relief of the Treasury, but nothing for that of the people of the country. Is this complaint well founded? Have we not extended to the banks a credit of four, six, and nine months on the deposits which they received from us as cash, and were bound to pay us on demand? Have we not extended for nine months the credit on merchants' bonds? These indulgences to the banks and to the merchants are, in effect, an indulgence to all their debtors. We do not press them; therefore, they are under no necessity of pressing the community. In order to enable ourselves to extend this relief we have agreed to make a loan of \$10,000,000, in the form of Treasury notes, for one year. These notes, in relieving the community, will be equal to the creation of so much gold and silver. Their credit will be such that they may be sent abroad as remittances, and thus pay our debt, equalize our foreign exchanges, and prevent the exportation of specie. I ask what more could we have done to relieve the country? But we have not proposed a bank of the United States; and, in the opinion of some gentlemen, all which we can do is nothing, if this be left undone. It is the sovereign panacea for all the evils which flesh is heir to.

In addition to the relief measures which I have just enumerated, I ought not to forget the vote of more than two to one upon the resolution reported by the Committee on

Finance against chartering a bank of the United States. I consider that vote by far the most important relief measure of the session. If the merchants of our country could but be prevailed upon to abandon every hope of the establishment of such an institution, and throw themselves upon their own resources, instead of expecting aid from the Government, how soon would the present gloomy aspect of affairs begin to brighten. Why should American merchants, whose abilities and enterprise render them more able to help themselves than those of any other country, be constantly invoking the aid of the Government to enable them to conduct their foreign and domestic exchanges? Let all hope of obtaining a national bank vanish from their minds, and we shall soon see the exchanges conducted upon the same principles, and with the same success, which characterize similar operations in Europe. Let our merchants first put their own shoulders to the wheel, and then they need never pray to Hercules for relief.

There is another cause which renders the charter of a new bank almost hopeless. It would be in bad taste for me to bring into the discussion upon this theatre, the Bank of the United States of Pennsylvania. Whether it shall continue to exist, is a domestic question which we shall settle at home. My opinions in regard to this institution have been openly avowed upon all suitable occasions. But if the people of Pennsylvania should tolerate its continued existence, you already have a bank of the United States. That institution is too vast to be sustained by a single State. It must be a bank of the United States, or it can be nothing. Mr. Biddle truly said, in presenting its charter to the stockholders, that it possessed greater advantages under it, than it had ever enjoyed before. It has the unlimited power of buying and holding banking stock. Under this provision, it has, I am informed, already purchased two banks—the one in Georgia, and the other in Louisiana; and it will continue to acquire other State institutions, which will act as its branches. Besides, its agencies are already spread over the Union. It is highly improbable that those interested in this institution will ever be the advocates of another national bank. A new bank, with a capital of \$50,000,000, would not, probably, under any circumstances, be established in the same city beside a bank with a capital of \$35,000,000. Attempt to create such a bank in New York, and you will probably find almost the entire population of Pennsylvania, belonging to all political parties, against it. I throw out these suggestions merely to convince the mercantile community how very improbable it is that a new bank of the United States will be established. If I could convince them of this truth, then the business of the country would soon conform to that state of things, and we should not be kept in eternal strife by the agitation of this question.

I should not further exhaust the patience of the Senate, had not the accuracy of some of the statements of the President, contained in his message, been questioned in the course of this debate.

The President, whilst assigning the causes of our existing distress, for the purpose of proving that they were not peculiar to this country, but were general in their nature, asserts that similar causes, operating at the same time, had produced similar effects in England and other commercial countries. He concludes his remarks upon this subject with the observations which I shall read.

[Here Mr. B. read the following extract from the message:]

"In both countries (the United States and Great Britain) we have witnessed the same redundancy of paper money, and other facilities of credit; the same spirit of speculation; the same partial successes; the same difficulties and reverses; and, at length, nearly the same overwhelming catastrophe. The most material difference between the results in the two countries has only been that, with us, there

SENATE.]

Sub-Treasury Bill.

[SEPT. 29, 1837.]

has also occurred an extensive derangement in the fiscal affairs of the Federal and State Governments, occasioned by the suspension of specie payments by the banks.

"The history of these causes and effects in Great Britain and the United States is substantially the history of the revulsion in all other commercial countries."

The correctness of this statement, in point of fact, has been attacked in no measured terms; and it is my present purpose to prove that it has been assailed without any just cause.

Even if the President had been in error in this particular, what would it prove? Certainly not that he intended to mislead others; because such an error, so far from sustaining, would be directly opposed to his own position. If he could have said, with truth, that our peculiar system of bank credits was so very bad, that we alone, of all the nations of the earth, were now suffering under dreadful reverses, whilst other commercial nations had escaped unscathed, this would have given great force to his argument. It would have added another powerful reason to those which he had already urged in favor of divorcing the banks from the Treasury, and not contributing, hereafter, by the public deposits, to swell the tide of bank credits and paper currency, which, in our country alone, had caused so much ruin and distress. The only purpose, therefore, of those who had assailed his statements must have been to convict him, not of intentional error, but of ignorance.

But is he justly liable to this imputation? Senators have attempted to prove it, by showing that, during the last few years, the circulation of bank notes throughout England has not materially increased; and, upon this isolated fact, they conclude that there has been no over-banking nor over-trading in that country. Now, sir, the premises may be true; but I shall show that they do not in theory warrant the conclusion, and that it is directly at war with the state of the fact.

Although excessive bank issues undoubtedly are a powerful incentive to extravagant speculations and overtrading, and such they have always proved, to a disastrous extent, in this country, yet these evils may, and sometimes do, exist in countries where the circulation scarcely varies in amount, and is almost purely metallic. If, then, gentlemen could show that the paper circulation of England had remained uniform for the last three years, this would not establish the fact that extravagant credits and speculations had not existed in that country. A friend has just reminded me of a case precisely in point. I refer to the French speculations in colonial produce, I think of the year 1809. So intensely, at that time, did the spirit of speculation act upon the minds of the people, that the Frenchman forgot his love of pleasure, and his fondness for spectacles; and the very theatres, whilst the play was proceeding, became commercial marts for the purchase and sale of these commodities. They rose to a most extravagant price, and the public mind became excited to the highest pitch. Napoleon, in order to arrest this spirit, had it announced all over the country, on the same day, that George the Third was dead. The bubble then burst; and the ruin of thousands was the consequence. These speculations were founded upon the prospect that the war with England would continue, and therefore colonial produce could not be imported into France; and they were suddenly checked, because it was believed that the death of the English monarch would be the harbinger of peace. It is scarce necessary to observe that the circulation of France is almost purely metallic.

But facts are stubborn things, and, in the instance before us, they will entirely destroy the conclusions of gentlemen. No country in the world has ever witnessed more extravagant bank credits and speculation than England has done within the last eighteen months; and this, notwithstanding the amount of bank notes in circulation, has not greatly increased.

In 1826, Parliament first authorized the establishment of joint-stock banks, with any number of partners, at a distance of not less than sixty-five miles from London. Let us examine the history of their progress, and we shall find it exactly similar to our own. During the first seven years thirty-four of these banks had been established. In the succeeding two years and eight months, ending on the 12th March, 1836, twenty-eight were added to the number. About this time speculation began to rage; and, in April, May, and June, of that year, they increased at the rate of five per month. Two of the fifteen banks established within these three months had each about seven hundred and fifty partners—one of them had eleven, and another thirty-four branches in different parts of the kingdom. The *Edinburgh Review*, for July, 1836, which is my authority for these facts, observes: "We have reason to think that the rate of this extraordinary increase has been since augmented rather than diminished. Latterly, indeed, the mania for joint-stock banks seems to have become almost as prevalent as the mania for railways. It is, in fact, hardly possible to take up a newspaper without meeting with sundry announcements of such establishments, all, of course, dressed up in the most captivating manner." The conjectures of the author proved to be correct. I have a statement before me of the number of joint-stock banks in England and Wales on the twenty-sixth of November last, and they amounted to one hundred and two, besides an immense number of branches. Thus, it appears that, their increase between the 1st of July and the 16th November, 1836, a period of less than five months, amounted to twenty-five. I have no later return in my possession.

In what manner do these banks make the enormous profits which we know they realize? Certainly not by the issue of bank notes; but by bank credits, or paper money in another form. Their notes in circulation, in March, 1836, when their number was sixty-two, amounted to £3,094,025 sterling. In December, 1836, when their number had augmented to one hundred and four, their issues had increased to only £4,258,000, or about a million and a quarter.

They discount notes and bills, and, instead of paying out the proceeds in their own notes, they place the amount to the credit of their customers on the books of the bank. These credits then become deposits, and constitute the capital on which individuals speculate and trade. They are transferred from hand to hand by means of bank checks, which are only another form of paper money. In large transactions, bank notes are rarely used. A owes B ten thousand dollars, and has a credit in a joint-stock bank for that amount. He gives him a check in payment of the debt. The account of A is charged with this amount, and the account of B is credited. Thus ends the transaction, without the use of a single bank note.

If Senators will take up the Treasury report, in relation to any of the large banks in New York, they will discover that a very small portion of their profits proceeds from their issues. The Bank of America, for example, with a capital of \$2,000,000, has but \$425,000 of notes in circulation, whilst its loans and discounts amount to \$3,755,000. What has become of the remaining \$3,300,000, the difference between its circulation and its loans and discounts? This sum consists of bank credits—bank deposits, circulating from hand to hand by means of bank checks, which as well deserve the name of paper money as bank notes.

The largest importing merchants in New York rarely keep any money in their counting-houses, except for incidental expenses. Their heavy business is all transacted by means of bank credits and bank checks.

The amount of bank notes in circulation, however much expanded, must necessarily bear some proportion to the every-day transactions—the common dealings of society—and cannot be extended beyond a certain point. The amount of bank credits is not limited by any such rule. All

SEPT. 29, 1837.]

Sub-Treasury Bill.

[SENATE.]

the great speculations, all the large operations, are made through their agency.

On the 1st of January, 1836, the bank notes in circulation throughout our country, although amounting to the enormous sum of \$140,000,000, did not equal the one-third of the bank loans and discounts.

Never, then, was there a more fallacious idea than this, that because the amount of bank notes circulating in England had not greatly increased, that, therefore, extravagant credits and extravagant speculation did not exist. We may form some idea of the enormous expansion of bank credits in that country from a passage in the Review to which I have already referred.

[Mr. B. here read the following extract:]

"This rapid increase in the number and in the issue of joint-stock banks, has been in part a consequence, but in a much greater degree a cause, of the late rise of prices, and of the existing excitements.

"But we should fall into the greatest possible error if we supposed that the influence of the banks in question was to be measured by the amount of their notes in circulation payable on demand. These, in fact, constitute but a comparatively small portion of their obligations. Most of them have been in the habit of trading, not on their own capital, or on the deposits made with them, but on credit obtained in the metropolis or elsewhere. Instead of retaining the bills and other securities they have discounted in their coffers till they are paid, many of the banks have been in the habit of immediately forwarding them to London to be re-discounted. To such an extent has this system been carried, that we are well assured that certain banks, with less than £500,000 of paid up capital, have discounted bills and made advances to the extent of from five to six millions; and the engagements of others have been even more incommensurate with their capital!"

Comment is unnecessary. The rapid increase in the number of banks, and in the amount of bank credits, has produced the same effects in England that they have done in the United States. I will venture to say that no portion of the history of that country presents a parallel to their late extravagant speculations of every description. The epidemic seems to have spent its force chiefly in the creation of joint-stock companies, for almost every purpose under the sun. There are companies for the construction of railroads; for the manufacture of cottons; for tanning; for the manufacture of glass, pins, needles, soap, turpentine, &c.; for dealing in coals; for raising sugar from the beet root; for making railways in Hindostan; for the prosecution of the whale fishery; for trading and founding settlements on the southeast coast of Africa; and, finally, for burying the dead.

During the first three months of the last year, one hundred and four joint-stock companies were formed in Manchester and Liverpool alone, with an aggregate capital of £37,987,500 sterling! To complete this picture of folly and extravagance, Mr. Poulett Thompson stated, in his speech in the House of Commons, in the discussion relative to the budget, "that he had made a register be kept of the various joint stock companies, then on the tapis in different parts of the kingdom, and he found their numbers amounted to between three or four hundred; and that a capital of nearly two hundred millions sterling, or about twenty times the capital of the Bank of England, would be required, according to the statements of the parties, to carry them into effect!"

The proposed capital of these companies formed in a few months, amounts to the enormous sum of one thousand millions of dollars, or to nearly four times the whole banking capital of the United States on the first of January, 1836! And yet, when it becomes necessary to convict the President of ignorance and mistake, we are told that there has been no over-trading, no excessive speculations, no ex-

travagant bank credits in England; and that, too, simply because the amount of bank notes in circulation has not greatly increased. Most astonishing effort! The statement contained in the message is true, both in letter and in spirit.

If I were to contend, which I do not, that all our calamities in this country have proceeded from the extravagant expansion of the paper credits of England, succeeded by a sudden contraction, it would be much more plausible than the argument of gentlemen. What but this bloated credit tempted our merchants to inundate the country with foreign goods? The ancient customs of trade were abandoned, and they were urged in every manner to accept credits, and to draw bills of exchange, not founded upon any actual exports, but on the hope that exports might be made at some future and indefinite period.

The two countries have proceeded together with equal strides on the road to ruin, stimulating each other in their downward career, and they have both suffered the same penalties, and endured the same misfortunes. As the President states, the chief difference in their condition is, that our banks have suspended specie payments, whilst those of England have been able to weather the storm.

But gentlemen allege that the President has committed another grave error, in stating that the foreign debt contracted by our citizens was estimated, in March last, at more than thirty millions of dollars. This estimate, they say, is below the truth some eighty of ninety millions. If it were, this would only be, as in the case of the other alleged mistake, so much in favor of the President's argument—not against it. But how do they prove this mistake? By adding to our actual foreign debt, now due and payable by the merchants, all foreign investments in our stocks, and all the permanent loans which have been made in England to the several States and to corporations. The bare statement of this fact is sufficient. It is evident the President was not estimating the amount of permanent investments made by foreigners in this country, but the actual amount of our commercial debt, due in March last, which it was necessary to extinguish before our trade could revive. This debt may have been thirty-five or forty millions of dollars; but, from the information communicated by the Senator from New York, [Mr. TALLMADGE,] a few days ago, that, in the opinion of the merchants of New York, it was now reduced to twelve millions of dollars, I should very much doubt whether it at all exceeded thirty millions in March last.

How cheering the intelligence that our foreign debt has been reduced to twelve millions of dollars! The resources of our country are so abundant, that this debt must very soon be extinguished. Our next cotton crop will create a large balance in our favor. The foreign exchanges will soon no longer be against us; and then the foreign demand for specie will cease. All sound banks may then with safety resume specie payments. They will have nothing to dread, except the want of confidence at home. This I fear has been greatly increased, at least throughout the interior of Pennsylvania, by the refusal of the banks in Philadelphia to meet those of New York, even for the purpose of consulting at what time it was probable specie payments might with safety be resumed. I have received numerous letters on the subject, which all speak the same language. This refusal I feel confident, did not arise from any apprehension that these banks were less able to resume specie payments than those of their sister city.

Mr. Van Buren is not only correct in his statements of fact, but, by his message, he has forever put to flight the charge of non-committalism—of want of decision and energy. He has assumed an attitude of moral grandeur before the American people, and has shown himself worthy to succeed General Jackson. He has elevated himself much in my own esteem. He has proved equal to the trying occasion. Even his political enemies who cannot approve

SENATE.]

Sub-Treasury Bill.

[SEPT. 29, 1837.]

the doctrines of the message, admire its decided tone, and the ability with which it sustains what has been called the new experiment. And why should the sound of new experiments in Government, grate so harshly upon the ears of the Senator from Massachusetts? Was not our Government itself, at its origin, a new and glorious experiment? Is it not now upon its trial? If it should continue to work as it has heretofore done, it will at least secure liberty to the human race, and rescue the rights of man, in every clime, from the grasp of tyrants. Still, it is, as yet, but an experiment. For its future success, it must depend upon the patriotism and the wisdom of the American people, and the Government of their choice. I sincerely believe that the establishment of the agencies which the bill proposes, will exert a most happy influence upon the success of our grand experiment, and that it will contribute, in no small degree, to the prosperous working of our institutions generally. The message will constitute the touchstone of political parties in this country for years to come; and I shall always be found ready to do battle in support of its doctrines, because their direct tendency is to keep the Federal Government within its proper limits, and to maintain the reversed rights of the States. To take care of our own money, through the agency of our own officers, without the employment of any banks, whether State or national, will, in my opinion, greatly contribute to these happy results; and in sustaining this policy, I feel confident I am advocating the true interest and the dearest rights of the people.

When Mr. BUCHANAN had concluded—

Mr. PRESTON rose, and addressed the Senate as follows:

Mr. President: The administration has distinctly avowed that it is not their purpose to propose any measure for the relief of the country or the people. Their sole object is to devise means for the relief of the Government; and, upon the declared policy of a separation between the Government and the people, they propose the receiving of the public dues in specie; and that they be collected, and kept, and disbursed, by Executive agents throughout the country.

This is the project of the administration. Another is proposed for our consideration by the gentleman from Virginia, [Mr. RIVES,] who, being a distinguished member of the party in power, may, more reasonably than any member of the opposition could, calculate on a possible success. His proposition is to revive the joint resolution of 1816, which has regulated the currency for the last twenty years, and to re-enact the currency bill, which was passed with such unexampled unanimity at the last session, and was, so unfortunately for the country, suppressed by the late President. The main object and purpose of the measures proposed by the Senator from Virginia I understand to be, to restore, as far as the agency of this Government can effect it, a sound currency to the country; and to use that currency, thus re-established, in common with the States and the people.

Between these two measures we must decide. It is manifest that we must take one or the other, or go home without having done any thing; for, however gentlemen may object to either of these propositions, it is obvious that no third project can be brought forward with any possibility of success. The opposition constitutes a small minority in the Senate, and could suggest no measure with the slightest prospect of success. It would be idle and absurd to make propositions doomed to inevitable rejection; but, by the division amongst the administration Senators, we have some small privilege of selecting what we may consider the least objectionable policy. The opposition, therefore, has distinctly assumed the ground that it will propose no measure; and especially have those gentlemen, whose known policy and long-established predilections are in favor of a United States bank, declared that it is not

their purpose to bring forward a proposition for the creation of such an institution. The policy of such a measure would be very questionable; its suggestion would be manifestly vain and useless. It is most properly not before us. It is not one of the measures from which we are to select. All that has been said about it, therefore, on either side, is entirely gratuitous and irrelevant. I am wearied and disgusted with the eternal iteration of unmeaning clamor about the United States Bank. Whatever is the subject of our deliberations, they run into the bank; whatever we are to be driven upon, the bank is the lash that urges us. The bank is the raw head and bloody bones with which the administration and its friends scare down the rising complaints of the people; and he who here might lack other means of entertaining the Senate can strut his little hour denouncing Biddle and the bank. Honor, and glory, and power, were given to the late administration for having slain the monster; and yet honorable Senators roar him around this hall to split the ears of the groundlings. Whenever a measure is to be defeated, it is the bank in disguise; whenever a measure is to be carried, it is that of the bank. Three years since, he who did not praise the State banks was a bank man; now, he who does not denounce them is a bank man. The bank drove us into the pet banks; it now drives us out of them, and into the sub-Treasury. It is fact and argument, pathos and satire, logic and declamation, ready made to the hands of honorable gentlemen. It is the burden of every man's speech, the alternative of every man's proposition. It is the secret purpose of every opponent; it is the lurking cause of every difference of opinion. He who is cool upon every other subject is warm upon this; and many a burst of eloquence would have been lost to the world but for the inspiring terrors of the bank. At present it is only in the heated fancy of gentlemen, or by the plastic power of their dialectic skill, that the bank is before us; and the administration party alone is capable, by its misrule, and reckless plunging from one mischievous experiment on the currency to another, of bringing it up in a more substantial form. When you have teased and worried the country until its patience is exhausted; when you have destroyed all confidence; when you have broken down commerce; when you have made domestic exchanges impossible, and have irritated the whole body politic into fever and frenzy, then the people will demand the bank at your hands. When your shallow expedients and capricious experiments have reduced the country to that state of confusion and suffering which existed twenty years ago, the people will seek refuge from you in any institution that will give them quiet and security for their property and industry; and thus those who clamor with a ceaseless vociferation against the bank are, at the same moment, dragging the country towards it. And not the less so, Mr. President, that now, for the first time, their denunciations of the United States Bank are generalized into denunciations of all banks, and of the whole banking system. It is now said that the whole system is wrong and vicious, and that there is, and always has been, adverse feeling in the community against it. It is doubtless true, that in periods of commercial disaster, like that under which we now suffer, in the uneasiness of men's minds, complaints are apt to be made of the banking system, and of the whole system of credit, to such an extent, indeed, that some have said that all who trade on borrowed capital should break; but that the settled opinion of any respectable portion of this community is opposed to the banking system, or to commerce, from which it springs, and which it reproduces, I should very much regret to believe. My own opinion has always been, that the banking system was the child of commerce, and the handmaid of liberty. It is one of the mainstays of the great civilization of the last 150 years. It belongs to free States, and free States have grown freer under its influences. Its birth-place was

SEPT. 29, 1837.]

Sub-Treasury Bill.

[SENATE.]

free, and commercial Holland, and England, and America, have fostered it. Run your eye, sir, over the map of the world, and you will find that in proportion as its nations are free, civilized, and commercial, this institution has been cherished and developed. All the peaceful triumphs of human intellect which day by day startle us into wonder and admiration, all the glorious results of modern society, all the magnificent achievements of human industry, whose aggregate has made the last century more replete with human happiness, and with the promise of it for hereafter, than the whole tract of history before—all this has been accompanied, promoted, and vivified by that organized system of credit which is itself, for efficiency, complexity, and controllability, the most wonderful engine that the tasked, excited, and victorious ingenuity of modern times has produced. It has made England a miracle, and has, in a generation, built us up into a great nation. Is banking England less happy than hard-money Spain, or we less moral than hard-money Mexico? Unquestionably the banking system, like all other beneficent institutions, may be, and has been, occasionally perverted and abused. Constitutional government itself is subject to morbid action or vicious control. We are at this moment assembled here to deplore and remedy the effects of misrule and usurpation. Have our republican institutions failed because they are in this crisis? Has the constitution run out because it has been abused? Shall we go back to hard money and despotism, abolish banks and the constitution, because we are smarting under temporary evils, produced by the maladministration of both? Denounce the breeze which wafts your commerce through the world, because it may be lashed into a tempest? Deprecate the showers which fructify your fields, because they may descend in torrents? War against the blessed light of heaven itself, because its scorching rays may wither a harvest? Shall we set about to supersede these kindly ministers of Nature's bounty, by arrogant devices of our own, or endeavor to bring them into disrepute by our ungrateful forgetfulness of their good, and exaggeration of their evil?

But, Mr. President, where is it proposed to terminate the war now declared against banks and banking? Is the whole system to be at once torn down and destroyed—scattering to the winds all the property, which, in such a vast variety of modes, is implicated in the banks? No one has proposed this instantaneous destruction of the country; and yet, sir, to my mind, it is questionable whether a short and final agony, though it be of death, is not better for the country, than a protracted war of the Government upon its money, its currency, its property, and its credit. Your edict is, that they shall all perish, and your boon is that they shall perish slowly, or, still worse, that they may linger on forever, under the ban of the Government, which, separating itself from the general destiny, will look coldly and safely upon the crippled and decrepit condition of the country. What, sir, is the arrogant and cruel language which this Government holds to the country at this moment? It has made an experiment upon the banks and the people, and has ruined both; and now we propose to leave the banks and the people to take care of themselves, and we will take care of ourselves!! Boldly and calmly this revolting proposition is announced by the President, repeated here, and this moment avowed by the gentleman from Pennsylvania, [Mr. BUCHANAN,] whose whole declamation has been a tirade against those very institutions whom he and his friends seduced and debauched. The remedy he proposes is, to cast them back, polluted and dishonored, to the States and the people, for whom he considers them good enough, not being good enough any longer for the chaste embraces of this most pure administration. Oh, no, not pure enough for this self-denyng, virtuous, humble, and righteous administration, which, chawing all adulterous connexion with power, or patron-

age, or spoils, or banks, will be honestly married to hard money, and, from its humble residence in a sub-Treasury, prove its virtue to an admiring and incredulous people, by crying fie! fie! at the State banks.

Why, Mr. President, the honorable Senator [Mr. BUCHANAN] who has just taken his seat, was one of the loudest eulogists of the State banks, from the day of the removal of the deposits up to this extra session. He, with the rest of them, lauded the experiment to the skies, deified the great experimenter, and, rapt in prophetic fire, predicted at the beginning the most glorious results—the best currency the world ever saw—the most fixed prosperity—a grateful people and triumphant Government; and then it was proclaimed with exultation that prophecy had become history; that all the flaming predictions of patriotic enthusiasm had been more than realized, and that democracy, Jacksonism, and the pet banks had established a political millennium. Such were the declarations of the Senator, and those who act with him, up to the 4th of March last. And now, sir, in the short space of six months, these very gentlemen turn short round, and with a gravity which would be ludicrous, if experience had not taught us to feel that their gravity is terrible, tell us that this Government has nothing to do with currency; that ours is the worst in the world; that the experiment has utterly failed; that the State banks are utterly unworthy to be trusted, and unfit to be used as financial agents; that the people must undergo another experiment, and not for a moment imagine that, when it has failed like the last, the experimenters will turn coldly upon them, again smile at their folly, and advise some new legerdmain, to amuse us for the time, and to enable them to keep their places. For some years past, sir, I and my friends have been denounced as United States Bank advocates and anti-State rights men, because we would not attribute all honor and glory to the State banks; and now, again, we are denounced as United States Bank advocates and anti-State rights men, because we will not attribute all sin and infamy to the State banks; and when the wretched system now proposed shall have served its hour of delusion, and brought us to an avowed Government bank, then we shall be denounced in the same terms, from the same quarter, for not acquiescing in this ultimate, inevitable, and designed destiny of all these measures.

From this general imputation against the administration party of indecent tergiversation, justice and candor demand that I should make an exception of the Senator from Missouri, who, with unwavering pertinacity, has adhered to his hard-money project, defending, with paternal solicitude, against all assailants, his own political offspring, whatever may have been the momentary pet of the administration, until he has achieved his present triumph. Well may the honorable gentlemen congratulate himself upon his measure having survived for years the persecution of both sides of the House, until now, adopted as the bantling of the Government, it no longer requires his guidance or nurture.

The honorable Senator from Pennsylvania [Mr. BUCHANAN] not only treats the late experiment as an absurd measure, predestined to inevitable failure, but, with the proverbial zeal of recent conversion, denounces his late pets with bitter invective; delights to swell the key-note lately given from the Hermitage, by exaggerating all the evils produced by the banks, and attributing to them others, which I believe to be entirely imaginary. That great evils have resulted from the overaction of the banking system is entirely obvious; but that all the difficulties and distress which the country now labors under have sprung from this cause, is a gross and dangerous fallacy. The honorable Senator knows better than I can tell him, that no country is exempt from vicissitudes of prosperity and adversity, and that all commerce ebbs and flows. Even in

[SENATE.]

Sub-Treasury Bill.

[SEPT. 29, 1837.]

those hard-money countries which the gentleman is so well acquainted with, in Russia, Austria, and Prussia, and, still more, even in that beau ideal of a hard-money country, Algiers, where there was lately found in the Government strong-box unsunned silver, that was told by the bushel; even in those enviable and envied States there have been seasons of pressure, of commercial distress, of deranged currency. Indeed, Mr. President, it is of the nature of all human institutions to fluctuate; to advance, and to recede; to expand, or to contract; to be subject to overaction or to apathy; and in our country especially, where every department of human industry is urged by the unbridled will of the citizen, this alternate propulsion and recoil must be proportionally violent. While I concede, therefore, that there has been an overaction of the banks, still I am a friend to those institutions; and I assert with confidence that, in the midst of the evils which they have in part contributed to, their influence has been salutary and protective. With or without the banks, this commercial storm would have burst upon us; it might not have done so much harm without as with them—the loss of a crop on barren land is not so great as that on fertile; but when the storm did come, these institutions have stood between us and its ravages. Under the protection of the incorporated credit of the community, the individuals of the community remain safe until time is allowed them to recover their means and meet their responsibilities. In obedience to the wishes of the people, and for their benefit, the banks suspended specie payments; and this they were able to do without loss of credit, the public having no doubt of their solvency. The banks have a double fund for the discharge of their responsibilities: first, the specie in their vaults, which is sufficient to meet ordinary demands in the usual routine of business; and, secondly, the infinitely larger fund made up of all the property of all the drawers and endorsers of notes to whom they have loaned. A demand upon the banks beyond the capital in their vaults is, therefore, a demand upon the individuals of the community, and if it be so sudden or violent that they cannot meet it, inevitable and general ruin is the consequence. Whatever cause we may have to deplore our recent sufferings, they bear no proportion, they give no indication of what they would have been, if the banks had gone on to pay specie, wringing it for that purpose, by forced sales of property, from the people, making a hundred bankruptcies where there has been one, and sacrificing the whole property of the country without paying its debts. The banks, the States, the General Government, and the people would have been involved in one common ruin. From this we have been protected by the stoppage of the banks. And, Mr. President, this suspension has operated on this occasion as it did in England and this country formerly—to the general relief, to the restoration of confidence, and to the instantaneous enhancement of the credit of the banks themselves. Sir, I thank them for their prompt and wise action, and would regard with indignation, were it not for the contempt I feel for it, the Executive recommendation of a bankrupt law, to be applied exclusively to them. The banks have not merited punishment, but thanks, for the suspension of specie-payments. Their sin was to be wheedled and seduced into a contaminating contact with a corrupt administration, which urged them to overaction by entreaty, exhortation, bribery, and bullying, and now rewards them (not unnaturally or unjustly, perhaps,) by proposing punishment for their unwise compliance.

Mr. President, the cant word of the day is divorce of bank and State. The honorable Senator from Pennsylvania has it often on his lips; but, as the gentleman argues that the union always was in violation of the constitution, it is rather a casting off than a divorce. But what is the divorce the administration proposes? A divorce of this Government from the State banks, from the State currency,

from the whole monetary system of the States and of the people. You divorce this Government from its cumbersome and restraining connexion with the country, that you may be free to wed it to the money. You divorce it from the banking system, that you may, with a licentious polygamy, marry it to ten thousand sub-treasuries, making the whole land a Government harem.

But it is said that the experiment of the State banks has failed. Doubtless an experiment on the banks, made by faithless and incompetent experimenters, has failed. It was instituted in an open violation of law and the constitution. It was conducted with the rashness and precipitancy of personal purposes. There was scarcely a passing regard bestowed upon the financial aspect of the arrangement, the whole attention of the President being directed to its political and party aspect. There was an omnipotent President wielding an acquiescing Congress, ever ready to record either his passions or his principles; and his passions were excited at the moment into a fury, which I hope, for the honor of the country, history will forget. He pronounced sentence of death against the United States Bank; by his own will he confiscated its property, he seized upon the public treasure; and when Congress assembled here, we beheld, with amazement and terror, the President standing upon torn charters and constitutions, and holding in his hands the money of the people, which he had snatched from the custody of the laws. The popular branch of Congress acquiesced; the people, I regret to say, acquiesced. This omnipotent President seized upon the State banks, promised to us a better currency than the world had ever seen, and ordered these institutions to relieve the wants of the people by discounting liberally upon the Government money, which the President had added to the banking capital. The national debt was paid off; the income of the Government was beyond all former precedent; there was an enormous surplus revenue, and an irritated and furious Executive lashed up the banks to effect larger and larger discounts.

The supervision and restraining power of the United States Bank had just been removed. All the States created new banks to supply the place of the abstracted capital, and in their eagerness and recklessness quadrupled it. In the midst of this flush and plethora, the Government found itself in possession of forty millions of surplus revenue, and this was also converted into active bank capital. Much has been (and most properly) attributed to the agency of this surplus revenue in producing the present state of things. It is a political phenomenon without a prototype in all history, and could not but exercise a disturbing influence upon the politics, finances, and currency of the country. What were the remote causes of its accumulation it were perhaps useless to inquire. The immediate cause was the undeducted duties upon an increased commerce. By the compromise act of 1833, it was provided that the duties should be reduced by a fixed ratio, neither to be accelerated nor retarded; and this act was esteemed, and most justly esteemed, to be so sacred in its character and objects, of such binding as well as healing efficacy, that Congress was willing to brave the terrors of a surplus revenue, rather than disturb its provisions or loosen the obligations of good faith and honor as well as interest, which were pledged to its maintenance. But for this, the obvious method of evading the crisis was to diminish the taxes, and thus prevent the surplus, which my colleague then foretold would be the fruitful cause of financial disorders and difficulties. I do not know, Mr. President, how the United States Bank, if it had been in existence, would have got on with this surplus of forty millions; but it is ludicrous to think how, with your proposed system, you would have been counting revenue by the chaldron—you would have had two millions and a half avoirdupois of silver—you might have laughed to scorn the Dey of Algiers, with his eighty bushels of coin.

SEPT. 29, 1837.]

Sub-Treasury Bill.

[SENATE.]

It was a capital error of the late administration to destroy the United States Bank without having provided in its stead some restraining power upon the banking system of the States. A very great, perhaps the main advantage of that bank was, that while it performed its own appropriate functions with unsurpassed wisdom and integrity, it also acted as a regulator of the state banks, keeping them, by a salutary check, within the legitimate bounds of banking. Each moved in its appropriate sphere, regularly and harmoniously, producing the happiest possible results. We had the best currency and the best condition of exchanges ever known in the world; and so firmly were they fixed, both by the organization of the banks and in the public confidence, that they could not be disturbed by the Executive or his party, until, by a nefarious act of open war, the President showed that the laws could not protect his victim from his fury. Then at once the whole organization was broken in upon and deranged; opposing forces and counteracting attractions whose well-adjusted combination had resulted in such harmonious action, and relations were disturbed and dislocated—confusion, violence, and eccentricity were of course the immediate result. But it was not only removing the restraint upon over-banking by the banks then in existence, but, what has been more productive of evil, was the unrestrained license given to the States to create a redundant banking capital. As soon as the United States Bank had received its death-blow, and while yet it lived, the States had created many times the bank capital which it had used, and both the old and the new banks rushed into the market with unbridled impetuosity. For this obvious and inevitable state of things nothing had been provided. The tendency of the States to an over creation of bank capital, and of the bank to over-bank, unless checked and restricted, is the great danger of our condition. My colleague, whose monitory voice was unfortunately unheeded, predicted these results in 1834, and proposed, as a means of avoiding them, a recharter of the United States Bank, with such provisions as it was supposed would ascertain, by slow and cautious experiment, how far the country could or ought to be “unbanked”—where the restriction upon our over-tendency to banking ought finally to be fixed. The administration, however, not perceiving or disregarding the danger, tore down with brute force the barrier which had been erected against the overflow of bank paper, and the country was inundated. This is the great difficulty which the Senator from Virginia has to encounter. No doubt the States and the State institutions will have received a salutary lesson in the present state of things. No doubt that the stern admonitions of disastrous experience will produce a decided effect; still, that very experience warns us that, without some restraining power upon the bank system, there is imminent danger; without some such I have great distrust of the permanent success of the project of the Virginia Senator, [Mr. RIVES.] I see the perils to which it is to be exposed. His project excites alarm, that of the administration despair. His project may succeed, that of the administration cannot.

A constitutional restriction upon the States in regard to the extent of bank capital to be created by them, ought to be obtained by a constitutional amendment. The pressure of the present difficulties would go far to induce the States to consent to the limitation of bank capital upon some fixed ratio amongst them; and if their wisdom and patriotism required to be stimulated to this prudent act of self-denial, that stimulus might be found in the fact, that the administration project makes the alternative to the States, bank restriction or destruction.

It is obvious that the evils of redundant banking, at present, are much more the result of indiscreet legislation in the creation of new capital than of indiscreet banking in the use of old. A document furnished from the Treasury Department shows that the bank capital now is more dis-

proportioned to what it was four years since than the bank issues or discounts. There is, in regard to the latter, an ever-present, though sometimes sluggish principle of restriction to be found in the pecuniary interest of the institution itself. Over-issues endanger a bank, and therefore some degree of caution and hesitancy may be expected in venturing upon them. But the discretion of the Legislature is not aroused by any such necessity, and its prudence is apt to be overcome by the urgent solicitations of private interest, or the still more dangerous spirit of competition with neighboring States. Indeed, the extension of bank capital in one State imposes a sort of necessity for an equal extension amongst its neighbors. Its worse currency supercedes their better, and takes possession of their channels of circulation. It has all the advantages of supplying them with capital, and at length, when the revulsion takes place, all are involved in a common calamity—the States which created and the States which used the surplus capital sharing all an equal evil, having enjoyed an equal good. Thus are the States alternately put under a sort of necessity to push their banking to a licentious extent, and this will unquestionably be done, unless prevented by some overruling power, such as a constitutional regulation.

The principle is broadly laid down in the message, and practically embodied in the bills now under discussion, that this Government is not authorized to regulate the currency, but that the States have an exclusive right to do so, as far at least as the circulation is to consist of bank paper. This power, repudiated now for the first time by this Government, is assumed and exercised by all the States. We are in the midst of a banking system, good in itself when not abused, and of paper money, eminently fitted for all the business of money when not issued in excessive quantities. To avoid the possibility of abuse, all that is necessary is, that the States should mutually fetter each other by a constitutional amendment, forbidding the creation by any one State of banking capital beyond a certain limit; for example, beyond \$200,000 for each member of the House of Representatives, and forbidding, also, (if it be thought desirable) the issue of any note below a fixed amount. The constitution already takes from the States the power to issue bills of credit, and the restriction suggested is of the same nature and policy. If the party in power, and which for the sins of the land have ruled it with such absolute and destructive sway; if that party which professes such violent antipathies to a degraded bank paper circulation, had suggested some such measure when they removed the control of the United States Bank, much of our present distress would have been avoided; or if that party, which as yet alone holds power, (tottering and decaying, I trust,) would now move such a measure, the States acting upon the recommendation of Congress might, and I believe would, before the termination of your next session, put the banking system in a condition that would silence the stoutest and most clamorous advocates for divorce. This Government has caused the mischief—let it propose the remedy. Pass the order along the lines of your party, sir; they obeyed you for the expunging, and will hardly be less prompt to adopt a measure of obvious propriety—a measure which will take away from you, by giving to the people a sound currency, all pretence of separating yourself from it, which will leave you without excuse or palliation of your selfish withdrawal from the destiny of the citizens—a destiny which your misrule has made wretched, and threatens to make intolerable by perpetuating it. Let it not be supposed that it is possible in the nature of things for two currencies to exist simultaneously in the same community of different values. The worse, of necessity, expels the better. Thus the Government, by giving to gold and silver the exclusive power of paying public dues, makes it a better currency than any paper can be, and, by necessary consequence, makes them articles of merchandise and traffic, deprives them of the

SENATE.]

Sub-Treasury Bill.

[SEPT. 29, 1837.]

character of a circulating medium, and thus abstracts them entirely from general use. If the note of a specie paying bank cannot perform all the offices of the specie itself, it is degraded by and to the extent of the difference. When, therefore, the Government, the great money dealer of the country, rejects notes and demands specie, it at once, by force of the act itself, debases the currency, and makes the money of the people worse than the money of the Government. It is not possible that you can separate yourself from the common currency of the country, and maintain peaceful or neutral relations towards it. The separation itself inflicts a wound, and every run which the debtors of the Government make upon the banks to enable them to pay Government debts is an act of hostility.

Then, sir, the distrust and suspicion in regard to the banks implied by the rejection of their paper, cannot fail to derange and injure that currency which is composed of it. Why, sir, will you not receive the notes of specie paying banks, as you have always done under the joint resolution of 1816? No answer has been given to this question but the vague and senseless cant word of divorce. Do you distrust the banks? Then propose measures of making them safe, so that you may no longer distrust them. Is your object to be paid in better money than the debts of the country are discharged in? Do you intend to abolish the banking system and substitute specie, or, as that is impossible, an irredeemable Government paper, a continental currency, by which this Government shall have the unlimited control of the whole property of the country? Are none of these your purposes? Why, then, demand specie, and reject the notes of specie paying banks? If you do not intend by your divorce to have a better medium of payment than that which the people use, what is the object of your measure? And if you establish for yourself this better medium, you make that of the people still worse; you not only abandon them, but aggravate their distresses. I have always held the true policy of this Government to be, that in the exercise of its granted powers it should so shape its policy that the incidental effects of its measures should operate to the good of the community—that the collateral action of its money-power, for example, should be so regulated as to sustain the currency, relieve the embarrassments of commerce, and facilitate the business of exchange. If there were in our community any bloated millionaire, any Rothschild or Baring, who from the extent of his operations could influence and control the moneyed affairs of the country, and who by that influence had induced distress, and difficulty, and embarrassment, and, in the midst of it, should demand the “constitutional currency,” with what burning indignation would a suffering and insulted community denounce the wretch, and drive him from our borders!

I hold it to be a clear proposition, Mr. President, that this Government is bound not to make for itself a better currency than that of the people; and it results from this, that if the currency of the people is not good enough for the Government, it should suggest measures for making it so. The United States Bank effected this object; that you have destroyed, and by general consent it is not to be revived. The same object can be effected by a constitutional limitation upon the banking power. By this means you will have a sound currency for the people and for the Government. By this means you may continue the safe and long-tried policy of the resolution of 1816. By this means you at once restrain and strengthen the State institutions; you give them vigor by pruning, and you will enable them forever to supersede all pretext for a United States Bank.

There are, Mr. President, some gentlemen who are opposed to any measure which has for its object the restoration of a sound paper circulating medium; whose eyes and ears can delight in nothing but the glitter and jingle of

metal, and whose happy hallucinations continually picture to their fancy a sort of Saturnian reign, a golden age, a pastoral state of political simplicity and beatitude, exempt from vicissitudes, amidst perpetual sunshine and perpetual peace. Of these romantic politicians there are but a few, and they would do well to study the most authentic chronicle of that ancient king, to whose earnest prayer the mischievous deities granted the power of converting all he touched to gold, and of whom the very winds proclaimed to mankind

“Auriculas asini Midas rex habet.”

Certainly, sir, the idea of establishing a pure specie currency for this numerous, commercial, and rapidly growing people, is very chimerical. The purchase of the specie requisite for this purpose would cost an enormous sum. One very efficient cause of our present difficulties is the large importation of specie, forced by the blind and ignorant policy of the late administration, with apparently no other object but that of boasting that they had eighty millions in the country, while the country is not only bankrupt with it, but in a great degree in consequence of it. The vast consumption of the precious metals, in various manufactures, and the diminished production of the mines, have enhanced their price to a degree that would make them a very expensive medium of circulation, while they are by no means so convenient as paper. Indeed, it may well be questioned whether the metals could answer the purpose of currency for our enterprising community, spread over so vast a surface, and engaged in such complicated commercial adventures. All this, however, I understand to be given up. The flood of specie which was to run up and down through the country in such strange courses is indefinitely postponed, or rather, perhaps, has subsided into that little Pactolus, which, dribbling from the exhausted Treasury, flows in tiny meanders round these walls, for members to dip their fingers in, while there is not a drop for the people.*

But, Mr. President, although it be no longer contemplated to fill the country with specie, it is not the less insisted upon by the measures under discussion to demand it in the payment of revenue. The most obvious consequence is, that the action of the Government will increase the price and keep up the demand for the precious metals; by which means, the resumption of specie payments by the banks will be rendered impossible. Let me, sir, point out the separate links of the chain by which you are to bind down the prosperity of the country.

1st. You confer upon specie a use which does not appertain to the note of a specie-paying bank, convertible into specie; thus specie is made better than the best note, and a run is created upon the banks to the extent of the difference.

2d. The Government dues are almost a million and a half a month; the demand for this much specie must necessarily threaten the banks with a disastrous run upon them the moment their doors are opened.

3d. The prospect of such a state of things will make it necessary for the banks to press their debtors, for the purpose of fortifying themselves; and thus the two great creditors of the country, the Government and the banks, will be pressing the people at the same time; the Government compelling the banks to this course for the purpose of trying an experiment. It is obvious that, under such circumstances, the banks will postpone the resumption of specie payments, and at length, perhaps, be driven to it through their own and the ruin of the community. These are necessary results from the attitude of hostility in which the measures before us would, if adopted, place the Government and the banks. In such a contest, where the Government, from the beginning, has been in the wrong, and

* Members of Congress are paid in gold.

SEPT. 29, 1837.]

Sub-Treasury Bill.

[SENATE.]

where its success can be achieved only by a wide-spread desolation of the property and prostration of the energies of the country, I cannot wish success to it. I doubt whether this Government is worth to my constituents what it will cost them to make this experiment.

It is to be continually borne in mind, Mr. President, that the proposed divorce not only contemplates a rejection of the banks as Government agents for the receipt, custody, or disbursement of public moneys, but, what is of much more consequence, the rejection of all State bank paper in the receipt of Government dues. This last is the aspect in which I have been considering the proposition; and I have shown, uselessly, perhaps, how futile or pernicious would be the attempt to substitute specie. I say uselessly, perhaps; because, though specie appears in the bill, and although hard money—constitutional currency—gold and silver, are clamored through the country, I am not inclined to believe that there are a half dozen men in Congress who seriously entertain thoughts of actually adopting this absurd policy. It is a pretence; a matter to cant and electioneer upon; in short, sir, a humbug. No Senator has been able to get through a speech without a suggestion of paper money of some kind or other. To this complexion must we come at last. Even the Senator from Missouri, the great propositus of the hard-money family, admits the necessity of discharging Government dues by bills of exchange, drawn from one sub-Treasury on another; which, while they are in transitu between the place drawn from and the place drawn upon, must serve, to a certain extent, as circulating medium. The actual condition of our affairs will show the operation of this system. At this moment the largest disbursements of the Government are in the Southwest and West—for the Florida war and for the protection of the Western frontier; the next largest disbursement is for fortifications and harbors in the North. Now and at all times New York is the great point for the collection of the revenue, there being about as much collected there as in the whole of the United States besides. These heavy disbursements, therefore, are to be made by bills of exchange upon New York. The workmen in the North and the soldiers in the South will be paid off by an exchequer bill upon New York, and this bill circulates until it is presented for payment. Until that time it is paper money, and in the mean time the Government has locked up the specie which it represents. The Government receives its debts in gold and silver, and pays its debts in bills of credit. The gold and silver are buried, and the bill is in circulation; and this is called the hard-money currency. I shall have occasion by and by to show that this is in truth and in fact a banking system; but my present purpose is merely to show that it is a paper currency convertible into specie in the city of New York. The supporters of this scheme rely upon what they consider a profound feeling in the community of hostility to bank paper. I think they are mistaken in regard to this feeling. The practice of this Government and of the States indicates no such prejudice. There has been a United States bank during eight-tenths of the existence of the Government, and there have been State banks during the whole period; and although the system has occasionally, during times of pressure, been assailed by a few ardent minds, yet the great onward current of public opinion has set directly in favor of it. There is, however, a deep-seated and wise public opinion, inherited from our ancestors, against Government paper. We have hardly a more vivid recollection of the glories of the Revolution, than of the disasters of the continental money. The heaviest penalties of the laws, the utmost tension of public spirit, the devotion which submitted to the encampment at Valley Forge, and the campaign of the Jerseys, all put together, could not keep up the Government paper. No Government has been found strong enough for this purpose. The revolutionary Government of France, the reign

of terror itself, was not strong enough to create that vital spirit, that subtle and ethereal essence of all currency, confidence; and, for the want of it, the assignats sunk to nothing; although sustained all around by penal statutes. It is because we have not forgotten continental money, because we have not forgotten the assignats, that there is a settled hostility in the public mind against Government paper. But, if it were a new matter, in regard to which we were deprived of that intense light of experience which, fortunately, we possess, a single view of the proposition would at once condemn it forever. It is proposed to make this Government the creator, centre, and controller of the circulating medium of the country; to give to it the power of regulating the price of every man's property, and of deciding, according to its caprice or the exigency of party affairs, whether those who owe money shall pay it according to the contract, or doubled, or divided; for the power of deciding upon the quantity of money implies all this. All this, the dexterity of debate might retort upon us, is possessed by banks, if they be permitted to exist. But we have the guaranty of their own interest that they will be careful how that power is exercised, their successful operation depending upon the prosperity of the people; whereas the interest of party, the desire for spoils and place have been found to control the politics of the country. So deeply felt is the danger of combining the political and the moneyed power in the same hands, that all parties have in turn objected to the measures of their opponents, by stigmatizing them as having this tendency. The danger, it is said, of the United States Bank is, that the Government may get control of the money power. The danger of the pet bank system is, that the Government may get control of the money power; and, to avoid these dangers, it is proposed to give to the Government at once the whole power to create and control the whole money of the country; and this without the salutary check which all ages have found to reside exclusively in the convertibility of paper into specie. This is the great check in the banking system; a check which, to be sure, like all human restraints, may occasionally prove inoperative, when fraud is stimulated by temptation, or crime urged by necessity. But have we found angels in the shape of Government agents?

We all know, sir, by what indirect, crooked means the present administration came into power, and what prodigious agency the usurped and illegitimate control over the currency had in effecting it. Confer upon it the power of issuing paper money, let Congress assume the power of making it, and do you believe, sir, that the country will ever be strong enough to stand up against the Executive? Will not its present waning power, will not its reeling and rickety majorities be revived and increased, and its ignominious reign, now just about to be closed by the sentence of an indignant people, be perpetuated until our institutions perish with the vampires that feed upon them? Let those who look with favor upon the project of endowing this Government with new powers over the currency think a moment of the history of the last four years. While the currency was regulated by the natural and undisturbed action of the banking system, we had nothing left to desire; when the Government undertook the management of it, we soon had little left to lose; and yet the control which the Government has had for the last four years is nothing to the grant which is suggested of the money-creating power. I have before asked, sir, whether all history can furnish an example of a sound currency made by Government paper. I now ask, with as much confidence, whether in all history a Government can be found assuming the power to make its own paper answer the ends of money, that it did not abuse the power thus assumed? History holds but one language, and that proclaims the perils into the midst of which we are hurrying. Let us not turn a deaf ear to the warnings of past times. I tremble, Mr. President, when I

[SENATE.]

Sub-Treasury Bill.

[SEPT. 29, 1837.]

hear my colleague say, "There is another and a final reason which I shall assign against the reunion with the banks. We have reached a new era with regard to these institutions. He who would judge of the future by the past, in reference to them, will be wholly mistaken." I should be deeply grieved to think so. I should lament to believe that we are so adrift upon an unknown ocean, with an unknown heaven above us, that the light of the polar star can no longer reach us, and that our only hope for a safe navigation through the perils which beset us is, either in trusting blindly to the pilots who have brought us where we are, or in following the meteor corruscations of genius, which too often dazzle rather than guide. For myself, sir, I will continue to look out for, and endeavor to steer my course by, the steady light of experience—that light which beams from its fixed, unalterable position in the firmament of the past, through the misty prejudices and stormy passions of the present, showing us the way of safety and deliverance. If I could shut my eyes against this light; if I could forego the solemn warnings of experience yet ringing in my ears, in favor of the revelations of genius, I should go nowhere for them with so much confidence as to my colleague. But, sir, on the subject of an inconvertible Government paper the past is too pregnant with monitions to be disregarded. History has erected warning beacons on all sides of us. Our colonial, our revolutionary history, the old Congress, all the States, concur in exhorting us to avoid this fatal evil. The constitution has embodied and perpetuated the terrors of our ancestors. "No State shall issue bills of credit." In this clause, sir, is declared the bitter experience of the Revolution. North Carolina, my colleague supposes, has furnished an exception to the history of her sister States and the world in the success of her *Proc. money*, as it was called. The history of that affair makes no exception to the general destiny of Government money. It fell below par, it embarrassed and confused the financial action of the State for very many years, and was finally burnt, with three or four times its amount in counterfeits, by the Treasurer of the State. My colleague's researches have not enabled him to cite any other instances than this of the proclamation money of North Carolina; and whatever weight this may be entitled to, I am persuaded is against his proposition; while the old Congress, and, I believe, every one of the revolutionary States, afford woful examples of the disastrous fatality of Government paper. It is impossible that it should be otherwise; for the primal law, the fundamental principle, the living soul of currency, is that it be property, or be readily convertible into it. Convertibility makes currency. Paper is money, because it represents property; and, losing the representative quality, it is but paper, and there is no magic in Government to make it otherwise. This necessary incapacity of Government to convert itself into a manufactory of money is one of those limitations upon despotism that the friends of freedom cannot too much rejoice in; and surely, Mr. President, if the question were whether we should, if we could, endow this federative agency with such a monstrous power, would we venture upon it? As guardians of the rights of the States, as jealous asserters of the limited character of this Government, as advocates and lovers of free institutions, would we give this tremendous power to this Government? No, sir. If we must have a Government paper; if this absorbing and destructive aggrandizement of Government power must be conferred, give it to the States, sir, and do not convert this Government into a money manufactory. Sir, I will not trust this Government with such a power, no matter who administers it; even if our own wise and pure Washington, (all will feel how extravagant the supposition is,) even if he were at the head of affairs. Could I then, sir, entrust it to a party whose wretched mismanagement and incompetence have brought us to this mournful condition? Shall I be

called upon to confide greater powers over the currency to those who, with such powers as they have, have produced so much disorder; or, rather, sir, to state the proposition truly, shall I entrust them with much power because they have ruined us with a little? Those who govern us have given testimony of their financial abilities; if we are satisfied with the past, why, sir, pass these bills?

For one, Mr. President, I do not at all share the confidence in this Government which my colleague avows. I look upon it with an habitual distrust and jealousy, sharpened instead of blunted by recent events. My colleague says "I rejoice to think that the Executive Department of the Government is now so reduced in power and means, that it can no longer rely on its influence and patronage to secure a majority. Henceforward it can have no hope of supporting itself but on wisdom, moderation, patriotism, and devoted attachment to the constitution, which, I trust, will make it, in its own defence, an ally in effecting the reform which I deem indispensable to the salvation of the country and its institutions."

I do not participate in these sanguine expectations; I see nothing in the proposed measures to quiet my long-established terrors of Executive power. I see before me the same men whom I have been all along warring upon—those men who have subverted the constitution, and usurped all powers—those men who issued the proclamation against South Carolina, who passed the bloody bill, who seized the deposits, who expunged the records of the Senate, who have perpetuated their control, by using the patronage of the Government and the plundered money of the country, in the hands of one President to make his successor. I see before me these men avowing, vindicating, and exulting in all that they have heretofore done, and proclaiming that they will persist in the same policy. All this I see, and I cannot give them my confidence. Let them resign, let them acknowledge their incompetence, and testify in sincere repentance, and they may be forgiven for the past. But still, Mr. President, I will not trust them for the future; I will still be jealous and circumspect, in regard to them and to this whole Government. It may be that the administration is weakened and stunned for the moment, and is terrified that its misdeeds are about to be avenged by the indignation of the people. It may be that, like sailors in a storm, they will be pious for a moment; but, even if this were the case, I should have no great faith in their repentance. I do not, however, see any signs of repentance. I see their terror distinctly enough, but there is nothing in their demeanor that would induce me to select them "as an ally in effecting reform."

With these feelings, therefore, and prejudices, if you choose, Mr. President, I do not come to the consideration of the Executive measures with a predisposition in their favor; but, on the contrary, I am animated with a decided disinclination against any project which proposes to endow this Government with a new power, or to intrust my rights and liberties to the keeping of the newly-enforced "wisdom," "moderation," "patriotism," of this administration.

My colleague states, as a main objection to any connexion of the Government with the banks, the unsteadiness produced in the currency by the action of Government. He says:

"It follows as a necessary consequence that, to the extent of this influence, the issues of the banks expand and contract with the expansion and contraction of the fiscal action of the Government; with the increase of its duties, taxes, income, and expenditure; with the deposits in its vaults, acting as additional capital, and the amount of bank notes withdrawn, in consequence, from circulation; all of which must directly affect the amount of their business and issues; and bank currency must, of course, partake of all those vibrations to which the fiscal action of the Government is necessarily exposed, and, when great and sudden,

SEPT. 29, 1837.]

Sub-Treasury Bill.

[SENATE.]

must expose the system to catastrophes such as we now witness. In fact, a more suitable instance cannot be selected to illustrate the truth of what I assert than the present, as I shall proceed to show."

Now, if this be true when the Government is operating upon banks which trade on a specie basis, and are cautious of their own interests, how much more true is it when the Government, divested of all such connexion, and having full control of the currency, will expand or contract it, according to its necessities, whims, or party purposes? I understand the proposition to be, that the banks are to be discontinued because their paper partakes of the vibrations to which the fiscal action of the Government is exposed. But it is obvious that Government paper (that is, a currency created by the fiscal action of the Government) will be still more immediately and intimately affected by the vibrations of that fiscal action than bank paper. The banks are some check upon these fluctuations, which, without that check, will necessarily be greater. I can easily conceive that if this Government undertakes to decide on the quantity of money, or to regulate its issues by law, nothing can be more uncertain than its quantity, and therefore value, from year to year. If it be regulated on a ratio with the revenue of the Government, we may estimate the fluctuations by the receipts of 1836, compared to those of 1837. Or, if it be submitted entirely to the discretion of this Government, let the various opinions at the present moment, in regard both to the quantity of money in circulation, and to the quantity which is necessary for circulation, teach us a lesson of caution. The administration party at this moment suppose that the country labors under a redundant circulation, and, if it controlled the currency, would immediately curtail it; while, perhaps, the better opinion is, that the money in circulation is hardly equal to the wants of the country.

I cannot but think, Mr. President, that my colleague habitually overrates the influence of the fiscal action of the Government upon the currency, in regard to the expansion or contraction of it, and especially if he be correct in supposing that the income of this Government is now reduced to an economical standard, and that the Executive will sustain itself only by wise, patriotic, and moderate measures. He supposes that the Government has power to make an inconvertible paper money circulate, which I conceive to be beyond the power of any Government; and this idea seems in part to result from what I consider a misconception he has fallen into as to the credit which sustains bank notes. He supposes that this credit is conferred to a great extent by the Government making them receivable in public dues, which he illustrates by stating that if the Government would say that it would take in payment of its dues the notes of any beggar in the streets, such notes would be current. I do not think they would be current, unless the dues of the Government were unlimited, or the notes of the beggar limited. If, as I have endeavored to show, a Government cannot make its own notes circulate at par, it cannot make a beggar's. The case of the beggar would be analogous to that of the banks, if the Government said that it would take his notes as long as he continued to pay specie, which is the language of the resolution of 1816 to the banks. The endorsement of the Government on the bank notes was not "receivable in public dues," but "receivable in public dues as long as specie can be got for it." The efficacy of such an endorsement to confer credit is not very perceptible. The convertibility of the note makes it good without the endorsement; nor does the withdrawal of the endorsement injure its credit. The pet banks were not in better credit than the rest of the banks, nor did the withdrawal of the Government from all bank paper whatsoever strike down its credit. When the banks suspended, the Government withdrew its countenance, and yet the notes maintained, and still maintain,

their credit, and this, too, when the Government has not only withdrawn its credit, but is waging a war of extermination against the banks. The community believes in the ultimate convertibility of the bank notes, and therefore trusts to them; and believing, moreover, that the prospect of that convertibility was improved by the act which made the Government withdraw its credit from them, the general credit was enhanced by it. Sir, let those who conceive that there is magic in the Government touch to confer or to take away credit, look to the recent history of the United States Bank, whose bills have been "every where at home," while the Government has been waging war against them all over the world. Amidst all the ruin which that war has occasioned, amidst the prostration of so much wealth, and the loss of so much credit, with a distressed people and a bankrupt Government, the credit of that bank is yet untainted, and its successor, under the wise and honest management of Mr. Biddle, is, by general consent, ready now to redeem you from your difficulties, and would be appealed to, but for that pride of opinion which prefers to suffer rather than acknowledge an error, especially when the suffering is that of the public, and the error that of the individual.

Mr. President, I deprecate this mad and ferocious warfare against any of the institutions of the country, against the United States Bank formerly, against the State banks now. It does not appear to me that this root and branch policy, this tearing up things established, to supply their places with new theories, however neatly constructed, or carefully elaborated, is the part of prudence and wisdom. My nature and habits of thought, confirmed by the terrible experience of the last four years, make me a conservative. I hesitate at every proposition to destroy, that you may build again. If any of our institutions have suffered damage, let us repair them; if any portion of the vast edifice of our prosperity has been injured, let us with a cautious and reverend hand restore what has been lost, strengthen what remains, adjust the proportions, if you choose, proceeding in all with a sedate and steady purpose of not weakening the deep foundations. Let us not, sir, with a fantastic caprice tear down the solid, and let me say glorious fabric of our prosperity, that we may try, by as futile a device as the lamp of Aladdin, to build up another in one night, of fairy marble, and gold, and gems.

It is the part of statesmen to deal with the circumstances around them. In the closet of a philosopher, in the desk of a professor, speculation may discuss what is best, and genius indulge its aspirations for the "chief good;" but the practical politician is fenced around by inexorable necessities. He has to deal with things, not with ideas. He must control, not create. He must govern himself by the circumstances amidst which he finds himself, use the instruments that are presented to him, and be content with such results as he can attain, without attempting such as he can imagine. The genius and temper of Napoleon might aspire to a different destiny; but ours, thank God, is humbler and safer. We administer a limited Government for free and self-willed States, whose bidding and whose business we are to do. They have placed us their servants in the midst of a great banking system; a system of credit, surrounding, pervading, and penetrating the whole body politic.

Mr. President, we must conform to our condition, we must work upon the platform prepared for us, we must use the materials furnished to our hands. It is in vain to try to extricate ourselves from the condition of our existence. We have not the strength (God forbid that we should have it!) to disconnect ourselves from the circumstances in which the States place us. And if we attempt to tear ourselves loose from them, there may be much suffering, a struggle, an agony; but you will have at length to come back to your allegiance, and content yourself with reform instead

SENATE.]

Sub-Treasury Bill.

[SEPT. 29, 1837.]

of revolution. Let us, then, wisely and at once, begin to correct, control, regulate, modify, adjust, do any thing but destroy.

In 1834, Mr. President, I entertained the same sentiments. I found all the great interests of the country implicated so thoroughly with the banking system, that to tear them apart at once would destroy every thing, and therefore I acquiesced in the proposal of my distinguished colleague for the purpose of making a cautious experiment, to ascertain the extent to which the banking system could be contracted or modified, so as to reject as much evil and secure as much good as it was capable of. It was then proposed to use the United States Bank, rechartering it for this purpose; that instrument is no longer within our reach; but here are the State banks still, and why not use them for the purpose of an experimental reform? They are in the best condition imaginable for that purpose. If the fiscal connexion of this Government with the banks gives it any portion of the control supposed, it may be used to induce the banks to limit their issues and extend the specie basis; in short to induce them to do whatever was proposed to be effected by the recharter of the United States Bank in 1834. My colleague, however, discriminates our present condition from what it was in 1834, by stating that *now* we are disconnected from banking, and were not then. I cannot perceive the accuracy of this distinction, either in law or fact. It is perfectly obvious that the States and the people are more involved at this moment with the banks than they were in 1834. As to this Government, in 1834, its deposits were withdrawn from the United States Bank, and, as far as law was concerned, were nowhere—the language of the day was “that there was no Treasury, that the money was in the breeches pocket of the Government.” There was no law as there now is, making the banks depositaries and fiscal agents. At this time the banks have large Government deposits in their possession, which are daily drawn upon; and, the resolution of 1816 being unrepealed, the banks can at any moment compel the Treasurer to receive their notes by resuming specie payment. Besides this, there are, by the Secretary's report, six banks yet used as Government agents and depositaries. It appears, therefore, that both in law and in fact, the Government is less disconnected from the banks than in 1834!

And here, Mr. President, permit me to say one word on the subject of the partial disconnection which has been effected by the Secretary of the Treasury. But for the perverse and blundering policy which has characterized his agency in this matter, as in all of his official acts, we should not have been brought here at this time. I do not speak, sir, of the manner in which he habitually miscalculates and confounds the public revenue, or of the absurd and mischievous execution of the deposit law, or of the pernicious fluctuations and embarrassments produced by his intermeddling with the exchanges, or of his execrable Treasury order, in regard to the public lands; but I allude to his immediate agency in producing difficulties between this Government and the banks. When the banks suspended specie payments, the act immediately reassured public confidence, as was proved by the rise of stocks; individual transactions with the banks were continued, and private deposits increased, until at this moment there is more money on deposit in the banks than ever was at any former period—than which nothing could more strongly indicate public confidence. In this state of things, had the Secretary of the Treasury permitted the office-holders of the Government to go on as every other individual in the community was content to do, they would have received their quarter salaries as usual, and the disbursements of the Government would have been made as usual; but he thought proper to issue a sort of circular to office-holders, as he had formerly done to receivers, virtually enjoining them to receive nothing but specie, and putting them on a

plan by which they might enhance their salaries, by a traffic in dishonored Government paper. It was in this way that a pretext was obtained for this second removal of the deposits, and for a declaration of war against the State banks, as formerly against the United States Bank. But for this ingenious device, this stroke of financial diplomacy, we, sir, in all probability, should not have been here; and, by the regular meeting of Congress, a renewed prosperity, returning confidence, and the certainty of an early resumption of specie payments, might have spared us the anxious deliberations which now oppress us. The country, conscious of its own immense resources, and confiding in its own vast energies, would have even now been looking for the natural dawn of day, but that the Treasury interposed its huge and darkening bulk, not only giving no light itself, but intercepting that which otherwise would have been cheering us now. It was competent to the administration to have sustained and kept alive the wounded confidence of the country, by the easiest method in the world, if its purpose had not been other than the country's good. If the President had recalled the Treasury order in compliance with the wish of Congress, if he had said a word of kindness towards the banks, if he had disavowed his imputed hostility to credit and commerce, and chartered rights, if, above all, he had forborne to urge the wild and impracticable theories of his message, the natural springs of our prosperity would before now have begun to develop their recovered elasticity; and I believe, sir, that, even now, if we would adjourn to day, and go home, having done nothing, we shall assemble at the constitutional time, under auspices so much better than the present, that very few will be disposed to resort to the desperate surgery recommended in the message.

Let me, Mr. President, put a not improbable case. Suppose we assemble here, and find the banks paying specie, or upon the eve of doing so: will any one, then, propose to repeal the joint resolution of 1816, for the purpose of rejecting bills of specie-paying banks, and receiving gold and silver? I speak of nothing now, but of the divorce of the Government from convertible bills, which is the great divorce insisted upon—the question of the deposits being another and different affair. What I ask is, whether any one will propose, in the midst of solvent banks and convertible paper, to insist upon specie? To what end, if specie and paper be of equal value, as they are by the terms of the proposition? and so, too, in regard to any other kind of money it may be in contemplation to create. Is your continental money to be equal to the money of the people? Then it is useless. Is it better? Then it is a tax upon the people to buy it. Is it worse? Then it is a curse to the country, and a disgrace to the Government. But for the suspension of specie payments, which I contend was, in itself, a wise and proper measure, and full of salutary results, there would be no pretence for the indulgence of this rabid passion for experiment; the fiscal operations of the Government would have gone on; its reduced revenue would have been found to be to a great extent innocuous; experience would have pointed out and effected restraints upon the tendency to excess of the banking system; and the administration, weak from the manner in which it came in, weak from the load of misdeeds which it inherited, and has added to, and weak from incompetency, would have been compelled to permit the passage of laws to guard against a mischievous use of the revenue. But the present occasion is seized upon to drive us into new experiments, and made the pretext for a revolution in the monetary system of the country, by force of a single, sudden, and sweeping act of legislation. Nor, Mr. President, is the violence of the measure more objectionable than its delusiveness. It purports to be a hard-money project, while in truth it is the merest paper project that has ever been dreamed of since the continental

SEPT. 29, 1837.]

Sub-Treasury Bill.

[SENATE.]

Congress—an inconvertible paper, which, if it circulates at all, must expel specie exactly to the extent of its circulation.

But there is one point of view, in which, as a Southern Senator, this resolution of the whole money of the country into a Government paper system strikes me with appalling terror. It is, that it establishes a centralization of the moneyed transactions of the Government and the country in New York, which will enhance the wealth, commerce, and political power of that already too powerful city, to such an extent as to make the other States of the Union provincial dependencies upon it. Already by the operation of permanent causes, and the action of this Government, there is a great ascendancy acquired by that city. It cannot be otherwise, perhaps; all systems must have a centre. In every community, or association of communities, there is a centripetal tendency of the moneyed, and commercial transactions. This is, of the nature of things, a law of society. New York, therefore, is, by necessity, the commercial emporium of the United States as long as we are the United States; but nothing can be more unwise or preposterous, nothing can be more unjust to the Southern States especially, than for this Federal Government to increase by its policy this absorbing centralization. Already the receipts and disbursements of the Government are in one section, and we of the South have felt the disastrous effects of it; but when New York is made the pivot upon which the circulation of the whole country turns, what will be our condition? It is said that the banking system has a tendency to centralization, but it has also a centrifugal tendency. South Carolina has her banks, with their centre at Charleston; abolish them, give us the Government money, (and it matters not whether it be specie or continental paper,) and South Carolina has nothing of her own; she is consolidated upon New York, which is necessarily the centre of the General Government money transactions. The result is inevitable, and will be utterly ruinous. In whatever aspect I regard this project, whether I consider the political consolidation which results from the power of manufacturing money by this Government, or the financial and commercial consolidation which results from the fact that New York must be the centre of the system, or the nature of the currency which is to be created, it is, in my judgment, liable to insuperable objections.

The rejection in the receipt of the revenue of the notes of specie-paying banks is the great revolution proposed by the present measure: this is intended as the vital stab to the banks; it is to be a standing discredit of those institutions, and the excuse for the Government to issue paper of its own to supersede theirs. The sub-Treasury system is less decisive and far-reaching. The currency established by law since 1816 was that of the bills of specie-paying banks; but the State banks have been used as depositories a much shorter time. Until recently the United States Bank had custody of the public funds; after that, the State banks and the States, by the deposit act; and at present they are in the hands of Government agents. The policy proposed by the bill under discussion is, that when the revenue is received in specie, or in such paper as by law may be directed, (*viz*: Government paper,) it shall be retained in the custody of Government agents throughout the country.

It is this new mode of custody by individuals, instead of by banks, and, as a corollary from it, the disbursements by individuals, which constitute what is called the sub-Treasury system. Hitherto it has been the policy of the Government to keep as distinct as possible the business of collecting, keeping, and disbursing the public money, for the obvious purpose of multiplying responsibilities and imposing checks. This sure and long-established policy of separating these functions is now proposed to be abandoned, and they are all to be blended in the hands of near ten

thousand different individuals in various parts of the United States. And why is this fundamental change proposed? What is required in determining on the proper custody of the public money is, that it be kept cheaply and safely; and if the Government interest alone is to be considered, (upon which supposition the whole policy is founded,) when safety and cheapness are provided for, all is done that the Government need do. If the doctrine so strongly urged in favor of other branches of this proposed policy, that the Government must take care of itself, and let the people take care of themselves, be correct, then it is obvious that when your money is safely and cheaply deposited, you must look no farther; its effects upon the banks, upon the currency, upon the general welfare, are events put beyond the scope of your purposes or your powers, and are rejected by the fundamental principle on which your whole system rests, *viz*: that you have nothing to do with the currency. If it be your duty to reject a safe and cheap keeping of the public money because it will operate injuriously upon the banking system and the currency, then you are bound to avoid any other measure which is likely to produce that effect. Your first proposition proceeds upon the ground that the Government must take care of itself, and not look to the right or left in doing so. Your second proposition proceeds on the opposite ground, *viz*: that you must regulate your Treasury with a special view to the banks and the currency. Your plea for hard money is, that it is safest for the Government—safety is your object, then keep your hard money when you get it where it will be safe; but this you will not do. You will carry one part of your policy on the ground of safety of the Government, and the other on the ground of love of the people.

I have assumed, Mr. President, that the custody of the public moneys is safer in the banks than in the hands of Executive officers. Does any man doubt it; or has any one, even in the fury of that tirade against banks which constitutes the staple of every administration speech, ventured to say that the custody of these funds by the banks is not as perfectly safe as moral and physical agency can make any thing? In the midst of the general distress and insolvency which press upon the country, I am not aware that any thing has been lost by your confidence in the banks; but, sir, if your enormous revenue had been accumulated in the hands of ten thousand individuals during the recent rage for speculation and the consequent crash, where would your money have been? The experience of the Government is conclusive. It has trusted banks a thousand times more than individual agents, and has lost a hundred times as much by individuals as by banks. Why, sir, in that department of the sub-Treasury which is to be conducted by the postmasters, there are now, by a report from the Postmaster General, some two or three thousand defaulters. Banks are created with complex checks and responsibilities, for the purpose of keeping and managing money; and all this is done in the first instance, and afterwards superintended in its operation, by those whose direct interest it is to have it well done. On what different principles are Government offices filled? They are yielded to the arts of solicitation, given to a needy kinsman or a subtle tool, or, to avow at once the great principle of appointments, they are given for political purposes. This power of appointment is the great, the destructive branch of patronage which it is now proposed to increase to an enormous extent, and to strengthen by the whole money of the Government.

At the moment that the Government proposes to declare, by act of Congress, that banks are unsafe depositories of its money, all the money-holders of the country are contradicting the aspersion. The private deposits in the banks were never greater than at this moment, and vastly exceed your revenue. Merchants, artisans, agriculturists keep their money in the banks; every individual here, who by word

SENATE.]

Sub-Treasury Bill.

[SEPT. 29, 1837.]

or act denies that the Government money is safe with the banks, contradicts himself by keeping his own money there. The most cautious and wily money-holder in the country will not trust his money to his own custody, but carries it to the banks; and yet you would delude us with the vain and presumptuous idea that you will get men more true to the Government than men are to themselves. Where every private individual intrusts his own money, let the Government confide its funds; and this will be the result even with your sub-Treasury scheme; for, if your agents be honest and faithful, they will carry the money to the banks for safe-keeping, under the conviction that it is safer in the banks than in their own hands. In such an event what do you gain by these intermediate agencies between you and the banks? Why, sir, you gain this: a new electioneering office-holder, with means in his hands of influencing the banks. You give to the Executive the use of the money on hand, without any trammel of law to restrain him.

If your sub-Treasury be robbed, shall your sub-Treasurer and his securities lose the money? If your sub-Treasury be burnt, and your funds with it, shall the poor officer and his poor securities bear the loss? You well know, sir, how subject the Post Office and Treasury Departments are to conflagration; against all this the banks guaranty you.

Then, sir, as to the expense. Thus far the custody of the money by the banks has cost nothing; nay, has been a source of income to the Government, for they have paid for the privilege of keeping the money. General deposits in bank would cost you nothing, because the banks are willing to take care of the public money for certain incidental advantages resulting from it. And here lies, Mr. President, the paramount objection to the use of the banks as Government agents. It is said that these "incidental advantages" to the banks are injurious to the currency, and increase the power of the Government, by the control it gives it over the currency. The principle upon which this objection rests is, that there should be no intermediate use of the public money between its collection and disbursement. The principle is a new one; for the last thirty years it has been thought politic that the large sums of money always in the hands of the Government should not be entirely dead to a country so much in want of capital as this; but that, either in the hands of the United States Bank or the State banks, it might be banked upon as private deposits are. Thus the country did not suffer the loss of the Government revenue between its receipt and disbursement, but portions perpetually returned to the community to stimulate enterprise. By this process the Government lost nothing, and the people gained. If the Government has a regular sum of twelve millions on hand, it is twelve millions permanently abstracted from the capital of the country. Now, it is said that the Government has no right to permit an intermediate use of its money; true, but it has no right to keep on hand twelve millions. The theory, to be sure, is, that money is collected to be paid out again, and not to be kept on hand or used until it be used for the legislative objects of disbursement; but, from the necessity of the case, it must accumulate, and, being accumulated, the policy has heretofore been to turn that accumulation to some account for the country.

But, it is said, this intermediate use, if entrusted to the banks, creates a political influence, and disturbs the currency of the country. If this be true, these deleterious effects would be hereafter diminished, by the reduced income and economical expenditure of the Government, and regulated by the "virtue, moderation, and wisdom," which are expected from the Executive. The evil would undoubtedly be much less than heretofore; and, I think, infinitely less than that which will result from filling the country with salaried agents of the Government, wielding immense masses of money, for private or party purposes. General deposits in the banks, with the

obvious dangers which I recognise as belonging to it, I do not think comparable to the enhancement of Executive power and danger to the currency resulting from the sub-Treasury scheme. But there is an obvious mode of securing all the advantages I have attributed to the custody of the revenue by the banks, and of avoiding all the evils which are said to be apprehended. This mode, sir, is to make special deposits in the State banks. By special deposits is understood to be that deposit which the bank receives to keep, and not to use for banking purposes; and to return the identical thing to the depositor when drawn for. For this species of custody, from which the bank derives no benefit, some small recompense might be demanded, and given, not amounting to an assignable fraction of the cost of the sub-Treasury. By this means, the banks would do with the public money precisely what the law would impose upon the sub-Treasurer; and which would be more likely to fulfil the law—the bank or the individual? Which would the community trust? Which would you, or I, or any body trust? The bank, by possibility, might violate its obligations and commit a fraud. Are you safe in the hands of an underling party intriguer, who receives office, it may be, under the General Government, as the reward for his treachery to his own State?

I shall, Mr. President, as soon as it is in order, move an amendment to the bill before us, providing for the special deposits of the money in the State banks.

Sir, it is said that this Government should not entrust its money to institutions over which it has no control. The proposition amounts to this: that the Government has not power enough over the banks to protect its own interest; and yet, in the same breath, it is contended that to allow this Government to use those banks will endow it with a power over them dangerous to the country. The propositions neutralize each other. But I am not discontented to see this Government using State agencies as far as they are fit for its purposes. I am not averse to some little control, on the part of the States, over the moneyed power of this Government. It is one of the recommendations to my system, that the Government has not so much control over the banks as over its sub-Treasuries. The policy I propose, Mr. President, is simple, obvious, and dictated by our actual condition; it is to encourage the banks to resume specie payments, to receive, in discharge of Government dues, notes of specie banks, and to make special deposits in the State banks of your revenue, when collected.

Thus we conform ourselves to our condition; thus we acquiesce in the business habits of the country; thus we use the institutions provided to our hands; thus we preserve all that experience has proved to be good, and reform what experience has shown to require it. Thus, sir, we avoid the jeopardy of revolution; we escape the terrors of revolution, we escape the terrors of experiment—a word which, in the mouth of this administration, should appal the heart of every lover of his country. Let me examine for a moment, Mr. President, this sub-Treasury experiment. My colleague has objected to the name of sub-Treasury. Sir, it is a misnomer—Government bank is its true name. From the first moment of its existence, it will be, as I solemnly believe it is intended to be, a Treasury bank, thoroughly equipped and calculated for Government and party purposes, and devised as the only means of preserving the ascendancy of the party which has so long abused our patience. The course of proceeding is obvious and has been avowed. For disbursements in one part of the country, where the Government has no money, its sub-Treasurer draws a bill on another where there is money. This bill is paid to the Government creditor, or sold for funds to pay him with, and is thus put into circulation. The sub-treasurer at Orleans is thus a cashier of the branch at Orleans, who issues a bill payable at the

SEPT. 30, 1837.]

Annexation of Texas—Sub-Treasury Bill.

[SENATE.]

mother bank at New York. Thus the circulation of bills is established—bills issued upon the faith of specie or Government paper, in the hands of the sub-treasurers. Or if we are to consider the scheme as a whole, without reference to the parts, then the case is this: the Treasury draws a bill upon itself, and puts it into circulation, payable on demand. Now in what does this differ from a bank bill? It is obvious that this process makes the sub-Treasury a bank of issue and circulation; but is it also a bank of discount? The Government has funds in New York, and desires to have them transferred to Chicago; by what process is it to be done? Why, it discounts a bill of exchange on some merchant who has funds at Chicago, and pays him for it, either in New York or by a Treasury draft on Boston. In this consists the whole mystery of banking. The Government exchanges its credit for the credit of an individual, as in ordinary cases the bank does. And, sir, it is curious to remark how much more complete this system is than the first effort of the banking system. The origin of banking was this: specie was deposited, and certificates issued of the deposit, which were thrown into circulation, and upon presentation were paid. The keepers of the specie soon ascertained that these certificates returned in sums and at periods which might be calculated with great precision, and that only a small portion of them were presented for payment. Under these circumstances, the keepers abstracted two-thirds of the money confided to them, and were not detected for eighty years. This was the beginning of banking. The sub-Treasury system is far more advanced, and the sub-Treasurers no doubt will be equally skilful with the Dutch directors.

As our monetary system is now and has always been organized, there have been large moneyed and commercial institutions co-operating with private individuals, in conducting the exchanges of the country. The regulation and conducting of exchanges is a matter of infinite consequence in a commercial community, and of fearful influence if confided to direct political control. By the proposed system, you establish Executive agents through the country, who, having command of Government funds, go into the exchange market with irresistible power, and control this great branch of commerce, without risk or responsibility. To this huge banking apparatus, to this unchecked control over domestic exchanges, add to the Government the power of manufacturing paper money at its own pleasure; and will any man say that this is a confederated Government? No, sir, it is a consolidated, money Government, holding its tyrannical court in Wall street; for to Wall street are all its tendencies. It has been said that the United States Bank, established in Philadelphia, has a tendency to centralism; it is said that the banking system of the States, with a bank in every village and hamlet, has a tendency to centralism; but what is all this to that irresistible centralism which will be given to New York, when, to her present political banking and commercial power, you add the all-absorbing influence of this new machinery; which, operating with the undisturbed force of singleness and identity, brings every thing within her already too powerful grasp?

I cannot but consider, Mr. President, the policy proposed by the message as the very opposite of the true policy of the Government. We should reform our system, not crush it; we should deal with the circumstances around us, not attempt a new creation. We should not endeavor to effect an entire disruption of the ties which bind up our financial destiny with that of the States and the people, but try to regulate them, for mutual benefit—try to make the banks subserve the just ends of this Government, while they are permitted to perform what the States created them for. It is said that the experiment has failed, and ought not to be again attempted. Mr. President, the great experiment which has failed is that

which the country has made with this administration; that is the fatal experiment, and that the disastrous failure; that is the experiment which it is madness to expect success from. To check and control and contradict and beat down this administration would effect more for the country in producing the true remedy for its disasters, than any thing else that can be done. The remedy which the case requires is confidence. Restore confidence, and you reinstate prosperity; conquer the administration, and you restore confidence. All its principles of finance have been wrong, violent, and preposterous. All men of property distrust it and its projects. If the great object of the vengeance and acrimony of the administration, if the reviled and denounced Mr. Biddle were to-day called to the head of the Treasury, in the place of Mr. Woodbury, it would in ten days add more than a hundred millions to the value of the property of the country; it would loosen those immense deposits now locked up in the banks, and send them abroad into the community; it would dissipate like a cloud the gloom from men's minds. It would do all this, because the community has confidence in the wisdom, integrity, and honor, of that persecuted gentleman. We need not expect the happiness of such a case as I have supposed; but we may, if we choose, revive confidence by other means—by our moderation; by our caution of entering on new experiments; by avoiding warfare upon the moneyed institutions of the country; by showing that we feel deep sympathy for the sufferings of the community, and are willing to contribute within our sphere to their alleviation, and to take our share of the burden. Above all, sir, let us deal tenderly and cautiously with this most delicate matter of currency; and when we have manifested such a temper and such purposes, confidence will be restored.

[Before Mr. PRESTON had concluded his remarks, the whole of which are given above, he yielded the floor for a motion for adjournment; and the Senate accordingly adjourned.]

SATURDAY, SEPTEMBER 30.

ANNEXATION OF TEXAS.

Mr. BUCHANAN presented three memorials from citizens of the city and county of Philadelphia, remonstrating against the annexation of Texas to the Union.

Also, one of the same kind from a number of citizens of Bucks county, Pennsylvania.

All of which petitions were laid on the table.

Mr. PRESTON took this occasion to state that an attempt would be made hereafter to exclude such petitions from the two Houses of Congress as had relation to the subject of slavery, the Southern delegation and the Southern portion of the country being determined to resist their reception; and that, at as early a day as was consistent with the proceedings of Congress, a motion would be made to that effect, for the purpose of testing the opinion of the country and of Congress on this subject; and that he (Mr. P.) stood pledged that the question should be presented here.

SUB-TREASURY BILL.

The Senate then again took up the sub-Treasury bill, with Mr. CALHOUN's amendment.

Mr. PRESTON resumed the floor in continuation of the remarks he commenced yesterday, and spoke about three hours, in reply to his colleague [Mr. CALHOUN,] and other members who had advocated the sub-Treasury and hard-money schemes. [His remarks are given entire in preceding pages.]

Mr. BROWN said, in rising to address the Senate, after the very able and luminous investigation which the subject then before them had undergone, he did so from no vain expectation that he should be able, by any thing he might

SENATE.]

Sub-Treasury Bill.

[SEPT. 30, 1837.]

say, to impart any new interest to the debate, which had been listened to so attentively, or to add any thing of force to the argument by which it had been sustained. The acknowledged importance of the question they were called on to decide, the powerful influence it would exert on the future destinies of the country, either for good or evil, and the deep interest felt in relation to it by the citizens of the State which he in part represented, would, he trusted, excuse him for presenting some of the leading considerations which would govern his course on that occasion.

Before, however, he entered into an examination of the merits of the proposed measure, he would notice very briefly some observations that had fallen from several Senators who had preceded him in the debate. The honorable gentleman from South Carolina, [Mr. PIERCE,] who has just taken his seat, in the commencement of his remarks, had alleged that the late Bank of the United States had been constantly the subject of reference, by those who had spoken in this body in defence of the measures of the administration, and had deprecated its introduction into this debate, as tending to make up an erroneous issue before the country. It surely could not have escaped the observation of that gentleman, that the course of the late administration, in relation to that institution, had been severely arraigned by many of those who were politically associated with him in the progress of the present discussion. Thus invited by the political friends of that gentleman, in some measure, to bring into review the character and conduct of that institution, it could not justly be complained of, either by them or himself, that the invitation had been accepted, and that some reminiscences had been called up, not, perhaps, the most gratifying to its friends, and but little calculated to recommend it to the public favor.

While, said Mr. B., the gentleman evinces so much anxiety that we should avoid making false issues before the country, is he quite certain that he is not himself obnoxious to the same charge? When he imputes to the administration and its supporters, the design of attempting to establish an exclusive metallic currency throughout the country, is he certain that he presents the question fairly? Does he, when he represents them as entering on a crusade to annihilate the State banks, and destroy the paper system, make up an impartial issue? He was well aware that many of the opponents of the administration had used no ordinary industry, for some time past, to produce the impression on the public mind, that it was a part of its system of policy to attempt the introduction of an exclusive metallic currency. The friends of a national bank, had been especially distinguished for their untiring zeal, in endeavoring to create this impression, no doubt hoping to profit by the apprehensions and distrusts which they expected to engender in the public mind, by the use of it against those in power. Neither the late administration, nor the present, had, on any occasion, promulgated this as a part of its policy. Neither, he was entirely confident, had, at any time, entertained a design so utterly visionary and impracticable in the present condition of the country. How, he would ask, could any well-informed person believe, for a single moment, that such was the design of those now in authority, when the Federal Government was entirely powerless to accomplish, by legislation, any such purpose? The States had been in the undisturbed exercise of the right to incorporate banking institutions, from the adoption of the Federal constitution down to the present time. A right now universally conceded by all parties, and which none were disposed to call into question. Congress could not, therefore, interpose its authority, either to suppress existing institutions, or to prevent the establishment of new ones, and could only exercise some indirect control over them through its revenue laws. Notwithstanding the insuperable difficulties which stood in the way of such an attempt, as well as from the want of constitu-

tional power in Congress to effect it, as its own absolute in expediency, yet we daily heard attributed to the administration, as a part of its policy, the intention to destroy the banking institutions of the country, and to substitute in their stead an entire metallic currency. Although the power of Congress was impotent for such purposes of destruction as were imputed, yet apprehensions were gravely expressed, here and elsewhere, that some such deep design was in agitation against the entire paper system, and that the country was to be visited with ruin and desolation, in all its branches of business and industry.

Mr. B. said he thought gentlemen might well dismiss all apprehensions which they seem to entertain for the safety of that system, as the danger, in his opinion, was much greater of its extending its power over the country, than of its being restrained within any reasonable limits. It had acquired a power, he feared, stronger than the Government, and above the control of the people themselves; a power which, if it remained unchecked, would, in his opinion, eventually overthrow our republican form of Government.

The friends of the administration had been reproached by the same gentleman, in no very measured terms, with having abandoned the State banks at this, the period of their greatest difficulty, and with having practised bad faith towards them, by refusing longer to employ them as depositories of the public revenue.

This charge was particularly applicable, said Mr. B., to the banks, and not to the Government. It was they who had abandoned the Government, and violated the trust reposed in them. By refusing to pay over large sums of the public money intrusted to them, they had deprived it, so far as depended on them, of the means necessary to conduct its ordinary operations. In having done this, they had voluntarily changed the relation which they had before stood in to the Government, and had incurred a forfeiture of their right to a longer continuance as its fiscal agents, under a provision of the deposit act. In this condition of things, when the trust reposed in them had been so grossly abused, was there any thing to justify the reproaches which were thus attempted to be cast on the friends of the administration, because they could not again give the banks their confidence, and place the Government again in a situation to be embarrassed by them? The gentleman who had preferred these charges, seemed to adopt a rule which was the very reverse of that generally acted on in such cases. Precisely in proportion as the banks have abused the trust confided to them, does he give them his confidence, and insist on their unworthiness to be continued as the depositories of the public money. When an individual employed an agent to transact his business, a flagrant abuse of the trust confided to him, was the best of reasons for his dismissal.

Those in opposition seemed, on the present occasion, to discard this valuable rule, founded as it was in common prudence; and the very banks not long since so unceasingly denounced by them as wholly unfit to take charge of the public moneys, has suddenly become worthy of all confidence. The pet banks, as the gentleman from South Carolina had designated them, had cause to congratulate themselves that they had been so ably defended at this time by him, who but a short time since denounced their employment in the character of fiscal agents of the Government, as fraught with the most pernicious consequences to the country.

The same gentleman, said Mr. B., had alluded, in terms of sarcasm, to what he was pleased to call the repeated experiments of the party who for some time past had been in power, on the happiness and prosperity of the people of our country. He (Mr. B.) would ask what party was it that first commenced experiments on this subject, so far as the action of the Federal Government was concerned? Was it not those who had defeated the obvious intention of the framers of the Federal constitution, to make it a hard-

SEPT. 30, 1837.]

Sub-Treasury Bill.

[SENATE.]

money Government? Was it not those who, in the early history of this Government, had established a national bank, and thus fixed on the country the paper system? The oft-repeated charge of tampering with the currency, and experimenting on that delicate question, was due, and most appropriately due, to that party who had introduced, and continued to advocate, a paper system under the Federal Government; in doing which, they had not only experimented on the currency, but also on the constitution under which they had professed to act. To recall the Government to the course on this subject, which he solemnly believed to be that originally designed by those who formed it, and to rescue it from the paper money experiments of those who advocated a national bank, was the great object which the friends of the present administration were endeavoring to accomplish.

If to bring the Government back, in this respect, to what its framers intended it; if to restore it to the true constitutional currency, constitute experiments, he, for one, was content to share in the reproach, in common with his political friends, which might be incurred by it.

But it seemed that the gentleman from South Carolina was not only opposed to what he had characterized as experiments, but he was most anxious that the people should get rid also of the experimenters. In this he was unquestionably sincere, as it would no doubt gratify that gentleman to see his political friends placed in power. The public good which the gentleman held out as likely to result from this change, reminded him, however, of an anecdote he had read of a queen of England, of German origin, who had but shortly before arrived in that country. While riding out one day in her carriage, she was saluted by many of the people of London with acclamations of great joy and respect; in return for which she most graciously assured them that she had "come to England for their goods." "Yes," added one of those in the crowd, "and for our chattels too." Mr. B. must be excused if he expressed the belief that the gentleman and his friends felt quite as much interest in the latter as they did about the former of these considerations.

The honorable Senator [Mr. PRESTON] has had recourse to his fruitful imagination to aid him in presenting the policy of the administration, in relation to its financial affairs, in the most unfavorable light. He represents it as a constant succession of changes—one thing to-day, and another to-morrow, and likens its course to the signs in the celestial system, to illustrate what he is pleased to consider its ever-varying policy. He had undertaken freely to condemn all its imputed aberrations, but had not pointed out the manner in which they were to be corrected. He had undertaken to define the position of those to whom he stands opposed in politics, but has left it in some doubt under which of the signs of the political zodiac he himself will be found. But, if he did not err greatly, from certain mysterious givings out, which had fallen from that gentleman in the course of his remarks, he would finally settle down under the inauspicious sign of a national bank.

He had heard the remarks of the gentleman from Georgia, [Mr. KING,] in relation to the message of the President of the United States, with mingled feelings of regret and surprise. He must be permitted to say, that he had done great injustice to that able document, characterized as it was, in his opinion, by decision, moderation, and dignity. The gentleman from Georgia had taken issue with the President chiefly as regarded the expansion of the paper system, alleged by him to have taken place contemporaneously in England with the expansion in this country, and also as to the amount of foreign debt owing from our citizens, which is estimated in the message at thirty millions of dollars, on the 1st of March last. Mr. B. had thought, as well from the debates in the British Parliament as from such writings of that country on that subject as had fallen

under his notice, that the expansion of the paper system there, in the last few years, was almost universally admitted. The gentleman from Georgia was the first, so far as he was informed, to attempt to controvert this opinion. This he had endeavored to do by reading a statement of the amount of bank notes in circulation in England for the last four or five years, in order to show that it had increased but little in that period. He then draws the conclusion, because the amount of bank notes have not much increased in that time, that the paper system had undergone no material expansion in that country.

This was a very fallacious standard, remarked Mr. B., by which to judge of the extent of business done by banks. Their transactions, in paper of various kinds, were often very large, when the amount of their notes in circulation was comparatively small. That the rule assumed by the gentleman from Georgia was not a fair one by which to test this question, and that an expansion of the paper system, to a very great extent, had taken place in England, he begged permission to read a few sentences from an essay on banking, in a late number of that very ably conducted journal, the *Edinburgh Review*. After exhibiting the great number of joint-stock banks which had lately been established in England, the writer makes the following very just remarks: "This rapid increase in the number and in the issues of the joint-stock banks, has been, in part, a consequence, but in a much greater degree, a cause, of the late rise of prices, and of the existing excitement. But we should fall into the greatest possible error, if we supposed that the influence of the banks in question was to be measured by the amount of their notes in circulation, payable on demand. These, in fact, constitute but a comparatively small portion of their obligations. Most of them have been in the habit of trading, not on their own capital or on the deposits made with them, but on credit obtained in the metropolis and elsewhere. Instead of retaining the bills and other securities they have discounted in their coffers till they are paid, many banks have been in the habit of forwarding them to London to be rediscounted. To such an extent has this system been carried, that we are well assured that certain banks, with less than five hundred thousand pounds of paid up capital, have discounted bills and made advances to the extent of from five to six millions, and the engagements of others have even been more incommensurate with their capital." Here, then, is a statement fully proving the expansion of the paper system in England, as alleged in the message, and establishing the important fact that the national bank of England is incompetent to regulate it, and to prevent its running into those excesses, prompted by the inherent principles of the system itself. The great number of bankruptcies which, a short time since, occurred in the great commercial cities of England, was another proof that went to show the existence there of the same speculating mania which had produced such calamitous consequences in this country. He had, not long since, seen it mentioned, in some of the publications of the day, that the number of failures among the merchants and traders in England was much greater than the newspapers of that country had given an account of. There it was not necessary, for political purposes, to send forth exaggerated accounts of mercantile distresses, and to publish daily bulletins of mercantile failures, to alarm the country. The disgraceful and extraordinary avidity with which disasters of that kind had been trumpeted to the world, by a large portion of the opposition press in this country, often magnified greatly beyond what in reality they were, afforded a melancholy example of the reckless spirit of party, which had proved itself but too ready to sacrifice commerce, credit, country, and every thing that was sacred, to the advancement of factious purposes.

There was another circumstance, which he had often

SENATE.]

Sub-Treasury Bill.

[SEPT. 30, 1837.]

seen stated in the publications of the day, and which remained uncontradicted, so far as he knew, that, of itself, and in itself, furnished the most irrefragable proof of the undue extension of the paper system in England; and that a spirit of wild speculation had been abroad there as well as on this side of the Atlantic. Many of her great banking houses connected with the American trade, are said to have actually despatched agents to the large commercial cities of this country, for the purpose of offering the most extended credit facilities to our merchants. It was in this way, that many who but a little while before were clerks, without either the capital or experience necessary to conduct large commercial operations, were suddenly converted into great importing merchants; and having failed for millions, the consequences of their own imprudence were now to be charged to the policy of the administration. It was this stimulus to overtrading, which had been furnished by the great expansion of the paper system in that country, united with the same cause here, that had proved so disastrous to the merchants of our large cities. The very excitement which had characterized it, in England as well as in America, clearly made out its diseased state there as well as here.

As to the second issue which the gentleman from Georgia had made up with the President, no precise data had been furnished to the country by which it could accurately be decided. The President, in his message, estimates the amount of debt owing in Europe, from our citizens, on the first of March last, at about thirty millions. The gentleman from Georgia thinks it much larger, and undertakes to prove it, by adding to what he supposes to be the mercantile debt, all the loans which have been negotiated in Europe, by banks, railroad companies, and other corporations in this country. The President surely had never intended to comprehend, in his estimate, all the debts and loans contracted in Europe by corporations, some of which were payable not until many years hence. On the contrary, he speaks of the debts which had been contracted by our "citizens," thus obviously alluding to the mercantile debts due by individuals, as distinguished from those contracted by corporations. As he had already remarked, we had no means of arriving at certainty in estimating the foreign mercantile debt. He had, however, understood that the best informed merchants had supposed it not to have exceeded the sum of thirty millions on the 1st of March last. Its rapid liquidation, as is proven by the great fall in the premium on bills of exchange on England, goes greatly to favor the supposition that it had not exceeded that amount, or otherwise it could not have been so much reduced in so short a time.

The gentleman from Georgia attributes much of the disaster which has fallen on the nation, in its pecuniary affairs, to the policy of the late President in relation to the national bank, and thinks that what he has been pleased to call "glory," is in a rapid state of depreciation. Mr. B. was neither an admirer of what was called national glory nor individual glory. If, however, it was meant to convey the idea that the distinguished individual who had lately retired from the station of Chief Magistrate of this nation to private life, no longer enjoyed that exalted eminence in public esteem which he had before occupied as a patriot statesman, he begged permission to differ from him. In the single act which the gentleman from Georgia had complained of, the late President had done enough to entitle him to imperishable fame, and to hand his name down to future ages as one of the great benefactors of mankind. In adding his humble testimony to the eminent public services of the late President, he was the more gratified to do so as it was a just tribute due to an individual now no longer in the possession of official station, but in the unostentatious retirement of private life.

He could not concur with those who sought a solution

of the causes which had brought about the present commercial distress and embarrassment of the country in the policy of the late administration. Cause did not more certainly produce effect than did the paper system occasional revolutions in trade and commerce, whether it existed in the form of a national bank or of state institutions. This was undeniably proven by parallel cases of distress, which had occurred in this country during the existence of the late national bank, and which had repeatedly occurred in England with a similar institution. But, besides the ordinary tendency of that system to visit on the country occasional pecuniary distress, he saw, in the violent political warfare which the United States Bank and its indefatigable partisans had waged against the party in power for the last five or six years, many of the causes which had led to the present state of things, and which the real perpetrators, with characteristic dexterity, were now endeavoring to charge to the policy of the late and present administrations.

The primary causes which had led to this catastrophe, in his opinion, were not of recent date, but had their origin some five or six years back. They originated in that rapid succession of expansions and contractions resorted to by the United States Bank when it was seeking to effect a recharter. The history of no similar institution in the world had been marked by so many and such sudden fluctuations in its management. Unless all past experience in banking is false, unless all that has been written by the wisest men on this subject is to be repudiated as untrue, this course of itself was sufficient to give an impulse to that spirit of speculation, which, roused into action then, has since spread far and wide over the country.

Among the most effectual of these expansions by the Bank of the United States in doing mischief, was that in the latter part of the year 1834, and in the beginning of that of 1835, by which it increased its discounts, in the course of a few months, from about forty-five millions of dollars to about sixty-five millions. It would be borne in mind, that this enormous increase took place some time after the removal of the public deposits from that institution, and after the State banks, strengthened by receiving them, had filled the vacuum in the moneyed circulation of the country, occasioned by the great reductions in its loans made by the Bank of the United States shortly after the deposits were removed. The United States Bank having thus discounted largely, when the channels of circulation were already full, powerfully contributed to create that redundancy in the paper system which has since produced so much mischief. Besides, he would ask what period has there been, since that time, that the country has enjoyed repose, from the violent and continual assaults made by that bank, and the powerful party which has acted with it, on the financial policy of the Government? What expedient has been left untried by them to frustrate and defeat that policy? Is it, therefore, now to be tolerated, that the perpetrators of so much of this mischief are to escape, by raising a false clamor against others? Imperceptible and difficult of detection as the means often were employed by a great moneyed power to accomplish its purposes, yet he could not doubt that the public intelligence was fully competent to understand the sinister agency which had labored with untiring perseverance, and at the hazard of destroying the prosperity of the country, to effect its designs.

They had heard much of reproach and vituperation cast on the administration for having, as was alleged, failed to present some plan by which to relieve the country of its embarrassments. Did gentlemen suppose, when they seemed to consider Congress so entirely competent to relieve the country from its embarrassments, that it would pay the debts of those involved, and restore the losses of those who had been unfortunate? Their knowledge of the principles of the constitution forbade the supposition that this was the plan of relief desired by them. Every

SEPT. 30, 1837.]

Sub-Treasury Bill.

[SENATE.]

measure of relief, which, in his judgment, the exigencies of the times called for, and which was compatible with the constitution, had been presented for their consideration, and had received the sanction of that body.

Was the bill which extended a very liberal indulgence to the merchants on a large amount of debt due to the Government, a measure bringing no relief? Was the bill granting further time to the banks to pay over the Government deposits, and which would enable them to extend more lenity to their debtors, of no value to the community? Would the bill which proposed the issuing of ten millions of Treasury notes, rendered necessary by the indulgence extended to the merchants and deposit banks, produce no beneficial effect? The very anticipation of the passage of these measures, and of the latter more especially, it was said, had already, in conjunction with other causes, produced a favorable influence on the money market in the large cities. If gentlemen in opposition, who had presented such exaggerated pictures of distress, knew of other and better remedies than those already proposed, and did not bring them forward, the country would hold them answerable for a dereliction of public duty. The physician who stood by and witnessed the agonies of the patient, and who knew the remedy, and yet would not apply it, was guilty of culpable negligence. A national bank, though not openly avowed as such, is, no doubt, in the estimation of gentlemen, the sovereign cure for the distresses of the times. Why, then, is it not proposed? Wherefore is there delay in bringing it forward? Is it apprehended that the patient is not yet sufficiently afflicted by distress to make him willing to receive the remedy? Is it necessary that he should be further tortured by bank chastisements, and alarmed by panic cries of distress, to subdue him to an acquiescence in the plans of those who have his good so much at heart? This plan of operations had been once before tried; it had failed then, and he predicted it would fail again.

Having, said Mr. B., replied to some remarks of honorable gentlemen which he considered of a character requiring especial notice, he would now present some of the principal considerations which had induced him to give the bill then before them, and the amendment proposed by the Senator from South Carolina, [Mr. CALHOUN,] his cordial sanction and support. The same considerations of wisdom and of common prudence, which would induce an individual to change an agent in whom he had reposed a trust, and who had proved unfaithful or incompetent, should admonish us, in our public capacity, to withdraw our confidence from those fiscal agents of the Government, who had so signally failed in performing the duties undertaken by them. The State banks had been tried as fiscal agents of the Government, under circumstances the most favorable to success. The nation had seen, with astonishment, in a period of profound peace, with no public debt burdening our resources, and with a Treasury abounding in means beyond all former example, the Government of the United States suddenly deprived of the means to carry on its ordinary operations, by the determination of the banks having possession of its revenues to suspend specie payments. Was it the part of wisdom, under such circumstances, to renew the connexion between the Government and the banks? Was it proper for those entrusted with the duty of conducting public affairs, again to subject the Government to the recurrence of the same evil, with perhaps still more aggravated injury?

For one, he wished to see the Federal Government taken out of the keeping of irresponsible banking corporations, and subject to be controlled alone by the will of the people, its only legitimate masters. So long as banks were made the depositories of the public revenue, the Government was dependent on them in conducting its most important operations, either in peace or in war. Its action might be arrested by their withholding its means in periods of the

greatest public emergency. It could not in war command a squadron to sail, or put a battalion in motion, if the banks entrusted with its revenue should determine to withhold it. Its very existence might be endangered by being brought to a pause for the want of means. The reflection was humiliating, that a Government, which was noble in the republican simplicity of its structure, and destined to solve the problem of the capacity of man to govern himself, should be made to depend on the will of banking corporations for so important an element of its success as the certain command of its revenue. In placing it, in this way, at their mercy, it was exposed in its financial affairs to all the evil influences which they might exert, whether arising from caprice, political hostility, or the vicissitudes of trade. Nor was this exhibiting the danger arising from this system in its true extent. It could be demonstrated that the banks of any single one of the large commercial cities, in a period of overtrading, would have it entirely in their power, by suspending specie payments, to compel a general suspension of all the banks throughout the United States; and, by doing so, arrest the regular operations of the Government! The banks of a single city in one of the Eastern States, at a very gloomy period of the last war, availing themselves of the balances which had accumulated in their favor, in the course of trade, against the large commercial cities of the Middle States, had, by a demand on them for payment in specie, caused a suspension by the banks throughout the United States! This movement struck a blow at the Government, which had well nigh proved fatal to the success of all its operations in the great contest in which it was then engaged. That it was, in a great degree, the result of hostility to the cause in which the country had embarked, was then extensively believed, nor has that impression to this day been removed.

The State banks are, from the course of commercial transactions, so intimately and closely connected together, that what affects any portion of them in any one of the principal cities, is, to a greater or less extent, felt by all. The stoppage of the banks at either of the great commercial points, almost with the quickness of electricity, is felt by all, and is followed by all throughout the country, as a measure of self protection. If this was proven to have been the case by the occurrence of that kind which took place in the last war, the circumstances of the country which now exist, are still more peculiarly calculated to produce such a result. The great increase in our internal trade, as well as foreign commerce, and the rapidity of communication now existing between the remotest points of our country, had produced a still closer connexion and sympathy between the banks than formerly existed, and doubly subjected all to the danger of being affected by causes operating on a few at a single great commercial point.

He had shown the great uncertainty and danger which the Government, by depositing its revenue with the banks, would be continually liable to, in its financial affairs. He had shown that these results might be brought about by the determination of the banks, at a single leading commercial city. Was it the dictate of wisdom thus to place this already great and rapidly growing republic under the control of a few great commercial cities, in a matter so materially involving its success, as well as its very being? Was it sound policy in that way to expose its financial action to the deleterious influence of the national Bank of England, and the great moneyed power of that country? Much the larger portion of the foreign commerce carried on by our great cities, was with England. He was informed that even a very large portion of the trade carried on by American merchants with other foreign countries, was conducted by means of credit obtained through the great banking houses in that country.

It was the misfortune of our great cities, if it was to be regarded as such, almost constantly to stand indebted to

SENATE.]

Sub-Treasury Bill.

[SEPT. 30, 1837.]

England in a very large amount. Whenever our merchants overtraded with her to any considerable extent, her national bank could, if she chose it, produce a pressure through them on our city banks, and produce the hazard of their stopping specie payments. Her powerful agency to accomplish such a catastrophe may be seen in the suspension of specie payments by all of our banks, which has lately occurred in this country. The first movement which led to that unfortunate result was that made by that bank, by which she compelled the great banking houses of England, connected with the American trade, to discredit American merchants. Indebted to England as they were in a sum estimated at about thirty millions, and unable longer to draw bills to meet their payments on her banking houses, which had before given them almost unlimited credit, they were driven to the only other expedient left them of making remittances in specie, the demand for which compelled the banks first in our great commercial emporium to close their vaults.

Nor would a national bank have shared a different fate, if one had been in existence, under the same overwhelming causes. It would, no doubt, have been forced, under the great and extraordinary pressure for specie, to have yielded to the storm. To reunite the Government with the banks, would be, therefore, to subject it, in a period of overtrading, to the dangerous influence of the great moneyed power of England, operating at such a time, first on our merchants engaged in foreign trade, next on the banks, and, through them, on the finances of the Government. If its independence was to be preserved—if its regular constitutional action was to be kept up, impelled alone by the vigor of the public will—then the separation of its financial interests from the banks entirely was a measure indispensable. That alone could secure to the people, in its administration, those great and important ends in a republican form of Government to which he had alluded, and free it from the extraneous influences which threatened such serious mischief.

Nothing, said Mr. B., was of greater importance to the happiness and prosperity of a people, than stability in the monetary concerns of a country. Could any one hope to see so desirable an object accomplished so long as the Government remained connected with the banks, by whom the circulating medium of the country was almost entirely supplied? Could any one hope to see an end of those wars on the currency, which had been so incessantly waged, for some years past, by the party opposed to the administration, in the hope to convince the people that they had acted unwisely in refusing to agree to the recharter of the national bank? Was it to be expected, if the Government was again reunited to the banks, that party violence and ambition would not again strike at the moneyed affairs of the country, constituting as they did the most sensitive nerve in the body politic, with a view to drive the administration from power? When the national bank was refused a recharter, it became the signal for that attack on the State banks which has been so incessantly kept up ever since. The removal of the public deposits from that institution, furnished another excuse for the same course of hostility, greatly embittered by their having been placed by the Government in the State banks. When commercial embarrassments began to thicken over the country, when it was plainly perceived by the keen-eyed sagacity of the managers of the moneyed power that the banks had endangered themselves by excessive issues, then it was that the war was pushed with renewed vigor, in the hope, no doubt, that the blow which would result from the suspension of specie payments would prove decisive of the fate of the administration.

He had noticed some weeks previous to the banks having stopped specie payments, the simultaneous movements of certain presses devoted to the interests of the Bank of the United States, tending to produce that result. They predicted that the banks would stop, and some of them zeal-

ously urged them to that course. He did not positively know that it was their design through the instrumentality of a panic, to bring about that result, to which their labors had powerfully tended for so long a time; but the time, the manner, and the circumstances, all went strongly to favor that supposition. The time selected for this movement, when mercantile failures were daily occurring, was of all others the most favorable to produce distrust and alarm in the public mind, as to the solvency of the banks, and, consequently, to cause a general demand on them for specie, by depositors, and those who held their notes. The manner of the attack, by commencing it about the same time at three or four important points, distant from each other, showed it to be, if not a matter of concert, at any rate a singular coincidence. The circumstances under which it was made, were exceedingly well calculated to produce the political effect doubtless ardently desired by those engaged in the crusade against the administration. Very many of our citizens were involved in heavy pecuniary embarrassments, the fruits of the wildest speculation. The States—many of them in the anticipation of receiving their proportion of the surplus revenue—had embarked in expensive plans of improvement; and the whole of the public revenue belonging to the General Government was deposited in the banks, thus liable to be affected. In this state of things, it was no doubt imagined by many of those who are desperately determined on producing a political revolution, that to stop the banks was to pull down the administration. It was a blow which, by the sufferings it inflicted, was to awaken the slumbering community to the merits of a national bank. It would disappoint the States in their expectations of receiving the surplus revenue. Finally, that it would stop the wheels of Government, and afford the enemies of those in power the opportunity of exultingly pointing to its bankruptcy, and proclaiming the mismanagement of its revenues. He regarded the great body of those in opposition as honest and patriotic citizens, and was far from believing that they were prompted by such motives as he had alluded to; but, at the same time, he felt regret at being compelled to express the belief, forced on him by the circumstances he had described, that there were some to be found among them ready to compass their objects at the expense of the prosperity and best interests of their country.

It would not, he thought, be doubted, on a candid review of the history of the last three or four years, that the connexion between the Government and the banks had invited and been made the cause of the harassing warfare which, to subserve party purposes, had been, in that space of time, almost constantly kept up against the deposite banks, and, consequently, affecting to a great extent the interests and business of the country. The streams of the money circulation never can run clear or smooth while they are liable to be muddled and lashed into impetuous violence by being mingled with political excitement. The country will be perpetually liable to experience inundations at one time in its circulation, and at another to suffer sudden reactions. The true remedy is, then, to remove the cause by severing the connexion between the Government and the banks. By doing this, many of the most powerful motives to produce agitation on this most delicate and sensitive question will be effectually removed.

Another consideration, by no means of secondary importance, in favor of such a step is the expediency, if not absolute necessity, of confining within more moderate bounds the relation of debtor and creditor between the Government and its citizens. While the banks are employed as the depositories of the public revenue they must necessarily loan it out to individuals, to indemnify themselves for the trouble and risk in keeping it, and for the interest which they are bound to pay on it to the Government. The public money thus loaned out by them, though nominally due to the banks, is, in reality, owing to the Govern-

SEPT. 30, 1837.]

Sub-Treasury Bill.

[SENATE.]

ment. The relation of debtor to it, in this way, becomes ramified throughout every part of the country; a relation which, when it exists to any considerable extent, is dangerous to the existence of the Government which creates it, and destructive of patriotic sentiment in the citizen. It is the firebrand by which faction may inflame public feeling, and by which civil war may be lighted up. If the Government is at any time compelled to demand its money from the banks, when they are pressed, designing politicians would not fail to ascribe the pressure which it might occasion to tyrannical and unworthy motives.

Let us suppose that the Government, at the present time, instead of granting indulgence to the defaulting banks for the large amount of money due it, was to yield to its necessities, and resort to rigid measures to enforce its immediate payment, can any one doubt but that appeals would be made to all the interested and selfish motives of those who are indebted, to array them against those at present in power? We need only refer to the criminal conduct of a certain class of individuals who had threatened resistance to the Government, not long since, because the postages were demanded of them in the legal currency of the United States, when they well knew it would be an open violation of law for officers of the Government to receive any other.

The measure proposed was no innovation on the principles of our Government, but was, in fact, a revival of those practised on in the early days of the republic, under the very extensive powers given the Secretary of the Treasury, by the law first organizing that Department. When but few banks existed at that time, individuals engaged in the collection of the revenue, in many instances, were required to keep and disburse the public money when called on by that officer. To him the system of collecting, keeping, and disbursing the public moneys of the Federal Government, through its own officers, was the most obvious and simple that could be devised. Nothing appeared more natural and appropriate than that a Government should execute its own laws, through officers appointed by itself, and accountable to its authority. When the constitution was formed there were but few banks in the United States. Its framers, therefore, must have intended that its finances should be managed by its own officers, otherwise they would have given the power, in that instrument, to Congress, to create a bank corporation for that purpose. As the system now proposed, therefore, was that evidently intended by the framers of the constitution, gentlemen paid them but a poor compliment when they denounced it as fraught with so much danger to the liberties of the people. Of nothing was he more entirely convinced than that its tendency was to lessen greatly Executive patronage, instead of to increase it, as had been so confidently insisted on by those who were opposed to it. It proposed no addition to the number of public officers already existing. It involved an expense of only comparatively trifling amount. Where, then, was the increased patronage so much complained of? That it would greatly diminish the patronage of the Executive branch of the Government, to discontinue the employment of the State banks as its fiscal agents, the speeches of gentlemen in opposition could be cited abundantly to prove.

When the law was, at a former session, under consideration by which they were made the depositories of the public revenue, it was then represented by them as placing the State banks under the control of the Executive, and organizing a moneyed power to be wielded at his will for the destruction of the liberties of the country. Politically hostile to the administration, as he believed much the larger portion of those who managed them were, in reality they brought no strength to the party in power, but were rather a source of weakness. But, to an administration of congenial politics with themselves, they could bring a power and influence dangerous to the liberties of the country. By ceasing to employ them, the Government, in effect, re-

moved the means of its influence from a vast number of persons who were engaged in managing those institutions, and, so far as their fiscal agency was concerned, were to be regarded as its officers.

It was then almost susceptible of positive demonstration that the proposed measure, by greatly reducing the number of those engaged in conducting the fiscal affairs of the Government, to that extent diminished the patronage of the Government.

The president, in recommending a severance of the connexion between the Government and the banks, had assumed an attitude of dignified firmness and moral elevation worthy the character of the Chief Magistrate of the nation. It carried out the doctrine into practice, that simplicity in the administration of a Government founded on the will of the people, while it is the readiest means of perpetuating its principles, is the surest way of securing their esteem and approbation. It voluntarily proposed to relinquish whatever of power and influence might be derived to the Executive branch of the Government from a connexion with moneyed institutions, and, in doing so, would leave it to repose on the wisdom of its policy, and the merits of its measures, for public support.

The objection, said Mr. B., that to carry into effect the measure proposed would be an attack on the banking institutions of the country, and, through them, on the people, was, to his mind, equally unfounded.

Unless it could be proved that the banks were the people, it would, he thought, be difficult to establish this assumption. He knew that the paper system was rapidly gaining a powerful ascendancy over public opinion; but it had not yet so entirely usurped their privileges and prerogatives as to make them and the banks convertible terms. What right, he would ask, had the banks to the custody and enjoyment of the public revenue? Was it at all necessary to the maintenance of their proper credit that they should be employed to manage it? The first inquiry was answered by the conduct of the banks in withholding from the Government its means, and thus crippling its operations. To the second, it may very properly be answered, that they, like individuals, should be left to their own intrinsic merits and means to sustain their credit. If they conduct their business on prudent and sound principles of banking, and act with honesty and fairness in their transactions, their credit will be, as a matter of course, established. To that extent they are entitled to credit, and no more. Any other credit beyond that is fictitious, and productive of injurious consequences.

Many of the banks who had been in possession of the Government deposits had, no doubt, been injured by the excesses to which they had been stimulated in consequence of it—excesses proving alike injurious to themselves and those who had borrowed of them. Its tendency was to expand the paper system beyond its proper bounds, by enabling the banks to discount largely on funds not their own; and when called for, as they must of necessity be by Government at short intervals, the frequent consequence would be a pressure on the community by the banks who loaned them, that they might be enabled to meet the Government demand. The effect, then, of using the banks as depositories, in this point of view, is to produce fluctuations in the bank note currency of the country, and to produce those shocks in trade and business so detrimental to both.

An objection, not less specious and unfounded than that which he had just noticed, and which had been used as an argument against the policy of the bill, was, that it attacked what, in his judgment, was erroneously called the credit system. Towards the true credit system of the country none felt more attachment and respect, and a more anxious desire to preserve it, than himself. But, if it was meant that the effect of the measure would be to put an end to that stupendous system of legalized fraud and plunder which,

SENATE.]

Sub-Treasury Bill.

[SEPT. 30, 1837.]

under every variety of the paper system, had, for some time, preyed on the industry and prosperity of the country, he, for one, would rejoice at such a result. He most sincerely wished to see that system of credit which was the offspring of merit, probity, or wealth, protected to the fullest extent; but not that system which prompts its followers to seek their ends through all the avenues of gambling and fraudulent speculation. It was a system by which the more honest, but less wary, class of society were made victims of the schemes and arts of the more practised and designing.

Among the strong recommendations (continued Mr. B.) in favor of placing the public moneys in the hands of individual depositaries, is the perfect and entire power which it affords to the Government at all times, through its agents, to look into the state of its funds by actual inspection. The bill provides that the Secretary of the Treasury shall cause examinations of the moneys on hand and accounts of each depositary to be made at least once a year, and as much oftener as he may deem necessary; and, for this purpose, authorizes him to appoint special agents. In this way, the Government will always be enabled to know the actual condition of its finances. This power cannot be exercised over the State banks, because they are corporations existing independently of the will of Congress, and, therefore, subject to no mode of investigation by the Secretary of the Treasury other than that afforded by their returns. Nor would the case, in this point of view, be improved if a national bank existed, and was made the depository of the public revenues. The resistance made by the officers of the late bank to a committee appointed by the House of Representatives to examine its condition, shows the power and will of moneyed corporations to evade investigation, even by those from whom they hold their charters.

As to the comparative safety of the two plans, in taking care of the public revenue, as a whole, it was in favor of the system to be conducted by individuals. Some of them might, occasionally, become defaulters; as, in the management of human affairs, under the wisest system, it was impossible to avoid casualties and difficulties. But, under no circumstances, could it be expected a state of things would occur which would deprive the Government of the use of its entire means, as had lately been the case, by the banks having resorted to a suspension of specie payments. In that aspect of the case, then, the question of superior safety was against the banks as depositories of the revenue, and in favor of the plan proposed.

The proposition of the gentleman from South Carolina [Mr. CALHOUN] so to amend the bill as to make the public dues, of every description, after a certain period, payable only in gold or silver coin, or in such notes, bills, or paper, issued under the authority of the United States, as may be directed to be received by law, met his hearty concurrence. The able arguments by which it had already been enforced would occasion him to confine his remarks to a few of the principal benefits which would result to the country from its adoption.

It would, in the first place, free the Federal Government from all the casualties, difficulties, and embarrassments with which its financial action had been so repeatedly oppressed by the receipt of bank paper. It was not only important, in the operations of Government, that it should be able promptly to command its money, but that it should be of a kind universally current, as well in the country as out of it. Money was the great agent which gave to Government its action and efficiency. In proportion as it was good, was the energy and success of its operations in periods of emergency. In proportion as it was debased, was its action weakened, and its success jeopardized.

Much of the success of a Government depended on its practising the principles of justice in its transactions with its citizens, by which it inspired sentiments of respect, and

strengthened it in their affections. Disbursing, as it did, annually large sums of money in the public expenditures made throughout the country, it could not fail to lessen those sentiments of respect and attachment by making its payments in a currency of less value than that recognised by its constitution, because, in doing so, it would violate the principles of justice which itself had established.

Again: its tendency would be, if aided by the passage of another bill then on the table, proposing to abolish credits in the payment of all the public dues, and substitute cash payments in their stead, to check that spirit of over-trading and excessive importation which had prevailed to such an extent among our merchants engaged in foreign trade. From it, evils of the greatest magnitude had arisen to the currency of the country, as well as to our trade and commerce at home and abroad. The great facilities afforded by the banks in obtaining loans would powerfully stimulate our merchants to over-trade, so long as bank notes were made receivable by our laws in payment of the customs. The effect of this measure, then, would be to reduce the imports from abroad nearer to the standard of our exports, and remove the evil effects on the business and currency of the country, always the consequence of over-trading. In doing this, the receipts of the Government would be lessened and brought down to a point making it incumbent on it to practise economy in its expenditures.

Another effect, of not less public utility, which would result from it, in his opinion, as auxiliary to the benefit of placing the public money in the hands of individual depositaries, was the suppression, to a great extent, of that system of fraud and speculation in the public lands which was so much and so justly complained of throughout the country. The specie circular had proved inadequate to effect this object, though it had, no doubt, contributed to lessen the evil. The specie paid into the hands of the receivers for the purchase of public lands was, under the late system, deposited in the banks, and by them again loaned out to land speculators, by whom it was again paid to the receivers, and again deposited in the banks—the same identical specie thus performing a perpetual round, and employed in that way to effect numerous purchases in the public lands. If bank notes are again made receivable in the public dues, the facility of obtaining them, by loans from the banks, will revive the spirit of speculation in the public lands, and the public domain will soon pass almost entirely into the hands of speculators. By requiring payment in gold and silver, and placing it in the hands of individual depositaries when collected, it effectually cuts off the means of conducting these operations: first, because the banks will not loan their specie to speculators, when they know it will not be returned to them again in the shape of Government deposits; secondly, when paid into the hands of individual depositaries, it cannot be used in loans to speculators without incurring very severe penalties, but will return to circulation among the public only in the form of Government disbursements.

If the observation that the adoption of this principle would furnish "one currency for the Government, and another, of inferior value, for the people," was intended for argument, certainly none was more shallow and easily refuted. If it was intended as a mere attempt at popular delusion, then he would say none was more easily detected. To whom, he would ask, did the Government belong, for whom this money was to be collected? Why, to the people. To whom did the money belong, thus collected? To the people. For whose benefit was it to be expended? Certainly for their benefit. Nothing could be of such great public utility as the steady and regular administration of the Government, for which purpose it was to be used.

If carried into practice, it was destined, as he believed, to perform an eminently beneficial public purpose. It

Oct. 2, 1837.]

Deposit Postponement Bill—Renewal of Revenue Bonds.

[SENATE.]

would raise the Federal Government above the influence of bank corporations, and place it on its own proper energies, to discharge the great and important trusts confided to it. It would bring into circulation, necessarily, more of the precious metals, and in that way form a mixed currency, now almost exclusively composed of paper. The liberties and prosperity of the country were now almost sinking beneath the effects and abuses of the paper system. The Federal Government was the only power competent to redeem it from that situation. It was bound, constitutionally, to exert its power to restore, as far as it could, the only kind of currency it was authorized to establish.

That it would prove of great advantage to the country he could not doubt; not only to the people themselves, by being the means of diffusing a more extensive metallic currency, but to the banks, likewise, by affording them, in its wider circulation, a fund to recruit from in times of exigency. In short, that which was denounced as a measure destructive to the banks, and to the interests of the people, was a measure, in his estimation, eminently calculated to benefit both.

Mr. B., in conclusion, said it was now very apparent that the decision of Congress would be ultimately narrowed down to a choice between the plan of fiscal agency then proposed, and the establishment of a national bank. The State banks had, on a fair trial, proved themselves incapable of fulfilling the duties of such a trust, and if again resorted to, would, in all probability, sooner or later, present a repetition of the difficulties in which they had recently involved the Government and the country. To the creation of a national bank, in any form, he had objections of an insuperable character. The argument made by gentlemen who had preceded him in debate, against its constitutionality, was unanswered and unanswerable. The objections to it, as a measure of expediency, were equally strong and decisive. The remedy which it would afford would be worse than the disease, which its friends professed its capacity to relieve. Besides its tendency to produce pecuniary distress for some time before it could go into operation, if established under the pressure of the present pretended necessity, it would be fixed on the country, notwithstanding any abuses it might commit, for ages to come. The argument would be constantly and readily used by its advocates, that it must be continued, or the prosperity of the country ruined.

Its success would bring into power, as a necessary consequence, the political party who have supported such a system with such zeal and perseverance in all its fortunes. With such an institution, devoted, as it would be, to the party that placed it in ascendancy, the Government would become stronger than the people, and their will would be superseded. It would be hailed as a triumph by the friends of the moneyed power in America and Europe, over that spirit of liberty and independence now existing in the republic.

When Mr. BROWN had concluded,

The Senate, by general consent, laid aside this bill, and proceeded to the consideration of the amendment of the House of Representatives to the

DEPOSITE POSTPONEMENT BILL.

The amendment of the House limits the operation of the bill to January 1st, 1839; that is, postpones the payment of the instalment to that period instead of indefinitely.

Mr. WRIGHT said the amendment had been informally examined by the Committee on Finance, and they had recommended that the Senate unanimously agree to it.

Mr. TIPTON said that he was opposed to the bill as it passed the Senate, and could not suffer it to pass as amended by the House of Representatives without his dissent. He considered this Government pledged by every principle of honor and justice to make the deposits in strict con-

formity to the deposit act of 23d June, 1836; the States had a right to expect it, and in most instances had made appropriations of the money. The State from which he came had appropriated the three instalments heretofore received, and had created expectations for the appropriation of the fourth, and would be greatly disappointed should Congress postpone or withhold it, as proposed by the bill as returned from the House.

The deposit act of 1836 made it the duty of the Secretary of the Treasury to ascertain and state the amount that would be deposited with each State on the 1st of January, 1837. He had done so, and had paid three instalments; and would Congress now step in and say to the States, we expected to be able to deposit the sum stated by the Secretary of the Treasury, but we were mistaken; times have changed, you must do without it; the Government will be embarrassed if we give you the money. Mr. T. considered it a relief measure to make the deposit in good faith. This Government could not make a more deadly stab at the interest of the State from which he came. The Western banks had large amounts of public money deposited in their vaults, and if we permitted the deposits to be faithfully made, the banks would transfer their public money to the States, it would remain and enter into circulation amongst the Western people; the Legislature could indulge the banks, and the banks could indulge their debtors, thereby making it a permanent relief measure. But if we withhold the fourth instalment, (said Mr. T.,) and force the silver from the Western banks into the Treasury of the United States, the consequences will be, that you will cripple the new States, check the internal improvements now going successfully on, and distress all classes of our people.

Mr. T. said this bill passed the Senate some days ago, soon after he reached the city, and while the state of his health forbade his expressing the strong objections he entertained to the bill. He now took occasion to say that the effects of this measure would be most ruinous to the interest of the people and the State he had in part the honor to represent here. Mr. T. concluded by calling for the yeas and nays, which were ordered; and

The question being put, the Senate concurred in the amendment of the House by the following vote:

YEAS—Messrs. Allen, Bayard, Benton, Black, Brown, Buchanan, Calhoun, Clayton, Fulton, Grundy, King of Alabama, King of Georgia, Linn, Lyon, Morris, Nicholas, Niles, Norvell, Prentiss, Roane, Robinson, Smith of Connecticut, Strange, Swift, Walker, Wall, White, Williams, Wright, Young—30.

NAYS—Messrs. Pierce, Tipton—2.

RENEWAL OF REVENUE BONDS.

Mr. GRUNDY, from the Committee on the Judiciary, to whom the subject had been referred, reported a bill to regulate the fees of District Attorneys for the renewal of custom-house bonds. Read, and ordered to a second reading.

This bill fixes the fees at five dollars for each renewal.

On motion of Mr. BAYARD,

The Senate adjourned.

MONDAY, OCTOBER 2.

Mr. GRUNDY expressed a desire to call up the bill reported by him on Saturday last, (and ordered to a second reading,) in relation to regulating the fees of the District Attorneys in cases of renewal of merchants' bonds. He was the more desirous that it should be taken up to-day, because, if the House of Representatives adopted the joint resolution for adjournment on the 9th instant, there would not be an opportunity of passing it this session, and it was a measure greatly needed.

The bill not having been printed, the second reading was

SENATE.]

Sub-Treasury Bill.

[Oct. 2, 1837.]

delayed, and the Senate passed to the order of the day, viz: the bill imposing additional duties on public officers as depositories in certain cases.

SUB-TREASURY BILL.

The sub-Treasury bill being resumed, Mr. PRESTON gave notice that, when in order, it was his intention to move an amendment to the bill pending before the Senate, making the State banks special depositories of the accruing revenues of the Government. It was his intention to offer such an amendment, whatever might be the result of the vote on the amendment of his colleague, [Mr. CALHOUN.]

Mr. BAYARD, of Delaware, then rose, and addressed Senate as follows:

Mr. President: No one can be more deeply impressed with a sense of the importance of the subject now under consideration than myself, considering as I do, that it involves in its consequences the welfare of the whole community. In the course of the debate which has taken place, many collateral matters have been introduced, which have diverted the attention of the Senate from the real question, to which I wish again to draw its attention.

The bill now before us proposes three measures: the first of which is, to dissolve all connexion with the banks; secondly, to substitute the agency of certain officers, thirteen or fourteen thousand in number, for that of the banks in keeping the revenues of the Government; and, thirdly, to receive, after a certain period, nothing but gold and silver coin in payment of Government dues. The objects which are said to be contemplated as the results of these measures are, first, to secure the Government against loss in the keeping of its treasure; and, secondly, to provide a currency of gold and silver coin, which is declared to be the constitutional currency. The measures themselves have nothing to recommend them beyond their supposed tendency to accomplish these objects. Before proceeding, however, to the discussion of these matters, it is necessary to have a just and precise conception of the objects, the accomplishment of which is said to be contemplated.

The first, which respects the fact of security against loss in keeping the public treasure, is easily understood; but the other, and favorite object, of providing a currency of gold and silver coin, requires some explanation. It has been supposed, sir, and I confess I entertained the same opinion, that some of those who advocate these measures were bent on procuring a purely metallic currency for the country, to the exclusion of all paper; while others were aiming only at a larger infusion of the precious metals into the circulating medium, being perfectly satisfied that a considerable part of it should still consist of convertible paper. I am convinced, however, from a closer attention to what has heretofore passed on this subject, that the views of all of us are directed merely to the enlargement of the metallic portion of the currency, by changing the ratio of the mixture of paper and coin, as it existed before the suspension of specie payments. The case is not, therefore, rightly presented by the Senator from Missouri, [Mr. BENTON,] when he states it to be a contest between opposite systems of paper and coin; but, in fact, whatever difference of opinion exists in relation to the currency is merely as to the relative proportions in which paper and coin should compose it.

No one, at least to my knowledge, Mr. President, has professed to countenance, much less to recommend, an inconvertible paper medium, except indeed, the Senator from South Carolina, [Mr. CALHOUN,] who seems to think that a Government paper is the only safe one. I shall proceed, therefore, to show what are the different views entertained on this subject, and the probable effect which the different propositions heretofore made for the suppression of notes of

a low denomination would have upon the currency. The Senator from Missouri, [Mr. BENTON,] who has taken the lead upon this subject of metallic currency, may very fairly be taken as the exponent of the views of those who are most partial to the precious metals. His proposition is to suppress all notes under one hundred dollars, as appears from the speech delivered by him on the 27th January, 1837, on the resolution to rescind the Treasury order, in which he cites his speech on the subject of the District banks in the preceding session, as containing his views on the subject. The following is an extract from that speech:

"Mr. Benton said that the proposed limit of twenty dollars for the minimum size of bank notes was not an arbitrary assumption or a fanciful designation; but was a limit ascertained by experience and proven by results to be the lowest that would suffice to accomplish the ends intended: these ends are, 1st. To re-establish the gold currency. 2d. To make gold and silver the common currency for all the small dealing of the country. 3d. To extend and enlarge the specie basis of the paper circulation. 4th. To save the laboring and small dealing part of the community from the effects of contractions and expansions from bank issues. 5th. To save them from the impositions of counterfeiters, from losses when banks fail, and from bearing the whole burden of the wear and tear of small notes. 6th. To save hard money enough in the country to make it safe to have such paper currency as commerce and large dealings may require. These are the objects to be accomplished, and less than \$20 will have no adequate effect. Far better would the limit be of \$100, as it is nearly in France, and where that limit ensures a circulation of nine-tenths gold and silver and one tenth paper."

It thus appears, Mr. President, that the most zealous advocates of a hard-money currency do not contend for the entire expulsion of paper, but desire a larger infusion of precious metals into the circulating medium. We are all agreed as to the odious and unconstitutional character of a mere paper currency, for a mixed currency of coin and convertible paper cannot be denominated a paper currency. The different views, then, which are entertained as to the ratio of this mixture of paper and coin in the circulating medium, may be reduced to three classes: first, of those who, with the Senator from Missouri, [Mr. BENTON,] are in favor of a suppression of all bank notes under \$100; secondly, of those who, with the Senator from Virginia, [Mr. RIVES,] are in favor of a suppression of all notes under \$20; and, thirdly, of those who are of opinion that the suppression of all notes under \$10 will be sufficient to ensure a due proportion of coin in the circulation. Before proceeding to my argument, I think it important to the perfect comprehension of the matter, that we should first settle, as nearly as practicable, the effect which would be produced upon the actual currency of the country by the adoption of either of the above suggestions. Fortunately, sir, we are not without the means of doing so. The report of the Secretary of the Treasury upon the condition of the State banks, made at the last session of Congress, in that part of it which relates to the banks in the State of New York, furnishes some data for that purpose. I take the instance of the New York currency, because it is the only one, the component parts of which are stated, and I presume that those facts which are found to be true in relation to the paper part of that currency, will be found to be nearly so in relation to the paper part of the currency of the whole country, although it is very probable that a difference, more or less considerable, may be found to exist in the currency of some particular States. But, so far as my argument is concerned, it is of no consequence whether the statement be precisely accurate or not; the object being to give some definite idea of the practical effect of those views. In that report the entire paper currency, on the 1st of January, 1836, of the State of New York, is stated to

Oct. 2, 1837.]

Sub-Treasury Bill.

[SENATE.]

be \$21,123,089, which, with the sum of \$4,000,000, the probable amount of coin in circulation, would make the entire currency of paper and coin about \$25,000,000. It appears from that report, that the whole number of bank notes in circulation of the denomination of \$100 and upwards, amounted to \$5,230,200, which is about one-fifth of the whole currency; that the whole number of notes in circulation of the denomination of \$20 and upwards, amounted to the sum of nearly \$8,000,000, or about one-third of the whole currency; and that the whole number of notes in circulation of the denomination of \$10 and upwards, amounted to the sum of \$12,265,765, or about one-half of the entire currency. It will follow, then, that to suppress all notes under \$100 would give four parts of coin, and one of paper, of the whole currency; while the suppression of all notes under \$20 would give two parts of coin and one of paper, and the suppression of all notes under \$10 would give a currency one-half of coin, and the other of paper.

It is of no consequence to my argument whether these ratios be exactly correct: it is sufficient if they be an approximation to the truth. Let us then apply them to the whole currency of the United States, and observe the result.

The Secretary of the Treasury, in his annual report on the state of the finances, made at the commencement of the last session of Congress, estimated the entire currency of the United States on the 1st of December, 1836, to be \$148,000,000, of which \$120,000,000 were paper, and \$28,000,000 coin. As it is necessary to take some specific amount for the purpose of calculation, we will take that to be the actual amount of the entire currency of the country. The effect upon that currency, of the proposition to suppress all notes under \$100, would, from the analogy of the New York currency, be, to give us \$118,400,000 of coin, and \$29,600,000 of paper, as the relative proportions. The proposition to suppress all notes under \$20 would give nearly \$93,000,000 of coin, and \$49,000,000 of paper; while that to suppress all notes under \$10 would give \$74,000,000 of coin, and \$74,000,000 of paper. This view of the matter is entirely distinct from the question of how much coin it is proper for the banks to keep in their vaults as the basis of their paper circulation; and which experience would seem to indicate to be about one-third.

Now, sir, I propose to show that, whether the object be to increase the ratio of the mixture of coin in the whole circulation as it existed on the 1st of December last, or to provide an exclusive metallic currency, the measures now proposed by the bill before us will not only not promote that object, but defeat it altogether. To do this, it is only necessary to advert to a few simple principles, which are established laws of currency. The purpose of a currency being to effect the aggregate payments of the nation, a given amount in value, less than the amount of those payments, but having a proportionate relation to them, is necessary for that purpose. It is also true that gold and silver are the standards of value over the whole world, and are, at the same time, objects of commerce and materials of currency. From these facts results a law of mixed currency, that paper will expel the coin unless it be restrained in its numerical amount and denomination. Of this fact abundant evidence may be found in the history of every civilized nation. But, sir, I will not trouble the Senate by referring to the elementary writers as authorities upon that point. I shall content myself with authorities nearer home. I mean to forage in the enemy's country; and I will cite one, which I presume will be satisfactory, not only to the Senator from Missouri, [Mr. BAXTER,] but to those also who are most zealous on the subject of the gold and silver coin, being no other than the speech of that Senator upon the District banks, delivered in the session of 1835-'6, to which I have before referred, and from which I now read the following extract:

"The great evils of a small paper currency are: 1. To banish gold and silver; 2. To encourage counterfeiting; 3. To destroy the standard of values; 4. To throw the burdens and the evils of the paper system upon the laboring and small dealing part of the community. The instinct of banks to sink their circulation to the lowest denomination of notes which can be forced upon the community is a trait in the system universally proved to exist wherever banks of circulation have been permitted to give a currency to a country, and the effect of that instinct has always been to banish gold and silver. When the Bank of England was chartered, in the year 1694, it could issue no note less than £100 sterling; that amount was gradually reduced by the persevering efforts of the bank to £50; then to £20; then to £15; then to £10; and at last to £5; and, finally, to £2 and £1. Those denominations were not reached until the year 1797, or until one hundred and three years after the institution of the bank; and, as the several reductions in the size of the notes, and the consequent increase of paper currency took place, gold became more and more scarce, and, with the issue of £1 and £2 notes, it totally disappeared from the country. This effect was foretold by all political economists, and especially by Mr. Burke, then aged and retired from public life, who wrote from his retreat to Mr. Canning, to say to Mr. Pitt, the Prime Minister, these prophetic words: 'If this bill for the £1 and £2 notes is permitted to pass we shall never see another guinea in England.' The bill did pass, and the prediction was fulfilled; for not another guinea, half guinea, or sovereign was seen in England for circulation until the bill was repealed two-and-twenty years afterwards."

The report of the New York bank commissioners, made on the 23d of January, 1836, is to the same effect, showing that the practical experience of our own country corresponds with that of England. The commissioners say:

"The measures adopted at the last session of the Legislature for the suppression of the small bank notes have, so far as they have yet gone into operation, occasioned as little inconvenience as was to have been expected. The effects of the change were not sensibly felt until about the 1st of September, and, since that time, a large amount of specie has been put into circulation, which will be very much increased after the issues of the three dollar notes shall have ceased. Our Canadian neighbors, however, circulate a very large amount of small bank notes, which are taken as freely on the adjoining frontier of this State as our own notes or specie. In a considerable portion of St. Lawrence county, where the intercourse of the inhabitants is chiefly with Canada, the law is entirely disregarded. It is more or less so in the counties bordering upon Vermont, in the extreme western counties, and in the city of New York. It will be found impossible, we apprehend, to enforce the law effectually so long as the small notes are issued by the banks of the adjoining States."

There can, therefore, I think, sir, be no doubt upon this point, that it is the inflexible law of a mixed currency of paper and coin, that the cheaper material supplants the more costly one, and that the only mode by which you can secure a proper admixture of coin is by the suppression of the small notes. I am thus particular as to this practical truth, because upon it is based the whole structure of my argument. I have before stated that the whole currency of the country is assumed to be what it was on the 1st of December last, as appears from the Secretary's report, \$148,000,000, of which \$28,000,000 was coin and \$120,000,000 bank notes. The Government furnishes the coin—the banks furnish the paper part of the currency. We are all agreed—that, to constitute a sound currency, there should be a larger admixture of the precious metals. Those who are in favor of the suppression of notes under \$10 wish, as I have shown, to raise the amount of coin in circulation from \$28,000,000 to \$74,000,000; those in

SENATE.]

Sub-Treasury Bill.

[OCT. 2, 1837.]

favor of the suppression of notes under \$20, to raise the amount of coin to \$99,000,000; and the Senator from Missouri, and those who think with him that all notes under \$100 should be suppressed, wish to raise that amount to \$118,000,000. And yet, sir, what means do they now propose to take in order to accomplish this purpose? Why, sir, to separate the Government from the banks! To divorce the Government from the banks! To leave the banks to themselves! The Senator says they have fallen into the sea, and he will not assist to angle them out! And this, too, after we have been told by the Senator himself, and the proposition is undoubtedly true, "that the instinct of banks to sink their circulation to the lowest denomination of notes which can be forced upon the community, is a trait in the system—and the effect of that instinct has always been to banish gold and silver." No, sir, you cannot leave the banks to themselves; you cannot divorce the Government from them! You must watch over and regulate them, if you mean to accomplish the object which you profess to have in view, namely, the improvement of the currency.

But it is said that, by requiring payments to the Government to be made in coin, you will compel its circulation. Well, sir, to what extent do you compel that circulation? To the extent only of the amount that is absolutely necessary to effect those payments. The President tells us in his message that the amount of coin which would be necessary for that purpose is about \$10,000,000. Then, I say, in the event of the non-resumption of specie payments by the banks, your currency would consist of \$138,000,000 of paper, and, what is worse, of inconvertible paper, without a limit to its extension; and of \$10,000,000 of coin, and that coin would be confined to the channel of Government receipts and Government payments. The currency would submit to the force you put upon it, just to the extent of that force, and no further. Your action would resemble in its effect a proviso to a general law, which is a restraint only to the extent of the proviso; and your coin would circulate only in the channel which you had dug out for it. If, on the other hand, the banks should resume specie payments, and the currency should be again composed, as it was on the first of December last, of \$28,000,000 of coin and \$120,000,000 of paper, then, I say, sir, that, as there would be specie, more than enough, in circulation to answer the payments of the Government, the measure of demanding payment in coin would have no tendency whatever to increase the amount. The reason of all this is apparent, and is to be found in the fact which I have stated, that paper will banish coin from circulation unless restrained, and will always do so up to the point of that restraint.

But it is not necessary to resort to any speculative reasoning in proof of these positions. You have now, sir, in the present state of things, the most positive proof of their truth. Does not the Government at this moment demand payment of its dues, of its duties, its postages, and its sales of public lands, in coin? And yet does that coin enter into the general circulation? Is it not confided entirely to Government debtors and Government creditors, to those who consume the revenues and those who pay them? I say, then, sir, that the result of your measure is this, and this only, to secure coin as the currency for the Government, and leave paper as the currency of the people. It is no unusual thing, Mr. President, to see those at the head of the Government profess one thing and do another.

I come now to the consideration of my second proposition, which is, that Congress is bound to furnish a sound currency of coin and convertible paper for the people of the United States. To any one read in the history of this country, and in the text of the constitution, it would seem strange that it would be deemed necessary to formally propound such a proposition, much more so to prove it. But the peculiar tone of the message, and the doctrines of some

of the supporters of the administration on this floor, would lead one to suppose that the constitution had been formed, and the Government created, for no other purpose than to take care of itself. Is it then true, sir, that this Government was created, merely that Martin Van Buren might be President, and enjoy the dignity and emoluments of his office; that you, sir, should be Vice President, and we Senators of the United States, with the privilege of franking our letters and receiving a per diem of eight dollars in gold and silver? Was that the end and purpose of all the anxious deliberation of that band of patriots who assembled in Philadelphia to form the constitution, and of the cession, in that instrument, on the part of the States, of almost all the high attributes of sovereignty? I had hitherto thought the object had been "to promote the general welfare of the people of the United States." I was taught to think that the powers of this Government were trusts for the benefit of the people, and that the end and object of the constitution was to promote their welfare. It seems, however, sir, that those who administer the Government read that instrument differently, and have come to the enlightened, profound, liberal; and statesman-like conclusion, that the Government was created merely for their benefit, and that the people have no part or lot in the field of its operations. Let us, then, examine for a moment the soundness of this opinion, so far at least as the currency is concerned, that being the matter immediately under consideration.

Every one familiar with the history of the revolutionary war, knows that we came out of that conflict with a ruined commerce and a debased currency of inconvertible paper; that the States refused to confer on the old Congress the power to levy duties on imports, and were unable to enjoy the benefit of that indirect mode of taxation themselves. That if New York, for instance, sought to raise a revenue from her commerce, New Jersey interfered and defeated her plans by throwing open her ports. That, in the same manner, the commercial regulations of Pennsylvania were at the mercy of the State of Delaware, and were, in fact, frustrated by the legislation of that State; and so of the other States. In the hopeless imbecility of commercial enterprise which grew out of this condition of things, the people saw the necessity of a General Government, which should have the power to regulate commerce, and provide a uniform and sound currency for the country. The main and immediate inducement for the formation of the present form of Government was the desire to escape from these distresses and embarrassments which, from their all-pervading character, could only be cured by a National Government. Hence we find that the express power is given in the constitution to regulate commerce, as well as the express power to regulate the standards of value and quantity, which are the legs of commerce.

I shall not, sir, after the luminous and powerful argument of the Senator from Massachusetts, [Mr. WEBSTER,] upon this power to regulate commerce, attempt to say any thing in illustration or support of it. I would not be chargeable with attempting "the wasteful and ridiculous excess of adding perfume to the rose, or gilding refined gold," but will content myself with remarking, that one might fairly conclude that as commerce in modern times is no longer carried on by barter, but is conducted, in its minutest details, by means of money; and, in its larger operations, by the commercial currency of bills of exchange and promissory notes, the power to regulate commerce, gives the right to regulate the means by which it is conducted. I proceed, therefore, to consider other provisions of the constitution. My proposition is, that Congress is bound to furnish a sound currency of coin and convertible paper for the people of the United States. I say of coin and convertible paper, for I consider the latter as equivalent to coin in the matter of currency. If, therefore, any

Oct. 2, 1837.]

Sub-Treasury Bill.

[SENATE.]

one should be of opinion that Congress is bound to furnish an entire metallic currency, that opinion does not weaken the strength of my argument, the views which I am about to present being applicable to both positions.

In the first place, the power is given to Congress "to coin money." For what purpose is money to be coined? Not that it may be melted down, and manufactured into plate; not that it may be exported, and pass into foreign mints, to assume some other form, or receive some other impression; nor that it may be hoarded as a matter of curiosity or avarice; but that it may be used for the purpose for which coined money is used, namely, the currency or circulating medium of the country. I say of the country, because, as the power is a trust for the general welfare, its execution must have reference to the end of its existence. In the second place, Congress is authorized to punish the offence "of counterfeiting the current coin of the United States." In the third place, the States are prohibited from coining money. And, in the fourth place, nothing "but gold and silver coin" can be made a tender in payment of debts. As the great business of currency is to pay debts, and Congress has the exclusive power of furnishing the coin, in which alone those debts can be legally paid, it follows that it is their constitutional duty to furnish such currency of coin, or what is equivalent, of convertible paper; for, if they do not furnish it, no other power can; and the whole business of society must be suspended. The purpose of currency is to make the aggregate payments of the country, and its amount in value has reference to the amount of those payments; at the same time, every payment presupposes an antecedent debt, though it exists but for a moment, and it is Congress alone that can furnish the legal means of making those payments.

What, then, sir, is the consequence of the existence of this power and this constitutional duty as regards the existing condition of the currency of this country, composed, as it is assumed to be, of coin furnished by the Government, and paper furnished by the banks? What, I ask, is the consequence of the existence of that duty on the part of this Government? Why, sir, clearly, the obligation so to regulate the issues of paper by the banks as to ensure its convertibility at all times into coin, and thus to provide a sound currency of coin and convertible paper for the people. If it be the duty of Congress to furnish either a metallic currency, or a mixed currency of coin and convertible paper, which is equivalent to a metallic currency for the purpose of business, then it is bound to guard against whatever may tend to defeat the performance of its duty; and I have already shown that it is the tendency of banks to extend their issues of paper, which has the effect of banishing the coin from circulation. If Congress does not regulate the issues of bank paper, then the banks control the power of Congress over the currency, and involve it in the violation of a constitutional duty. You cannot, then, abandon the banks to themselves without being recreant to that duty. You must watch over them, and regulate their issues of paper, or else they defeat one of the great purposes for which this Government was created. As matters stand at present, you are bound to cause them to return to specie payments, and afterwards by your parental care to guard against another suspension. This duty I have expressed in the phrase "to provide a sound currency," that is, a currency free from the danger of degenerating into inconvertible paper. As to the question of the proportion of the precious metals, which may be necessary to ensure that result, some difference of opinion may and does exist. I have already explained the different views entertained on that subject; but all are agreed that for that purpose there should be a larger infusion of coin into the circulation than existed at the time of the suspension of specie payments.

Then, sir, I ask if you must watch over the State banks and regulate their issues of paper, why not use them as fiscal agents? The Senator from Virginia [Mr. RIVES] proposes to do so. I shall vote, Mr. President, for his amendment, though I am free to say I do not think it the best that could be offered.

It is generally conceded that the currency, whatever it is, should be of uniform value, since the constitution provides that all taxes and duties shall be uniform, which could not be the case if that in which they are paid is not of uniform value. The plan of the Senator from Virginia [Mr. RIVES] is defective in two particulars: First, that it does not secure uniformity of value to the paper part of the currency, from the fact of its not being able to command general confidence; and, secondly, that it does not control the issues of paper from all the banks. It attempts to persuade by insufficient inducements, instead of compelling the deposit banks to limit their issues of paper money by suppressing all notes under a certain denomination. But its radical defect is, that its operation is confined to the deposit banks, instead of reaching all the banks of the country. For, sir, I have already shown from the report of the New York bank commissioners, that the measure of suppressing the small notes with a view to the improvement of the currency, will always be ineffectual, unless it be general. That if any banks are suffered to issue small notes, they will circulate and exclude the coin, notwithstanding other banks may be prohibited from doing so. To perfect this plan, a bank of the United States is indispensable to give that uniformity of value to the paper part of the currency which can result alone from general confidence, and is proper as the milder means of regulating the issues of bank paper.

From what has been said, it is apparent that it is the constitutional duty of Congress to regulate the issues of bank notes, which can only be done in one of two ways, either by means of a bank of the United States, or by means of a stamp duty on the notes. As to a bank of the United States, it is out of the question at this time; and I am free to say, sir, that I consider it altogether inexpedient, in a political point of view. For I hold it to be extremely unwise in a Government constituted like ours to attempt to force public opinion. No system can be successfully administered which is repugnant to the public will; and it is sufficient for me, in this instance, that there is strong reason to believe that the majority of the people are opposed to a national bank. I have no constitutional scruples on the subject; on the contrary, I believe that it is necessary and proper as a fiscal agent of the Government, and the most gentle and effectual means of furnishing a sound and uniform currency to the country, composed, as I have before stated, of coin and convertible paper. But, sir, I will not consent to vote for such an institution, until I am satisfied that it is not repugnant to the wishes and feelings of the majority of the people. There is no other mode of suppressing the small notes, in the absence of a bank of the United States—I mean, of course, by the action, direct or indirect, of this Government—than a resort to the taxing power, by imposing a stamp duty on them. To this there cannot, I presume, be any constitutional objection, as it is an express power, justified in its use by the great object of promoting the general welfare, but in this instance used to sustain and enforce another express power and high constitutional duty, of supplying the country with a sound currency of coin or its equivalent.

In advocating the now favorite measure of the Government, its supporters, who were lately such zealous friends of the State banks, lauding them for their fidelity, and magnifying and blazoning the extent of their services, have now become their bitter adversaries, vilifying them with opprobrious epithets, and denouncing them in the most harsh and unmeasured terms. Why this hostility to their

SENATE.]

Sub-Treasury Bill.

[Oct. 2, 1837.]

recent friends? In his last message to Congress, in December, 1836, President Jackson uses this language:

"Experience continues to realize the expectations entertained as to the capacity of the State banks to perform the duties of fiscal agents for the Government, at the time of the removal of the deposits."

After stating the amount of transfers made by the banks for the Government, he proceeds to say:

"These enormous amounts of money first mentioned have been transferred with the greatest promptitude and regularity, and the rates at which the exchanges have been negotiated, previously to the passage of the deposit law, were generally below those charged by the bank of the United States. Independently of these services, which are far greater than those rendered by the United States Bank and its twenty-five branches, a number of the deposit banks have, with a commendable zeal to aid in the improvement of the currency, imported from abroad, at their own expense, large sums of the precious metals for coinage and circulation."

Mr. Secretary Woodbury, in his report at the same session, speaking of the deposit banks, says:

"It is a source of high satisfaction to be able to add, that while so selected and employed, not a single dollar was lost to the Government by any of them, nor a single failure occurred to transfer promptly and pay out satisfactorily the public money entrusted to their custody. Nor is it believed that the domestic exchanges of the country were ever lower or more regular than during that period."

What is principally wanting in every young country is capital, by which alone its resources can be fully developed; and the want of which, for a long time, caused the subjugation of the infant manufactures of this country by those of Great Britain. It was its vast capital, manufacturing and commercial, which enabled Great Britain to contend, single-handed and successfully, against the gigantic power of Napoleon, whose wild and lawless ambition sought to place its yoke on the neck of the civilized world; whose imperial standard was planted amid the orange groves of the South and the snows of the North, and whose cormorant appetite for dominion would have gorged not only provinces and kingdoms, but whole continents. It was to the indomitable spirit and vast resources of that great and magnanimous nation that the continent of Europe was indebted for its emancipation from the thralldom of universal monarchy; and it is to its all-pervading capital and industry that Great Britain is now indebted for its control over the commercial exchanges of the world.

These banks, which are now so much abused, have supplied, to an immense extent, the want of capital in this country, and at this moment furnish, for the employment of its industry and development of its resources, more than \$200,000,000. The actual capital paid in, according to the report of the Secretary of the Treasury on the state of the banks, was, on the 1st of January, 1836, \$251,857,292, while their loans and discounts amounted to \$457,506,080. Making, for all the purposes of business, an effective increase of capital to the extent of the difference between those amounts, namely, \$205,648,788. This immense sum, at an average commercial profit of ten per cent. would yield to the country an annual income of more than \$20,000,000.

The deposit banks themselves, which are denounced as having been guilty of the grossest treachery towards the Government, have done wonders. According to the report of the Secretary of the Treasury, presented at this session, they have, in the space of five and a half months, between the 1st of March and 15th of August, collected from their debtors the sum of \$40,689,862; and in the same time paid off \$26,792,006 of public deposits; while their immediate liabilities do not bear to their immediate means a much larger ratio than two and a quarter to one, leaving

the entire debt due to the from them community for loans and discounts as a security for the difference.

Banks, Mr. President, are not the authors of commercial distress, although it is true they may, and often do, feed that appetite for speculation which leads to it. Nor, sir, is commercial distress ordinarily connected with the quantity or nature of the currency of the country; it results from the want of capital for the time being, not from the redundancy or from the want of currency, much less from the nature of that currency, whether metallic or mixed. It occurs in all countries, with every description of currency, paper, metallic, and mixed. It is the result of that love of gain which stimulates the enterprise of the merchant, and broods over the projects of the speculator; which leads the one to search in foreign climes for those subjects of commerce which are to be distributed for consumption, and causes the other to dam up the streams of supply with a view to the augmented profits of an unsatisfied demand, which prevails most where there is most freedom of thought and action, and which ends in those commercial orgasms which, with periodical occurrence, prostrate for a time all commercial energy, by impairing all commercial confidence.

The President, in his late message, with a sort of twilight perception of the truth, speaks at one moment of the redundancy of credit, and at another of the redundancy of circulation, as the cause of the present commercial embarrassments. There can be no redundancy of circulation where the paper of a mixed currency is convertible. If the paper is not wanted for the purpose of currency it is returned to the banks. That the fact is so, the elementary principles of the science of political economy would teach us; but we have daily and abundant evidence of its truth in the bank reports. Thus we find by the reports of the Secretary of the Treasury, at the last session, upon the state of the finances, that while, on the 1st day of January, 1836, the gross amount of notes issued by the banks was \$140,000,000, the amount in circulation was only \$108,000,000; making a difference of \$32,000,000, which had been returned to them, and remained in their hands. Here I might advert to that inaccuracy in matters of fact which prevails in the President's message, and which has been so fully and ably exposed by the Senator from Georgia, [Mr. KING,] in other particulars, and which is manifested likewise in relation to this very matter of the currency. The message states the amount of paper circulation to have been \$140,000,000 on the 1st of January, 1836, when, in truth, that was the amount of notes issued, but of which \$32,000,000 had been withdrawn from circulation. The error is the more inexcusable because the Secretary of the Treasury, in his last annual report on the finances, made at the former session, in that part of it which treats of the mint and currency, explicitly states the fact, and distinguishes between the gross amount of notes issued and the actual circulation. The present commercial distress, the first symptoms of which were exhibited in New Orleans, in the failure of several commercial houses there for an immense amount, owes its existence, without doubt, to the wild spirit of speculation which was prevailing throughout the country, and to the employment of the banking capital of the country in enterprises which were not of a commercial character, but, being in their nature permanent investments, were, in effect, dead loans, and therefore hostile to the interest and purposes of banking. The case of the planters of Mississippi is a complete illustration of the whole subject. They were in the habit of receiving, on loan, large sums of money, with which they purchased lands and negroes, and pledged their crops for the gradual repayment. This was done by drawing bills of exchange on the merchant in New Orleans; and these bills, being accepted, were afterwards discounted by the banks. The planters, from the fall in the price of their great staple, cotton, were unable to furnish the merchant with the means of paying

Oct. 2, 1837.]

Sub-Treasury Bill.

[SENATE.]

these bills when they came to maturity, and the merchant, on his part, not having capital enough to carry on his other operations and meet these demands, fails; which disaster deranges and mars the whole web of commercial affairs.

When people engaged in large commercial operations, and enjoying a vast and almost unbounded credit, suddenly fail, a shock is given to public confidence in all men of business, which, for a time, breaks the charmed circle of credit, and the commercial world falls into a sort of syncope, from the suspended action of the great principle of its vitality—commercial confidence. It may be true that the great increase of banking capital led to this spirit of speculation, and to these enterprises and employments, which, not being of a commercial nature, ought not to have been undertaken on the faith of banking capital. Yet who, I ask, is responsible for that increase of banks? Who but the past administration, that, in its lawless act of the removal of the deposits, and the subsequent destruction of the Bank of the United States, gave at once an apology, as well as created a seeming, if not real, necessity for the creation of new banks in every State of the Union? Let it never be forgotten that, in the year 1830, the second year of the administration of Andrew Jackson, there were but 330 banks, with an estimated capital of \$145,192,268, as appears from the Secretary's report at the last session upon the subject of the banks; and that, in the last year of his administration, on the first of December, 1836, there were 677 banks, with 146 branches, and an authorized capital of \$378,421,168.

The immediate cause of the suspension of specie payments, which commenced in New York, the great commercial emporium of the country, was, no doubt, the unfavorable condition of the foreign exchange, growing out of the debt which had been incurred to Great Britain, of forty or fifty millions of dollars. Not possessing the means of paying that debt in the products of the country, nor being able to procure a postponement of its payment, the specie of the country was required for that purpose, as the only article of commerce, which, having universal value, is the only one which is every where exchangeable for all other commodities; and the banks, as the largest depositories of that article, were called upon to furnish it. But what was their condition? They had been crippled in their resources for the supply of that article by the drain which had been made on the East towards the West, by the last measure of the administration—the specie circular—which had the effect, as was most ably and satisfactorily established by the Senator from Georgia, [Mr. KING,] of removing it, contrary to all the laws of trade and of common sense, from the place where it was wanted to the place where it was of no immediate use, and from whence, in the nature of things, it must be forced ultimately to return. But, in the mean time, the mischief is done. The banks of New York, not being able to supply the demand thus created, and perceiving that it must end in the abstraction from their vaults of every dollar of their coin, which would have been attended with a compulsory suspension of specie payments from absolute want of means, and accompanied with the entire prostration of their credit, they determined, by an immediate suspension of specie payments, to save that credit, and avoid the shock which its destruction would have given to the whole community. Their suspension, in the nature of things, led to the same measure throughout the country. It is thus, I conceive, sir, most apparent that, if the commercial distress of this country be owing to the increase of banks and banking capital as the proximate cause, the past administration has been the remote cause, the *causa causans* of the whole difficulty; and that it is equally clear that, if the immediate cause of the suspension of specie payments was the state of foreign exchange and the demand for specie, the remote cause was the specie circular of General Jackson. We might here be tempted to exclaim,

Vol. XIV.—28

"quam parva sapientia regitur mundus!" The people of this country have had a lesson, and a severe one, in the throes and convulsions to which it has been subject under the past administration, never again to trust the helm of Government to the hands of any man who is not possessed of the competent attainments and training of civil life; and that it is not sufficient that a man should enjoy the reputation of honesty and common sense to entitle him to claim from the American people the important trust of presiding over their welfare, without any familiarity with the complicated interests of a commercial and civilized community.

But why, sir, I ask again, this hostility to the late deposit banks? Why this new experiment? I will tell you, sir. There must be some new rattle, some new straw to please and tickle the grown children of this nation. I recollect once hearing it said that when the Count Surville, the brother of the late Emperor Napoleon, was introduced to President Jackson, the latter distinguished individual said to the count, "I have always, sir, taken your illustrious brother for my model in war." This, to be sure, was very modest. And if one should be disposed to think that there was some difference between the campaigns of Italy and those of a Creek or Seminole war, between the invasion of Russia and that of Florida, yet it should be observed that the remark does not import equality, but merely imitation; and we all know that a copy may be more or less humble, according to the means and abilities of the artist. But let us see whether this admiration of the great original may not have led to the adoption of some of his maxims of civil government. I remember, sir, once coming across a passage in one of the works of that celebrated woman Madame De Stael, which gives a slight sketch of the character and policy of the Emperor; and I remember too, that, upon recently reading it, I was struck with some points of resemblance in the character and policy of the two men. The friends of the late President, who knew him best, will judge how far the resemblance holds; but it seems to me that the passage may be regarded as a sibylline oracle of the events of the last eight years. It may be found in her little work entitled *"Ten Years Exile,"* and runs thus in the English translation of that work:

"While we have seen the Christian Kings take two confessors to examine their consciences more narrowly, Bonaparte chose two ministers, one of the old and the other of the new regime, whose business it was to place at his disposal the Machiavelian means of too opposite systems. In all his nominations, Bonaparte followed nearly the same rule of taking, as it may be said, now from the right and now from the left; that is to say, choosing alternately his officers among the aristocrats and among the Jacobins. The middle party, that of the friends of liberty, pleased him less than all others, composed as it was of the small number of persons who, in France, had an opinion of their own. He liked much better to have to do with persons who were attached to royalist interests, or who had become stigmatized by popular excesses. He even went so far as to wish to name as a counsellor of State a Conventionalist, sullied with the vilest crimes of the days of terror; but he was diverted from it by the shuddering of those who would have had to sit along with him." Bonaparte would have been delighted to have given that shining proof that he could regenerate as well as confound every thing. What particularly characterizes the Government of Bonaparte is, his profound contempt for the intellectual riches of human nature; virtue, mental dignity, religion, enthusiasm—these are in his eyes the eternal enemies of the Continent, to make use of his favorite expression; he would reduce man to force and cunning, and designate every thing else as folly and stupidity. The English particularly irritate him, as they have found the means of being honest, as well as

[SENATE.]

Sub-Treasury Bill.

[Oct. 2, 1837.]

successful—a thing which Bonaparte would have us regard as impossible.

“I do not believe that when Bonaparte put himself at the head of affairs, he had formed the plan of universal monarchy; but I believe that his system was what he himself described it a few days after the 18th Brumaire, to one of his friends: Something new must be done every three months to captivate the imagination of the French nation; with them, whoever stands still is ruined.”

We observe, sir, in the course of the late administration, the same system of fusion. First a little democracy, and then a little federalism, until we are served up in the end with a ragout of both, but so artfully compounded and seasoned, that the original ingredients are no longer to be discovered. This leads me to say a word or two as to the origin of this piebald party. It took its rise more from individual interests and private views—from partialities and antipathies, than from any other cause.

The old parties into which the country had been so long divided had ceased to have any practical existence under the administration of Mr. Monroe. All the great measures of federal policy had been adopted by their opponents. The navy, a bank of the United States, internal improvements, the system of light-houses and harbors—all had become favorite measures with the dominant party; and there remained little to struggle about but abstract doctrines of construction, which had not sufficient interest with the multitude to sustain the zeal of party warfare. Notwithstanding this, the federalists, as a body, were proscribed, and the demagogues of the day were disposed to keep alive the ancient animosity, that the favors of Government might be confined to a smaller number of persons; very wisely considering that, as the days of miracles had gone by, and the loaves and fishes could not be made to feed the whole multitude, it was better to limit the number of mouths to be fed. In this state of things, General Jackson's pretensions to the Presidency were brought forward; and as he had proposed, in his celebrated letter to Mr. Monroe, to destroy the monster-party spirit—for it seems there were monsters in those days as well as at present—and had recommended to that gentleman to act as the President of the nation, and not as the President of a party; and to make his appointments indifferently from the good men of both parties, he enlisted at once the sympathies of the federalists in his favor. They hoped, through his means, to obliterate the ancient party names and distinctions, and come in for their share of the honors and emoluments of the Government. Besides many of them felt a peculiar repugnance to his opponent, Mr. Adams, from the fact of his having left their party; and it was believed that if he should even desire to act liberally towards them, the peculiarity of his position as a convert would not suffer him to do so. It was thus that General Jackson was enabled to substitute for the old parties of the country, one which was founded on mere personal considerations, upon private motives, private partialities, and private resentments, which, while it was quite as intolerant of dissenters as the former dominant one had been, required, at intervals, from lack of any settled principles of conduct, some new toy for its amusement, something to captivate its imagination, and inflame its zeal.

Here, then, sir, we have the solution of those various topics which have been thrown out as rattles to the community. First, retrenchment and reform, which ended in augmented disbursements, and increased patronage of the Executive. Secondly, the payment of the public debt, which was continued to be represented as the peculiar merit of his administration, although the natural result of a system which had been organized before he came into power; and to give color to the pretension, the fortifications were neglected and public improvements abandoned, that an event might be accelerated which must speedily occur, and

the postponement of which, for a few years could in no degree affect the real welfare of the country. Thirdly, the removal of the Indians, which was conducted without any regard to the laws, accompanied with every variety of fraud and oppression, and has ended in a disgraceful conflict which has brought desolation and ruin upon a large district of country, and absorbed millions of the public treasure. Fourth, the war on the Bank of the United States, which has led to the creation of between three and four hundred State banks, now denounced as an evil. Fifth, the removal of the deposits, which, in its accompanying circumstances, was a gross violation of the law, and of the spirit of the constitution, and was followed by the highest commercial distress and individual ruin. Sixth, the gold currency, which was to give to labor a solid reward, instead of an empty promise to pay; and, seventh the State bank system of fiscal agency, which was to furnish the country with a better currency, and both which latter measures have ended in the disappearance of all coin, and the substitution of an inconvertible paper as the circulating medium; and now, eighthly, this footstep-administration proposes the sub-Treasury scheme, which is to restore us to the halcyon days of our prosperity; and which, in my opinion, will open the door to more fraud, corruption, and national loss, than any other that could be devised; and will, in its turn, be abandoned for some other novelty, if the people of this country do not in the mean time see fit to dismiss these experimenters from their service.

There have been some minor incidents in this drama, thrown in to heighten the effect, such as the quarrel with the Vice President, the dissolution of the unit cabinet, the difficulty with South Carolina, the contest with the Senate, and the rupture with France. The great principle of the party has been blind obedience, and the discipline of the camp was introduced into the cabinet. Indeed, so passive has been that obedience, that the party may lay claim to the encomium which the barber passed upon his parrot. Gentlemen, said he, one day to some persons in his shop, my parrot is a bird of uncommon intelligence. I will give you a proof of it. Pretty Poll, who is the greatest man in the world? Answer—General Jackson. And who is the next greatest? Answer—Pretty Poll. And what does General Jackson say? Answer—Damn the bank! And what does Pretty poll say? Answer—Damn the bank! You see, gentlemen, said the barber, my parrot understands General Jackson's politics quite as well as he does himself.

I come now, sir, to consider my last proposition in relation to the measure now before the Senate, which is, that this sub-Treasury scheme is less safe and less convenient and more liable to abuse than the agency of the State banks. Upon this point I have the authority of the Secretary of the Treasury, in a report of his made during the session of 1835-'6, and also the authority of the Senator from South Carolina, [Mr. CALHOUN,] who does not appear, in the year 1834, to have been as much enamored of the scheme of individual fiscal agents and specie payments to the Government as he does at present. In his speech, delivered here on the 21st March, 1834, upon Mr. WEBSTER's motion for leave to bring in a bill to continue the charter of the Bank of the United States, he expresses himself explicitly; the point which he is urging is the necessity of restoring the equilibrium between the specie and the paper which composed the currency, and the question is as to the means of doing so. After rejecting the taxing power as odious and unconstitutional, and stating that the mere coining power would have but a limited control over the currency, he suggests that some other must be used, and then states that the most immediate and obvious is, the exclusion of every thing but specie in the receipts of the Government. He then proceeds to express himself as follows:

Oct. 2, 1837.]

Sub-Treasury Bill.

[SENATE.]

"But there is, in my opinion, a strong, if not an insuperable, objection against resorting to this measure, resulting from the fact that an exclusive receipt of specie in the Treasury would, to give it efficacy, and to prevent extensive speculation and fraud, require an entire disconnection on the part of the Government with the banking system, in all its forms, and a resort to the strong box, as the means of preserving and guarding its funds—a means, if practicable at all in the present state of things, liable to the objection of being far less safe, economical, and efficient than the present."

Such, sir, were the opinions of that Senator in the year 1834, when he seems to have considered a disconnection between the Government and the banks as an evil to be dreaded, not a measure to be approved; and a resort to the strong box as being liable to the objection of being far less safe, economical, and efficient than the present.

[Mr. CALHOUN here desired to know whether the Senator from Delaware read that extract from his speech for the purpose of convicting him of inconsistencies in his opinions and course of conduct on this subject; for he wished to observe that he could not admit that his opinions were to be gathered from one extract from a single speech, when he had delivered several others, which, if all taken together, would show that his opinions were unchanged in relation to the propriety of disconnecting the Government from the banks.]

Mr. BAYARD replied that it was no part of his purpose to convict the Senator from South Carolina of inconsistency in his opinions; that to do so would not assist his argument, nor be agreeable to the private feelings which he entertained towards that Senator; that if there was any apparent inconsistency, he regretted it; but that he cited him as authority upon the particular point now under consideration, namely, the comparative safety of the public treasure in the two modes of keeping it.

Mr. B. then proceeded. The President of the United States, in treating this part of the subject, does not present the matter fairly; he speaks of the amount of the public funds likely to be on hand at any one time, as presenting an average of not more than thirty thousand dollars in the hands of any one officer. But, sir, it is not a question of average. The receipts of many individual officers will be ten, twenty times that sum, in a very short space of time; and the amount in their hands may accumulate, by delays in payments or transfers, greatly beyond that sum, or twenty times that sum. The President further treats this question of safety as if it were one which depended on the relative strength of the vaults that were to be employed for the safe keeping of the public treasure; whereas the real question is as to the confidence reposed in the officer, and his official fidelity. No one fears open depredation on either. But no reasonable man will pretend to say that there is any comparison between the safety of funds entrusted to a single individual, checked only by his sense of duty, and the penalty of his official bond, and the safety of the same funds deposited in the vaults of a bank under the check of daily supervision and accountability on the part of its officers, and secured by its entire means, the greater part of which could not be the subject of depredation or fraudulent abstraction. But, sir, I am not disposed to be satisfied with any vague conjectures on this subject, or flimsy reasoning about probabilities. I appeal to experience as the only true guide; I call in its light, and I ask what are the lessons which we derive from it? Let me for a moment draw the attention of the Senate to the case of the receiver at Fort Wayne, in Indiana, reported to the last session of Congress, as furnishing an illustration of the manner in which money may accumulate in the hands of a public officer by a slight neglect of his instructions, and the kind of reasons which may be given for not complying strictly with them.

It appears, then, that this officer, instead of a sum of \$30,000, which the President supposes is the average amount which would be in the hands of any officer at any one time, had accumulated in his hand, between the 7th of March and the 1st of June, the sum of \$601,380; and that he made no deposits, as in duty bound, from the 7th of March to the 15th of June. That both he and his relative had been in the habit of the office of shaving money; in other words, exchanging money which could not be received for public lands, at a rate of discount varying from 3 to 5 per cent.; and that he was in the habit of taking in five-dollar notes, contrary to his orders; for doing which he received a premium. All this is clearly established by the document to which I refer. Under these circumstances, we find a late Senator of the United States writing to the Secretary of the Treasury in relation to this officer, in the following strain: That he is reputed to be an honest and honorable man, and that the Senator did not think he had intentionally done wrong. And then proceeds to express himself as follows: "It would, to some extent, produce excitement if he were removed, for he has many warm and influential friends, both at Fort Wayne and in Dearborn county, from which he removed to his present residence. Better let it be."

At a subsequent period we find this officer assigning to the Secretary as a reason for not going to deposit funds in his hands, that his democratic friends thought he ought not to leave the place until after the Presidential election, which was to take place eleven days afterwards. The letter is as follows:

"RECEIVER'S OFFICE,

"Fort Wayne, Oct. 27, 1836.

"SIR: This is to inform you that I have forwarded to the deposit bank one hundred and four thousand dollars, in silver, there to remain until I arrive with the gold and paper.

"My democratic friends think that I ought not to leave until after we hold our election for President, on the 7th of November, which I have concluded to await, and shall leave on that evening, or the next morning, to deposit, with all the funds on hand up to that time."

Now, sir, it may be asked, why the gold and paper was not forwarded at the same time that the silver was despatched. But without going further into the case, what has been stated is sufficient to show the manner in which the greatest abuses might take place under the proposed system of making the public officers the depositaries of the public funds, and the inducement which may exist to practise those abuses, although the officer may be honestly disposed. In this case I do not know that the Government ultimately lost any thing by this officer: but if it did not, that only shows his individual honesty, but does not prove that the system, which would make him not only the receiver, but the keeper of the public treasure, is not liable to the abuses I have pointed out. Not only would the officer have to resist the importunity of friends in moments of the greatest necessity and distress, and the temptations of avarice on his own part, but the solicitations of his political friends, in moments of party strife, when his office and means of subsistence might be at stake: and he would be told that his democratic friends required a little pecuniary assistance; that a loan to A, and another to B, and a third to C, would help the cause; and that success would secure him from discovery; or, if discovered, from reproof on the part of his superiors. And, sir, let me add, that if yielding to the prompting of avarice, the claims of distress, or the solicitations of political friends, he should become a defaulter, we should have some Senator or active partisan hinting to the Government that his removal, or punishment would produce excitement, and the matter had better be let alone. Suffer me now to draw the attention of the Senate

SENATE.]

Attorneys' Fee Bill.

[OCT. 2, 1837.]

to the reports, made at the last session, of the balances due from the collectors, the receivers, and the postmasters, all of whom are, by this bill, to be made fiscal agents; and let us see what lessons are to be drawn from them. And, first, as to the collectors; there are twenty-seven cases reported, four of which exhibit balances upwards of \$30,000 each—one case of \$53,000, one of \$80,000 and one of \$109,000. So much for the President's average of \$30,000. As a sample of the practical results of such cases, take the following:

"Andrew Erwin, Tennessee, \$53,337 28. Suit ordered March 17, 1829. Judgment, October term, 1830, for \$92,635. Execution issued October, 1830. In the marshal's report for November, 1830, he remarks as follows: 'reported insolvent.' In a letter dated January 30, 1837, from the district attorney, he advises that, upon the strictest scrutiny of proof by him in this case, he is satisfied that it would be a useless undertaking to file a bill of discovery, as all the responsible parties had previously, in the case of private creditors, denied any indebtedness or liability to Colonel Andrew Erwin," &c.

I will cite one other case.

"Robert Cochran, Wilmington, \$109,232 49. Suit ordered September 10, 1821, for \$143,922 68. Judgment May term, 1823, for 145,361 30. Balance reduced by subsequent settlements up to July, 1835, to \$109,232 49. The district attorney advises that he obtained a decree of the court at November term, 1828, against William Watts Jones, trustee of Cochran, for \$9,725 05, with interest from the 7th of February, 1825, till paid. Balance of claim desperate."

In the instance of the receivers, there are twenty-eight cases reported of which five are upwards of 30,000, and one of \$110,000; the details are generally in olveny of principal, sureties not to be found, or indulgence granted to sureties, and judgments with a return of no property. In the instance of the postmasters, there are 144 octavo pages filled with the names of defaulters, numbering probably little short of 2,000; for, sir, I had not the patience to count them all, but estimated the whole from the contents of a few pages. The amounts due from them respectively are not generally large, for many of them receive very little, but exhibit an aggregate of \$209,398 40, of which \$110,400 84 is admitted to be "not collectable." This class of officers, too, are to become fiscal agents, and having shown a disposition to keep for their own use the small amount of public money they have heretofore been able to collect, are now each to be intrusted with keeping, for the public, the President's average of \$30,000 of the public revenues. But, sir, there is one case among those which I cannot suffer to pass without more particular notice, exhibiting, as it does, a curious feature in the details of official vigilance. It is that of Francis P. Blair, the editor of the *Globe*, who was the surety of Samuel B. Crockett, of Frankfort, Kentucky. The balance due from Crockett on the 1st of April, 1822, was \$1,395 54, and the following note is appended to the case:

"Suit ordered, and judgment obtained, May, 1824, for \$1,827 01; credited by \$431 47; penalty remitted by Postmaster General, leaving balance as stated; application for relief refused by the Department December 30, 1825; *fieri facias* issued and returned March 1826; no estate found; information was sought by the Department relative to the parties, November 30, 1835; referred to the district attorney December 30, 1835: also wrote to him February 13, 1837."

So that it seems, Mr. President, here is a case originating in 1822, more than fifteen years ago, in which judgment was obtained more than thirteen years since, and we are gravely told that on the 30th of November, 1835, the Department was seeking information relative to the parties; when one of those parties, Francis P. Blair, the surety, was

living under the very eyes of the Government, in habits of daily social and political intercourse with the President, and with the head of the Department, and receiving thousands of dollars as the printer to the House of Representatives; and yet the official eyes of the Department could not see him. Such, sir, will be the results of this system if carried into effect. I do not mean longer to trespass on the patience of the Senate, but allow me in conclusion, to say, that if this system is adopted, which has nothing on earth to recommend it but its novelty as an experiment, and which defeats its alleged objects in relation to the currency, there will be exhibited a scene of fraud, speculation, and political corruption, which has never been witnessed before in this country, and seldom, perhaps, in any other.

When Mr. BAYARD had concluded,

Mr. CALHOUN followed in explanations.

ATTORNEYS' FEE BILL.

Mr. GRUNDY asked the Senate to take up, informally, the "bill regulating the fees of the district attorneys in the renewal of merchants' bonds." No objection being made, the bill was taken up and read a second time.

The bill is as follows:

A Bill to regulate the fees of District Attorneys, in certain cases.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That upon every extension of a custom-house bond, granted under the instructions of the Solicitor of the Treasury, the district attorney shall be entitled to the sum of five dollars, to be paid by the person applying for and obtaining such extension; and no other charge or compensation whatever shall be made, or allowed to any district attorney for his services in any case of the extension of a custom-house bond.

Mr. G. briefly explained the views of the committee in relation to the bill before them. The object was to fix some uniform price for the services of district attorneys in such cases. The fees varied materially in some of the different States, and in some he believed no compensation was allowed. The present sum, Mr. G. thought was, according to his judgment, about a fair equivalent. Filling up a bond was not the only duty performed by the district attorneys; they had to look into the conditions of principal and sureties, &c.

Mr. WEBSTER was of opinion that the bill as reported would not reach the mischief—it did not probe deep enough for that. The fees of the Government officers at New York were ten times greater than those of Boston, Baltimore, or Charleston, and he was desirous that they should be restricted within some reasonable limits, for at present they were beyond all reason. The office of the district attorney of New York produces more than the salary of the President of the United States, and the clerk received more than would pay the annual salary of the Chief Justice of the United States. There was not only gross enormity, but gross inequality in this business, which the bill, in his estimation, was not calculated to cure.

Mr. GRUNDY was of opinion that the bill as reported, covered all that the resolution of the Senator from Massachusetts had referred to. The Senator should have attended to the subject when before the committee. It could not be expected that a full examination of the modes of taking fees as regulated in the different States, would be gone into at a juncture like the present. The committee had prepared an adequate remedy, in its opinion, for the evil complained of. Mr. G. expressed his willingness, however, at a proper time, to go into the subject, and have a thorough reformation of the whole business of fees.

Mr. WEBSTER then proposed the following amendment, which he thought would cover all the ground:

SEC. 2. And that no suit shall be brought, or costs in-

Sub-Treasury Bill.

[SENATE.]

curring, on any bond, for the renewal of which provision is made by law, unless the party or parties shall neglect to apply for such renewal for more than twenty days after the maturity of such bond.

Mr. WESTER explained the object of his amendment to be to prevent what are called "snap-judgments," and other tricks employed by pettifoggers.

Mr. BUCHANAN thought the matter required more consideration, and moved to postpone it until to-morrow; which motion was agreed to.

SUB-TREASURY BILL.

The Senate resumed the consideration of the bill for a sub-Treasury system. (Informally suspended to allow of the consideration of the Attorneys' Fees bill.)

Mr. WRIGHT rose and said that, but for his situation upon the committee, which reported the bill upon the table, he should not only not feel it to be his duty, but he should not even feel excused, for occupying the attention of the Senate at this time, and adding to this already full debate. Indeed, so extensively had all the important points presented by the various propositions been referred to, and ably debated, by those who had preceded him, that he should feel justified in preserving silence, had not certain charges been made against the committee, touching the discharge of their duties, which he felt himself compelled to notice. He did not use the term "charges" in any offensive or improper sense, but as expressing strong differences of opinion between himself and those who had complained.

The reference of this and all the other important subjects which had occupied the attention of the Senate during its present session, to a single committee, though strictly appropriate, had necessarily devolved upon the members of that committee some labor, great anxiety, and high and delicate responsibilities. It was impossible, therefore, that any one of them, and most especially any one of the majority of the committee, who had concurred in its reports, could have listened to this debate with any other than the most interested feelings; nor could they pass in silence, charges of insensibility to the crisis, and its influence upon all the citizens of the country, or of a culpable neglect of any important duty confided to them. What, then, were the charges to which he had referred?

The first was, that the committee had confined their deliberations, and the measures they had proposed, simply to the wants of the Government, in disregard of the higher and paramount wants of the people. It had been said that the great and important purpose of this extra convention of Congress was to relieve the people; and that the wants of the Government were secondary and unimportant in the comparison. He did not himself understand this new doctrine of a separation of interests between the Government and the people. He had supposed that the wants of the people, which it was within the constitutional power of the Government to relieve, were, of necessity, the wants of the Government itself; nor could he understand how it was possible that the Government could have any want, which was not a want of the people. The public Treasury want money. Is that a want of the Government and not a want of the people? For what is the money wanted? To carry out the dearest interest of the people, in all the objects of a good Government, of a Government of their own choice. Why is the want of money for the public Treasury a want of the Government? Simply because it is a want of the people, inasmuch as, without it, their Government cannot be carried on.

He would examine, for a moment, the measures which the committee had reported to the Senate, that, in that way, it might be seen what was their tendency and effect, and how far the committee had been deficient in their attention to the wants of the citizens generally, or in proposing such measures of relief as the Government could adopt.

He certainly did not intend to discuss now measures which had passed the Senate and gone to the House many days since, but he trusted a reference to these measures, for the purpose he had avowed, would be not only pardonable, but proper.

The first was the bill to postpone the transfer of the fourth instalment of the deposit with the States. The committee found that the existing law made it the duty of the Secretary to make this transfer to the States, of about nine and one third millions of dollars, on the first day of the present month; on yesterday. They found that the means in the Treasury, from which alone it could be made, were in the late deposit banks, and in the deferred and unpaid merchants' bonds for duties. If the transfer must be made, the banks and the merchants must be called upon for immediate payments, to enable the Treasury to make it. Consequently, the customers of the banks, and of the merchants, must be called upon to pay them, that they might be able to pay the Government. The committee supposed it impolitic to make the call, and oppress the debtor citizens, merely that the Treasury might obtain the money to transfer for safe-keeping. They considered it wiser and better to postpone the transfer and give time to the banks and merchants to pay. Therefore, they presented the bill in question: and was it not a relief bill? Did any one look on it as a relief to the banks and merchants only? Did any one suppose that the banks actually had in their possession, locked up in their vaults, the money they owe to the Government, or that the merchants were in funds to pay their deferred bonds, without a call upon their customers? On the contrary, did not all know that the banks had loaned these moneys in the ordinary course of their banking operations, and that they could not pay without collecting these loans at this difficult period for borrowers to pay? Did not all know that the inability of the importing merchants to pay, proceeded from the inability of their customers to pay, and that, if pressed for payment by the Government, they must press those customers? And who are the customers of the banks and the merchants? Are they not the people, and the whole people? Would any one say, then, that this was not a relief bill? That this was a bill for the Government, and not for the people?

The second bill reported by the committee, was to authorize the emission of ten millions of dollars in value of Treasury notes; in this form to borrow upon the credit of the United States the sum of ten millions of dollars in money—and for what? To enable the Treasury to get on, and grant time to the debtor banks and merchants. The committee found the Treasury in want of means to answer the ordinary calls upon it, and that those means must be realized, either from a prompt collection of the demands due to it, or from moneys raised upon public credit. For the reasons which induced them to recommend a postponement of the further deposits with the States, they were also induced to present this bill to the Senate, and thus, so far as the current calls upon the Treasury should require it, to interpose the public credit between the wants of the Government and the rigid collection of its dues. Was this bill to be considered in the mere light of a care for the Government, without regard for the interests of the citizens? Who were to be affected by a prompt and rigid collection of the public dues? Not the Government, or the Treasury, but the public debtors. Who were the public debtors? The banks and the merchants immediately: the borrowers from the banks and the customers of the merchants substantially. And who were the borrowers from the banks and the customers of the merchants but the people of the country.

The third bill reported by the committee was to grant time to the importing merchants upon their bonds due, and to become due, for a year from the present time. The extension, assented to by the committee, and ordered by the

SENATE.]

Sub-Treasury Bill.

[Oct. 2, 1837.]

Senate, was nine months upon each bond. Would any one question that that was a relief measure to the merchants? Did any one suppose that the relief afforded by that bill was designed to reach no further than the merchants who owed the bonds? No, sir. It was the customers of those merchants, the persons who had purchased for consumption and use the goods upon which the duties were payable, that the bill was to relieve. Few, comparatively, of those who occupy these seats would have voted for that measure, had its influence and action been confined to the merchants only. But they could not indulge their debtors unless they could be indulged by the Government, because they must collect if they must pay. To enable them to grant the indulgence which the state of the times and the condition of the monetary affairs of the country demanded, was the design and object, and would be the effect, of the bill. Who, then, would deny to it its relief character?

The fourth bill which the committee presented for the acceptance of the Senate, was one to extend a proportionate indulgence to the late deposit banks for the payment of the balances remaining due from them to the public Treasury. It was true that these institutions stood upon a different footing from the merchants. They had merely received the public moneys for safe-keeping. The moneys were legally and technically in the Treasury, but were they there in fact? Could the Treasurer command them for the uses of the Government or the people? No. They were unavailable funds in the Treasury. And why were they unavailable funds? Because the banks had got them locked in their vaults, and were not willing to pay them upon demand? No, sir: but because the banks had them not; because they were loaned to the customers of the banks, the citizens of the country, who could not pay on demand. The relation of debtor and creditor, in its ordinary acceptance, was not intended to be created by the law establishing the late bank deposit system. It was a mere agency for the safe keeping of the money, which the law recognised, but that agency had been turned into the relation of debtor and creditor by the failure of the banks to fulfil on their part—into the most unpleasant relation of debtor and creditor; a creditor who wants and debtors who cannot pay. Indulgence, therefore, became a matter of interest to the creditor, as adding to the chances of eventual payment; and of favor to the debtors, as giving them time to collect the means for payment. To whom, then, was the favor, the relief, extended? To the banks or to their customers? Most assuredly to the latter. The banks could pay if they could collect; and, if compelled to pay, they would be compelled to collect. Their power to indulge depended upon the indulgence extended to them; and could it be said that a measure giving to them four, six, and nine months, to pay their balances to the Treasury, was a measure solely confined to the protection of the Government, without regard to the relief of the people?

These were the first four bills presented by the committee to the Senate, and yet they were told that they had forgotten the suffering interests of our great community in their exclusive care for the Government and its officers. Was the charge just or merited? These bills had all received the final action of the Senate, and all, save one, had passed this body by nearly unanimous votes, while that one had passed by a large majority. It was true that the connexion between them was intimate, and that, to a greater or less extent, each subsequent one was predicated upon the success of its predecessor, while all were most intimately connected with the condition and action of the public Treasury.

Indeed, it was but candid to say that the committee knew of no direct relief which Congress could properly afford to the distressed of the people of the country, but such as should grow out of the existing connexion between the

means of the Treasury and the banking and mercantile interests. These bills covered all that ground, and no difference of opinion could possibly exist as to them, unless it should arise upon the principle of indulgence, or the time of indulgence. No such difference had been manifested in the action of the Senate upon the respective measures, and therefore it was right to assume that none existed. Some had supposed that it was the duty of Congress to borrow the nine and one-third millions, covered by the first bill, that it might be transferred to the States for safe-keeping; and propositions having that tendency had been presented to, and acted upon, by the Senate, but they did not meet with favor. The body did not seem to suppose that such a disposition of the public credit would be a measure of relief either to the Government or the people, and it was rejected.

Take, then, the four measures referred to, sum them up in their combined action, and to what do they amount as relief to the community? The first is equal to a forbearance to collect nine and one-third millions of dollars from the customers of the banks and the merchants, to be transferred to the States for safe keeping. The three last authorize a loan, upon the public credit, to the amount of ten millions of dollars, to pay the expenses of the Government and meet the public appropriations, and a forbearance of the collection of that sum from the public debtors, that they too may be able to forbear collections, at this trying period, from those who are indebted to them. Here, then, is direct and positive relief to the amount of nineteen and one-third millions of dollars. Might he not, then, ask, with some force and some justice, whether the committee were obnoxious to the charge of having forgotten the interests of the people in their care for the Government? He would here dismiss this topic.

The next and only remaining charge against the committee which he proposed to notice was, that in their action they had entirely overlooked, or wholly neglected to act upon, one of the most, nay, the very most, important of the subjects presented for their action in the message of the President referred to them; that they had reported no bill declaring the description of currency which should be receivable in payment of the public dues. He did not refer to this complaint against the action of the committee for the purpose of representing it as unjust or ungenerous; not even for the purpose of refuting it. It had come from opposite sides of the House, and it might be well founded. The fact was certainly as alleged; and his only purpose was to give the reasons which governed himself, and which, he was certain, governed the majority of the committee, in the conclusion to report no bill upon the subject of the currency to be received into the public Treasury. Those reasons had been, and still were, satisfactory to himself, as he doubted not they were to his colleagues upon the committee; but the course of action of the Senate upon this bill seemed to indicate, and its final action would probably show, that they were not satisfactory to the majority of the body. Should this be so, the committee would be content, when their reasons had been placed fairly before the Senate and the country.

They found the message presenting, among others, two distinct points, both, in the judgment of the committee, most deeply interesting to the public Treasury, the Government, and the country. The first was the continuance of the separation between the moneys of the people and the State banks, which the operation of the existing laws and the conduct of the banks had already produced. The other was a gradual and safe discontinuance of the reception of the bills of the State banks in payment of the public dues, and an eventual return to the collection of gold and silver and such paper as should be issued upon the faith and credit of the United States, and be, by the laws of Congress, made receivable for debts due to the United States.

Oct. 2, 1837.]

Sub-Treasury Bill.

[SENATE.]

The laws as they are, upon the subject of the deposit and safe keeping of the public moneys, seemed to the committee to require immediate action, if the recommendation of the President was to be carried out and made a part of our permanent policy. Hence they reported to the Senate the bill now under discussion. They were not unmindful that some regulation as to the descriptions of currency to be received in payment of the public dues might become necessary, in case the new system of deposits should be adopted and the present condition of the banks should be changed; but in the present condition of the banks and of the law upon this point, they could see no necessity for immediate action, or for any present change of the existing laws. They felt that the two subjects were somewhat connected, but not so intimately as to require or demand that both should be embraced in the same bill. They knew that great diversity of sentiment prevailed as to both, and that different opinions were held by those who had hitherto been friends and supporters of the administration, as well as between them and their common political opponents. Under these circumstances, and with the distinct expression of a desire, on the part of a large majority of the Senate, that the present session should be terminated at the earliest possible day, the committee felt bound to present every subject from their hands in the most simple and distinct form, and in a shape which might receive the definitive action of the body with the least possible consumption of time. With this view they reported separate bills upon every subject upon which they did report, and the same consideration influenced them to omit reports upon all subjects which they supposed might be deferred to the regular annual session, without injury to any important interest, public or private. By the law, as it stands, the notes of non-specie paying banks can neither be received in payment of the public dues, nor paid to the public creditors. He was sorry to be compelled to say that, for all practical purposes either to the Government or the people, there were, at this time, no other banks in the country, and he was much more sorry to be compelled to believe that there would not, in a practical sense, be any such banks until after the time when Congress would be again in session. No one had proposed, and he was happy to know that no one would propose, to make the inconvertible notes of non-specie paying banks receivable at the public Treasury, and surely no one could have expected such a proposition from the committee. The revenues, then, to every practical extent, are now receivable in gold and silver only, unless Congress shall, at its present session, create a paper upon the faith and credit of the Government, and make it receivable for the public dues. Hence the absence of any immediate necessity for legislation upon this point. The committee further believed, what has already been proved to be true, that any bill upon this subject would lead to long and grave discussion, and tend to protract the session. For these reasons they had omitted to report upon this subject, and he had as yet seen nothing to change his opinion of the wisdom of their course. He still believed that the connexion of these two subjects in the same bill was undesirable; that it would retard action, and he greatly feared embarrass the bill which the committee had reported, and the passage of which they considered to be of high public importance. The matter, however, was now with the Senate, and he should cheerfully submit to its choice. If called upon to vote upon the proposition before it, he was ready to vote, whether they should be insisted upon as amendments to the committee's bill, or as an independent measure.

Having said thus much by way of explanation, and he hoped, to some extent, in justification, of the course and action of the committee, he would now pass to a brief discussion of the bill before the Senate.

The crisis, he said, was one of the deepest interest.

Every man in these seats, every citizen of the country, felt it to be so. Still, its peculiar character could not be too often adverted to, or too firmly fixed in the memory of all. During a period of profound peace; after a series of years of unexampled abundance in every production of the earth, and every product of labor; with a currency more abundant than our young country had ever before witnessed; and standing as strong in the public confidence as our paper currency had ever stood; with ready markets, and prices higher than any former period of peace had sustained; under the influence of all these elements and evidences of prosperity and wealth, national and individual, and at the entrance upon another of those rich and fruitful seasons with which a kind Providence so frequently blesses our fertile soil—a season not surpassed by any which has preceded it in the abundance it has returned to the husbandman for his labor—at such a time, and under such circumstances, the revulsion came, and in an instant, as it were—in a single night, the whole beauty of this rich scene was changed. That currency, so abundant and creditable, became depreciated, inconvertible, and debased. Those markets, so quick and active, and profitable, became stagnant and deserted. Those prices, so alluring to enterprise and industry, were changed to a priceless mass of unsaleable commodities.

That all should have inquired after the causes of this sad and sudden change, was most natural. That statesmen should have done so was necessary to the discharge of their delicate and responsible duties. The President of the United States, to qualify himself for the performance of his constitutional duty of giving to Congress "information of the state of the Union, and recommending to their consideration such measures as he shall judge necessary and expedient," has done this. In his message, he has given to us his opinion of the causes which have brought upon our country this sudden and sweeping revulsion. It was not his purpose to examine the correctness of these opinions of the President. No one had expressed a doubt that they were honestly entertained, and all admitted that they had been clearly, frankly, and firmly expressed. They had been the subject of able and extended criticism in the course of this debate, and he thought also the subject of equally able and perfectly triumphant defence. Entertaining this opinion, he had but a single remark to make in regard to them, and that was, that he had heard criticism and contradiction from some quarters of the House delivered in a manner and in language which excited his profound regret—in a manner and in language which he would not, if he could, (and he was most thankful he could not,) imitate, towards friend or opponent.

He had listened to the debate, however, with profound attention; and while all had their peculiar views of the causes of the present derangement in our monetary affairs, and while the views of the different speakers differed materially as to the immediate and most active causes, he thought there were certain general positions substantially conceded by all; which, being drawn out and placed in their proper order, would advance us very far in the wide field of discussion presented and occupied by the various members. He had endeavored, therefore, to place these positions upon paper, and to give them an order best calculated to promote this object. They were as follows:

1. That wide-spread and highly injurious derangements have been, and are experienced, in the banking concerns, and in most of the business transactions of the country.

2. That the present embarrassments in the affairs of individuals are, to a greater or less extent, caused, or greatly increased, by the existing embarrassments in the affairs of the banks,

3. That an undue multiplication of banks by many of the State Legislatures, and excessive issues of paper money by the State banks, are among the most prominent of the

SENATE.]

Sub-Treasury Bill.

[Oct. 2, 1837.]

causes which have brought about these embarrassments of the banks, and consequently of business generally.

4. That a material enlargement of the specie basis for our paper circulation, is indispensable to the security of the banks, and the stability of the paper currency.

5. That all banks of issue and circulation are liable to excesses, and that the State banks, from their distant locations, rival interests, and the variety and diversity of their business and associations, are peculiarly so liable, which renders it desirable and important that the fiscal action of this Government should never be so directed as to promote these excesses, while, so far as that can be safely and constitutionally done, it should be so directed as to have an equal tendency, in all parts of our extended confederacy, to check them.

6. That the powers of Congress, to prevent the evil of excessive banking by the State institutions, are, in no sense, direct and positive, but are, in whatever form they may be exercised, incidental and consequential, growing out of the expressly granted powers.

So far he thought all could agree and walk together in this trying crisis. He was not aware that any one would controvert either of these positions, while he was sure that most of those who had addressed the Senate, in the course of this debate, upon whatever side of the house, had substantially assumed them.

The difference seemed to arise as we passed the last proposition, and came to inquire how this incidental power of Congress should be exercised. The late catastrophe to the banks and business of the country, had satisfied all that something was wrong in the working of our monetary system, but the seat of the disease, and the appropriate remedy, were questions upon which opinions differed.

The President was bound, in recommending to the consideration of Congress, such measures as he judged necessary and expedient, to point out his view of the evil, so far as he should consider it connected with and remediable by federal legislation, and to present his plan of remedy. He has done so frankly and fully, and as the majority of the Committee on Finance have agreed with him, and have reported the bill under consideration to carry out his recommendation upon this point, it would be his duty, Mr. W. said, to examine that bill in its favorable and unfavorable influences upon the Treasury, upon the Government, upon the banks, and upon the currency generally. The safe keeping of the public moneys became separated from the State banks, in May last, by the voluntary suspension of specie payments by the banks, and the operation of the existing laws upon that act, and the bill proposes to continue the separation.

Before he could proceed with his argument, he must here notice a position taken by the Senator from South Carolina, who addressed the Senate yesterday, [Mr. PRESTON,] and which position, he must say, he heard assumed with some surprise. It was, that the existing law had not produced a separation between the public Treasury and the State banks; that they were not legally separated, and that the only separation which did exist was one forced by the Secretary of the Treasury, without the requirement of law and against the public interests. If he correctly understood the Senator, this was a fair statement of his argument; and he would repeat, he had heard it with surprise. The answer to it should be an extract from the law itself; and it would be found a triumphant answer. That part of the eighth section of the deposit act of the 23d of June, 1836, which prescribed the rule for the action of the Secretary upon this subject, was in the following words:

"Sec. 8. And be it further enacted, That no bank which shall be selected or employed as the place of deposit of the public money, shall be discontinued as such depository, or the public money withdrawn therefrom, except for the causes hereinafter mentioned; that is to say,

if at any time any one of said banks shall fail or refuse to perform any of said duties as prescribed by this act, and stipulated to be performed by its contract; or if any of said banks shall at any time refuse to pay its own notes in specie if demanded; or shall fail to keep in its vaults such an amount of specie as shall be required by the Secretary of the Treasury, and shall be, in his opinion, necessary to render the said bank a safe depository of the public moneys, having due regard to the nature of the business transacted by the bank; in any and every such case it shall be the duty of the Secretary of the Treasury to discontinue any such bank as a depository, and withdraw from it the public moneys which it may hold on deposit at the time of such discontinuance."

This was the law. What had the Secretary done? He had discontinued the defaulting banks as public depositories. Had he obeyed the law in doing this, or had he forced the separation? It was true, as the gentleman had stated, that there were yet six specie paying banks, and consequently six deposit banks upon the list; but where were they located? What were the collections of the revenue at those points? What was the importance of any one of them as a fiscal agent of the Treasury? The gentleman had not seen fit to give to the Senate these facts in connexion with his claim on behalf of this remnant of the deposit banks, and certainly he did not intend to detain the Senate to do it. It was enough for his purpose that the connexion was, for all practical and useful purposes, either to the Government or the people, wholly dissolved; and if it again existed, must exist by a re-union, not as a continuance of any present existence.

The conduct of the Secretary of the Treasury was complained of by the Senator. Had the Secretary attempted to force a separation between the public depositories and the six remaining deposit banks? This was not alleged. They were placed upon the list of depositories in the report of the Secretary, laid before Congress at the commencement of the present session; and in the same statement the location of each, and the amount of public money on deposit in each, to enable the Senate and the country to judge of the importance of a continued connexion with those banks as fiscal agents of the Treasury, were plainly given. From this statement the assertion had been made, and was now repeated, that, for all practical and useful purposes to the Treasury or the people, the connexion between the deposit banks and the public moneys was at an end. Nor was the Secretary of the Treasury in any sense chargeable for the dissolution of this connexion. So far from it, his own statements to Congress show that he has fallen short of the execution of the law. It commanded him, upon the failure of any bank to pay specie for its notes, when demanded, not only to discontinue such bank as a depository, but to "withdraw from it the public moneys which it may hold on deposit at the time of such discontinuance." Has he done this? No: for he tells us that the larger portion of the means in the Treasury, at this moment, exists in balances due from these banks as portions of the deposits they have received for safe keeping. Has the Secretary brought suits to recover these balances, when the banks have failed to make legal payment? He tells us not, except in a few cases where it was considered necessary, for the eventual security of the public property. He, then, is the last person in the world who should be charged with persecution against the banks, or with an attempt to force a separation between them and the public Treasury. If he is culpable at all, it is in not having obeyed the law, by withdrawing from them the moneys they held in deposit at the time they discontinued the payment of their notes in specie when demanded. If he has violated the law, he has violated it from lenity to the banks; and all know that this lenity has been wholly compulsory, growing out of the situation in which the banks have placed

OCT. 2, 1837.]

Sub-Treasury Bill.

[SENATE.]

themselves. So much for the charge that the Secretary of the Treasury has forced the separation between the banks and the Government.

He would now proceed to inquire what influences, favorable, or unfavorable, the bill to make this separation between all banks and the public money permanent, would exert upon the public Treasury. It would give to the Treasury direct possession, and a perfect knowledge of its means, at all times, and under all circumstances. They would consist not of bank credits, but of money, and would, therefore, not be subject to any of the fluctuations to which bank credits must be always liable. The means of the Treasury would be the value received, and not the mere representation of that value in account.

It would give to the Treasury the perfect command of its means. It would no longer be troubled with unavailable funds, a description of funds well known to it for the last twenty years; which have always grown exclusively out of its connexion with banks; which now constitute almost its only resource for the payment of the public creditors; and the consequence of which character given to the means of the Treasury, so far as he was informed, had, more than any other single cause, compelled the convention of Congress at this inconvenient, and he thought he might safely say dangerous, season of the year. It might be well here to define this term "unavailable funds," as applied to the means in the public Treasury. He understood them to consist, now and upon all former occasions, either of bank notes, which the banks issuing them could not redeem in specie, or any thing else which would pay the debts of the Government; or of moneys received by the banks for safe keeping, and which they could not pay, upon demand, in the legal currency of the country, or in any currency, which the creditors of the Government would consent to receive as money. An entire separation from banks would, of course, relieve the public Treasury from this embarrassment for the future. It would, at all times, enable the Treasury to pay the demands upon it, when the money of the people had been collected and placed in its keeping for that purpose; whereas, under the connexion, these moneys were liable to become unavailable in the hands of the banks, and the people again to be called upon to raise, either from their pockets, or upon their credit, the means to pay those very debts for the payment of which they had once provided by depositing the money in bank.

A continuance of the separation would further relieve the Treasury from the necessity of using its means to sustain the credit of banks, when revulsions in trade, and general shocks to credit, must bring the banks in jeopardy. These revulsions must be always more or less frequent in every commercial country, and most frequent, and most severe in those which most extensively adopt a system of paper or credit circulation and currency. If, then, the means of the national Treasury are confided to the safe keeping of the banks which furnish that paper or credit circulation and currency, they must be always subject to the fluctuations, revulsions, and incidents, to which the credit of the banks are subject. They become mere credits with the banks, and cannot be exempted from the influences which affect its other credits. Can the fiscal officers of the Government, then, neglect to put forth their exertions, and the means at their command, to sustain the credit of those banks, when occasion shall call; whose credits constitute the means of the public Treasury itself? He was not ignorant of the fact, that loud and startling complaints had been made in this hall against a late Secretary of the Treasury, upon the mere suspicion that he had used the means of the Treasury to sustain the credit of the deposit banks; but would any gentleman deny that, under this concise and practical view of the consequences of a connexion between the Treasury of the people and the banks, it must frequently become the imperious duty of that officer, a duty as

binding as that of keeping the Treasury in a situation to answer the calls upon it, to exert this power, and so to locate the means of the Treasury, as to render it as effective as possible? The consequence was unavoidable, and still the exercise of such a power would always be odious in a political sense, and must always be more or less invidious in a financial sense. It could never be exerted equally towards all the banks, but must be used especially in favor of those which should be, for the time being, the depositories of the public funds. Its influence, then, might often be unfavorable, and even injurious, towards institutions which had promoted, as much as any other, the collection and prompt payment of the public revenues, but which should not, on the day of trouble, be safe keepers of any portion of those revenues. Is it not desirable, if it can be done with safety to all interests to be regarded, to relieve the Treasury, and the head of the fiscal department of this Government, from this always so delicate, and frequently so odious, an exercise of the power and influence of the public funds, upon the credit of the banks and the business of the country? He must say that a proper national pride, and a just feeling of patriotism, seemed to him to demand it, at any expense short of the positive sacrifice of some paramount public interest.

A further benefit to be derived from a system which shall make the Treasury the keeper of its own means, and especially if those means shall be collected and disbursed in the legal currency of gold and silver, or of paper issued upon the faith and credit of the Government only, will be a perfect uniformity of value in the collections and disbursements of the Treasury, wherever made. Its operations will become stable and certain in every sense, and all the contracts with the Government may be made without the customary deductions on account of the anticipated receipt of a depreciated medium of payment. Every citizen can make his proposals for the public works or public supplies, wherever may be the place of his residence, or the place of payment under the contract, based upon the par of money, and will not be driven to an uncertain calculation upon the fluctuations of exchange and the uncertainties of credit.

These are some of the benefits to be anticipated to the public Treasury from a permanent separation from the banks. What are the injuries, the unfavorable influences, if any, to stand against these benefits? He had heard but one suggested, so far as the interests and conveniences of the Treasury are concerned, and he must say but that one had occurred to his mind. The expense and trouble of remitting specie, in cases where that should become necessary, was, he believed, the only drawback upon the Treasury for all these benefits, and a short examination would show the weight of this objection.

Under the system of bank deposits, drafts from the Treasurer, upon the different depositories, and from one depository upon another, are made the medium of remittance in all ordinary cases, and, where the drafts are fully credited, supersede the necessity of an actual transportation of the money in almost all the operations of the public Treasury. Nothing in the system proposed, prevents the use of the same medium for remittance and exchange. The drafts of the Treasurer of the United States upon a receiving officer of the Government, will certainly have as good credit as his drafts upon a deposit bank, and when they are known to be drawn upon the specie in safe keeping, and upon nothing else, they cannot fail to be as acceptable to the public creditor as any similar drafts have heretofore been. The trouble and expense, therefore, of transporting specie funds from one portion of the country to the other, for disbursement to the public creditors, will not probably be more extensive under this bill than under the bank system which it proposes to supersede.

But we here meet an objection from the Senator from South Carolina, [Mr. PRESTON,] which requires an answer.

SENATE.]

Sub-Treasury Bill.

[OCT. 2, 1837.]

He says the system proposed, thus carried out, will constitute a bank, a bank of discount, a bank of issue, a national bank, a Government bank. He reasons thus: One of the depositories constituted by the bill will make his draft upon another and deliver it to the public creditor. The receipt of the draft by the public creditor, is a discount of the paper of the officer making it. The person receiving the draft may transfer it to his neighbor before it is presented for payment, and it may pass from hand to hand before it finds its way to the officer upon whom it is drawn, and who has the specie in keeping for its payment. This will convert the draft into an issue of paper, and as it is drawn upon specie funds in actual deposit in the hands of the drawee, the whole machinery must constitute a bank, and a bank, too, of deposit, discount and issue. Now the only answer which this argument requires is simply to say, that if this constitutes a national bank, a Government bank, or a bank of any sort, then we have had such a bank under the system of deposit with the State banks, because the public disbursements have constantly been made, and the public funds distributed and equalized by exactly similar drafts. He saw no force whatever in the argument, unless it was designed to frighten those who, like himself, were not very partial to banks of any description, and were most distinctly hostile to a national or Government bank, with the apprehension that such a bank was insidiously buried under the bill, and would be disinterred and spring into life at its passage. Now he was ready to say to the Senator from South Carolina, and to all the friends of that Senator who were so very anxious for the establishment of a national bank, that, opposed as he was to such an institution, in name or in principle, if they would compromise by the acceptance of such a bank as this bill would establish, they should have it with his cheerful assent, and this long and heated agitation about a Government bank should be forever amicably settled.

He would now look at the influences of this measure upon the Government.

It would discharge its legislation from bank influences of all sorts. He spoke not of improper or corrupt influences, but of those constituent interests, which must be represented in Congress so long as the connexion between the public Treasury and banks of any description was maintained. He addressed those who must understand him, and who must have seen and felt these influences in our official action here. Who, he would ask, had occupied one of these seats for the last five years, and had not seen the power of this influence upon our deliberations? Who had failed to see that it was an influence more nearly overpowering and beyond our control than any we had been called to encounter? Who did not see and feel it now as pressing upon us with a giant force? It was true, we had formerly and most usually encountered it in the consolidated form of a national bank, and that it now presented itself to us in State detachments; but it was the same influence similarly exerted. It was the effort of cupidity on our free institutions—an effort to make money out of the money and means and credit of the people.

He uttered these sentiments with extreme reluctance, and with the most extended charity towards all those who differed from him. He knew well that not only political opponents, but those who had ever been political and personal friends—those towards whom he had ever entertained, and still did entertain, the kindest feelings, did differ with him upon these points. He most cheerfully yielded to their integrity, sincerity, and patriotism, every indulgence which he asked for himself; but the crisis, the importance of the questions presented, and our imperious duty to our constituents, demanded from us frank and fearless action.

Was it not, then, in case he was right, most desirable to free the legislation of Congress from bank influence altogether? Would it not tend more than any other single act

we could perform, to take from our debates and deliberations that bitterness and acrimony which had too strongly characterized them for the last few years, but which, he was proud to say, had entered, in a much less degree, into the present debate in the Senate, than into any similar debate for many years? For himself, he felt that this consideration alone demanded the passage of this bill; that it was entirely paramount to any objections he had yet heard urged against it; that it was as much superior to considerations of financial convenience and pecuniary profit, as was the purity and permanency of our political institutions to the temporary advantages of a bargain or the facilities of borrowing money.

This was not the only advantage the Government would derive from a permanent separation of its finances from the banks. It would discharge it from that eternal round of imputations to which, under the connexion, its every fiscal action is subjected. If it be a time of prosperity and plenty, all are struggling for the profits arising from the safe-keeping of the Government funds; and the failure on the part of its fiscal officers to select a given bank as a public depository, is not only matter of personal offence, but is immediately converted into the active cause of all the pecuniary calamities which the friends and customers of that bank may experience through all time to come. If it be a time of scarcity and pressure, like the present, the drafts of the Treasurer upon the money of the people in safe-keeping with the banks is a ruthless attack, a war upon them, and is intended to prostrate the institutions. The former keeping of the funds becomes a merit and a virtue, and to ask for their payment to the public creditors is ingratitude and injustice.

If the Executive in the exercise of a sound discretion, sees proper to issue an order requiring payment in money for the whole, or any portion of the public revenue, this is converted into an attack upon the banks, a distrust of their credit and solvency, and a wrong inflicted by the Government upon the whole people. Can it be desirable to preserve a connexion which is the subject of incessant complaint on the part of the banks and their friends, and of constant embarrassment to the operations of the public Treasury, and of imputation upon the most faithful and worthy public officers? He thought not. He considered this connexion of the fiscal affairs of the Government with the credit and business of the banks, and of business and commercial men, and the constant imputations brought upon the Government thereby, as promoting a political morality in the public mind most dangerous to our institutions; as doing more to weaken the confidence of the people in the Government of their choice, than any and all other causes of distrust combined. If we would listen to the slander and misrepresentations of the times, we must believe that all our misfortunes, public and private, are imputable to our Government—all our prosperity to a resistance to its measures and its policy. And whence do these imputations come, but from our connexion with the banks? They all emanate from that source, and from no other. That connexion is now dissolved, by the operation of law and the voluntary action of the banks themselves; and he would say, let it be perpetual—let it never be renewed.

The effect of this measure upon the banks should next occupy his attention.

It had been considered as a measure of open and violent hostility to those institutions; as fraught with unmixed evil to them. Was this the true view of it? Had it these exclusive tendencies? He thought not, and he would attempt to point out some positive benefits to the banks from its adoption.

It would leave the State banks to operate upon their own means—upon the capitals which the respective State Legislatures had thought proper to give to them, and upon the funds derived from their private depositors. These means

Oct. 2, 1837.]

Sub-Treasury Bill.

[SENATE.]

would be perfectly certain and uniform, so far as they consisted of the capitals of the banks, and would be subject to no dangerous fluctuations, so far as they consisted of private deposits. Hence the action of the institutions could always be regulated by a certain standard—the extent of their means for the accommodation of their customers. This would discharge them from the inducement to those dangerous expansions and contractions, which not only promote, but cause, revulsions such as that under which the country now suffers.

The Government has been charged with being the cause of the present pecuniary embarrassments of the country, and he thought not without some foundation, but he considered the connexion between the Treasury and the banks the only foundation for such a charge. What had we done? We had deposited our funds in the State banks. A period of unexampled prosperity had visited our country. Importations had become excessive, and the duties thereupon had swelled the public revenue from that source beyond all reasonable anticipation. The banks received the excess of revenue which the wants of the Government and the public appropriations did not call for. The same causes promoted unusual and unexampled sales of the public lands, and thus, from both of the great sources of revenue to the United States, streams were poured into the public Treasury, widened and deepened by their own accumulation and velocity. The banks were safe-keepers of the public funds, the fiscal agents of the Treasury, and they were also the reservoirs from which the importing and other merchants drew their means, and from which the speculating purchasers of our immense domain were supplied with funds for their operations. So far as the Government was concerned, the consequences are obvious. The moment the revenue exceeded the wants of the Treasury, the excesses fed the passion they ought to have controlled. The banks were the receivers and the payers. They received, to keep for the Government, and loaned to the merchants and purchasers of our lands. The system, in fact and in practice, was one of indefinite credit for both duties and lands. The money paid for both went into the banks for safe-keeping. The Treasury did not want it or call for it for payment of the public dues. The banks loaned it to their customers, who were the payers for duties and lands. Under these circumstances, and this action of the system, excesses were inevitable, and they had visited their consequences sweepingly upon the country and upon the Treasury itself.

Ought not this state of things to be a lesson to the wise not to renew a connexion which had been so disastrous to every interest involved? To the Government and the public Treasury, as a creditor of the banks; to the banks, as debtors to the Treasury and creditors to the citizens; and to the people at large, and especially to the commercial community, as debtors to the banks.

That the times have promoted over-trading, and over-banking no one will deny; but that the connexion between the Government and the banks, and the forty millions of dollars of surplus funds in deposit with them, immensely increased the over-banking, is equally undeniable. It is not to be expected that the managers of banks will keep money without making profitable use of it, when that use is presented and urged upon them. This remark was not made in censure of the officers of the deposit banks. Their stockholders, and the community about them, knew that they were in possession of the funds; and the use would be demanded, nay, he might say commanded, had the officers of the institutions resisted. The evil lay further back. It was in placing and retaining the funds in the banks which the immediate calls upon the Treasury did not require.

The fault of the Government, however, did not stop here. We passed a law exacting from the banks interest for these

funds, and thus not only sanctioned, but compelled, their use of them in their ordinary loans and discounts. Could a bank keep money, and pay interest upon it, and derive no interest from its use? Most certainly not, and we, therefore, compelled the banks, by our express legislation to promote the evils of which we now complain. We compelled them to loan our money in their hands for safe-keeping, by charging and exacting from them an interest for its use, and thus stimulated them to increase the excesses of over-trading and over-banking. We furnished them with a capital of some forty millions of dollars, and forced them to use it in making loans.

Can any thing more strongly, or clearly, show the impolicy to every interest of any connexion of a financial or interested character, between the local banks of the country and the Treasury of the nation? The imputations cast upon us, as having caused the present pecuniary embarrassments of the country, have this justice, and let us discharge ourselves from similar imputations for the future. Our real fault has been, not that we have unduly checked the excesses of the times, but that, in the outset, we promoted the expansions by the banks which necessarily led to those excesses, and that all our efforts, legislative, and executive, have been insufficient to avert the catastrophe which has now come upon the country. We see our agency in the mischief, when it is too late for us to apply a remedy. The incidental relief in our power, we have already offered to the country, so far as the action of this body is concerned, and now let us pass this bill, and protect ourselves against all imputation as wrong doers for the future.

A further benefit to the banks, to be derived from a continuance of the separation, is, that when they shall win the public confidence by their sound management and permanent means, they will possess and retain it, independent of public patronage, independent of any action of the Federal Government, and exempt from the fluctuations which congressional legislation or Executive discretion may otherwise cause. This is the description of public confidence which these institutions should possess and rely upon, and these should be its foundations. Its own capital, and the integrity and ability of its managers, should be the dependence of a banking institution; not the uncertain and changing patronage of any body, much less the fluctuating and dangerous patronage of Governments, State or National. A credit founded upon such patronage must be delusive. To-day you deposit with a bank a million of dollars; to-morrow it extends its accommodations upon the strength of your funds in its keeping: the day following its favored customers expand their business, and enlarge their credits; on the fourth day you require your funds, and draw upon the bank for them. Your deposit has given to the bank a false confidence in its means; its extension has given its customers a false estimate of its ability to indulge them; their expansion has given to the community false expectations as to their power of indulgence; and your call for your money undeceives all, after the mischief is done, the excess committed, and just in time to produce the derangement and distress and suffering which must always, sooner or later, follow excessive credits and mistaken confidence. The institutions which are to furnish to the people of this country a circulating paper to answer the purposes of money, ought not to be subjected to fluctuations of this description. Their love of gain ought not thus to be stimulated, and especially by this Government, which has none but an incidental control over their proceedings. They should be left by us to operate upon their own means, to rest their credit upon their own ability and good character, and not upon our funds.

But it is said the withdrawal from the State banks of our confidence, countenance, and patronage, in this particular, will prostrate and destroy those institutions; that the attempt

SENATE.]

Sub-Treasury Bill.

[Oct. 2, 1837.]

to separate the finances of this Government from them, is, in effect, a declaration of war against them, which they cannot survive. Is this, can this, be so? Will any sound and solvent State bank fail, because the United States does not entrust to it the safe keeping of the moneys of the people? Did the State Legislatures, in chartering these banks, expect or intend that their credit or solvency should be sustained by the legislation of Congress, or the use of the funds of the Federal Government. If so, why have they limited and fixed their respective capitals, and attempted to set bounds to their operations? Why have they assigned different amounts of capital to different banks, dependent upon their location and business associations? Certainly no other answer can be given to these interrogatories, than that they intended that each bank should have a capital equal to the wants of the business community surrounding it, and that all the banks of their creation should have a credit and confidence with the people, and should transact a business proportioned to the capitals granted to them respectively, and not beyond that limit. You, then, by making your deposits with these institutions, destroy the proportions which the State Legislatures have intended to establish and preserve. Your deposits are treated as capital by the banks, and an extension of their loans, and an augmentation of their business, beyond that which their own means would allow, is the necessary consequence of your patronage. Can this disposition of your moneys fail to promote excessive banking? The members of the State Legislatures have a knowledge of the business wants of all the places at which they locate banks, and their object is to measure the banking capital at any given point by the wants of business at that point. When they have done that, you come in with your deposits, distributed, not upon the basis which governs the State Legislatures, but according to your convenience for receipt or disbursement. The consequence is, that you pour your millions into these State institutions, without reference to the legitimate business calls for banking facilities at the points where your deposits are made; and thus derange and destroy the proportions, as to these facilities, which the local Legislatures have determined to be safe and proper. In this way your patronage becomes an evil, and not a benefit. It stimulates the cupidity of the banks, and they, in turn, stimulate the cupidity of the business community around them, until excesses on the part of all produces revulsion, distress, and bankruptcy.

Still it is urged that our withholding this evidence of our confidence in the State banks will destroy their credit, and prostrate the institutions. Will any one pretend that the States have rested the credit of their banking institutions upon the patronage or confidence of this Government? Can that man be found who, will admit that, as a member of the Legislature of his State, he has voted for banks with the expectation that they must be solvent or insolvent as the pleasure of Congress shall determine? Will not every such man tell you that he has given to the banks, which he has aided to create, a capital stock upon which its solvency and credit with the people is to rest? That, with honest and prudent management, each bank has within itself, and under its own control, the elements of its own prosperity, and is not dependent upon your smiles, or to be ruined by your frowns? This ought to be so, and is so.

How was it with the State banks during the period from 1816 to 1836? The Bank of the United States then enjoyed the exclusive privilege of keeping the public funds, and its notes alone were by law made receivable in payment of the public dues. Were the State banks discredited or ruined then? Was that separation between them and the funds of the Government treated as a war upon them, a war of extermination? No, sir. The operations of these institutions were never more stable or safe than during that period, nor did they ever stand stronger in the

public confidence than then. Away, then, with the idea that the solvency or credit of the State banks rests upon our patronage or favor, or that our frown upon them is annihilation.

He knew that, were we to withdraw our confidence from a particular bank, and extend it to all others, the inference would justly be that we suspected its solvency and responsibility, and that this might do it injury. But when we separate ourselves from all banks, State or National, and declare our object to be a political as well as a financial separation, will it be said that we cast distrust upon the banks, which will destroy their credit? Will it be contended that the banks established by the States have a right to the safe-keeping and use of the revenues of the nation? He thought not; and if not, then could the separation of our finances from them be justly termed a war against them? No. The position was absurd and unsustainable. He had no feeling of hostility to the State banks; but he was not to concede their right to the possession and use of the moneys of the people, lest they should choose to consider a denial of the right an act of hostility. He would go as far as any man should go to protect these institutions in the full enjoyment of all their constitutional and legal rights; and he would go quite as far to compel them rigidly to fulfil their most sacred obligations to that confiding people who take their promises to pay upon demand as money.

In every light, then, in which he could view this matter, it was his deliberate opinion that the banks would be benefited, and not injured, by making the existing separation between them and the public Treasury perpetual. The passage of this bill, at this time, might have some tendency to weaken the confidence of the community in the institutions; but, if such a consequence must attend this change of our policy, could there be a better time than the present to make that change? The banks are now—he would not say insolvent, for he did not believe that was the condition of any large portion of them—but unable to pay the demands upon them. That fact was avowed by themselves, and known to all the world. They were in a *quasi* insolvent state, and all the distrust which could grow out of such a condition they had brought upon themselves by their voluntary suspension of specie payments. It was in vain, then, to talk of the delicacy of their present credit. That delicacy had been destroyed by their own act, and before they could ever again restore themselves to the confidence of the community they must be sound in fact, and able to discharge, to the fullest extent, every obligation which general distrust could bring against them. It was erroneous to suppose that they could ever resume and sustain specie payments until they were thus prepared and thus armed. They must build up for themselves a new character, based upon a perfect fulfilment of all their obligations. If, then, we are to separate from them, and that separation is to have any tendency to affect their credit, this is the very period when it is most desirable to them that the declaration of a perpetual divorcement should be made. Now it can do them no harm. They are already in a condition from which main strength alone can raise them; but at a time when their credit was unsuspected, and their operations unembarrassed and unimpeded, the measure might give them an injurious shock. Let it be done now, therefore, that, when they do rise, it may be distinctly known that they rise upon their own strength, unaided by our patronage, and untrammelled by our movements.

Mr. W. said he had touched but incidentally the question of the receptibility, or non-receptibility, of the notes of the State banks in payment of the public dues. He did not now propose to detain the Senate by remarks upon that point. The proposition affecting that question had not come from the committee, but from a member of the Senate in his place, and to him he should leave the discussion of that topic. For himself, he agreed with the views

Oct. 2, 1837.]

Sub-Treasury Bill.

[SENATE.]

of this matter which he understood his honorable colleague to take, that, in case the deposits were confined to the safe-keeping of the officers of the Government, it was a question of much less interest to the banks than seemed to be generally supposed. If the banks were not made the depositories, it could not be supposed that their notes, if made receivable, would be retained for any length of time in safe keeping. It would be a necessary result of this mode of keeping the public funds, that all bank notes received must be presented at short intervals for payment; and he could not see that it would be any very valuable favor to the banks, as a permanent system, to receive their notes merely for the purpose of immediate presentment and payment. In this respect, he was fully conscious that the change should not be precipitate or rash; most especially it should not while the heavy balances remain due to the Treasury from the late deposit banks. For this reason, the graduation provided for in the amendment proposed by the Senator from South Carolina [Mr. CALHOUN] met his approbation; nor did he think time very material upon this point, and he should be willing to make the graduation even more slow than that proposed, in case any important interest would be favorably affected by further time. The preservation of the principle was what he wished, but he did not desire rashness or precipitancy in bringing it into practice.

He would now examine very briefly the influences which he supposed this measure would exert upon the currency generally.

It would give a stable and uniform value to the currency received into and paid from the public Treasury, in whatever portion of our widely-extended country the receipts or payments should be made.

It would also preserve the currency of the Treasury at the standard fixed by the constitution and the laws of Congress, and guaranteed to all the citizens of the country, as the only currency they should be compelled to take in payment of debts.

It would stimulate, if not compel, the banks to elevate their paper currency to a level with the currency of the public Treasury, and would go very far to measure the public confidence in these institutions by the standard which regulates the currency received and disbursed by the Government. If they keep their paper up to that standard of value, it will have currency and confidence; and if they do not, it will have neither. There will be a rule for judgment which cannot err, because it will be a rule of intrinsic value, and not of paper credit.

In this sense, he deemed the measure of immense national importance. Hitherto the standard of currency fixed by the constitution had been, in practice, erected nowhere; while the banks, State and national, had been left to establish the standards of value in all quarters of the country, and these standards had been as various, at different points, as the fluctuations of trade could make them. The fiscal operations of the Federal Government had hitherto been made, to every practical extent, to follow the interests of the banks; and the uniformity of receipts and disbursements in the various portions of the Union had only been the uniformity of bank credits, and the uniformity in value of bank paper. It was high time that a more permanent standard, and one in conformity with the constitution, should be established. Congress alone could establish it; and Congress, in his judgment, could only establish it in connexion with the receipts and disbursements of the public revenue, and to the extent of those receipts and disbursements. He hailed this measure, then, as one calculated to produce this great reformation, and to bring us back to the starting point of 1789. With these feelings he advocated it, and hoped for its passage.

A further beneficial tendency of this measure will be an extension of the specie basis for our broad paper circulation.

This is admitted by all to be a matter of indispensable necessity. Who, then, should contribute to it, if not the Federal Government? Are the banks expected to do it, when it is in the very face of their interests to promote the circulation of the metals? Are the States to do it, when they cannot "coin money, or regulate the value thereof?" Whence is this great good to the people of the country to be derived, unless Congress shall bring its powers to aid in the work? And how shall Congress accomplish this purpose but by the receipts and disbursements of the public revenue?

The adoption of such a system by Congress would constitute a point, in the broad field of our currency, exempt from the fluctuations and revulsions to which a currency of credit must be always subject. It would be a fortress to which public confidence would retreat in times of trouble, and within which it would remain uninjured, however violent the convulsion which should shake the monetary world. Now we were without any such rock of safety. The storm, which was now sufficiently powerful to agitate the great ocean of credit, shook alike the Treasury of our country and the humblest bank. This ought not so to be. The finances of a rich, and powerful, and prosperous nation, ought not to be subject to these fluctuations. They ought to be exempted from the reverses and revulsions to which private cupidity will always subject the business of an enterprising people. Place them upon the basis of a currency of intrinsic value, and you accomplish this great object. Leave them to stand upon the credit of banks, and you ensure the recurrence of a crisis like the present, when, with abundant means in account, your Treasury is destitute of means at command.

But we are told that the passage of this bill will establish one currency for the Government and its officers, and another for the people. This argument had been repeated from various quarters of the House, and he was disposed to consider it as advanced in all candor and sincerity, and to reply to it in the same spirit.

He must premise, however, that he could not comprehend this mode of treating the Government and the people of this country as separate interests, much less as antagonist interests. He had supposed that our Government consisted of mere servants of the people, charged in their several stations, with the execution of the will of the people; and that, beyond the execution of that temporary trust, the officers of the Government were, to the extent of their numbers, the people themselves, and one with them in feeling and interest. How, then, would it be possible to create or establish a currency which, properly and practically speaking, should be a currency for the Government, and should not, at the same time, be a currency for the people, was entirely beyond his comprehension. The officers of the Government principally reside in the country, and among the people. They receive their compensation, whatever it may be, from the people, and the expenses of themselves and their families are paid, like those of other citizens, to the people from whom they purchase and with whom they deal. The currency they receive from the people as a compensation for their services, they must pay to the people in discharge of their debts; and how a currency thus employed, received from the people and paid back again to the people, could be a Government currency as contradistinguished from the currency of the people, he must again repeat, he could not at all comprehend.

But he would look at the argument in another aspect. It necessarily presupposes that a better currency is to be secured to the Government and its officers, and a baser for the people. The currency proposed to be secured to the national Treasury is gold and silver, or their equivalent. The currency which the argument assumes the people are to have, is bank paper. What, then, do those who use the argument assume? Most certainly that the currency

SENATE.]

Sub-Treasury Bill.

[Oct. 2, 1837.]

of bank paper is always to be baser than the currency of gold and silver; because if the currency of paper be equal in value to the currency of gold and silver, then the argument has no force, as urged, to show that the Government and its officers are to be preferred in our legislation to the people at large. Taking the argument with this assumption, and in what predicament do those who use it place themselves? They, by their own assumption, urge us to adopt, by a law of Congress, a standard of currency for the Treasury of the nation baser than gold and silver, to avoid the invidiousness of giving to ourselves a better currency than the people are to have. Has this argument been well considered, and its consequences duly weighed? He thought not, or it would not have been presented.

Gentlemen might suppose it popular to talk about the currency of the people as base and depreciated, but they would permit him to ask, to whom are the people to look for an elevated standard of currency—for a standard of currency such as is guaranteed to them by the constitution—if not to Congress? Shall they look to the banks? The complaint of the argument is that the banks are to furnish them a base paper currency, while the Government secures to itself a currency of gold and silver. Are they to look to the States? They have no power to fix a standard of currency even for their own citizens, much less for the nation. They must, then, look to Congress and to the constitution. And what shall Congress do to promote the interests of the people in this matter? Fix a standard of value baser than that which the constitution has guaranteed to the people? Adopt bank paper as the standard of value of the country, for fear that the Government will have a better currency than the people? Can the people ever have a better currency than the Government, so long as the regulation of the standard rests with the Government? Most certainly not. If we adopt a standard baser than the coins, the people cannot elevate it. If we keep our standard upon the level of the constitution, the people can compel the banks to come up to that standard, because no law can obligate them to receive the paper of the banks, or to give to them their confidence, and they will, of course, do neither, unless the banks furnish them a currency equal to the legal standard of the country; but, adopt by your legislation a baser standard than gold and silver, and do you think—does any one think—that the banks will furnish a better currency for the people than you prescribe for the public Treasury? No, sir. The supposition would be absurd. If you do not fix and maintain a proper standard of currency, none can exist in the country. If you adopt and adhere to the constitutional standard in your transactions, the influence of your example will be all-powerful with the banks, and with all future State legislation, in regard to them.

The Senator from Massachusetts [Mr. WEBSTER] manifested some alarm, lest the officers of the Government should be set down at the first table, and the people left to supply themselves at the second. He was one of those who claimed to be as democratic as the honorable Senator, and as unwilling to degrade our masters the people, but if the cook were to supply the first table with base food, in order that the master of the mansion might sit at it with the servants, he could not believe that the honor of the situation would compensate for the unwholesome character of the bill of fare. Would it not better comport with the duty of a faithful servant to provide sound, healthful, nutritious food for every table, and thus enable the master to consult his pleasure, as to which he would be fed from, without danger to his health. True, if bad food were not provided and cooked, the servants could not eat bad food; but it was true, that if sound food were not provided, the master could not have sound food, whatever table he might choose it from. If we do not provide a sound standard of currency; our masters, the people, cannot enjoy a sound currency,

for to us, they have entrusted the duty of selecting and establishing that standard. We act for them, and not for ourselves, and the standard of currency we adopt for the public Treasury, is adopted for them, and not for us.

Another argument, very nearly allied in character to the last, is urged against the passage of this bill. It is said its effect will be to raise the salaries and compensations of the public officers. Some have stated the increase to be equal to ten, some to twelve and a half, and he believed he had seen some statements raising it as high as twenty per cent. upon the present compensations. What foundation had this argument? The same as the former. It went upon the assumption that the currency of the country was now, and was always to remain, base and depreciated. That a dollar of currency was not, and was not to be, equal in value to a statute standard dollar. Look at the position in its true light, and its fallacy will be instantly manifest. The compensations of all public officers are fixed by law. Take our own compensation for example. We are to receive a given number of dollars per day for each day of our service. This is the contract between us and the people. How, then, are we to be paid? Are we to have eight dollars for each day we occupy these seats, or are we to have eight promises of some bank to pay, which are worth but four dollars? Does any man doubt which was the intention of the law? Will any man contend that we are overpaid, if we receive eight dollars in gold or silver, as the value thereof is regulated by Congress? Will not all admit that we are not paid according to the law unless we receive that value? But, say gentlemen, gold and silver bears a premium in the market, and, therefore, any given amount paid in the standard coins of the country is overpaid to the extent of the premium upon the coins. Here rests the error. The premises are false, and the conclusion, therefore, falls to the ground. Gold and silver does not, and cannot, properly speaking, bear a premium. An American silver dollar can no more be worth one hundred and ten, or one hundred and twenty-five cents, in this country, than a standard pound can weigh a pound and a quarter. The one thing is as impossible as the other. Both are themselves standards, the one of value, and the other of quantity; and the former can no more vary than the latter. The dollar is worth exactly one hundred cents. It is the measure of that value, and cannot be worth either more or less than that sum. It is itself the par of money. Whatever is above it bears a premium, and whatever is below it is at a discount. This error in computing the value of money, and the value of our paper currency, is so universal that it is not singular this argument should appear plausible to most minds, without a somewhat close examination. All the statements we see published adopt the value of the paper as the par of money, and, because the gold and silver are more valuable, and command a higher price in the market than paper, they are said to bear a premium. The error arises from adopting an erroneous standard for the par value. The paper is not par when gold and silver are worth more than it. They are the par, and the paper is depreciated. A moment's reflection will show every man that this is the true position. Why, then, it will be asked, are not the statements of the market value of our currency, daily published to the country, made upon the true, and not upon a false basis? The boards of brokers, and bankers, and dealers in money would probably be able to account for the manner in which these statements are made. It is much more acceptable to them, and doubtless much more favorable to the circulation and credit of the depreciated bank paper, to use it as the par, the standard of value, and to present gold and silver at a premium, as being actually worth a tenth beyond its statute value, its value as a tender in the payment of debts.

A single fact which transpired in this city but a day or two since will show the practical effect of this mode of com-

Oct. 2, 1837.]

Sub-Treasury Bill.

[SENATE.]

puting the value of money. A member of the Senate, within the last few days, related to me the following incident: The Senator stepped into a shop upon the Avenue to purchase some small article. The price was given to him by the shopkeeper at eighty-seven and a half cents. He presented a dollar in silver to make payment, when he was informed that the price was given at eighty-seven and a half cents under the expectation that payment would be made in paper, in "shin plasters," as they are called, and that it was but seventy-five cents if paid in specie, and he received a quarter of a dollar in change and the article he desired. Was this difference of price a premium upon the silver? No, sir. It was an addition to cover the depreciation of paper. The seventy-five cents was the value of the article in money. The eighty-seven and a half cents was the value in depreciated paper. This little incident shows us the tax which would be imposed upon the public creditors, including the officers of the Government, if we were to pay them in a depreciated currency. It shows us that we should, at once, sink their compensations about one sixth, as that would be the additional charge against them for every necessary of life, because they must make payment in a currency so much depreciated. It shows us also the immense tax which the whole community must pay so long as they are compelled to use a base currency; and shall we then be urged to adopt a standard of currency for the public Treasury below the value of gold and silver?

A third argument against the passage of this bill, urged with great zeal and earnestness by those who put it forth, is, that it will extend most fearfully the Executive patronage of this Government; that it will tend to strengthen the Executive arm, to the danger of public liberty itself. He would examine concisely this startling objection. The bill creates no new officers. It proposes to entrust the safe-keeping of the public funds with the officers who now collect them. These officers are all appointed by the President and Senate, by the President alone, or by the heads of some one of the Executive Departments. They are all public officers of the Government, responsible to it, and to the people, for their official acts. They are all now removable at the pleasure of the President. The bill does not propose to change the mode of their appointment, or to increase their liability to dismission from office by the Executive. In what way, then, does it increase the Executive power over them, or strengthen that arm of the Government for good or for evil? He would take a case, the more clearly to illustrate his views: The collector of the port of New York, a place of high trust and responsibility already, and to be made much more so if this bill becomes a law, is appointed by the President, by and with the advice and consent of the Senate; he is removable at the pleasure of the President, without cause, either proved or assigned; this is the relation of that officer to the Executive branch of the Government under the existing laws. Does the bill before us propose to change that relation? Not in any way whatever. It merely proposes to make that officer keep and disburse the money he collects, instead of handing it over to a bank for safe-keeping; and it will require that he should strengthen his official bond and sureties to meet the increased official responsibility. But would any gentleman explain to him how the power or influence of the Executive over the officer was to be increased by these proceedings. That power and influence could only be exerted in reference to his appointment to, or removal from, office; and the existing law upon that subject was not to be changed. The office was made no more valuable by this addition of duty and responsibility, and, therefore, the bill would cause no increase of a desire for the possession or retention of it.

It was a mistake, then, of fact, that the Executive patronage was increased, or the Executive arm strengthened, by the provisions of the bill. It was a delusion, which gentlemen had permitted their imaginations to practise upon

them, which had no foundation in the proposed law. This would be rendered more apparent by the fact that this argument was most urged by those who preferred a return to the system of deposits with the State banks. Had any gentleman, who had occupied a seat here for the last few years, or who had turned his attention at all to the proceedings of Congress since the public moneys were transferred for safe-keeping from the late Bank of the United States to the State banks, forgotten the vivid pictures daily drawn upon this floor, of the immense stride which had been taken by the Executive power in the adoption of that system of deposits? Were we not constantly told of the army of bank agents, bank officers, and bank directors, persons unknown to the constitution and the law, and not responsible to Congress or the people, which that system had brought within Executive influence, and engaged in the service of the Executive? Who did not then feel that there was some force in these remarks? And who that was a friend to the then administration did not struggle incessantly to procure the passage of some law which should bring that system of deposits within the power and control of Congress? And are we now to be urged to return to that system, to re-enlist that numerous body of bank managers, and reconnect them with the Executive branch of the Government, to prevent an extension of Executive patronage and power, by the simple employment of officers of our own appointment, directly responsible to the people, and to the representatives of the people here? The position was absurd. It was to urge us upon the very evil we were cautioned to avoid; to embrace a danger existing in its worst form to discharge ourselves from one of a merely imaginary character.

No, sir; if gentleman would take a calm and dispassionate view of this subject, they would see that the bill would increase immensely, fearfully, the Executive responsibilities, not the Executive power. If the system proposed be adopted, the people will hold the President responsible for his selection of the officers to be entrusted with the safe-keeping of the treasure; and they will hold the head of the Treasury Department responsible for an incessant and sleepless vigilance over these depositaries. This will be the influence the bill will exert upon the Executive branch of the Government. It will throw upon the Executive officers a great increase of care and responsibility—not an increase of power or influence.

Indeed, so strongly had this increase of responsibility, even upon the minor Executive officers, impressed itself upon the mind of one of the gentlemen who had addressed the Senate, [Mr. RIVES,] as to induce him to entertain the apprehension that men of proper character, standing, and responsibility could not be found willing to accept the trusts. For himself, he was almost ready to say that he wished he could entertain more apprehension upon this point than the argument of the Senator had inspired him with. He had no fear of living to see that period when the lucrative and honorable and desirable offices of this Government would go begging for incumbents; when candidates, of the most unquestioned qualifications, in every sense, would not voluntarily present themselves, and conflict with each other for the places. At points where the emoluments of office did not present adequate temptation, the collections must be small, and the trust light; so that he was at perfect ease upon this point, and had only alluded to it to enforce his own position, that the bill was calculated to increase Executive responsibility, not to extend Executive power.

A fourth argument against the bill claimed a passing notice. It was that it would work the entire destruction of credit in the country. This appeared to him to be, most clearly, an objection springing from an excited imagination. What were the premises from which this frightful conclusion had been drawn? State them in their worst

SENATE.]

Sub-Treasury Bill.

[OCT. 2, 1837.]

form and utmost extent, and what are they? That the Government of the United States was, hereafter to confine the safe keeping of the public moneys to the hands of its own officers, and was gradually to discontinue the receipt of bank notes in payment of the public dues. Those were the things proposed to be done. The effect of such a policy upon the credit and business of the local banking institutions of the country he had already fully discussed; and, to his own satisfaction, had shown that its adoption would promote, and not injure, the usefulness of those institutions, considered in the light of public institutions, founded for the benefit of the people at large, and deserving credit and confidence precisely in proportion as they should confine their operations within the fixed means, and should discharge faithfully and promptly all the obligations imposed by their charters. In this light only was he disposed to discuss the claims of the local banks upon the country, or the confidence of the people. The profits of the corporations was not a consideration to enter into a discussion like the present. It was a mere consequence of the faithful discharge of one of the highest trusts which any Government could delegate, the trust of making a currency for the people of the country; and if he had succeeded in showing that this trust could be more safely and perfectly executed without than with a fiscal connexion with this Government, he had accomplished his object, and proved that the just credit of these institutions was not to be injuriously affected by the bill.

Who would contend that its provisions were calculated to injure any other description of credit? Would not wealth and integrity receive the same confidence with the community, whether the funds of this Government were kept in the State banks, or in the hands of the officers of the people? Would not industry and enterprise gain the same esteem, and command the same credit, wherever the Government should choose to place its strong box? Would neighbor cease to trust and confide in neighbor, because bank notes were not to be received in payment of the public dues? Certainly not. The picture was an imaginary one, and this consequence of the passage of the bill, upon the credit between man and man, was not to be apprehended. It was the objection of an excited mind, and not of sober reason.

An argument of a character very similar to that last noticed, had proceeded from the same source. It was, that the passage of this bill, the separation of the funds of the Government from the banks, and the gradual suspension of the receipt of their paper in payment of the public dues, would lead to a universal and exclusive metallic currency for the whole country in all its business operations. That it would lead to a currency equal in value to gold and silver, and convertible into gold and silver at pleasure, he hoped and believed. But that it would destroy the State banks, and send us back to an exclusive metallic currency, there was not the slightest reason for believing. If he had not labored in vain, in a former part of his argument, he had shown that the effect of this policy would be favorable to the banks, favorable to the certainty of their means, to a safe measure for their operations, and to the stability of their credit and confidence with the people. If these positions should prove to be true, there was no just fear that the banks would be destroyed, or that banks chartered by the States would not continue to exist. And surely, while banks of issue were in operation in the country, no one need fear the prevalence of an exclusive metallic currency; for nothing was more certain than that bank paper and gold and silver of equal denominations could not circulate together. The paper might be made, for the general purposes of business, of equal value with gold and silver; but while the one was the promise of a bank to pay, and the other the means by which alone that promise could be redeemed, and while it was the direct in-

terest of the bank that the promise should take the place of the real value, and circulate in its stead, the one would be withdrawn from circulation and hoarded, and the other would be scattered upon the wings of the wind.

His fear was, that the whole operations of the public Treasury would be inadequate to furnish a sufficient specie basis for our paper circulation. What were those operations in the aggregate, compared to the monetary operations of the country? The Senator from Massachusetts [Mr. WENSTEN] had said they were estimated at from one and a half to two per cent. Call them two per cent.; call them five per cent., and will they distribute a quantity of the metals sufficient to sustain the immense superstructure of paper, amounting to the remaining ninety-five or ninety-eight per cent.? And from what other source were we to look for an extension of our specie basis, if not from the operations of this Government? Here then was the fear, and not that too extensive a metallic currency would be diffused among the people.

He would notice a single other objection to this system, and close his remarks upon this branch of the subject. It had been said that its effect would be to hoard vast amounts of cash capital from the uses of business. How far was this effect to be anticipated? When the revenues of the country were made to bear a just relation to its expenditures—a relation which he hoped our recent experience would induce us most rigidly to preserve for the future—there would be nothing to hoard, in the practical sense of that term. We should receive with one hand, and disburse with the other. The payments into the public Treasury, and the payments out of it, would be made in the same description of currency; and what was taken from the uses of business by the receipts, would be given back to those uses in the disbursements, without material delay. It was true that the great extent of our territory, the great number of points at which both receipts and disbursements were to be made, and the wide distance of their locations from each other, and from the Treasury here, keeps a large sum in suspense, and in transitu, during the whole time. That sum might be liberally estimated at from three to five millions, and it was the whole amount which the ordinary operations of the Treasury would, in any sense, hoard—the whole amount which it would withdraw from the uses of business, when the revenues and expenditures of the Government should be justly measured together. This same sum was now exactly similarly employed, and was suspended in the deposit banks to await the presentation of outstanding drafts: that is, it would be so suspended if the banks were in a condition to fulfil their obligations, and meet the drafts of the Treasury in specie or its equivalent.

But it might be said that, when our revenues should again become abundant, and exceed our expenditures, so that another surplus should accumulate, this system of deposits would necessarily lead to hoarding. This consequence he most cheerfully admitted, and he considered it one of the strongest merits of the system. He hoped never again to see the time when a surplus revenue should afflict us; but if that time did ever again come, it must proceed from an excess of importations, and a renewal of the speculations in our vast public domain. In that case he wished to see the excess of the revenue hoarded, closely locked up from the uses of the trading community, as the most efficient, speedy, and certain check to the overtrading and speculations.

What, he would ask, would have been the surplus of revenue during the late excesses, had the accumulations of money in the public Treasury, paid for duties and lands, been hoarded then, and not surrendered to the uses of the customers of the banks? That surplus, under the system of deposits then in use, reached an amount beyond forty millions of dollars? Does any one suppose it would have reached one-third of that sum, if the gold and silver had

Oct. 2, 1837.]

Sub-Treasury Bill.

[SENATE.]

been demanded in payment of the public dues, and closely locked up in the public depositories? No, sir: a pressure upon the money market would have been produced, and the excesses arrested before you would have hoarded ten millions of coin by this process? What an infinite benefit to the country would have been produced by such an action. We should have been saved from the almost incurable evils of a surplus revenue, and of its practical distribution among the States of the Union; and, what would have been of far more importance, we should have been saved from this tremendous revulsion, which the excesses of credit have brought upon us.

What, sir, has been our own agency in this national calamity? Our revenue was accumulating millions upon millions beyond our wants. We placed it in the banks for safe keeping, exacted from them interest for its use, and thus compelled them to make loans upon it in the ordinary course of their business. It was a time of plenty, and their own means were full, but yet they must use ours to indemnify them for the use which the law compelled them to pay. Could any system have been better devised to promote the excesses of which we now complain. Every dollar collected toward the public revenue added, not one dollar simply, but, being used as capital, two or three dollars to the loans which the cupidity of the banks stimulated them to make. Hence the evil, so far as the funds of the Government were concerned, promoted its own increase, and so it must ever be while the banks are made the depositories of the public moneys. Should we not, then, dismiss the idea that a hoarding of capital is to be a dreaded evil of the proposed system; so regulate our legislation that the revenues and expenditures, in times of stability and regularity of business, will meet each other; and desire to hoard, when excesses in trade, or credit, or speculation, threaten to disturb the healthful equilibrium of the currency, and to plunge us into reverses such as we are now experiencing? For himself, he had no hesitation upon the subject. If a regulator of the general currency of the country was within the power of Congress, he thought this that regulator, and this action of the proposed system of separation from the banks seemed to him to be more valuable than almost any feature in it.

In addition to the remarks he had made, and the objections he had attempted to answer, he found it to be his duty to notice a single feature of the bill which had been the subject of much apprehension and criticism. He referred to the provision for the public moneys in the hands of the depositories proposed to be established. The committee had here introduced a guard of a most rigid character, new to him, and he believed new to our laws. It was that of making a use of the moneys a criminal offence, punishable by fine and imprisonment, in addition to the usual pecuniary liabilities. Their object was to draw the characters of the officers into security for the public, and to interpose that guaranty against an abuse of their trust. He considered this feature of the bill of vital importance to its successful operation, although the usual provisions for sureties and pecuniary liabilities were full and complete without it.

The Senator from Delaware [Mr. BAYARD] had expended much of his argument in showing that the public funds would be insecure in such keeping; and, to fortify himself in his position, he had exhibited to us the long list of defaulting public officers which is annually laid before us, and which comprises every defaulter from the commencement of the Government to the present day. This was a part of the history of our country most unpleasant and painful, and he could not dwell upon it with any pleasure; but the Senator, in bringing it to his aid upon this occasion, seemed to have forgotten that all these defalcations had happened under an established system of bank depositories, State or national; and, therefore, did not go a step to show either the danger of a permanent keeping and dis-

bursement of the public moneys by the public officers, or the greater security of a system of deposit in banks than of a keeping by the officers themselves. The cases cited did go to show that there would sometimes be defaulting officers; and he did not flatter himself that the present bill, or any other which human ingenuity could form, would constitute a perfect exemption of the Government from such losses, or a perfect security to the public funds in any condition. One thing, however, was clear, and would be conceded by all, which was, that the depositories proposed to be established by this bill would not all fail at once, and thus effectually block the wheels of the Treasury, with an abundance of means in its possession, in case those means could be commanded. Such was its present condition under the system of State bank depositories. With millions in the banks, the Treasury had not a dollar at command, and is now, at this moment, compelled to resort to the public credit to carry on the Government. No such revulsion to the Treasury could be experienced under the system of depositories proposed to be adopted; and even if we should occasionally lose a small sum by a defaulting officer, we should not be driven to the expense of extra calls of Congress in consequence of such defaults.

He would not detain the Senate, to add any thing further to this branch of the argument. The President, in his message, had placed the ordinary aspect of the subject too clearly before Congress and the country, to admit of confirmation by any thing he could add to these forcible and practicable views.

This clouded the examination he proposed to make of the plan of the administration, for the exercise of the incidental powers of Congress over the general currency of the country, and of the prominent objections to that plan; and he would now pass to the alternatives proposed by those who differed from the President.

The first of these, was the plan proposed by the honorable Senator from Virginia, [Mr. RIVES,] which, in substance, is a return to the system of State bank depositories, connected with the general receptability, upon certain conditions, of the notes of the State banks in payment of the public dues. What he had already said in reference to the administration plan, would excuse him from any further discussion of this proposition, than what related to its limitations. The proposition was, in substance, similar to one formerly introduced into this body by the same distinguished Senator, and upon that occasion it underwent a full discussion. It was not, therefore, a proposition new to the body; but as he had not taken part in its discussion then, and as it was now brought in conflict with a system he approved, he felt it to be his duty to test its efficiency to accomplish its proposed objects.

Those objects seemed to be two; the first of which was to strengthen and sustain the State banks, and facilitate their return to specie payments; and the second, to extend and strengthen the specie basis for the paper circulation of the banks, by expelling from circulation small bank notes.

The first object was proposed to be accomplished by a continuance of the public depositories with these banks, and by making their notes, when redeemed with specie, receivable in payment of the public dues. He had already discussed both these points, as fully as he proposed to do it, under the head of the influence upon the banks of the passage of the bill before the Senate. He had there given his reasons for the opinions that even a connexion, as depositories, between the State banks and the national Treasury, was injurious to the banks; that if the connexion as depositories did not exist, the receptability of the notes of the banks in payment of the public dues was a matter of little practical interest to them, because the notes so received must be immediately presented for payment, and could not be permanently retained in safe keeping; and that if the

SENATE.]

Sub-Treasury Bill.

[Oct. 2, 1837.]

separation between the banks and the Treasury was to be made perpetual, the present was the most favorable time, so far as the banks are concerned, to make that declaration.

It therefore remained for him simply and concisely to examine the efficacy of the Senator's plan to exclude small notes, and extend the circulation of specie.

These two great objects were proposed to be accomplished by the enactment that no note of any State bank should be received in payment of the public dues; which bank should, after a specified day, issue notes below a specified denomination. The restriction is made to commence at the passage of the act, with a limitation of notes not below five dollars; after the year 1839, no notes are to be issued below ten dollars; and after the year 1841, no notes below twenty dollars; and the receptability of the bank paper by the public Treasury is made dependent upon an observance by the banks of these restrictions. No alteration of the present bank deposit law is proposed; and that compels the banks, as a condition of their participation in that patronage, not to issue notes below the denomination of ten dollars. Neither the deposit law, nor the proposition of the honorable Senator, appeals to the controlling power of State legislation to make them effective. Neither could do so with propriety, as both are mere regulations of federal legislation, addressed to the interests of the State banking institutions. This address to such institutions is always the safe one, so far as their power of action is within their own control; for no principle can be more safely depended upon than that a moneyed incorporation, by whatever authority brought into existence, will govern its action by its interests.

It is in this single sense, then, that the practical results to be expected from the adoption of the plan of the Senator from Virginia are to be examined. How far will the interests of the State banking institutions of the country induce them to subject their action to his proposed restrictions? The inducement offered is the receptability of their paper in the payment of the public dues. The disability is that of issuing no small notes. He had before suggested, as the result of his reflections, that, unaccompanied by a portion of the public deposits, the receptability of the notes of a local bank in payment of the public dues was a very trifling, if not a very questionable, boon. That impression confidently remained. He therefore concluded that the interests of no banks would induce them, voluntarily, to subject themselves to the restrictions proposed, except such as should be selected as depositories. The value of this patronage would be greatly impaired, if the notes of the deposit banks were not so receivable. These institutions, therefore, would bring themselves within the restrictions and within the benefits of the system. What, then, would be the effect, in practice, upon the currency of the country? There are now some eight hundred State banks in organization. The greatest number selected under the deposit law was about one-tenth of the whole; and it is known at the Treasury, and will be readily seen by all who will make a practical examination of the subject, that one of the greatest evils of that law was the large number of banks which its provisions compelled the Secretary of the Treasury, in the then bloated state of the public funds, to select as depositories. From thirty to forty is the largest number which the convenience of the receipts and disbursements, and the safe management of the public funds, can ever require. But suppose the highest number heretofore employed should be retained. Still we should have more than seven hundred banks not submitting themselves to the proposed restrictions, and consequently not restrained, except by their charters, from the issue of small notes. Go farther, and suppose that the interests of one-half of all the banks of the country should induce them to come within the provisions of the

proposed bill. The field for the circulation of small paper would only be made richer for those which did not come in, and until the established laws of currency be radically changed, and silver dollars and half eagles can circulate in common with one and five dollar bank notes, the four hundred banks would make much more from this circulation, than from any additions we can make to their business by receiving their notes. The inducement which the proposition holds out, is wholly inadequate to the accomplishment of the objects proposed, and not a dollar will be added to the specie circulation of the country under it. These considerations rendered this plan less desirable to him than that proposed by the President.

True, it might be said that the plan of the President did not act upon the banks by way of restraint upon the amount or description of their issues. It was true, as to the description of their issues, that was left to State legislation, the source from which they derived their existences, and to which belonged the limitation of their powers, so far as they were to be limited by legislation. The plan of the President sought to act upon these institutions in a different way, and by a more powerful lever. Specie was their life-blood; and the creation of a demand for it was the only efficient control over them. Bring the public revenues, then, to a specie standard, and you most effectually limit the amount of issues of the banks, so far as your operations can impose such a limit. Make your disbursements in gold and silver; and although the small bank paper will displace it, your continued and perpetual action will draw the same specie again from the banks, and will thus keep an amount, equal to your receipts and disbursements, in a constantly active state. In this way alone, in his judgment, is it in the power of this Government to expand the specie basis for our immense paper circulation.

He could not see that the action of the bill proposed by the Senator from Virginia would accomplish this object, while it did appear to him that a perfect separation from the banks, and a gradual return to a metallic currency for the operations of the national Treasury, might reach it.

The only other alternative which had been presented was a national bank. No distinct proposition, in a legislative form, for such an institution, was before the Senate; but the debate had developed the fact that such an institution was the favorite alternative of a large minority of the body, and therefore he made this allusion to it. It was not his purpose to discuss it in any manner. In the absence of any distinct proposition, and after the recent expression of the Senate upon that point, he could not feel warranted in taking the time even to reply to the arguments which had been advanced in favor of this plan. The whole subject had constituted a topic of constant discussion before the country for years, and he could not hope, at this late day, to give any new ideas upon it to the Senate, or to the public.

He had upon his notes several other replies which he had intended to make, but the lateness of the hour, and the full discussion which every important point in the debate had received from others, would induce him to omit them, with a single exception.

The honorable Senator from Virginia [Mr. RIVES] had seemed to suppose that nothing had transpired to weaken the confidence of those who had formerly favored the system of State bank deposits. He was one who had favored that system, when it was adopted by the Executive in 1833-'4. He then expressed his confidence in the ability and fidelity of the State banks to discharge the trusts confided to them. At that time he entertained fully and honestly the confidence he expressed in those institutions. Their subsequent conduct had gone far to convince him that his confidence was excessive and misplaced. He would not say that that system of deposits had entirely failed, as that seemed to be a point of debate and question,

Oct. 3, 1837.]

Adjournment—Sub-Treasury Bill.

[SENATE.]

but he would say that the banks had failed to comply with their obligations; that both the Government and the people had been reduced to extremities by this failure on their part; that we found ourselves here, at this unseasonable period, in consequence of it; and that, in view of these facts, he heard with some surprise, the declaration, confidently pronounced, that nothing had taken place to authorize a change of opinion as to the safety of that system.

He had been repeatedly published to the country as grossly inconsistent, for supporting and sustaining that system of deposits in 1834, and for failing to support it now. He did not feel the force of the charge; but, whether inconsistent or not, when convinced of his error, he was most cheerful to retract it. Time had shown that he then possessed a confidence in the banks which they had not sustained, and which he was bound to presume they could not sustain. Was he, for the sake of consistency, or for any other cause, to assume to entertain his former confidence, when every foundation for it had been swept away, by the voluntary action of the banks themselves? No, sir, such was not his course. He left the defence of such a position to those who could see no difference between sound specie paying banks, and banks which refused to pay specie upon their promises; between banks which promptly, upon demand, fulfilled all their obligations to the public and the national Treasury, and banks which complied with their engagements to neither.

Mr. WRIGHT occupied the floor until near 4 o'clock. When he had concluded,

Mr. CALHOUN moved that the Senate adjourn; he subsequently withdrew his motion at the suggestion of Mr. WALKER, who moved to take up the resolution relative to

THE ADJOURNMENT,

As announced by the House of Representatives, viz: to strike out the 9th and insert the 16th October.

Mr. HUBBARD expressed his dissent from the amendment. He thought the 9th was the proper time, and it was well known that, when the day was definitely fixed, there was always a better disposition to get through the business. He therefore hoped the Senate would adhere to the resolution as originally passed.

Mr. GRUNDY was for concurring with the House in their amendment, and giving them to the 16th. It was well known they were behind the Senate in legislation, and it was but reasonable to concur.

Mr. KING, of Alabama, thought it would be better to wait a day or two before acting on the amendment. If the bill under discussion before the Senate were passed, the 16th would not be time enough for the other House to act on it; on the contrary, if it were not passed, the 9th would be the proper time for adjournment. He would prefer that the matter be laid on the table, though he would not make a motion to that effect.

Mr. BUCHANAN asked gentlemen to consider what might be the effect of sending back the resolution. We might then be kept until the 29th of October, or probably not adjourn at all. He thought, therefore, the Senate had better concur at once with the amendment.

The question being taken on concurring with the amendment of the House, it was carried; and

The Senate then adjourned.

TUESDAY, OCTOBER 3.

SUB-TREASURY BILL.

The Senate resumed the consideration of the bill to provide for the collection and keeping of the public money, with the amendment offered by Mr. CALHOUN.

Mr. CALHOUN rose and said that, in reviewing this discussion, he had been struck with the fact that the argument on the opposite side had been limited, almost exclu-

sively, to the questions of relief and the currency. These are, undoubtedly, important questions, (said Mr. CALHOUN,) and well deserving the deliberate consideration of the Senate; but there are other questions involved in this issue, of a far more elevated character and commanding control, and which more imperiously demand our attention. The banks have ceased to be mere moneyed incorporations.

They have become great political institutions, with vast influence over the welfare of the community; so much so, that a highly distinguished Senator [Mr. CLAY] has declared, in his place, that the question of the disunion of Government and the banks involved in its consequences the disunion of the States themselves. With this declaration sounding in our ears, it is time to look into the origin of a system which has already acquired such mighty influence; to inquire into the causes which have produced it, and whether they are still on the increase; in what they will terminate, if left to themselves; and, finally, whether the system is favorable to the permanency of our free institutions, to the industry and business of the country; and, above all, to the moral and intellectual development of the community. I feel the vast importance and magnitude of these topics, as well as their great delicacy. I shall touch them with extreme reluctance, and only because I believe them to belong to the occasion, and that it would be a dereliction of public duty to withhold any opinion which I have deliberately formed on the subject under discussion.

The rise and progress of the banking system is one of the most remarkable and curious phenomena of modern times. Its origin is modern and humble, and gave no indication of the extraordinary growth and influence which it was destined to attain. It dates back to 1609, the year that the Bank of Amsterdam was established. Other banking institutions preceded it, but they were insulated, and not immediately connected with the systems which have since sprung up, and which may be distinctly traced to the Bank of Amsterdam. That was a bank of deposit; a mere store-house, established under the authority of that great commercial metropolis, for the purpose of safe-keeping the precious metals, and facilitating the vast system of exchanges which then centered there. The whole system was the most simple and beautiful that can be imagined. The depositor, on delivering his bullion or coin in store received a credit, estimated at the standard value on the books of the bank, and a certificate of deposit for the amount, which was transferable from hand to hand, and entitled the holder to withdraw the deposit on payment of a moderate fee for the expense and hazard of safe-keeping. These certificates became, in fact, the circulating medium of the community, performing, as it were, the hazard and drudgery, while the precious metals, which they in truth, represented, guilder for guilder, lay quietly in store, without being exposed to the wear and tear, or losses incidental to actual use. It was thus a paper currency was created, having all the solidity, safety, and uniformity, of a metallic, with the facility belonging to that of paper. The whole arrangement was admirable, and worthy of the strong sense and downright honesty of the people with whom it originated.

Out of this, which may be called the first era of the system, grew the bank of deposit, discount, and circulation—a great and mighty change, destined to effect a revolution in the condition of modern society. It is not difficult to explain how the one system should originate in the other, notwithstanding the striking dissimilarity in the features and character between the offspring and the parent. A vast sum, not less than three millions sterling, accumulated and remained habitually in deposit in the Bank of Amsterdam—the place of the returned certificates being constantly supplied by new depositors. With so vast a standing deposit, it required but little reflection to perceive that a very large portion of it might be withdrawn, and that a sufficient amount would still be left to meet the

SENATE.]

Sub-Treasury Bill.

[Oct. 3, 1837.]

returning certificates; or, what would be the same in effect, that an equal amount of fictitious certificates might be issued, beyond the sum actually deposited, either process, if interest be charged on the deposit withdrawn, or the fictitious certificates issued, would be a near approach to a bank of discount. This once seen, it required but little reflection to perceive that the same process would be equally applicable to a capital placed in bank as stock; and from that, the transition was easy to issuing bank notes, payable on demand, on bills of exchange, or promissory notes having but a short time to run. These combined constitute the elements of a bank of discount, deposit, and circulation.

Modern ingenuity and dishonesty would not have been long in perceiving and turning such advantages to account; but the faculty of the plain Belgian was either too blunt to perceive, or his honesty too stern to avail himself of them. To his honor, there is reason to believe, notwithstanding the temptation, the deposits were sacredly kept; and that, for every certificate in circulation, there was a corresponding amount in bullion or coin in store. It was reserved for another people, either more ingenious or less scrupulous, to make the change.

The Bank of England was incorporated in 1694, eighty-five years after that of Amsterdam, and was the first bank of deposit, discount, and circulation. Its capital was £1,200,000, consisting wholly of Government stock, bearing an interest of eight per cent. per annum. Its notes were received in dues of the Government, and the public revenue was deposited in the bank. It was authorized to circulate exchequer bills, and make loans to Government. Let us pause for a moment, and contemplate this complex and potent machine, under its various characters and functions.

As a bank of deposit, it was authorized to receive deposits, not simply for safe-keeping, to be returned when demanded by the depositor, but to be used and loaned out for the benefit of the institution, care being taken always to be provided with the means of returning an equal amount when demanded. As a bank of discount and circulation, it issued its notes on the faith of its capital stock and deposits, or discounted bills of exchange and promissory notes backed by responsible endorsers, charging an interest something greater than was authorized by law to be charged on loans; and thus allowing it for the use of its credit, a higher rate of compensation than what individuals were authorized to receive for the use and hazard of money or capital loaned out. It will, perhaps, place this point in a clear light, if we should consider the transaction in its true character, not as a loan, but as a mere exchange of credit. In discounting, the bank takes, in the shape of a promissory note, the credit of an individual so good that another, equally responsible, endorses his note for nothing, and gives out its credit in the form of a bank note. The transaction is obviously a mere change of credit. If the drawer and endorsers break, the loss is the bank's; but if the bank breaks, the loss falls on the community; and yet this transaction, so dissimilar, is confounded with a loan, and the banks permitted to charge, on a mere exchange of credit, in which the hazard of the breaking of the drawer and endorser is incurred by the bank, and that of the bank by the community, a higher sum than the legal rate of interest on a loan; in which, besides the use of his capital, the hazard is all on the side of the lender.

Turning from these to the advantages which it derived from its connexion with the Government, we shall find them not less striking. Among the first of these in importance is the fact of its notes being received in the dues of the Government, by which the credit of the Government was added to that of the bank, which added so greatly to the increase of its circulation. These again, when collected by the Government, were placed in deposit in the bank; thus giving to it not only the profit resulting from

their abstraction from circulation, from the time of collection till disbursement, but also that from the use of the public deposits in the interval. To complete the picture, the bank, in its capacity of lending to the Government, in fact paid in its notes which rested on the faith of the Government stock, on which it was drawing eight per cent.; so that, in truth, it but loaned to the Government its own credit.

Such were the extraordinary advantages conferred on this institution, and of which it had an exclusive monopoly; and these are the causes which gave such an extraordinary impulse to its growth and influence, that it increased, in a little more than a hundred years, from 1694 to 1797, (when the second era of the system, commenced with the establishment of the Bank of England, terminated,) from 1,200,000*l.* to nearly 11,000,000*l.*; and this mainly by the addition to its capital by loans to the Government above the profits of its annual dividends. Before entering on the third era of the system, I pause to make a few reflections on the second.

I am struck, in casting my eyes over it, to find that notwithstanding the great dissimilarity of features which the system had assumed in passing from a mere bank of deposit to that of deposit, discount, and circulation, the operation of the latter was confounded throughout this long period, as it regards the effects on the currency, with the bank of deposit. Its notes were universally regarded as representing gold and silver, and as depending on that representation exclusively for their circulation; as much so as did the certificates of deposit in the original Bank of Amsterdam. No one supposed that they could retain their credit for a moment after they ceased to be convertible into the metals on demand; nor were they supposed to have the effect of increasing the aggregate amount of the currency; nor, of course, of increasing prices. In a word, they were in the public mind as completely identified with the metallic currency as if every note in circulation had laid up in the vaults of the bank an equal amount, pound for pound, into which all its paper could be converted the moment it was presented.

All this was a great delusion. The issues of the bank never did represent, from the first, the precious metals. Instead of the representatives, its notes were in reality the substitute for coin. Instead of being the mere drudges, performing all the out-door service, while the coins reposed at their ease in the vaults of the banks, free from wear and tear, and the hazard of loss or destruction, as were the certificates of deposits in the original Bank of Amsterdam, they substituted, degraded, and banished the coins. Every note circulated became the substitute of so much coin, and dispensed with it in circulation, and thereby depreciated the value of the precious metals, and increased their consumption in the same proportion; while it diminished, in the same degree, the supply, by rendering money less productive. The system assumed gold and silver as the basis of its circulation; and yet, by the laws of its nature, just as it increased its circulation, in the same degree the foundation on which the system stood was weakened. The consumption of the metals increased, and the supply diminished. As the weight of the superstructure increased, just in the same proportion its foundation was undermined and weakened. Thus, the germe of destruction was implanted in the system at its birth; has expanded with its growth, and must terminate, one day or other, in its dissolution, unless, indeed, it should, by some transition, entirely change its nature, and pass into some other and entirely different organic form. The conflict between bank circulation and metallic (though not perceived in the first stage of the system, when they were supposed to be indissolubly connected) is mortal; one or the other must perish in the struggle. Such is the decree of fate; it is irreversible.

Oct. 3, 1837.]

Sub-Treasury Bill.

[SENATE.]

Near the close of the second era, the system passed the Atlantic, and took root in our country, where it found the soil still more fertile, and the climate more congenial, than even in the parent country. The Bank of North America was established in 1781, with a capital of \$400,000, and bearing all the features of its prototype, the Bank of England.* In the short space of a little more than half a century, the system has expanded from one bank to about eight hundred, including branches, (no one knows the exact amount, so rapid the increase,) and from a capital of less than a half million to about \$300,000,000, without apparently exhausting or diminishing its capacity to increase. So accelerated has been its growth with us, from causes which I explained on a former occasion,* that already it has attained a point much nearer the assigned limits of the system in its present form than what it has in England.

During the year 1797, the Bank of England suspended specie payment; an event destined by its consequences to effect a revolution in public opinion in relation to the system, and to accelerate the period which must determine its fate. England was then engaged in that gigantic struggle which originated in the French Revolution, and her financial operations were on the most extended scale, followed by a corresponding increase in the action of the bank, as her fiscal agent. It sunk under its overaction. Specie payments were suspended. Panic and dismay spread through the land—so deep and durable was the impression that the credit of the bank depended exclusively on the punctuality of its payments. In the midst of the alarm, an act of Parliament was passed, making the notes of the bank a legal tender; and, to the surprise of all, the institution proceeded on, apparently without any diminution of its credit. Its notes circulated freely as ever, and without any depreciation, for a time, compared with gold and silver; and continued so to do for upwards of twenty years, with an average diminution of about one per cent. per annum. This shock did much to dispel the delusion that bank notes represented gold and silver, and that they circulated in consequence of such representation, but without entirely obliterating on that point the old impression which had taken such strong hold on the public mind. The credit of its notes during the suspension was generally attributed to the tender act, and the great and united resources of the bank and the Government.

But an event followed of the same kind, under circumstances entirely different, which did more than any preceding to shed light on the true nature of the system, and to unfold its vast capacity to sustain itself without exterior aid. We finally became involved in the mighty struggle that had so long desolated Europe, and enriched our country. War was declared against Great Britain in 1812, and, in the short space of one year, our feeble banking system sunk under the increased fiscal action of the Government. I was then a member of the other House, and had taken my full share of responsibility in the measures which had led to that result. I shall never forget the sensation which the suspension, and the certain anticipation of the prostration of the currency of the country, as a consequence, excited in my mind. We could resort to no tender act; we had no great and central regulating power like the Bank of England; and the credit and resources of the Government were comparatively small. Under such circumstances, I looked forward to a sudden and great depreciation of bank notes, and that they would fall speedily as low as the old continental money. Guess my surprise when I saw them sustain their credit, with scarcely any depreciation for a time, from the shock. I distinctly recollect when I first asked myself the question what was the cause? and which directed my inquiry into the extra-

ordinary phenomenon. I soon saw that the system contained within itself a self-sustaining power; that there was between the banks and the community mutually the relation of debtor and creditor, there being, at all times, something more due from the banks to the community than from the latter to the former. I saw, in this reciprocal relation of debt and credit, that the demand of the banks on the community was greater than the amount of their notes in circulation could meet and absorb, and that, consequently, so long as their debtors were solvent, and bound to pay at short periods, their notes could never fail to be at or near a par with gold or silver. I also saw, that as their debtors were principally the merchants, they would take bank notes to meet their bank debts, and that which the merchant and the Government, which are the great money-dealers, take, the rest of the community would also take. Seeing all this, I clearly perceived that self-sustaining principle which poised and impelled the system, self-balanced in the midst of the heavens, like some celestial body, with scarcely a perceptible deviation from its path, from the concussion it had received.

Shortly after the termination of the war specie payments were coerced with us by the establishment of a national bank, and a few years afterwards in Great Britain, by an act of Parliament. In both countries the restoration was followed by wide-spread distress, as it always must when effected by coercion, for the simple reason that banks cannot pay unless their debtors first pay; and that to coerce the banks compels them to coerce their debtors before they have the means to pay. Their failure must be the consequence, and this involves the failure of the banks themselves, carrying, in their consequences, universal distress. Hence I am opposed to all kinds of coercion, and am in favor of leaving the disease to time, with the action of public sentiment and the States, to which the banks are alone responsible.

But to proceed with my narrative. Although specie payments were restored, and the system apparently placed where it was before the suspension, the great capacity it proved to possess of sustaining itself without specie payments was not forgotten by those who had its direction. The impression that it was indispensable to the circulation of its notes that they should represent the precious metals was almost obliterated, and they were regarded rather as restrictions on the free and profitable operation of the system, than as the means of its security. Hence a feeling of opposition to gold and silver gradually grew up on the part of the banks, which created an *esprit du corps*, followed by a moral resistance to specie payments, if I may so express myself, which in fact suspended in a great degree, the conversion of their notes into the precious metals long before the present suspension. With the growth of this feeling, banking business assumed a bolder character, and its profits were proportionally enlarged; and, with it, the tendency of the system to increase kept pace. The effect of this soon displayed itself in a striking manner, which was followed by very important consequences, which I shall next explain.

It so happened that the charters of the Bank of England and the late Bank of the United States expired about the same time. As the period approached, a feeling of hostility, growing out of the causes just explained, which had excited a strong desire in the community, who could not participate in the profits of these two great monopolies, to throw off their restraint, began to disclose itself against both institutions. In Great Britain it terminated in breaking down the exclusive monopoly of the Bank of England, and narrowing greatly the specie basis of the system, by making the notes of the Bank of England a legal tender in all cases, except between it and its creditors. A sudden and vast increase of the system, with a great diminution of the metallic basis in proportion to banking transactions,

* See Speech on Mr. WEBSTER'S motion to renew the charter of the United States Bank, in 1831.

SENATE.]

Sub-Treasury Bill.

[Oct. 3, 1837.]

followed, which have shocked and weakened the stability of the system there. With us the result was different. The bank fell under the hostility. All restraint on the system was removed, and banks shot up in every direction almost instantly under the growing impulse which I have explained, and which, with the causes I stated when I first addressed the Senate on this question, is the cause of the present catastrophe.

With it commences the fourth era of the system, which we have just entered—an era of struggle, and conflict, and changes. The system can advance no further in our country, without great and radical changes. It has come to a stand. The conflict between metallic and bank currency, which I have shown to be inherent in the system, has, in the course of time, and with the progress of events, become so deadly, that they must separate, and one or the other fall. The degradation of the value of the metals, and their almost entire expulsion from their appropriate sphere, as the medium of exchange and the standard of value, have gone so far, under the necessary operation of the system, that they are no longer sufficient to form the basis of the widely extended system of banking. From the first, the gravitation of the system has been in one direction—to dispense with the use of the metals; and hence the descent from a bank of deposit to one of discount; and hence, from being the representative, their notes have become the substitute, for gold and silver; and hence, finally, its present tendency to a mere paper engine, totally separated from the metals. One law has steadily governed the system throughout—the enlargement of its profits and influence; and under that operation, through which metallic currency became insufficient for circulation, it has become, in its progress, insufficient for the basis of banking operations; so much so, that, if specie payments were restored, it would be but nominal, and the system would in a few years, on the first adverse current, sink down again into its present helpless condition. Nothing can prevent it but great and radical changes, which would diminish its profits and influence, so as effectually to arrest that strong and deep current which has carried so much of the wealth and capital of the community in that direction. Without that, the system, as now constituted, must fall, unless, indeed, it can form an alliance with the Government, and through it establish its authority by law, and make its credit, unconnected with gold and silver, the medium of circulation. If the alliance should take place, one of the first movements would be the establishment of a great central institution; or, if that should prove impracticable, a combination of a few selected and powerful of the State banks, which, sustained by the Government, would crush or subject the weaker, to be followed by an amendment of the constitution, or some other device, to limit their number and the amount of capital hereafter. This done, the next step would be to confine and consolidate the supremacy of the system over the currency of the country, which would be in its hands exclusively, and, through it, over the industry, business, and politics of the country; all of which would be wielded to advance its profits and power.

The system having now arrived at this point, the great and solemn duty devolves on us to determine this day what relation this Government shall hereafter bear to it. Shall we enter into an alliance with it, and become the sharers of its fortune and the instrument of its aggrandizement and supremacy? This is the momentous question on which we must now decide. Before we decide, it behooves us to inquire whether the system is favorable to the permanency of our free republican institutions, to the industry and business of the country, and, above all, to our moral and intellectual development, the great object for which we were placed here by the Author of our being. Can it be doubted what must be the effects of a system whose operations have been shown to be so unequal on free institutions whose founda-

tion rests on an equality of rights? Can that favor equality which gives to one portion of the citizens and the country such decided advantages over the other, as I have shown it does in my opening remarks? Can that be favorable to liberty which concentrates the money power, and places it under the control of a few powerful and wealthy individuals? It is the remark of a profound statesman, that the revenue is the State; and, of course, those who control the revenue control the State, and those who can control the money power can the revenue, and through it the State, with the property and industry of the country, in all its ramifications. Let us pause for a moment, and reflect on the nature and extent of this tremendous power.

The currency of a country is to the community what the blood is to the human system. It constitutes a small part, but it circulates through every portion, and is indispensable to all the functions of life. The currency bears even a smaller proportion to the aggregate capital of the community, than what the blood does to the solids in the human system. What that portion is, has not been, and perhaps cannot be, accurately ascertained, as it is probably subject to considerable variations. It is probably between twenty-five and thirty-five to one. I will assume it to be thirty to one. With this assumption, let us suppose a community whose aggregate capital is \$31,000,000; its currency would be, by supposition, one million, and the residue of its capital thirty millions. This being assumed, if the currency be increased or decreased, the other portion of the capital remains the same, according to the well-known laws of currency; property would rise or fall with increase or decrease; that is, if the currency be increased to two millions, the aggregate value of property would rise to sixty millions; and, if the currency be reduced to \$500,000, it would be reduced to fifteen millions. With this law so well established, place the money power in the hands of a single individual, or a combination of individuals, and, by expanding or contracting the currency, they may raise or sink prices at pleasure; and by purchasing when at the greatest depression, and selling at the greatest elevation, may command the whole property and industry of the community, and control its fiscal operations. The banking system concentrates and places this power in the hands of those who control it, and its force increases just in proportion as it dispenses with a metallic basis. Never was an engine invented better calculated to place the destiny of the many in the hands of the few, or less favorable to that equality and independence which lies at the bottom of all free institutions.

These views have a bearing not less decisive on the next inquiry—the effects of the system on the industry and wealth of the country. Whatever may have been its effects in this respect in its early stages, it is difficult to imagine any more mischievous on all the pursuits of life than the frequent and sudden expansions and contractions to which it has now become so habitually subject, that it may be considered its ordinary condition. None but those in the secret know what to do. All are pausing and looking out to ascertain whether an expansion or contraction is next to follow, and what will be its extent and duration; and if, perchance, an error be committed—if it expands when a contraction is expected, or the reverse, the most prudent may lose by the miscalculation the fruits of a life of toil and care. The effects are to discourage industry, and to convert the whole community into stock-jobbers and speculators. The evil is constantly on the increase, and must continue to increase just as the banking system becomes more diseased, till it shall become utterly intolerable.

But its most fatal effects originate in its bearing on the moral and intellectual development of the community. The great principle of demand and supply governs the moral and intellectual world no less than the business and

Oct. 3, 1837.]

Sub-Treasury Bill.

[SENATE.]

commercial. If a community be so organized as to cause a demand for high mental attainments, they are sure to be developed. If its honors and rewards are allotted to pursuits that require their development by creating a demand for intelligence, knowledge, wisdom, justice, firmness, courage, patriotism, and the like, they are sure to be produced. But, if allotted to pursuits that require inferior qualities, the higher are sure to decay and perish. I object to the banking system, because it allots the honors and rewards of the community, in a very undue proportion, to a pursuit the least of all others favorable to the development of the higher mental qualities, intellectual or moral, to the decay of the learned professions, and the more noble pursuits of science, literature, philosophy, and statesmanship, and the great and more useful pursuits of business and industry. With the vast increase of its profits and influence, it is gradually concentrating in itself most of the prizes of life, wealth, honor, and influence, to the great disparagement and degradation of all the liberal and useful and generous pursuits of society. The rising generation cannot but feel its deadening influence. The youths who crowd our colleges, and behold the road to honor and distinction terminating in a banking-house, will feel the spirit of emulation decay within him, and will no longer be pressed forward by generous ardor to mount up the rugged steep of science, as the road to honor and distinction, when perhaps, the highest point he could attain in what was once the most honorable and influential of all the learned professions, would be the place of attorney to a bank.

Nearly four years since, on the question of the removal of the deposits, although I was opposed to the removal, and in favor of their restoration, because I believed it to be unconstitutional and illegal, yet, forcing what was coming, and not wishing that there should be any mistake as to my opinion on the banking system, I stated here in my place what that opinion was. I declared that I had long entertained doubts, if doubts they might be called, which were daily increasing, that the system made the worst possible distribution of the wealth of the community, and that it would ultimately be found hostile to the further advancement of civilization and liberty. This declaration was not lightly made; and I have now unfolded the grounds on which they rested, and which subsequent events and reflection have matured into a settled conviction.

With all these consequences before us, shall we restore the broken connexion? Shall we again unite the Government with the system? And what are the arguments opposed to these high and weighty objections? Instead of meeting them and denying their truth, or opposing others of equal weight, a rabble of objections (I can call them by no better name) is urged against the separation: one currency for the Government and another for the people; separation of the people from the Government; taking care of the Government and not the people; and a whole fraternity of others of like character. When I first saw them advanced in the columns of a newspaper, I could not but smile, in thinking how admirably they were suited to an electioneering canvass. They have a certain plausibility about them which makes them troublesome to an opponent, simply because they are merely plausible, without containing one particle of reason. I little expected to meet them in discussion in this place; but since they have been gravely introduced here, respect for the place and company exacts a passing notice, to which of themselves they are not at all entitled.

I begin with that which is first pushed forward, and seems to be most relied on—one currency for the Government, and another for the people. Is it meant that the Government must take in payment of its debts whatever the people take in payment of theirs? If so, it is a very broad proposition, and would lead to important consequences. The people now receive the notes of non-specie-paying

banks. Is it meant that the Government should also receive them? They receive in change all sorts of paper, issued by we know not whom. Must the Government also receive them? They receive the notes of banks issuing notes under five, ten, and twenty dollars. Is it intended that the Government shall also permanently receive them? They receive bills of exchange. Shall Government, too, receive them? If not, I ask the reason. Is it because they are not suitable for a sound, stable, and uniform currency? The reason is good, but what becomes of the principle that the Government ought to take whatever the people take? But I go further: it is the duty of Government to receive nothing in its dues but which it has the right to render uniform and stable in its value. We are by the constitution made the guardian of the money of the country. For this the right of coining and regulating the value of coins was given, and we have no right whatever to receive or treat any thing as money, or the equivalent of money, the value of which we have no right to regulate. If this principle be true, and it cannot be controverted, I ask what right has Congress to receive and treat the notes of the State banks as money? If the States have the right to incorporate banks, what right has Congress to regulate them or their issues? Show me the power in the constitution. If the right be admitted, what are its limitations, and how can the right of subjecting them to a bankrupt law in that case be denied? If one be admitted, the other follows as a consequence; and yet those who are most indignant against the proposition of subjecting the State banks to a bankrupt law, are the most clamorous to receive their notes, not seeing that the one involves the right of the other. I am equally opposed to both as unconstitutional and inexpedient. We are next told, to separate from the banks is to separate from the people. The banks, then, are the people, and the people the banks—united, identified, and inseparable; and as the Government belongs to the people, it follows, of course, according to this argument, it belongs also to the banks, and of course is bound to do their biddings. I feel on so grave a subject, and in so grave a body, an almost invincible repugnance in replying to such arguments; and I shall hasten over the only remaining one of the fraternity, which I shall condescend to notice with all possible despatch. They have no right of admission here; and, if I were disposed to jest on so solemn an occasion, I should say they ought to be driven from this chamber under the 47th rule.* The next of these formidable objections to the separation from the banks is, that the Government, in so doing, takes care of itself, and not of the people. Why, I had supposed that the Government belonged to the people; that it was created by them for their own use, to promote their interest, and secure their peace and liberty; that, in taking care of itself, it takes the most effectual care of the people; and, in refusing all embarrassing, entangling, and dangerous alliances with corporations of any description, it was but obeying the great law of self-preservation. But enough; I cannot any longer waste words on such objections. I intend no disrespect to those who have urged them; yet these, and arguments like these, are mainly relied on to countervail the many and formidable objections, drawn from the highest considerations that can influence the action of Government or individuals, none of which have been refuted, and many not even denied.

The Senator from Massachusetts [Mr. WEBSTER] urged an argument of a very different character, but which, in my opinion, he entirely failed to establish. He asserted that the ground assumed on this side was an entire abandonment of a great constitutional function conferred by the constitution on Congress. To establish this, he laid down the proposition, that Congress was bound to take care of

* It is the rule regulating the admission of persons in the lobby of the Senate.

SENATE.]

Sub-Treasury Bill.

[Oct. 3, 1837.]

the money of the country. Agreed: and with this view the constitution confers on us the right of coining and regulating the value of coins, in order to supply the country with money of proper standard and value; and is it an abandonment of this right to take care, as this bill does, that it shall not be expelled from circulation, as far as the fiscal action of this Government extends? But, having taken this unquestionable position, the Senator passed (by what means he did not condescend to explain,) from taking care of the money of the country to the right of establishing a currency, and then to the right of establishing a bank currency as I understood him. On both of these points, I leave him in the hands of the Senator from Pennsylvania, [Mr. BUCHANAN,] who, in an able and constitutional argument, completely demolished, in my judgment, the position assumed by the Senator from Massachusetts. I rejoice to hear such an argument from such a quarter. The return of the great State of Pennsylvania to the doctrines of rigid construction and State rights, sheds a ray of light on the thick darkness which has long surrounded us.

But we are told that there is not gold and silver enough to fill the channels of circulation, and that prices would fall. Be it so. What is that, compared to the dangers which menace on the opposite side? But are we so certain that there is not a sufficiency of the precious metals for the purpose of circulation? Look at France, with her abundant supply, with her channels of circulation full to overflowing with coins, and her flourishing industry. It is true that our supply is insufficient at present. How could it be otherwise? The banking system has degraded and expelled the precious metals, driven them to foreign lands, closed the mines, and converted their products into costly vases, and splendid utensils and ornaments, administering to the pride and luxury of the opulent, instead of being employed as the standard of value, and the instrument of making exchanges, as they were manifestly intended mainly to be by an all-wise Providence. Restore them to their proper functions, and they will return from their banishment; the mines will again be opened; and the gorgeous splendor of wealth will again reassume the more humble, but useful, form of coins.

But, Mr. President, I am not driven to such alternatives. I am not the enemy, but the friend of credit—not as the substitute, but the associate and the assistant of the metals. In that capacity, I hold credit to possess, in many respects, a vast superiority over the metals themselves. I object to it in the form which it has assumed in the banking system, for reasons that are neither light nor few, and that neither have nor can be answered. The question is not whether credit can be dispensed with, but what is its best possible form—the most stable, the least liable to abuse, and the most convenient and cheap? I threw out some ideas on this important subject in my opening remarks. I have heard nothing to change my opinion. I believe that Government credit, in the form I suggested, combines all the requisite qualities of a credit circulation in the highest degree: and also that Government ought not to use any other credit but its own in its financial operations. When the Senator from Massachusetts made his attack on my suggestions, I was disappointed. I expected argument, and he gave us denunciation. It is often easy to denounce, when it is hard to refute; and when that Senator gives denunciations, instead of arguments, I conclude that it is because the one is plenty, and the other scarce.

We are told the form I suggested is but a repetition of the old continental money—a ghost that is ever conjured up by all who wish to give the banks an exclusive monopoly of Government credit. The assertion is not true; there is not the least analogy between them. The one was a promise to pay when there was no revenue; and the other a promise to receive in the dues of Government when there is an abundant revenue.

We are also told that there is no instance of a Government paper that did not depreciate. In reply, I affirm that there is none, assuming the form I propose, that ever did depreciate. Whenever a paper receivable in the dues of Government had any thing like a fair trial, it has succeeded. Instance the case of North Carolina, referred to in my opening remarks. The drafts of the Treasury at this moment, with all their incumbrance, are nearly at par with gold and silver; and I might add the instance alluded to by the distinguished Senator from Kentucky, in which he admits that, as soon as the excess of the issues of the Commonwealth Bank of Kentucky were reduced to the proper point, its notes rose to par. The case of Russia might also be mentioned. In 1827 she had a fixed paper circulation, in the form of bank notes, but which were inconvertible, of upwards of \$120,000,000, estimated in the metallic ruble, and which had for years remained without fluctuation, having nothing to sustain it, but that it was received in the dues of the Government, and that, too, with a revenue of only about \$90,000,000 annually. I speak on the authority of a respectable traveller. Other instances, no doubt, might be added; but it needs no such support. How can a paper depreciate which the Government is bound to receive in all payments to it, and while those to whom payments are to be made are under no obligation to receive it? From its nature, it can only circulate when at par with gold and silver; and if it could depreciate, none could be injured but the Government.

But my colleague objects that it would partake of the increase and decrease of the revenue, and would be subject to greater expansions and contractions than bank notes themselves. He assumes that Government would increase the amount with the increase of the revenue, which is not probable, for the aid of its credit would then be least needed; but if it did, what would be the effect? On the decrease of the revenue its bills would be returned to the Treasury, from which, for the want of demand, they could not be re-issued; and the excess, instead of hanging on the circulation, as in the case of bank notes, and exposing it to catastrophes like the present, would be gradually and silently withdrawn, without shock or injury to any one. It has another and striking advantage over bank circulation, in its superior cheapness as well as greater stability and safety. Bank paper is cheap to those who make it, but dear, very dear, to those who use it, fully as much so as gold and silver. It is the little cost of its manufacture, and the dear rates at which it is furnished to the community, which gives the great profit to those who have a monopoly of the article. Some idea may be formed of the extent of the profit by the splendid palaces which we see under the name of banking houses, and the vast fortunes which have been accumulated in this branch of business; all of which must ultimately be derived from the productive powers of the community, and of course adds so much to the cost of production. On the other hand, the credit of Government, while it would greatly facilitate its financial operations, would cost nothing, or next to nothing, both to it and the people, and of course would add nothing to the cost of production, which would give every branch of our industry, agriculture, commerce, and manufactures, as far as its circulation might extend, great advantages both at home and abroad.

But there remains another and great advantage. In the event of war, it would open almost unbounded resources to carry it on, without the necessity of resorting to what I am almost disposed to call a fraud—public loans. I have already shown that the loans of the Bank of England to the Government were very little more than loaning back to the Government its own credit; and this is more or less true of all loans, where the banking system prevails. It was pre-eminently so in our late war. The circulation of the Government credit, in the shape of bills receivable ex-

Oct. 3, 1837.]

Sub-Treasury Bill.

[SENATE.]

clusively with gold and silver in its dues, and the sales of public lands, would dispense with the necessity of loans, by increasing its bills with the increase of taxes. The increase of taxes, and, of course, of revenue and expenditures, would be followed by an increased demand for Government bills, while the latter would furnish the means of paying the taxes, without increasing, in the same degree, the pressure on the community. This, with a judicious system of funding, at a low rate of interest, would go far to exempt the Government from the necessity of contracting public loans, in the event of war.

I am not, Mr. President, ignorant, in making these suggestions, (I wish them to be considered only in that light,) to what violent opposition every measure of the kind must be exposed. Banks have been so long in the possession of Government credit, that they very naturally conclude they have an exclusive right to it, and consider the withdrawal of it, even for the use of the Government itself, as a positive injury. I have some experience on this subject. It was my fortune to take a stand on the side of the Government against the banks during the most trying period of the late war—the winter of 1814 and 1815—and never in my life was I exposed to more calumny and abuse—no, not even on this occasion. It was my first lesson on the subject. I shall never forget it. I propose to give a very brief narrative of the scenes through which I then passed; not with any feeling of egotism: for I trust I am incapable of that, but to illustrate the truth of much I have said, and to snatch from oblivion not an unimportant portion of our financial history. I see the Senators from Massachusetts, (Mr. WEBSTER,) and from Alabama, (Mr. KING,) who were then members of the House of Representatives, in their places, and they can vouch for the correctness of my narrative, as far as the memory of transactions so long passed will serve.

The finances of the country had at that time fallen into great confusion. Mr. Campbell had retired from the head of the Treasury, and the late Mr. Dallas had succeeded—a man of talents, bold and decisive, but inexperienced in the affairs of the Department. His first measure to restore order, and to furnish the supplies to carry on the war, was to recommend a bank of \$50,000,000, to be constituted almost exclusively of the new stocks which had been issued during the war, to the exclusion of the old, which had been issued before. The proposed bank was authorized to make loans to the Government, and was not bound to pay specie during the war, and for three years after its termination.

It so happened that I did not arrive here till some time after the commencement of the session, having been detained by an attack of bilious fever. I had taken a prominent part in the declaration of the war, and had every motive and disposition to sustain the administration, and to vote every aid to carry on the war. Immediately after my arrival, I had a full conversation with Mr. Dallas, at his request. I entertained very kind feelings towards him, and assured him, after he had explained his plan, that I would give it my early and favorable attention. At that time I had reflected but little on the subject of banking. Many of my political friends expressed a desire that I should take a prominent part in its favor. Their extreme anxiety roused my attention, and, being on no committee, (they had been appointed before my arrival,) I took up the subject for a full investigation, with every disposition to give it my support. I had not proceeded far before I was struck with the extraordinary character of the project; a bank of \$50,000,000, whose capital was to consist almost exclusively of Government credit in the shape of stock, and not bound to pay its debts during the war and for three years afterwards, to furnish the Government with loans to carry on the war! I saw at once that the effect of the arrangement would be, that Government would borrow back its

own credit, and pay six per cent. per annum for what they had already paid eight or nine. It was impossible for me to give it my support under any pressure, however great. I felt the difficulty of my situation, not only in opposing the leading measure of the administration at such a crisis, but, what was far more responsible, to suggest one of my own, that would afford relief to the embarrassed Treasury. I cast my eyes around, and soon saw that the Government should use its own credit directly, without the intervention of a bank; which I proposed to do in the form of Treasury notes, to be issued in the operations of the Government, and to be funded in the subscription to the stock of the bank. Treasury notes were, at that time, below par, even with bank paper. The opposition to them was so great on the part of the banks, that they refused to receive them on deposit, or payment at par with their notes; while the Government, on its part, received and paid away notes of the banks, at par with its own. Such was the influence of the banks, and to such degradation did the Government, in its weakness, submit.

All this influence I had to encounter, with the entire weight of the administration thrown into the same scale. I hesitated not. I saw the path of duty clearly, and determined to tread it, as sharp and rugged as it was. When the bill came up, I moved my amendment, the main features of which were, that, instead of Government stock already issued, the capital of the bank should consist of funded Treasury notes; and that, instead of a mere paper machine, it should be a specie paying bank, so as to be an ally instead of an opponent, in restoring the currency to a sound condition on the return of peace. These were, with me, indispensable conditions. I accompanied my amendment with a short speech of fifteen or twenty minutes; and so overpowering was the force of truth that, notwithstanding the influence of the administration, backed by the money power, and the Committee of Ways and Means, which was unanimous, with one exception, as I understood, my amendment prevailed by a large majority; but it, in turn failed: the opposition, the adherents of the administration, and those who had constitutional scruples, combining against it. Then followed various but unsuccessful attempts to charter a bank. One was vetoed by the President, and another was lost by the casting vote of the Speaker, (Mr. CHEVES.) After a large portion of the session was thus unsuccessfully consumed, a caucus was called, in order to agree on some plan, to which I and the few friends who still adhered to me, after such hard service, were especially invited. We of course attended. The plan of compromise was unfolded, which approached much nearer to our views, but which was still objectionable in some features. I objected, and required further concessions, which were refused, and was told the bill could be passed without us; at which I took up my hat and bid good night. The bill was introduced in the Senate, and speedily passed that body. On the second reading I rose and made a few remarks, in which I entreated the House to remember that they were about to vote for the measure against their conviction, as had been frequently expressed; and that, in so doing, they acted under a supposed necessity, which had been created by those who expected to profit by the measure. I then reminded them of the danger of acting under such pressure, and I said that they were so sensible of the truth of what I uttered, that if peace should arrive before the passage of the bill, it would not receive the support of fifteen members; I concluded by saying that I would reserve what I intended to say on the question of the passage of the bill, when I would express my opinion at length, and appeal to the country. My objections had not gone to the people, as nothing that I had said had been reported—such was my solicitude to defeat the bill, without extending our divisions beyond the walls of the House, in the then critical condition of the country. My object was to arrest

SENATE.]

Sub-Treasury Bill.

[OCT. 3, 1837.]

the measure, and not to weaken confidence in the administration.

In making the supposition, I had not the slightest anticipation of peace. England had been making extensive preparations for the ensuing campaign, and had made a vigorous attack upon New Orleans, but had just been repelled; but, by a most remarkable coincidence, an opportunity (strange as it may seem) was afforded to test the truth of what I said. Late in the evening of the day, I met Mr. Sturges, then a member of Congress from Connecticut. He said he had some information which he could not withhold from me; that a treaty of peace had been made, and that it had actually arrived in New York, and would be here the next day; so that I would have an opportunity of testing the truth of my prediction. He added, that his brother, who had a mercantile house in New York, had forwarded information to him by express, and that he had forwarded the information to connected houses in the Southern cities, with direction to purchase the great staples in that quarter, and that he wished me to consider the information as confidential. I thanked him for the intelligence, and promised to keep it to myself. The rumor, however, got out, and the next day an attempt was made to pass through the bill; but the House was unwilling to act till it could ascertain whether a treaty had been made. It arrived in the course of the day, when, on my motion, it was laid on the table, with less than fifteen votes against the motion; and I had the gratification of receiving the thanks of many for defeating the bill, who, a short time before, were almost ready to cut my throat for my persevering opposition to the measure. An offer was then made to me to come to my terms, which I refused, declaring that I arose in my demand, and would agree to no bill which should not be formed with the view to the speedy restoration of specie payments. It was afterwards postponed, on the conviction that it could not be so modified as to make it acceptable to a majority. This was my first lesson on banks. It has made a durable impression on my mind.

My colleague, in the course of his remarks, said he regarded this measure as a secret war waged against the banks. I am sure he could not intend to attribute such motives to me. I wage no war, secret or open, against the existing institutions. They have been created by the legislation of the States, and are alone responsible to the States. I hold them not answerable for the present state of things, which has been brought about under the silent operation of time, without attracting notice, or disclosing its danger. Whatever legal or constitutional rights they possess, under their charters, ought to be respected; and, if attacked, I would defend them as resolutely as I now oppose the system. Against that I wage, not secret, but open and uncompromising hostilities, originating not in opinions recently or hastily formed. I have long seen the true character of the system, its tendency, and destiny, and have looked forward for many years, as many of my friends know, to the crisis in the midst of which we now are. My ardent wish has been to effect a gradual change in the banking system, by which the crisis might be passed without a shock, if possible; but I have been resolved for many years, that, should it arrive in my time, I would discharge my duty, however great the difficulty and danger. I have, thus far, faithfully performed it, according to the best of my abilities, and, with the blessing of God, shall persist, regardless of every obstacle, in performing it, with equal fidelity, to the end.

He who does not see that the credit system is on the eve of a great revolution, has formed a very imperfect conception of the past, and anticipation of the future. What changes it is destined to undergo, and what new form it will ultimately assume, are concealed in the womb of time, and not given us to foresee. But we may perceive in the present many of the elements of the existing system which must be expelled, and others which must enter it in its renewed form.

In looking at the elements at work, I hold it certain that in the process there will be a total, and final separation of the credit of Government and that of individuals, which have been so long blended. The good of society, and the interests of both, imperiously demand it, and the growing intelligence of the age will enforce it. It is unfair, unjust, unequal, contrary to the spirit of free institutions, and corrupting in its consequences. How far the credit of Government may be used in a separate form, with safety and convenience, remains to be seen. To the extent of its fiscal action, limited strictly to the function of the collection and disbursement of its revenue, and in the form I have suggested, I am of the impression it may be both safely and conveniently used, and with great incidental advantages to the whole community. Beyond that limit I see no safety, and much danger.

What form individual credit will assume after the separation is still more uncertain; but I see clearly that the existing fetters that restrain it will be thrown off. The credit of an individual is his property, and belongs to him as much as his land and houses, to use it as he pleases, with the single restriction, which is imposed on all our rights, that they are not to be used so as to injure others. What limitations this restriction may impose, time and experience will show; but, whatever they may be, they ought to assume the character of general laws, obligatory on all alike, and open to all; and, under the provisions of which all may be at liberty to use their credit, jointly or separately, as freely as they now use their land and houses, without any preference by special acts, in any form or shape, to one over another. Every thing like monopoly must ultimately disappear before the process which has begun will finally terminate.

I see not less clearly that, in the process, a separation will take place between the use of capital and the use of credit. They are wholly different, and, under the growing intelligence of the times, cannot much longer remain confounded in their present state of combination. They are as distinct as a loan and an endorsement; in fact, the one is but giving to another the use of our capital, and the other the use of our credit; and yet so dissimilar are they that we daily see the most prudent individuals lending their credit for nothing, in the form of endorsement or security, who would not loan the most inconsiderable sum without interest. But, as dissimilar as they are, they are completely confounded in banking operations, and which is one of the main sources of the profit, and the consequent dangerous flow of capital in that direction. A bank discount, instead of a loan, is very little more, as I have shown, than a mere exchange of credit—an exchange of the joint credit of the drawer and endorser of the note discounted for the credit of the bank in its own note. In the exchange, the bank insures the parties to the note discounted, and the community, which is the loser if the bank fails, virtually insures the bank; and yet, by confounding this exchange of credit with the use of capital, the bank is permitted to charge an interest for this exchange rather greater than an individual is permitted to charge for a loan, to the great gain of the bank and loss of the community. I say loss; for the community can never enjoy the great and full benefit of the credit system, till loans and credit are considered as entirely distinct in their nature, and the compensation for the use of each be adjusted to their respective nature and character. Nothing would give a greater impulse to all the business of society. The superior cheapness of credit would add incalculably to the productive powers of the community, when the immense gains, which are now devised by confounding them, shall come in aid of production.

Whatever other changes the credit system is destined to undergo, these are certainly some which it must; but when and how the revolution will end—whether it is destined to

OCT. 3, 1837.]

Sub-Treasury Bill.

[SENATE.]

be sudden and convulsive, or gradual and free from shock, time alone can disclose. Much will depend on the decision of the present question, and the course which the advocates of the system may pursue. If the separation takes place, and is acquiesced in by those interested in the system, the prospect will be that it will be gradually and quietly run down, without shock or convulsions, which is my sincere prayer; but if not—if the reverse shall be insisted on, and, above all, if it should be effected through a great political struggle, (it can only be so effected,) the revolution would be violent and convulsive. A great and thorough change must take place. It is wholly unavoidable. The public attention begins to be roused throughout the civilized world to this all-absorbing subject. There is nothing left to be controlled but the mode and manner, and it is better for all that it should be gradual and quiet than the reverse. All the rest is destiny.

I have now, Mr. President, said what I intended, without reserve or disguise. In taking the stand I have, I change no relation, personal or political, nor alter any opinion I have heretofore expressed or entertained. I desire nothing from the Government or the people. My only ambition is to do my duty, and shall follow wherever that may lead, regardless alike of attachments or antipathies, personal or political. I know full well the responsibility I have assumed. I see clearly the magnitude and the hazard of the crisis, and the danger of confiding the execution of measures in which I take so deep a responsibility, to those in whom I have no reason to have any special confidence. But all this deters me not, when I believe that the permanent interest of the country is involved. My course is fixed. I go forward. If the administration recommend what I approve on this great question, I will cheerfully give my support; if not, I shall oppose; but, in opposing, I shall feel bound to suggest what I believe to be the proper measure, and which I shall be ready to back, be the responsibility what it may, looking only to the country, and not stopping to estimate whether the benefit shall enure either to the administration or the opposition.

Mr. WEBSTER rose and said: The gentleman from South Carolina has said of my remarks, on a former day, that, where he looked for argument, he found only denunciation. But there are always two sides in such a case; it may certainly happen that denunciation is given instead of argument; but it may also happen that arguments which cannot be answered are got rid of by calling them denunciation. That, however, is a question which it is not for the two parties themselves to decide. I listened with great respect to the opinions of the member, as it is my constant practice to do, and I mean to express my astonishment that, at this period of his public life, looking back to his former course in relation to the currency of this country for the space of nearly twenty years—I say, I must give utterance to my astonishment at finding him where he now is, namely, according to his own avowal, back again to the old continental money! If this Government paper currency, of which the gentleman is now become the sudden and zealous advocate, is not what I pronounced it to be, continental money, what is it? It is not a species of exchequer notes; it is a mere Government paper, circulating without interest, receivable for the dues of Government, and with no certain provisions for its redemption: and that is what the old continental money was. But the gentleman says there is no analogy between his proposed money and the old continental, because Congress then levied no taxes! But Congress made requisitions on the States, and did not the States levy taxes?

The greater part of his remarks, so far from being any reply to the subjects under discussion, have been taken up with a general history of the banking system. No doubt much of the outline he has given may be correct, but there is nothing in all he has advanced to justify the leading inference which he makes, and which is, that the credit sys-

tem ought to be destroyed, and the hard money system henceforth be acted upon. In coming to this conclusion, he is by far too general; he seems, indeed, to have generalized himself out of all power of applying practical truths to the common subjects.

He has referred to the Bank of Amsterdam as an argument in proof of the superiority of a bank of deposit over one of circulation. But so far from a bank of deposit being safer than one of circulation, we all know that the Bank of England took the character of a bank of circulation, among other things, to avoid the danger of a bank of deposit, making the money in the bank liable to constant call by the bills. Every day's experience in this way brings the solidity of the bank to the test. It is astonishing he should assert the superiority and greater safety of such kind of banks; they had all the dangers of banks of circulation, without any of their security, which is the liability of an immediate demand, at any time, for the specie represented by their notes. Certificates of deposit issued by a bank of deposit are not subject to this test. When certificates upon sums in actual deposit are issued, who is to know when the issue begins upon deposits not in existence? Who is to know where such an issue of such certificates may end? I conclude, therefore, that the notes or certificates of a bank of deposit are not in their nature so good as the convertible notes of our common banks of circulation. But, if the certificates issued upon actual deposits are not so safe as the notes of banks always convertible at the pleasure of the holder, then, how much less safe are the notes proposed by the gentleman? Notes to be issued on no deposit, and convertible at no time! These he would issue, not upon the basis of any deposit, not convertible at the will of the holder, and not bearing any interest! Now, here, I insist upon it, is all the character and all the danger of the old continental money; and this train of reasoning, the gentleman says, is denunciation.

The gentleman brings an objection against the Bank of England as a bank of circulation, which he doubtless deems of great weight against all such banks. He says the Bank of England made successive augmentations of its capital, beginning first with a capital of a quarter of a million, and ending, after the lapse of one hundred years, with a capital of eleven millions. But will the gentleman call this a rapid advance? Within the space of one hundred years, has not the advance of commerce, trade, manufactures, population, and every thing else, been far more rapid? Is it not the fact that commerce and manufactures have outgrown the bank, and that it has lagged behind? The capital of that bank now, at eleven millions, for a commerce so vast and so extended as that of England, is a much smaller capital, in point of fact, than its original capital of a quarter of a million a century ago. Surely the gentleman must admit that, in the course of one hundred years, manufactures and commerce have undergone an increase beyond all proportion to the capital of the bank.

Again, the gentleman says that, in 1797, when the Bank of England suspended specie payments,* then, to the astonishment of the world, the suspension produced no great shock. I think somewhat differently. It is true, there was no immediate, instantaneous shock, but the wants of the Government and of the community were such as to give rise to a constant overissue, so that at one time the depreciation, I think, was nearly twenty per cent. When Government afterwards threatened to resume, a great contraction of issues became necessary. And if the suspension rendered such a contraction, at a subsequent period, necessary, or, rather, inevitable, how can it be asserted that the suspension never occasioned any great shock?

* This assertion, as here responded to, is modified and much changed in the printed speech of Mr. C. so as to read differently.—Note by the Reporter.

SENATE.]

Sub-Treasury Bill.

[Oct. 3, 1837.]

That contraction was of itself a great shock and a great distress. It made a violent change in the relative interests of debtor and creditor!

So in this country in 1814, the gentleman says he was astonished that the suspension produced so little effect. What effect, I would ask, would satisfy him? What sort of a shock must it be before he will feel it! The fact is, that at that time, as he well remembers, exchange was, in some places, at twenty-five per cent. discount between one part of the country and another.

A man here could not buy a bill upon Boston at less than that discount; in other words, money here was depreciated twenty-five per cent. And was not that shock enough? Was not that a shock to the credit of the country? To me it appears that the gentleman, in his general view, and in his desire to fix great eras and establish a few sweeping propositions, leaves out quite too much of what is practical and precise. He expresses his astonishment at what he says he saw in 1816, when, although the banks did not pay specie, yet, he says, they kept their credit. He certainly saw what I did not see. Their credit was depreciated from New England, proceeding south, to Washington; in all that extent their credit fell to various low rates. Beyond that point I have less recollection of the circumstances. Granting, however, the gentleman's argument that when banks have suspended, still their paper has maintained its ground, does it follow that a paper starting into existence on the very principle of suspension, and never even promising to pay, will be a good paper currency? Does he think such a paper can maintain its ground, or ever, indeed, obtain any ground to stand upon at all? Yet such is the currency the gentleman has proposed; and the argument by which he would recommend it to the country is built upon the assumed fact that the paper even of suspended banks is a good currency!

To prevent all mistakes on this subject, I desire to repeat that, in my opinion, it is utterly vain and hopeless to maintain any paper circulation, at par with specie, that is not convertible into specie at the will of the holder. If we are not ready to admit this, the history, not only of all other countries, but of our own country, must have been lost upon us.

The gentleman next proceeds, after this strong testimony in favor even of broken banks, to descend vehemently upon the dangers which he now apprehends from the whole banking system, and of course even from good banks! He has classed all these dangers very systematically, and finds that the banking system is full of dangers: 1st, to civil liberty; 2dly, to industry; and, 3dly, to the moral and intellectual development of mankind.*

Now, as relates to liberty, the only question is, whether the extending the property and business of the great mass of mankind can be adverse and unfavorable to liberty. If the raising the great mass of men to a better condition—if surrounding them with greater comforts and greater abundance of all things—if thus raising their social condition is unfavorable to liberty, then indeed the banking system, or, in other words, the credit system, (for it is the same thing; they are identical,) is, as the gentleman maintains, full of danger to liberty; for it is that very system, and none other, which, within the last two hundred years, has raised the condition of the body of the people in all commercial countries. It is that system which has made the working men and the industrious classes of modern times superior even to the landed proprietors and feudal lords of former times.

The institution of banks is one part in that great system of trade, commerce, and credit, which has grown up within the last two centuries; and, let me ask, what has been the progress of liberty during the lapse of these centuries?

* This proposition of Mr. CALHOUN'S is quite softened down, and almost suppressed, in the printed speech.—*Note by the Reporter.*

Does not the slightest retrospect confute the gentleman's argument? Are the ideas of liberty now less distinct, or its enjoyment less general, or less secure, than in the days of the Stuarts? If banks are useful to trade and commerce—if they give to industry the facilities of capital—if they thus raise the mass of society into a better condition—providing for them better—making them richer—multiplying the means of employment for all—enabling the industrious to maintain themselves better, and to educate their children better, who is ready to assert that all this has an unfavorable effect on the progress of civil liberty?

In reply to my arguments on a former day, showing it to be the duty of the Government to regulate the currency, (which I can agree with the gentleman in calling the very life-blood of the political body,) the honorable gentleman asserts that Government has no right to interfere with individuals. He therefore proposes individual banking, and maintains that credit is a man's private property; that Government has no more right to interfere with this than with any other kind of property; that Government has no right to put restrictions of any kind upon it. But this, which the gentleman asserts is not the right of Government, is the very and the especial object for which Government is instituted. Government does interfere and place restrictions in a thousand ways upon every kind of individual property; and it is done, and is necessarily done, by every Government for the good of the whole community. But if the gentleman is so very desirous of establishing such a system of private individual banking, he need not go far, he need not even stir from his seat, he may see everywhere around him all the blessings of the system of individual irresponsible banking which he recommends. If this is the currency which the Government seeks to give us, we have got it!

The gentleman's system has been tried, it is now upon us; and the country has suffered enough, and too much, from it already. Years ago, as well as now, we had private banking—every body turned banker—every body put out his notes for circulation, till it was at last found necessary to restrain this right—this very right which the gentleman says Government has not the right to restrain; a right which, however, has more than once been proved to be, after all, nothing more than the right of practising fraud and imposition upon the people. Many, perhaps, smothered, of the States, therefore, have restrained it by law. It is the very necessity of checking and restraining the licentious exercise of this individual right which is the origin of banking communities.

By the institution of such corporations, the common right is restricted for the sake of the good of the whole, and the issue of paper as money is made to be founded on assigned capital, on recognised credit, and issued under an administration of responsible citizens, responsible, individually and corporately, to the laws. It is to restrain a right which leads to so much imposition, that it has been found necessary to create banking communities, and by means of them to establish commercial credit on a safe foundation. This is the system of credit which the gentleman is now joined with the administration to uproot and to destroy; instead of this, he would let loose individual bankers with their spurious paper all over the country; and, in proof of the expediency of doing all this, he maintains that the banking system is full of danger to liberty! That it may be dangerous to the liberty of defrauding and imposing upon the poor, I have already conceded to him, and believe there are few who will not agree with me that this, if a danger, is a wholesome and valuable one.

But the gentleman has also discovered, not only that the credit system is full of danger against liberty, but that it exercises a pernicious influence upon the industry of the people! This indeed is to me entirely new! Surely the gentleman has been dealing with things unreal and imagi-

Oct. 3, 1867.]

Sub-Treasury Bill.

[SENATE.]

nary! It is quite a new thing to me that the young men of our country are, as the gentleman says, seeking after an education to make themselves banker's clerks; and that there is no other road to distinction but employment behind the counter and in the banking houses! How long has this danger been hanging over the land, and has never till now been seen or suspected, or dreamt of? Even the late illustrious President, and the gentleman from Missouri [Mr. BEXTON] never discovered or suspected so much as this in all their industry and zeal against the banking institutions of the country. It is quite novel to me, that the ingenious youths of the country, in all the colleges and halls, are only seeking to prepare themselves to be cashiers and tellers, writers and accountants! I have never heard that their desire of distinction has taken such a turn, or that, out of regard to such pursuits, they had stifled their ambition for literary and professional distinction. On the contrary, if we look at the subject as it is, we shall discover that a well-regulated banking system is eminently favorable to the industry of the people, by assisting the industrious who have no capital, and lending aid to enterprise, which otherwise would waste itself in ineffectual efforts. This system, invaluable to our country, has a tendency to break down the influence which dead capital confers upon the few who possess it, while it lifts up the many who have got no capital. In so doing, it promotes industry, and betters the condition of the greater number. Look at our villages and manufacturing cities in the North, are they smitten and withered, and destroyed by this system? They all have their banks, which are established according to the necessities and prospects of the people; and wherever they are, there industry is seen in full and vigorous operation, and the people busy in prosperous employment. But where the credit system, by any cause, is prostrate and injured, (as it now is,) and its action made to cease, the hum of business is silenced, and the industrious community, the mass of the people, is thrown out of employment.

Let us look at things as they are, and let us not be driven by denunciations against institutions which exist in all the States. That these institutions have been abused, is very probable; but how shall that be remedied? After all I have heard from the gentleman and his coadjutors, I can find the only remedy they propose is to withdraw from them! To withdraw from them! but will that remedy any evils of the system? Men might as well think of putting out a fire by merely going away from the fire! If we saw a house in flames, and the blaze rushing out through the windows, who would think of recommending as a means of extinguishing the fire, to withdraw, to go away, and leave the house and the fire to themselves? The system is with us, and cannot be got rid of, even if it were desirable to get rid of it. It is, therefore, our duty to do what we can to regulate it. It is our duty, as practical men, taking things as we find them, and seeing that to eradicate is not possible, but to mitigate every evil is easy—it is, under such circumstances, our paramount duty to render the currency which we have the best possible. Instead of this, the administration proposes to do nothing, and the honorable gentleman echoes back the advice, and proposes to withdraw, to divorce from the system! But, does the gentleman think, that if there are evils, those evils will be less when all remedy is withdrawn?

With respect to the two currencies, one of specie for the Government, and the other of depreciated paper for the people, the reasoning we have heard is this: "Would you have Government take bad money for its dues? If the people are willing to take such a depreciated medium, ought the Government to take it?"

This, sir, is not our point of objection; we do not wish the Government to take bad money because the people are obliged to take it: what we complain of is, that the administration does nothing, and proposes nothing, to make this

bad money of the people better. We want an equality; that both Government and people share the same fate, and use the same money, and that the Government perform its duty of rendering the money, the currency of the people, sound and good.

It is this equality which I desire; not that Government should take bad money, but that it should take such proper measures that there may be no bad money to take! That the people first, and then the Government, may have and receive good money. This can only be done by regulating the currency. It cannot be done by continuing a wild warfare against the credit, the currency, the money of the people. This has been done—it is the duty of Government to do this; and if ever we are to see prosperity again, it must be done again. But the vice of the message, the defect of this measure and of this amendment, is, that nothing is attempted for the people; Government looks out for its own part, it takes good care for the lion's share, and leaves all the rest to chance and accident! Again, I assert and maintain that it is the duty of the Government to give effectual relief to the people; and to the people first and most especially; for, if the people are relieved from a bad currency, it is plain enough there would be no bad currency for the Government to receive. Then this invidious and selfish measure of one currency for the Government and another for the people would be rendered unnecessary. It is the duty of the Government to do what it can; its power is a trust power; it was not created for itself alone. Its object is the good of the people, and now is not the time to disavow and neglect that object by leaving the country to suffer, and only providing for itself.

I shall detain the Senate, sir, with a few remarks only in reply to the gentleman from Pennsylvania, [Mr. BUCHANAN.]

The gentleman has met the question fairly. He denies that there is any power or duty belonging to this Government, such as I have attempted to maintain. He denies that it is incumbent on Congress to maintain a sound and uniform currency, or to have any thing to do with currency or exchange beyond the regulation of coin. I am glad to see the honorable member take this distinct ground. All see now what the question is.

The gentleman remarked, that I had abandoned that part of the constitution which is usually relied on as giving Congress power to establish a bank; that is to say, the power to lay and collect taxes. But you will remember, sir, that I was not discussing the power to create a bank; although, certainly, I have no doubt of the power. I was not contending merely for something that should aid in the collection of taxes; I was speaking of the power and duty of providing a sound currency for the whole country; a power and a duty which would both belong to this Government, if another dollar of taxes was never to be collected. Yes, sir, if we knew, this day, that the proceeds of the sales of the public lands would yield revenues equal to all the wants of the Government for a hundred years to come, our want of a currency would be the same, and the duty of Government to provide it the same, as it now is.

The gentleman argues, too, that a power to provide a currency cannot be drawn from the commercial power granted to Congress; because, he says, that power is only to regulate commerce, and to regulate is not to create. This is not quite correct; there are many forms of expression, in our language, especially those in which complex operations are described, in which to regulate, means to cause, or to produce. But, suppose I concede to the gentleman that to regulate never means to create. What then? Would that prove that Congress could not create a currency, in order thereby to regulate commerce? May it not be necessary to make one thing, in order to regulate another? Let us take the gentleman's own illustration. He says Congress has power to regulate the value

SENATE.]

Sub-Treasury Bill.

[Oct. 3, 1837.]

of foreign coin; but that this cannot mean that it has the power to create such coin. Very true; but then, it may make the steelyards, or the scales, (may it not?) as necessary instruments, to ascertain that value which is to be regulated. It may establish an assay, on any scale it chooses.

We have just passed a bill authorizing the Treasury Department to make and issue Treasury notes; and we have done this, under the power to borrow money; and certainly the honorable member himself, did not doubt, in that case, that, in exercising a clear constitutional power, we had a right to make any thing, which became necessary, as an instrument, to its convenient execution.

The power of Congress, therefore, over the currency; its power to regulate all currency, metallic or paper; and its power, and its duty, to provide and maintain a sound and universal currency, belongs to it as an indispensable and inseparable part of its general authority to regulate commerce.

But, sir, I might safely go much further than this. It could be shown, from a hundred instances, that the power to regulate commerce has been held to be broad enough to include an authority to do things, to make things, to create things, which are useful and beneficial to commerce; things which are not so much regulations of commerce, in a strict sense, as they are aids and assistances to commerce. The gentleman himself, I will undertake to say, has voted for laws, for such purposes, very often.

Mr. President, we have appropriated, I know not how much more, or how much less, than a million of dollars, for a breakwater in the mouth of the Delaware. The gentleman has concurred in these appropriations. Now, sir, we did not propose to regulate a breakwater; we proposed to make it, to create it. In order to regulate commerce, and to regulate it beneficially, Congress resolved to create a breakwater; and the honorable member never found any constitutional difficulty in the way, so far as I remember. And yet, sir, a breakwater is not essential and indispensable to commerce it is only useful and beneficial. But a sound currency, of universal and equal credit, is essential to the enjoyment of the just advantages of the intercourse between the States.

The light-houses on the sea-coast, and on the lakes, and all the piers, buoys, and harbors, have been created, in like manner, simply by the power of Congress to regulate commerce.

Mr. President, the honorable member from Pennsylvania, growing warm in the progress of his speech, at length burst out into an exclamation: "What," said he "would the framers of the constitution say, could they be now present, and hear the doctrines for which the member from Massachusetts contends?"

Sir, I have already quoted the language of several of these good and great men. I rely on their opinions, fully and clearly expressed. I have quoted Mr. Madison among others; but, sir, to use the language of the forum, I am willing to call the witness again into court, and to examine him further. Mr. Madison, all will admit, is a competent witness. He had as much to do as any man in framing the constitution, and as much to do as any man in administering it. Nobody, among the living or the dead, is more fit to be consulted, on a question growing out of it; and he is far from being considered as a latitudinarian, in his mode of construction. I will then, sir, question him further.

Be it remembered, sir, that my proposition simply is, that it is a part of the power and duty of Congress to maintain a general currency, suitable to the state of things existing among us, for the use of commerce and the people.

Now, sir, what says Mr. Madison? I read from his message of December, 1816:

"Upon this general view of the subject, it is obvious

that there is only wanting, to the fiscal prosperity of the Government, the restoration of a uniform medium of exchange. The resources and the faith of the nation, displayed in the system which Congress has established, ensure respect and confidence both at home and abroad. The local accumulations of the revenue have already enabled the Treasury to meet the public engagements in the local currency of most of the States; and it is expected that the same cause will produce the same effect throughout the Union. But, for the interests of the community at large, as well as for the purposes of the Treasury, it is essential that the nation should possess a currency of equal value, credit, and use, wherever it may circulate. The constitution has intrusted Congress, exclusively, with the power of creating and regulating a currency of that description; and the measures which were taken during the last session, in execution of the power, give every promise of success. The Bank of the United States has been organized under auspices the most favorable, and cannot fail to be an important auxiliary to those measures."

And now, sir, I hand the witness over to the gentleman for cross-examination.

But, sir, if the honorable member from Pennsylvania could overthrow my proposition, he would equally overthrow his friend from South Carolina; because that gentleman admits that there must be a paper currency of some kind; and that, a paper currency issued by the authority of Government. And if we both fall, we shall pull down along with us (which mercy forefend) the Secretary of the Treasury, report and all; for it is one of the leading objects of that luminous paper to show how far Government issues might usefully become the medium of payment and the means of circulation. And, indeed, every vote given in Congress for the Treasury note bill—the gentleman's own vote, if given, or so far as given, on the ground that Treasury notes shall pass from hand to hand as currency—is a refutation of his argument.

Mr. President, this power of the currency, for which I am contending, is in the constitution; the authority of Congress over commerce would be radically deficient without it; the power has been admitted, acknowledged, and exercised. To deny that this power is in the constitution, is to rewrite the constitution, to reconstruct it, to take it away, and give us a substitute. To deny that the power has been acknowledged, and exercised, is to contradict history, and to reverse facts.

Mr. BUCHANAN said he had not flattered himself that the remarks which he had made some days ago, in answer to the Senator from Massachusetts, would have called him out in reply. It has, sir, been already reported over the whole country, by a portion of the newspaper press, that the blows which I aimed at him, with a feeble hand, had been repelled by his adamant armor, without leaving the slightest impression. Besides, (said Mr. B.,) I have since been utterly prostrated, according to the same reports, by the Senator from South Carolina, [Mr. PRESTON,] and so belabored after I was down that I can scarcely now be recognised by my most intimate friends. Under these painful circumstances, it affords me a ray of comfort to find that the Senator from Massachusetts has deemed my argument worthy of a studied reply. I hope it may not be considered presumptuous in me to say a few words by way of rejoinder.

Heaven forbid (said Mr. B.) that I should be forced to lie down in the same bed with the Senator from Massachusetts, the Senator from South Carolina, [Mr. CALHOUN,] and the Secretary of the Treasury. For a man of peace like myself, the bed of Procrustes would be mercy compared with such a fellowship. Never were there more ill-assorted and heterogeneous materials brought together. If my argument has made the three gentlemen lie down together in the same bed, as the Senator has asserted, there

Sub-Treasury Bill.

[SENATE.]

let them lie as best they can. I beg to be excused from becoming a partner with this triple alliance, conscious that in that event my fate would deserve to be pitied. I shall endeavor to sustain myself alone.

I have not contended that the Government might not, under the constitution, draw in favor of public creditors upon its own revenue in the hands of its own depositories, and that these drafts might not circulate as currency between their date and the time of their presentation for payment. Neither have I contended that the Government had no power to borrow money, and issue Treasury notes for the amount, in order to meet appropriations made by Congress. Such drafts and such Treasury notes, whilst limited in amount to the actual wants of the Government, are necessary for conducting the business of the Treasury. Did the Senator from Massachusetts understand me to have maintained that such an exercise of power would be a violation of the constitution?

[Mr. WEBSTER answered that he did not so understand the gentleman. It had been his purpose to maintain that it was both the right and the duty of the Government to establish a paper currency as a medium of commerce for the country. He did not confine himself to the limits prescribed by the gentleman.]

The Senator and myself (said Mr. B.) understand each other perfectly. What, then, is his proposition? That Congress possessing the express power "to regulate commerce with foreign nations and among the several States," there results from this power, by implication, a power to create a paper currency of sufficient amount to furnish a medium for our foreign and domestic exchanges. Now, sir, can such a vast power be derived, by any fair construction, from this provision of the constitution? That is the true question. The gentleman soars far above the disputed power to create a national bank, and incidentally, through its agency, to furnish a paper currency for the country. He leaves this at an immeasurable distance behind, and contends that the Government possesses the general power to create such a currency for the people by its own direct action, and without the agency of any bank whatever.

I did say, and I now repeat, that the sturdy patriots who formed the constitution, and who conferred power upon the Government with a jealous hand, would have been greatly astonished had they been informed that such a power to create a paper currency as that now contended for could be found lurking in concealment under this grant to regulate commerce. The Senator has again appealed to the authority of Mr. Madison; and, in my opinion, again appealed to it in vain. He must call some other witness into court before he can establish his position. The point to be maintained is that the fathers of the constitution, or any of them, had ever held that a general power to create a paper currency was incidental to the exercise of the power to regulate our commerce. Does Mr. Madison any where express any such opinion? Has the Senator shown that any of the fathers of the constitution had ever asserted any such proposition? No, sir. Of all the important powers conferred by the constitution upon Congress, the history of the times will prove that the power over commerce was considered the most simple and easily understood, and the least liable to misconstruction.

I shall not read to the Senate the passage from Mr. Madison's message of December, 1816, which has just been read by the gentleman. The circumstances under which it was written, as well as the language employed, will clearly point to its meaning. Specie payments had been suspended throughout the country; and our currency then, as now, composed of inconvertible bank paper. Mr. Madison had waived his constitutional objections to a Bank of the United States, and in April, 1816, had approved the act to charter that institution. Besides, Congress had, in the same month adopted a resolution to compel the payment

of the public dues in specie, or in the notes of specie-paying banks. Mr. Madison is evidently speaking in reference to these two measures in this extract from his message. It is true, he asserts that the constitution has entrusted Congress exclusively with the power of creating and regulating a currency of equal value, credit, and use, wherever it may circulate; but does he not here evidently refer to the power "to coin money and regulate the value thereof?" Is there any other clause of the constitution to which he could refer? He calculated much on the power of the Bank of the United States "as an important auxiliary" in restoring this constitutional currency, and banishing irredeemable paper; but does he any where suggest, or even intimate, that Congress possesses the general power to create a paper currency for the country, as a means of regulating commerce? This is the point which the Senator must prove, or that part of his argument which rests upon authority must fall to the ground. No, sir, the Senator himself is the first individual, since the adoption of the constitution, who has asserted this proposition. It is original with himself. He has produced no authority to prove that any of the fathers of the constitution ever held such doctrine.

The Senator contends that a power to regulate commerce, by implication, confers the power to create a paper circulating medium by which commerce can be conducted. Now, if I were even to admit this inference, contrary, in my opinion, both to the letter and spirit of the constitution, still the gentleman would be far from establishing his proposition. And why? Because, when the constitution confers an express power, and provides, in express terms, the means by which it shall be exercised, it would be a violation of every sound rule of construction to call in the aid of implication to create another and a different means of accomplishing the same end. Now, the constitution has provided gold and silver coin, and no other currency, as the medium by which commerce is to be conducted; how, then, can the gentleman create a paper currency by implication? Congress have established mints to coin hard money in execution of this power; how, then, can he establish paper mints to manufacture paper money for the very same purpose? To use a law maxim, the expression of the one is the exclusion of the other. If the framers of the constitution had intended to confer such a power, they would have added to the power "to coin money and regulate the value thereof," that of issuing paper money. Now, sir, can any person, at all acquainted with the history of those times, believe that such a proposition would have received a single vote in the convention?

Is there a word in the English language, which has a more precise signification than the word "regulate?" Does it not necessarily imply the previous existence of something to be regulated? In this sense it has been used by the framers of the constitution themselves, in conferring the coining power. They first give the power "to coin money," and after money has thus been created, then they add the power to "regulate" its value. They thus clearly mark the distinction between the two words. In respect to commerce—it had existed in this country from its first settlement. From the mode in which it was regulated by thirteen independent sovereignties, it became absolutely necessary, in order to produce uniformity and to prevent perpetual collisions, that this power of regulation should be transferred from the States to Congress. The subject-matter on which this power was to operate was the commerce then in existence, and all which might be called into existence in after-times by the energy and enterprise of our citizens. A mere power to regulate, not to create, was therefore given. If the Senator's argument be well founded, then, by a much less strained construction, Congress possesses the power to create or build ships—to embark in the carrying trade—to construct roads and canals through-

[SENATE.]

Sub-Treasury Bill.

[Oct. 3, 1837.]

out the different states, without or against their consent—and to assume jurisdiction over these improvements. This clause, in the hands of the gentleman, would indeed become a prolific source of federal power. No, sir, we possess no such power to create paper money. If we do, the jealousy of those who framed the constitution was vain, and the powers which you may confer on this Government, by implication, vastly transcend those which have been expressly granted. The constitution may be made to assume any form and any feature at pleasure. It contains no guaranty for liberty, none for the reserved rights of the States.

What, sir, is its obvious meaning, when construed by common sense? Would a plain man, of sound understanding ever imagine that an unlimited power to create paper money could be inferred from the power to regulate commerce? Can any two things be more remote from each other than these two subjects? It requires a chain of metaphysical reasoning even to make them seem to approach each other. And yet they are made cause and effect, according to the Senator's argument.

I am sorry, sir, that upon this subject the gentleman has not shown his entire hand. He has cut himself loose from the Bank of the United States, and all bank paper. This we know; but we are left in ignorance as to what kind of paper money he desires to create.

“Give me the power,” (said Mr. WEBSTER,) “and I will then tell the gentleman.”

Mr. B. I desire to know, in advance, how the Senator would execute this power. He has kept his plan entirely in the dark. The Delphic oracle never was more mysterious. Who, sir, or what is to issue this paper money? It is not a Bank of the United States—nor is his paper medium to be bank notes. I wish to know what kind of a paper mint he intends to establish, and what will be the nature of its issues. Then, and not till then, can the question be fairly discussed, and the issue, which he so much desires, be made before the people of the country. They demand something tangible. They do not deal in abstractions. They must be able to judge in advance as to how the system will probably operate, before they give it their approbation. If the Senator ever expects to be elevated, by popular suffrage, to a higher station than the one he now occupies, he must no longer clothe himself in mystery, but make known his plan in detail. A general assertion of the power, without any statement of the particular mode in which it is to be exercised, will never satisfy the people of this country. I confess, for one, I should be glad if he would be more explicit on the subject, and inform us what kind of paper he intends to issue.

After all, the manner in which the Senator has attempted to sustain himself, in deducing the power to create paper money from that to regulate commerce, considering his great abilities, has been of such an unsatisfactory character, at least to my mind, as to confirm rather than to shake my former convictions.

The question was then put on Mr. CALHOUN's amendment, which was as follows:

Add the following as a new section:

Sec. —. *And be it further enacted*, That from and after the first day of January, eighteen hundred and thirty-eight, the resolution of eighteen hundred and sixteen, authorizing the receiving of notes of specie-paying banks in dues to the Government, shall be so modified that only three-fourths of the amount due to the Government for duties, taxes, sales of public lands, or other debts, may be received in the notes of specie-paying banks; and that from and after the first day of January, eighteen hundred and thirty-nine, one-half may be so received; and from and after the first day of January, eighteen hundred and forty, one-fourth; and from and after the first day of January, eighteen hundred and forty-one, all sums due for duties, sales of public lands, or

other debts to the Government, and all payments to the General Post Office, shall be paid in gold and silver coin only, or in such notes, bills, or paper, issued under the authority of the United States, as may be directed to be received by law; and from and after the said first day of January, in the year eighteen hundred and forty-one, every officer or agent engaged in making disbursements on account of the United States, or of the General Post Office, shall make all payments in gold and silver coin only, or in such notes, bills, or paper, issued as aforesaid, when authorized by law; and any receiving or disbursing officer, or agent, who shall neglect, evade, or violate the provisions of this section, shall be dismissed the service, and shall forfeit all compensation which may then be due him.

And the amendment was adopted by the following vote:

YEAS—Messrs. Allen, Benton, Brown, Buchanan, Calhoun, Clay of Alabama, Fulton, Grundy, Hubbard, King of Alabama, Linn, Morris, Niles, Norvell, Pierce, Roane, Sevier, Smith of Connecticut, Strange, Walker, Wall, Williams, Wright, Young—24.

NAYS—Messrs. Bayard, Black, Clay of Kentucky, Clayton, Crittenden, Kent, King of Georgia, Knight, McKean, Nicholas, Prentiss, Preston, Rives, Robbins, Robinson, Smith of Indiana, Southard, Spence, Swift, Tallmadge, Tipton, Webster, White—23.

The amendment offered by Mr. RIVES as a substitute for the whole bill (authorizing the reception of the bills of all specie-paying banks not issuing notes of less than \$20,) was then tried, and lost by the following vote:

YEAS—Messrs. Bayard, Black, Clay of Kentucky, Clayton, Crittenden, Kent, King of Georgia, Knight, McKean, Nicholas, Prentiss, Preston, Rives, Robbins, Smith of Indiana, Southard, Spence, Swift, Tallmadge, Tipton, Webster, White—22.

NAYS—Messrs. Allen, Benton, Brown, Buchanan, Calhoun, Clay of Alabama, Fulton, Grundy, Hubbard, King of Alabama, Linn, Lyon, Morris, Niles, Norvell, Pierce, Roane, Robinson, Sevier, Smith of Connecticut, Strange, Walker, Wall, Williams, Wright, Young—26.

Mr. PRESTON then offered a substitute for the bill, making it the duty of the Secretary of the Treasury to make special deposits of the accruing revenues of the United States in banks most conveniently situated, and to make such terms with them as in his judgment would best promote the public interest.

This substitute was lost by the following vote:

YEAS—Messrs. Bayard, Black, Clay of Kentucky, Clayton, Crittenden, Kent, King of Georgia, Knight, McKean, Nicholas, Prentiss, Preston, Rives, Robbins, Smith of Indiana, Southard, Spence, Swift, Tallmadge, Tipton, Webster, White—22.

NAYS—Messrs. Allen, Benton, Brown, Buchanan, Calhoun, Clay of Alabama, Fulton, Grundy, Hubbard, King of Alabama, Linn, Lyon, Morris, Niles, Norvell, Pierce, Roane, Robinson, Sevier, Smith of Connecticut, Strange, Walker, Wall, Williams, Wright, Young—26.

Mr. BUCHANAN then moved an amendment, “That it shall be the duty of the Secretary of the Treasury to prescribe regulations to enforce the presentation of all Government drafts for payment at the place where payable; and to prescribe the time—according to the different distances of the depositories—within which they shall be presented for payment.”

Mr. CRITTENDEN deprecated the great and arbitrary power conferred by such a clause upon the Secretary.

Mr. BUCHANAN then amended his own amendment by adding to it the following:

“And in default of such presentation, to prescribe any other mode and place of payment which he may deem proper.”

The amendment, so modified, was agreed to.

A long discussion took place on an amendment offered by

Oct. 4, 1837.]

Attorneys' Fees.

[SENATE.]

Mr. MORRIS, proposing that no notes should be received from any bank which were not payable at the place of issue.

Mr. STRANGE offered, as an amendment to Mr. MORRIS's, amendment, to strike out the restriction as to notes under \$5; which amendment prevailed as follows:

YEAS—Messrs. Bayard, Brown, Calhoun, Clay of Ala., Clayton, Fulton, Grundy, Hubbard, Kent, King of Ala., Knight, Linn, Lyon, Nicholas, Prentiss, Roane, Robbins, Sevier, Spence, Strange, Swift, Wall, Wright, Young—24.

NAYS—Messrs. Allen, Benton, Black Buchanan, Clay of Kentucky, Davis, King of Georgia, McKean, Morris, Niles, Norvell, Pierce, Rives, Robinson, Smith of Conn., Smith of Ind., Tipton, Walker, White, Williams—20.

Mr. MORRIS's amendment, as amended, was then adopted: Ayes 26, noes not counted.

Mr. BENTON offered an amendment authorizing a premium of one per cent. on gold coin paid into the Treasury; which being objected to, he laid it on the table, with a view to attack it to some other bill.

The bill as amended was then ordered to a third reading by the following vote:

YEAS—Messrs. Allen, Benton, Brown, Buchanan, Calhoun, Clay of Alabama, Fulton, Grundy, Hubbard, King of Alabama, Linn, Lyon, Niles, Norvell, Pierce, Roane, Robinson, Sevier, Smith of Connecticut, Strange, Walker, Wall, Williams, Wright, Young—25.

NAYS—Messrs. Bayard, Black, Clay of Kentucky, Clayton, Crittenden, Davis, Kent, King of Geo., Knight, McKean, Nicholas, Prentiss, Preston, Rives, Robbins, Smith of Indiana, Southard, Spence, Swift, Tallmadge, Tipton, Webster, White—23.

On motion of Mr. CLAY, of Alabama, The Senate adjourned.

WEDNESDAY, OCTOBER 4.

ATTORNEYS' FEES.

The bill regulating the fees of district attorneys in the renewal of merchants' bonds was called up for consideration.

Amendments to this bill were offered by Mr. CLAYTON and Mr. CLAY, of Alabama, and some remarks made, which were not distinctly heard.

Mr. CLAY, of Kentucky, said he would have been better satisfied if the Committee on the Judiciary had reported a different bill; for if it passed in its present shape the attorney's fees for the city of New York would amount to between twenty and thirty thousand dollars, so numerous were the bonds to be renewed under existing emergencies.

Why (said Mr. C.) take the business out of the hands of the collector of the customs? Why not let him renew the bonds, and give him the same fee for the renewal that was charged on the original document? On what pretence are they handed over to the attorney unless for suit? In which case, he was entitled to his fees.

The tax of five dollars, as contemplated by the bill, would fall heavily on the class of small importers, many of whose bonds did not exceed fifty dollars. Five dollars on that sum—ten per cent. on the whole amount—would be unreasonable; while bonds for a very considerable amount were subjected only to the like charge. There was no equity, no propriety in such a measure. He would propose to remodel the bill entirely.

Mr. GRUNDY said the object of the bill was to secure to the attorney five dollars, and allow no further charge. The usage in New York was, when papers were placed in the hands of an attorney, to charge certain fees whether the suit was brought or not; it was the custom, he understood, in that State, though certainly not in any other, as far as his knowledge went, and he presumed it was under this law that the attorney had received the fees so much complained of.

Mr. BUCHANAN said the repeated attention of Congress had been called to the subject of fees of Government officers; but as yet no adequate remedy had been provided. Fees varied in the different States as much as two, three, and even four hundred per cent. He believed they acted under a law of Congress of 1799, which left the control to the ever-varying laws of the States. He had consulted the Solicitor of the Treasury on the subject, and had been told by that distinguished officer, that in three-fourths of the States no charge whatever was made; while acting in the capacity of district attorney, that officer had never received a farthing for such duty. Mr. B. agreed with the Senator from Kentucky, that five dollars, ten per cent., on a bond of fifty dollars—as much as was exacted for a large one—was unjust. To obviate that difficulty, and do justice as far as practicable, he would propose to amend the bill, so as to make the fee five dollars on all bonds exceeding five hundred dollars, and two dollars for all of and under that sum, instead of five on all classes, as reported by the bill.

Mr. TALLMADGE was of opinion that it would be better to postpone the subject, and lay the bill on the table until something definite could be fixed on. The fees received by the district attorney were in entire accordance with the usage of the courts. Mr. T. went into an explanation of the manner in which the practice was regulated in the State of New York, and the fees law officers were entitled to under the present regulations. The bill as offered to be amended by the gentleman from Pennsylvania, [Mr. BUCHANAN,] graduated the fees for the renewal of bonds of a small amount; but he doubted whether more than five dollars was charged for the mere renewal. Mr. T. said he had conversed the other day with a merchant from New York, who told him that he had been surety on thirty-one bonds; for renewing these the district attorney had charged only two dollars on each bond, making sixty-two dollars for the whole, which was far less even than proposed by the Senator from Pennsylvania.

Mr. WEBSTER said when he introduced his resolution, he mentioned that, from the enormous amount exacted, he presumed there was some mistake, but the facts were for the committee to investigate. He had since received a letter on the subject, which should go to the Committee on the Judiciary for their inspection. The charge made by the district attorney was, according to his own showing, \$6 64; which charge he presumed was according to the old English rule of taxing by the folio, (so many words;) and if that were the fact, the attorney might be entitled to that amount; but he thought it high, as blank bonds were now printed, and hence the expense materially lessened. There were now more than four thousand bonds to renew, and he thought two dollars on each would be sufficient. It was the matter of fees; however, that was most complained of, which the bill before them did not touch. Evils or abuses were contagious; and he feared, unless the bill covered the whole ground, we should find the fees in other places based on the system at New York.

Mr. WRIGHT went into some explanation of the practice of the State in relation to fees, and said, in justice to the district attorney of New York, that the fees received by him were legal, and such as citizens paid in like cases. The highest charge made for a mere renewal in any case, had never been more than six dollars and sixty-four cents; and in cases where the amount of the bond did not exceed two hundred dollars, he had invariably remitted one-third even of that charge. Where so many bonds were to be renewed, as would be the case at present, he thought the fee high; but in places where there were only a few bonds, he was not prepared to say it was too high.

The question on Mr. TALLMADGE's motion to lay the bill on the table being taken, it was decided in the affirmative.

SENATE.]

Sub-Treasury Bill.

[Oct. 4, 1837.]

THE SUB-TREASURY BILL.

The following engrossed bill was read the third time, viz: A bill imposing additional duties as depositaries, in certain cases, on public officers.

Be it enacted, &c., That the Treasurer of the United States, the treasurers of the mint and its branches, all collectors of the customs, and surveyors acting in that capacity, all receivers of public money, and postmasters, be, and they are hereby, required to keep safely, without loaning or using, all the public money collected by them, or otherwise at any time placed in their possession, till the same is ordered by the proper department to be transferred or paid out; in which cases, the transfers and payments shall be faithfully made by them as directed, and all other duties performed as fiscal agents, which may be imposed by this or former acts of Congress, or by any regulation of the Treasury Department made in conformity thereto.
